— Starting Adventures,	270
VALENTINE STRANGE, a Story of the	
Primrose Way.—By David Christie	
Murray, Author of <i>A Life's Atonement</i> , &c.	
CHAP.	
1. Hiram Search,	1
2. 'The Blind Bow-boy's Butt-	
shaft,'	19
3. 'I like the Primrose Way,'	
said Strange,	35
3. <i>Continued</i> — Love's First	
Draught is sweet enough;	
it is only in the After-taste	
that we detect its Bitter-	
ness,	59
4. Hiram 'looks around for	
something to get a Livin'	
at,'	77
4. <i>Continued</i> — A Furnished	
Room for a Single Gentle-	
man,	92
5. 'You were tired of me, and	
wished me dead,'	107
6. 'Half a Million of Money is	
something considerable,'	124
7. 'Oh,' said Gerard, 'that's	
Jolly's Sister,'	139
8. 'My Dear,' said Mr Jolly, 'I	
told you so,'	156
9. She answered 'Yes,'	171
10. The Ghost of Garling's Past, .	
186	
11. 'Armed and like a Giant,' . .	
204	
12. 'Mary,' said Hiram medita-	
tively, 'I've made a Dis-	
covery,'	219
13. 'That Coin is marked,' said	
Hiram seriously; 'I shan't	
take another,'	235
14. 'You look wretched, Val.	
What is it?'	251
15. 'She loves me. I shall win	
her yet!'	268
16. 'This is my Future Partner,	
Ladies,'	284
17. 'You've got Two Names, have	
you?' thought Hiram,	285
18. 'Underhand?'	299
19. Reginald, in his friendship	
for Val Strange, began to	
grow desperately fearful	
for him,	315
20. 'Valentine Strange, I want	
to speak to you,'	331
21. 'My Dear, I have had a talk	
with your Father,'	348
22. 'I must give Myself what	
• Law I can,'	363

VALENTINE STRANGE—continued.

CHAP.	Page
23. Running away from Dis-	
honour,	380
24. 'Of how much have you	
robbed us?'	395
25. 'He's an awfully Odd Fish is	
Strange,'	412
26. 'My Dear,' said the Old Lady,	
'you are fretting about	
Something,'	427
27. Like a Ghost revisiting Old	
Haunts,	443
28. A Messenger from the Bank, .	
460	
29. 'I am afraid, Sir, it is talked	
about,'	475
30. Shorn of Wealth and shorn	
of All,	491
31. All Day, Hiram looked about	
for Chances, and next	
morning he set out afoot in	
pursuit of Employment,	507
32. A Blue Foolscape Document,	
written in a stiff and legible	
hand, lay on the page	
before him,	524
33. 'I had the pleasure of meeting	
you, Sir, one hot day last	
summer, when you paid	
me this identical Half-	
sovereign,'	510
34. 'Did the return of one of her	
Lovers please her, even	
though he were not the	
chosen?'	556
35. 'Comes over here to see Con.,	
and finds himself too late,' . .	572
36. And now he began to know	
how futile his Dishonesty	
would have been even had	
he succeeded,	587
37. 'You didn't answer the Two	
Letters I sent you at the	
Grand Hotel,'	603
38. His feet were in the Prim-	
rose Way, and he had not	
the heart to leave it,	620
39. 'All is Ready,' said Val	
quietly. 'Tell your Mis-	
tress,'	635
40. 'Gerard,' his Mother had said,	
looking with an awful fore-	
boding fear at his face,	
'you will bear it for your	
Father's sake. There are	
things worth living for yet,'	
652	
41. 'Mother,' said Gerard on the	
evening of his return, 'I	
am going abroad,'	668
42. 'Mister, there's a score of	
living souls aboard that	
craft. Let go the wheel,'	
682	
43. The Horror of the Vengeance	
his Enemy had purposed	
left Val unhinged and	
terror-stricken,	699
44. 'Ay!' cried Garling in a quiv-	
ering voice, 'you have	
punished me enough,	
amongst you,'	715
45. 'Constance! maybe God will	
be good, and let me see you	
happy, as you never could	
have been in this world,'	
731	
46. 'Hiram,' she said dejectedly,	
'aren't you going to kiss	
me?'	747
47. 'Mister,' said Hiram gravely,	
'you paid me long ago.	
You enlisted me with this	
Half-sovereign,'	763
48. 'Let me stay with you,'	
pleaded Milly. 'I shall	
never marry,'	780

VALENTINE STRANGE—continued.

CHAP.	Page
49. Val Strange meets his old	
Friend and Enemy at times,	
and after all there is on	
each side a softened and	
tender esteem,	796

VALENTINE STRANGE

A STORY OF THE PRIMROSE WAY.

By DAVID CHRISTIE MURRAY, AUTHOR OF 'A LIFE'S ATONEMENT,' 'JOSEPH'S COAT,' &c.

CHAPTER I.—HIRAM SEARCH.

A DUSTY, hilly road wound up and down, here in broad light, there in deep shadow. It was a sweltering English summer day, and there was no wind; but a dry quiver was in the air at times, as though the parched earth panted. The birds chirped in feeble enjoyment of the drowsy heat, and the grasshopper shrilled incessantly from cool and tangled grasses. A lame traveller came toiling up a stiffish slope in the lane, bearing a bundle on his shoulder. The bundle, which was bare and scanty, was slung on a walking-stick with a crook at the end of it. Arrived at the top of the slope, the lame traveller sat down in shadow on a smooth table of rock which cropped out beneath an elder-bush. He was lank in build, and sallow in complexion. His nose and his beard were each long and pointed, his cheekbones were prominent, his cheeks sunken, and his eyes as bright as a hawk's. The stone on which he sat was in an English lane, and a true English landscape smiled and dozed around him; but he, though dressed in a commonplace English costume, was evidently foreign to the scene. In age he might have been anything from five-and-twenty to five-and-thirty.

The seat he had taken being a low one, and his figure tall and gaunt, his knees were ungracefully prominent. He sat in an attitude of great fatigue, his head drooping, and his arms hanging loose at his sides. After a time, he shook off this broken look, and began to explore his waistcoat pockets with an aspect of anxiety. A smile crossed his features; and between finger and thumb he drew out a very little bit of twist tobacco. This he shredded with an enormous pocket-knife, and packed carefully into the bowl of a well-blacked clay-pipe. Then, with a

renewed look of anxiety, he made another search in his waistcoat pockets; and again he smiled as he drew forth a single lucifer-match. Balancing this between his finger and thumb, and regarding it as though it were in some sort a curiosity, he opened his lips and broke into speech.

'I dew not think,' he said, in slow distinct and nasal tones, 'as there was ever anybody in my fam'ly as was gifted with mi-racklous powers. The professed spiritualist is not an animal I feel called upon to admire. But if I am not an unwillin' medium, there never was, an' never will be, sech a phenomenon on the face of the universal globe. There ain't a breath of air stirrin' at this minute; but this is the last lucifer-match I have, an' I've on'y got to strike it to raise some gentle zephyr that'll just come round the one corner that ain't guarded an' blow it out. Now, that's a remarkable fact, an' illustraytive of my general luck. An' if anybody was to be here, an' I was to bet on the zephyr, the atmosphere would lie in dead stillness till this match had burned clean through, an' then most likely it'd blow a tornado just to rile me.' He spoke with a look and voice of weary gravity. 'This old country ain't so thick crowded as I used to fancy; or if it is, it's my luck that drives the people off any road I happen to be travellin'. If this lucifer don't strike, or if it blows out, or the pipe won't draw, I shan't see a human creetur' for ten mile. If by any chance I get a light, I shall probly find a boxful on the road, immediately after. Ay, ay. Things re'ly air contrairy.'

He made grimly elaborate preparations for lighting the match. He took off his broad-brimmed

felt hat, laid it above his knees, and drew himself back upon the stone until the hat and his legs made a little cave of safety for the lucifer. Then he rubbed the end of the match gently on a bit of roughened stone, and smiled to see the flame. He gave an anticipatory pull at his pipe, smiled again, bent above the light, and pulled gently till flame and tobacco just kissed each other. Then came disaster.

If the weary traveller had turned his head, he might have seen through the parted boughs of the elder-bush a sun-tanned healthy face with a pair of honest gray eyes alive with fun. A young man clad in a suit of dark tweed lay with his elbows on the grass, with his chin supported on his hands. The band of his hat was stuck full of flies, and a disjointed fishing-rod lay on the grass beside him. The strap of his creel pulling tightly at his shoulder, seemed to indicate prosperity in sport. Close to his sun-tanned cheek were the hairy face, black muzzle, and glittering eye of a broken-haired terrier. The dog's hind-legs quivered with readiness to obey an expected order, and his black nose wrinkled and his eyes glittered as if he understood the coming mischief. At the critical second recorded, the young man slightly raised his head and gave an almost imperceptible wave of the right hand. With a bark and a leap the terrier flew through the hedge, and lighting on the traveller's shoulders for the fraction of a second, bounded over his head, twisted himself round and barked himself backward along the dusty road, recoiling at each explosion like a canine cannon. The traveller dropped the extinguished match and reached out in sudden anger for a stone. Before his hand had secured the missile, he drew it back again. 'Tain't no use throwin' stones at Destiny,' he said resignedly. 'I might ha' been prepared for it. I'd rather it had been the gentle zephyr, though, because then I might ha' took credit for bein' a prophet. But even that consolation'd be tew much for a man like me to look for.'

The unseen auditor was grave, as if his jest had failed. There was even a slight look of shame upon his face.

'I meant to ha' made that smoke do for dinner,' soliloquised the traveller mournfully. He turned to one side and untied the lean bundle. 'Ridicalous small sum of money twopence is, ain't it? An' a ridiculous small amount o' bread an' cheese it buys. Wal, Hiram, you've played the prodigal; an' I reckon you'll ha' to come down to the swine-husks yet. Hand 'em in at once; I'm game for 'em. I'm holler enough to be ready to fill up with nigh a'most anythin'.—Hello! Air you hungry?'

This query was addressed to the dog, who finding himself in safety, had at first sat down to bark in comfort; and now seeing the bundle open, crossed over to the traveller with something of the air of a friend dropping in casually to dine. The man broke off a small—a very small piece of bread and offered it. The terrier walked round it, sniffed at it, winked at it with both eyes, then gravely seating himself in the dust, yawned and looked into space with a mighty pretence of not having seen the proffered bread at all, and of being there quite accidentally for some altogether different end.

'No,' said the traveller, deliberately masticating

the rejected morsel; 'you air *not* hungry. When you air, you'll know better'n turn your nose up at dry bread. An' I'll tell you what 'tis, my ca-nine friend, I hope you never may be. Hunger's a real cruel thing for man or beast to suffer—a real cruel thing it is. If you'd the brains to have the heart, you'd be nigh on cryin' to see a citizen of the Great Republic takin' his last meal with a hunderd an' fifty mile afore him, an' blank starvation at the end of it.—Goin', are you? Wal, good-bye. I s'pose my conversation's kind o' dull to a prosperous dog like you.'

The dog saw what the traveller did not see; he saw his master rise noiselessly behind the hedge and slouch along beside it with wary footsteps; and he followed. The young man shook a warning finger at the terrier; and he, comprehending the sign, went quietly in his master's train. By-and-by the young man, being out of earshot of the lame traveller, began to run; and the dog still kept at his heels. Reaching a stile, the master halted there, and kneeling in the grass, beckoned the dog to him. Then detaching a joint of the fishing-rod from the bundle, he motioned the terrier to take it. 'Home, at once!' he said with a warning finger raised once more. With a wag of the tail, the dog took the slender joint between his teeth and trotted gravely towards a lofty white house which stood upon the slope of a hill a mile away. The dog's master sat down upon the stile, and drawing from his pocket a well-stocked cigar-case, he began to smoke. The cigar-case bore a monogram and a crest; and its owner, though plainly attired, looked like an English gentleman from head to heel. His broad shoulders and deep chest gave indications of physical strength and soundness, and his tanned cheeks were ruddy with health. His face was not remarkably handsome, but he was good-looking enough to pass in a crowd; and his bronzed hand swept now and again over a moustache which gave character and manliness to his countenance. The carriage of his head was perhaps a trifle haughty; but he was an only son, and was accustomed to having his own way. That circumstance may have helped to decide the fashion in which he should carry his head on his shoulders. His figure was almost perfect in its combination of strength and grace; and there was that exquisitely clean and healthy look about him which is the especial attribute of the well-bred British man. When the lame traveller, having finished his scanty meal, came limping down the lane with the lean bundle still over his shoulder, he caught sight of the figure a hundred yards away, and scanned him with keen eyes.

'Old country,' he said to himself voicelessly, 'boasts of a likely-lookin' sort o' people. Clean grit all through, some on 'em, an' lots of it, but no lumber. Now, that's a lord o' the sile, I reckon. Looks born to order other folks around while he slides along easy.' Then he caught sight of the cigar. 'Guess, I'll come on him for a light,' he said; and his lank hand sought the pocket in which his pipe reposed. 'No,' he continued in an irresolute voice; 'can't ventur' on that bit o' consolation yet. I shall ha' to keep that for supper; but I may as well get a light, though.' He limped on with one gaunt arm jerking at his side, and with his scanty bundle

held on the crooked stick over his shoulder. 'No,' he said again as he drew nearer; 'I can't afford to have the weight of a fusee on my mind for the next three hours; I should have it cryin' out at me every step, an' I should be fightin' not to smoke all the way. I've got to keep that pipe for supper. It's all the supper I shall have, an' that's a fact.' Drawing near the stranger, he flung him a 'Good afternoon,' which sounded discourteous and aggressive.

'Good afternoon,' said the stranger in a round cheery voice. 'Going on to Brierham?'

'If that's the next town on this road,' said the lame traveller, 'I'm goin' there.'

'Yes,' said the young Englishman, rising and walking into the dusty road; 'it's the next town.'

'Can you tell me how fur 'tis?' asked the traveller.

'About nine miles,' returned the other. 'If you are willing to earn a few shillings, I will ask you to take a note for me.'

'I guess,' responded the lame traveller, 'I'm game to do a good deal for half a dollar.'

'Hard-up?' asked the young man carelessly.

It was not insolently meant; but the other fired at it. He cooled again, or restrained himself, and answered: 'I am willin' to sell any service I can render to anybody who can pay me.'

'Wait a minute, then,' said the stranger; and drawing a note-book from his breast-pocket, he wrote a few lines upon one of its pages, pencilling the letters with apparently minute care. Then tearing out the leaf, he folded it, and wrote an address upon it. 'Ask for Mr Valentine Strange at the Manor House. Anybody will direct you. And this will pay you for your trouble.' He drew out a purse as he spoke, and made a feint of being disappointed as he looked into it. 'I've nothing but gold,' he said. 'Well, there you are. You don't earn half a sovereign so easily every day, I suppose?'

The traveller took the coin, and answered simply: 'If you'll say how much of this I am to keep, I'll hand over the balance at the other end.'

'Oh,' said the other carelessly, 'keep the lot.'

'Wal,' said the traveller, pocketing the coin with unchanged visage, 'I s'pose you can afford it. It's the first wind o' good fortune as has blowed my way for many's a day, an' that's a fact. I can't give you a permanent address to write to just at present; but if ever you happen to be in want of a good turn, you've on'y got to find me, an' I'll spend my last dollar to serve you.'

'That's very good of you,' said the young Englishman, with a twinkle in his eyes. 'You're an American, I think?'

'Yes,' said the traveller, drawling on the word; and added 'Sir,' as though that were an after-thought not of respect, but of added affirmation.

'There are not many Americans who think it worth while to try their fortunes in the old country.'

'No,' said the lame traveller with great dryness. 'They air a sensible people, as a rule.'

The other laughed.

'You don't seem to be favourably impressed with England?'

'It's fairish,' said the traveller, 'what there is of it. But I'll say this about your country, mister—it's the wust country in the hull globe to be poor in.'

'Have you been poor in many countries?' asked the gentleman lightly.

'A few,' said the traveller grimly. 'It might be—I don't know as it will be—but it might be satisfactory to you to know'—

'You'll deliver the note, won't you?' said the Englishman, half turning away.

'Wait a minute, mister. It might be satisfactory to you to know that you're the man that's turned my fortune. You might like to know it, if you hear o' me again. An' if ever you get in a real corner, you might do worse than ask Providence to furnish a mo-men'try interview with Hiram Search. That's me. I ain't a lot to look at; but if ever you're cornered, you ask to see me.'

'You are really very good,' said the Englishman with a satire too grave for the other's comprehension.—'You won't forget the note, will you? Good afternoon.'

They parted, and went their separate ways; the Englishman sauntering blithely with rod and well-filled creel; the American limping stolidly under a burden which, pitifully light as it was, seemed almost too heavy for him. A score of times as he went, Hiram Search drew out the half-sovereign from his pocket, and having gazed at it, returned it. A hundred times he felt carefully with thumb and finger, to make sure that it had not been spirited away.

'I'll make a stroke with you, my beauty,' said Hiram, standing still to contemplate the coin; after which he put the half-sovereign back into his pocket, and went on, with one gaunt leg limping and one gaunt arm jerking until again the desire to realise the possession of good fortune came upon him. Then the coin came out once more, and Hiram stood still to admire it. 'It's like the fairy's tent Uncle Josh used to read to us about out of *Arabian Nights*. You kin pack it in a nutshell, an' it'll spread into board an' lodgin' over a hunderd an' fifty mile. Money's a great idea. Saves kerryin' about a house along with you. It's plaster for a sore foot, an' food to your empty stomach, an' comfort all over. I could fight a wagin-load o' such fellers as I was an hour ago. When I think o' that poor creetur' settin' down to his last hunk o' bread a mile or tew back, I feel like a manumitted nigger lookin' at a mean white, an' longin' to kick him out o' pure contempt.'

With this jubilant statement, Hiram put the coin away finally, and jerked along until, bent nearly double with fatigue and pain, he reached the town, and inquired for the Manor House. It was a mile beyond the town, said the man he questioned. Hiram groaned in spirit; but he buckled loyally to his task, and went on. Evening was merging slowly into night; but a street lamp shed its rays upon a stone column beside a gateway, and on the column he read in graven letters, 'The Manor House.' He passed through the gateway into darkness, and walked painfully along a gravelled drive. 'To see how lonely an' re-tired the big folks live in this small island,' said Hiram contemplatively, 'you might think as hull prairies could

be had for askin'.' The drive was nearly a quarter of a mile in length; but the lame traveller went pluckily along it, and at last halted before a grim-looking old house of dark stone. There was not a light visible; and Hiram searched for the bell-handle in some misgiving lest the place should prove empty. The peal he rang sounded solitary and funereal, but it brought an immediate answer. The footman looked down on Hiram Search and his bundle with one glance of swift disdain, and closed the door in his face. Hiram took the bell-handle in his lean fingers and pulled as though he were sounding an alarm of fire.

The footman returned indignant. 'Wotter yer a-makin' that row for?' he demanded.

It sounded like a foreign tongue to the American. Hiram looked, and beheld the scoff and scorn of his own people—a flunkey. He had never before seen one so near at hand. The footman was a gorgeous creature, crimson plush and silk stocking as to his lower man, sky-blue and white powdered in his higher parts. He planted a trim shoe, with a bulbous ankle and a slim calf above it, on the doorstep, and surveyed the poor traveller with an ineffable lordly disdain.

'When you re-quire to know what a man wants,' said Hiram gravely, 'it's a roundabout way to shut the door on him. You should find out first, an' shut the door after.'

'I can't stend 'eah all night,' returned the footman with such an assumption of the fine-gentleman accent as he could compass. 'Wottah yah want?'

'Young man,' said Hiram severely, 'your clothes air tew many for you. You are not Lord-Justice an' Chief Gold-stick in Waitin'—yet.'

'Wotter yer want?' cried the footman, angrily relapsing into the tone of his native Hammer-smith.

'I dew not want a po-lite male help,' returned Hiram with aggravating slowness of nasal delivery; 'an' when I dew—if ever I dew—this is not the store I shall apply at.'—The footman gazed into the darkness over Hiram's head, and stood there as if impervious to the sharpest shaft of satire.—'Take that in to your master, you—you gilded menial!' quoth the lame traveller, as he produced the note.

'Hany hanswer?' asked the gilded menial with sublime contempt. He hoped inwardly that this queer person might be a begging letter-writer, and that it might be his own happy lot to see him off the premises.

'Ask your master, you po-maytum'd slave!' returned the messenger. Hiram's republican gorge arose at the mere notion of a flunkey. He knew that there was no great probability of an answer being intrusted to his keeping; but it was something for the free citizen of an enlightened republic to triumph over this remnant of the enslaved ages in a darkened monarchical realm, even so far as to make him come to the door again.

'Wait there,' said the footman in his lordliest tones. He made as if to close the door; but the lame traveller thrust in his bundle.

'Shut that door again afore you've done my arrand, you poor clothes-hoss,' said Hiram, 'an' I'll ring the bell off the handle.'

'Hoskins,' said a voice from the hall, 'what's the matter there?'

'Pusson with a note, sir,' said the footman, with a sudden change of tone.

Hiram looked round the figure of the footman, and saw standing in the hall a gentleman who carried a billiard cue in his hand. He had discarded coat and waistcoat, and stood in a spotless white shirt, with one brilliant stud sparkling in the breast of it. Close-cut, well-groomed hair, with a reddish tinge in it; eyebrows and moustache a shade darker; forehead high and smooth; outline of the face an almost perfect oval. Eyes large, dark-gray, and luminous. Nose, mouth, and chin a trifle womanish, but finely modelled. These details the lame traveller's hawk-like eyes took in at a single glance.

'Gentleman,' said Hiram to himself. 'British breed. Strength, delicacy, an' stayin' power.' These criticisms related to physique only. Hiram made no pretence to an ability to read character in that off-hand fashion; but he was an intense and therefore a ready admirer of British physical development.

'Pusson with a note, sir,' said the footman.

'For whom?' asked the gentleman.

'Valentine Strange, Es-quire,' said Hiram from the darkness.

'Come in,' said the gentleman; and Hiram entered, limping and jerking in his gait, dusty and worn out with travel.—'Where is the note? Who sends it?'

'Your po-lite menial has the note,' slinging his bundle to his shoulder again.

The footman had hastily seized a salver and placed the little missive upon it.

The gentleman took the note, opened it, surveying Hiram Search the while, then read it a little slowly and with a puzzled look. Having read it, he glanced at Hiram with an inquiring smile, glanced through the note again, and looked once more at Hiram. The note was in English, but written in Greek characters, and ran thus:

DEAR VAL—I have nothing to say; but I wanted to give the queer fish who carries this something to do to excuse charity. Let me know if you receive it.—Yours, GERARD LUMBY.

'Come this way,' said Valentine Strange; and Hiram, limping and jerking gauntly, followed into a billiard-room. There sat a diminutive man with a bald head, smoking a cigar, which looked too large for him. The diminutive man looked up and glanced from one to the other. Hiram, with his bundle hung on its stick over his shoulder, returned his regard. The diminutive man had a merry face, which looked at once old and young. Either he was not yet old enough to have grown a beard or was clean shaven—a matter not easily decided at a cursory glance. His head shone like a billiard ball, and below the baldness lay the slightest ring of light hair, which he smoothed with his right hand as he surveyed Hiram, and then looked inquiringly at Strange.

'Where did you get this note?' asked the master of the house.

'Somewheer 'bout five hunderd mile back, countin' by a lame man's measure,' responded Hiram. 'You might call it ten.'

'When did you get it?'

'This afternoon,' Hiram answered, 'four hours ago.'

'You look tired,' said his interlocutor.

'Appearances,' returned Hiram, 'air not always deceptive.' His long face was pallid with fatigue and hunger. He could scarcely draw himself upright to assert his manhood.

'Where are you going?'

'London,' he answered briefly.

'Were you paid for bringing this note?' Strange asked.

'I was so,' returned the messenger.

'What are you? Have you a trade?'

'Compositor, Clerk, Auctioneer, Smith, Builder, Cabinet-maker. I ain't partickler.'

'It seems not. You're an American, of course?'

'I am so,' said Hiram.

'Well,' said Strange, regarding him with a comic seriousness, 'this is a very important document indeed. Had it been intrusted to careless hands, I dare scarcely guess what terrible consequences might have come about. You have proved a trusty messenger, and you deserve to be rewarded. There's an extra half-crown for you.'

Hiram solemnly pouched the coin, and spoke in turn. 'Look here, mister. If you don't mind, I want to ask a question. Who wrote that note?'

'Why do you want to know?' asked Strange.

'Wal,' said Hiram, shifting his bundle and lifting his lame foot to ease it, 'so fur as I know, I ain't superstitious, but I dew believe in luck. The man that wrote that note brought the first streak of luck I've had sence I landed in this country. Now, you've widened the streak—not much; but you've widened it, an' I'm thankful for it. From this out, I'm bound to prosper. Things like this don't happen for nothin', I guess. Now, I want to know the name o' the man that did me this good turn. If it's all the same to you, mister, I should like to know it.'

'There you are,' said Strange, laughing mischievously. He laid the note on the edge of the billiard-table, and pointed with his little finger to the signature, which, like the rest of the brief epistle, was in Greek characters. To his surprise, the gaunt Yankee leaning over it evinced no dismay or wonder, but spelled it out with a rugged finger, following it letter by letter.

'Gerard Lumby,' he said quietly to himself, and repeated the name once or twice—'Gerard Lumby. Thank you, mister. I shan't forget.'

'Ali!' said Strange, still smiling, 'you read Greek, do you? Did you master the contents of this important state document by the way?'

'There's your coin, Colonel,' said Hiram, throwing the half-crown on to the green cloth of the table. His sallow features flushed and his keen eyes glittered with anger. He drew himself to his full height, and wheeling round, he walked from the room without a limp. 'Here, you flunkey!' he called out in the hall, 'let me out o' this, d'y'e hear?'

The majestic Hoskins strolled slowly to the door and opened it.

'You an' your master,' said the indignant Hiram, pausing in the doorway, 'air a pair.'

The flunkey smiled, thinking his own wounded honour avenged.

'I was allays inclined to wonder, up till now, how it come about that a man an' a Britisher could bear to have sech a creetur' as a flunkey foolin' round at all. But I guess there's a spice of the flunkey in the Britisher himself, when all's told, an' mebbe that's the reason.'

Hoskins slammed the door upon his heels and retired with dignity. Valentine Strange took up the coin from the billiard-cloth, and threw it away at angry random. It passed through the doorway of the room, struck a door opposite, and rolled with a clear silver tinkle down the mosaic floor of the hall. Strange laughed constrainedly.

'I think,' said the bald-headed man, removing his cigar to make way for the observation—'I think the Yankee scored.'

REMINISCENCES OF SOME SEVERE WINTERS.

THOUGH last winter was a remarkable one, and one of the most austere, in our temperate latitude, within the experience of the present generation, it is far from being unprecedented, even during the present century. Several times during the last eighty or ninety years, we have been snowed up and be-frozen to an extent quite equal to, or even exceeding in severity, the winter of 1880-81, as some of the following reminiscences will show.

In 1837, as some of our readers may perhaps remember, there was an unusually heavy fall of snow over the whole of the United Kingdom, but the effects of which appear to have been most keenly felt in England. In former days, a snow-block was perhaps less inconvenient than at the present time, inasmuch as the travelling public was much more limited; but, on the other hand, those who did venture a journey were considerably more exposed to privations than travellers nowadays. In the early part of the year above named, the mail-coach system was completely deranged; and communication between different parts of the country was for a time at a standstill. About the middle of January, in the midland counties of England, and particularly on the borders of Northampton and Warwick, the snow lay at a great depth. In some parts, the drifts exceeded twenty feet in height; and tracks of roads, or traces of coaches or travellers, were not discernible. The Cambridge coach on its way to the Metropolis on Thursday morning the 20th of January, stuck fast in a hollow part of the road, and remained in that situation, passengers, mails, and all, with the snow drifting overhead, until the following day, when it was released by the aid of fourteen horses. Nor is this a solitary instance. Coaches were, in nearly all parts of the south country, overtaken in a similar manner, and in many cases abandoned in the wreaths. At St Albans, where several coaches were completely engulfed, passengers were under the necessity of fighting their way on foot to the nearest shelter; those of the more stalwart sex carrying the ladies.

A distinguishing feature of the storm of 1837 was the prevalence of a virulent influenza, which raged epidemically in nearly all parts of England

and Scotland. Whole families were attacked; and though the malady was not looked upon as being attended with great danger, not a few cases ended fatally. In London, the conduct of business was impeded by a great number of persons being incapacitated for their every-day occupations; and not only so, but its immediate effects on trade were considerable. Butchers, bakers, and provision merchants, in general complained loudly of a wholesale falling away in customers' appetites. Medical practitioners and apothecaries were, of course, proportionally busy; while hosiers were at their wits' end to meet the demand for flannels and mufflers. Nor did the epidemic confine its ravages to this country; it extended to the continent. In Berlin, forty thousand persons were said to be affected with it; and in France, where the doctors termed it *La Grippe*, its consequences were even more serious than in England.

The north of England and a considerable portion of Scotland were visited during March 1827 by a violent snow-storm. The area over which it extended was covered to a great depth, and the face of the earth, in some of the flat country districts, seemed like a trackless waste. Some hamlets were likened to rabbit-warrens, as the houses were only discernible by a hole excavated in front of the door. The town of Lanark was for a whole week completely cut off from the outside world, and the inhabitants to a considerable extent from each other. During that time, not a vehicle of any description entered or left the town; while the rare appearance of a fatigued pedestrian from the country only made the effect more dismal. On Sunday the 4th of March, no church door was opened in the burgh.

Mail communication was, as a matter of course, nearly paralysed; yet a vigorous Post-office fought against the elements with indefatigable purpose in the exercise of its great trust. Mail-guards were the heroes of the hour, many of them deservedly so. On a coach becoming imbedded in the snow, it remained for the guard to hurry forward the mail-bags as best he could, which he generally did by floundering forward with them on horseback; or he might, if he could, as was done in some cases, drag them along the surface of the snow. If all means of transit failed, it was his duty to remain with and protect his charge—by no means an unnecessary task in days when the footpad was not an unknown personage. Purves, the guard of the Edinburgh and Dumfries mail, the 'Royal Bruce,' deserves honourable mention. This coach, which set out from Edinburgh accompanied by a chaise, both with full complements of passengers, experienced the dreadful storm of Saturday the 3d of March. At Devine-glen, in Nithsdale, both vehicles were brought to a stand-still by a great wreath, said to be twenty feet deep, with no possibility of either advance or retreat, and the snow drifting with blinding fury. Purves thereupon, at no small risk, carried nearly all the passengers through the snow to a smithy, which fortunately was only three hundred yards distant. Having accomplished this, his next task was to unyoke and save the horses, which he succeeded in doing, with the assistance of a considerable number of men, after three hours of strenuous exertion. Besides the mails, there was a goodly number of valuable packages in the 'coach; and after

having seen to the safety of all lives, Purves determined, notwithstanding the entreaties of the passengers, to return to the vehicle and protect his charge. This he did, taking with him some bread and meal—the only provisions to be had. On the following day, some refreshments of a better nature were taken to him; and he continued faithfully to maintain his post until the coach was dug out four days later.

Quite as unfortunate was 'The Telegraph' in its journey from Glasgow to Ayr on the same day. Having stuck fast a short distance from King's Well, with no possibility of escape, the guard, driver, and outside passengers huddled themselves inside the coach as best they could, and there remained until the following day. One unfortunate passenger, for whom there was no available space in the interior of the conveyance, attempted to make his way to King's Well on one of the horses; but the task was a hopeless one, and the poor man perished in the storm.

The winter of 1819-20 saw a great snow-storm overspread Great Britain and Ireland. So keen had been the frost, that about the beginning of January in the latter year, loaded carts for several days passed over the Clyde at Renfrew, and foot-passengers at Erskine. On Sunday evening the 16th of January, the streets of Edinburgh presented all the appearance of a Canadian storm. Snow fell densely, and was so dry, from the keenness of the atmosphere, that it was driven in great clouds, and accumulated in enormous wreaths at street corners. During the week, on the Glasgow Road, at the village of Corstorphine, it lay at a depth of from eight to ten feet; while in Fife the ground was generally covered to a depth of four feet. So intense was the cold, that, on Tuesday morning the 18th, the great water-pipe at the reservoir on the Castle Hill, Edinburgh, was found to be frozen—a circumstance that had not occurred for thirty years before. In the South, a similar state of things prevailed. The Thames at Woolwich was frozen in several parts to a thickness of five feet; while at Lambeth, it was said that one piece of ice reached a thickness of twelve feet.

Following on such a storm as this, the inevitable thaw, particularly if it came suddenly, would necessarily be as inconvenient for the time as the storm itself. The thaw in some parts of Scotland set in suddenly, and great floods ensued. The Water of Leith, on Monday morning the 24th of January, presented a spectacle truly imposing. Down the valley of the Dean rolled, with majestic fury, a great volume of water, carrying with it huge masses of ice, wood, stones, and other debris. At Bonnington Mills, where the ice had not yet given way, its impetuous course was impeded; and then the dammed-up stream quickly overflowed its banks as far back as Canonmills Distillery; over-spread the gardens at the back of Canonmills village and Logie Green; burst through the wall at the end of Warriston Crescent, and speedily filled the spacious park there.—At Dumfries, so high did the river rise, that some of the lower lying parts more resembled a district of Venice, than of the ancient burgh. In Bridge Street and Brewery Street, where the water was lashing against the windows and oozing through the doors, a gondola would doubtless have been hailed with delight.

The winter of 1820 was in some respects even

exceeded in severity by that of 1814. In January of the last-mentioned year, the snow near Glasgow lay level with the tops of the hedges, and several coaches, caught in snow-wreaths, had to be abandoned. So intense had been the frost, that, on Friday the 21st, several loaded wagons, each weighing thirty-two hundredweight, crossed the Clyde at Dalmarnock Ford. At Kelso, a number of persons availed themselves of this state of things to indulge in a species of diversion which has only been practised on rare occasions. Some of the respectable inhabitants of the town decided to celebrate the reign of Jack Frost by holding a dinner on the ice; and instructions were accordingly given to the jolly host of the *Queen's Head* to provide a feast on the middle of the river Tweed. A commodious pavilion, comfortably heated with stoves, having been erected midway in the river, a hot and sumptuous dinner was served therein to between forty and fifty persons. On the cloth being removed, the chairman gave 'King George,' which was drunk with three times three; and among other toasts and sentiments that followed, were—'Lord Wellington and our gallant armies in France;' 'General Frost, who so signally fought last winter for the deliverers of Europe, and who supports the present company;' and 'Both sides of the Tweed, and God preserve us in the middle.' The company were much pleased to have with them an old inhabitant who had been present at a similar entertainment, held at the same place, during the memorable winter of 1740, when part of an ox was roasted on the ice.

In the course of the winter of 1814, not only was the list of persons who perished in the snow a painfully long one, but many animals were lost, particularly sheep. There were, however, some remarkable instances of the latter being rescued, after a protracted entombment. One belonging to a gentleman in the south of Scotland, was rescued after having been buried for six weeks. It was not much the worse for its imprisonment; for, after a little stumbling, it was able to walk home before the shepherd, and by-and-by, was as strong as the rest of the flock. On the 22d of February, a sheep belonging to a farmer in Berwickshire was dug out, after having been for fourteen days entombed in the snow. Instances might be multiplied of animals having existed thus for a considerable period in a state of semitortidity, when protected from the frost by a substantial covering of snow.

Neither are instances wanting of the almost miraculous preservation of human beings when buried in a drift-wreath. Few more remarkable than the following will be found, which occurred at the village of Impington, about three miles from Cambridge. On the 2d of February 1799, Mrs Elizabeth Woodcock, a respectable resident of the village, on returning home from market, was overtaken by snow-drift. Lying down beside a hedge, she was completely enveloped, and remained there until the 10th of the month—a period of eight days and eight nights. During the interval, one of the villagers is said to have dreamed, on three different occasions, that a hare was to be found at a particular spot at the roadside near the village. Immediately after the last occasion, he resolved to go and see; and on doing so, he discovered a handkerchief in a hole in the snow; and on further search, to his amazement, Mrs Woodcock. She was conveyed, in the

full possession of her faculties, to her family and friends, who had given her up for lost. She said she had a distinct recollection of hearing the village bells chiming for the church service, on the day after that on which she was inwrapped in what she believed was to be her winding-sheet; and equally good was her hearing on the morning of the day on which she was rescued, when, on the bells again chiming, she recognised them. About thirty or forty years ago, a monument commemorative of the event, with an inscription stating the particulars, was erected on the spot; and persons are said to be still living in the village who remember having seen Mrs Woodcock.

The great storm of 1795 lasted for fifty-one days; and on a simultaneous appeal being made to the 'Oldest Inhabitant' in all parts of the country, that venerable personage positively failed to conjure up from memory a parallel winter, unless, indeed, it were that of 1740. On the Thames, there was a general suspension of commerce, and it was said there were no fewer than three hundred vessels fast in the ice. During the months of January and February, a great many persons perished in the snow or from the cold—not a few in circumstances exceedingly painful. But there was also a very considerable catalogue of gallant rescues. We select the following two examples of deliverance effected by the agency of the dumb animal that has always been among the best friends of man. One day towards the end of January, a Norfolk farmer, while returning home from the town of Norwich, became so benumbed by the cold, that he was compelled to lie down in the snow. He would undoubtedly have perished but for his dog, which, with a pathetic sagacity, stretched its body across its master's breast, and so protected his lungs from the cold. In this position it lay for several hours, until at length, by continued barking and howling, it attracted attention and relief.

An almost equal power of discernment was displayed in the following instance. About the same period, while a farmer near Huntlycote was, with the assistance of his shepherd, relieving some sheep from the snow-drift at the side of a bank, a large quantity of snow shot down in the form of an avalanche from the higher ground, and enveloped the two men. There they must have remained, and perhaps perished, but for the sagacity of their two faithful collies. The dogs at once scampered home, and by their excited demeanour and continuous howling, aroused the suspicions of the women, whom they by-and-by induced to follow them to the spot where their masters were buried. Arrived there, the animals commenced to scrape the snow; and the situation having thus been made plain, the men were dug out, after a confinement of six hours, of which, however, they were not much the worse.

Whether our climate has been really and substantially ameliorated, is a question which we do not propose to consider here; but certain it is that our fathers and grandfathers have told us that in their youth there were snow-storms and severe winters terribly worthy of the names, and the like of which have seldom, if ever, been experienced in recent times. It would appear that those casualties and fatal occurrences which are the invariable concomitants of austere seasons, were more frequent a century ago than now; while

and Scotland. Whole families were attacked; and though the malady was not looked upon as being attended with great danger, not a few cases ended fatally. In London, the conduct of business was impeded by a great number of persons being incapacitated for their every-day occupations; and not only so, but its immediate effects on trade were considerable. Butchers, bakers, and provision merchants, in general complained loudly of a wholesale falling away in customers' appetites. He would undoubtedly have perished but for his dog, which, with a pathetic sagacity, stretched its body across its master's breast, and so protected his lungs from the cold. In this position it lay for several hours, until at length, by continued barking and howling, it attracted attention and relief.

An almost equal power of discernment was displayed in the following instance. About the same period, while a farmer near Huntlycote was, with the assistance of his shepherd, relieving some sheep from the snow-drift at the side of a bank, a large quantity of snow shot down in the form of an avalanche from the higher ground, and enveloped the two men. There they must have remained, and perhaps perished, but for the sagacity of their two faithful collies. The dogs at once scampered home, and by their excited demeanour and continuous howling, aroused the suspicions of the women, whom they by-and-by induced to follow them to the spot where their masters were buried. Arrived there, the animals commenced to scrape the snow; and the situation having thus been made plain, the men were dug out, after a confinement of six hours, of which, however, they were not much the worse.

Whether our climate has been really and substantially ameliorated, is a question which we do not propose to consider here; but certain it is that our fathers and grandfathers have told us that in their youth there were snow-storms and severe winters terribly worthy of the names, and the like of which have seldom, if ever, been experienced in recent times. It would appear that those casualties and fatal occurrences which are the invariable concomitants of austere seasons, were more frequent a century ago than now; while

the hardships entailed on the poor were much more distressing. It is highly pleasing, however, to find a thread of philanthropy running a continuous course throughout the narrative of these inclement seasons. The nobility and gentry of eighty or a hundred years ago would seem to have vied with each other in acts of humanity towards the suffering poor. In hard times, nearly all the towns and hamlets of Scotland were recipients, in a greater or less degree, of good round sums, to be distributed among the needy, in coals, meal, or other necessities to comfort and existence. But it must be kept in view that in those days the donors lived more at home than they do now; and in many respects, the two extremities of the social scale were more in sympathy with each other.

ANCIENT EUROPEAN SAVAGES.

IN TWO PARTS.—PART I.

Not very many years ago, it would have drawn a smile of contemptuous incredulity from people of education to have suggested even the possibility of a race of savages having once inhabited all continental Europe and Great Britain. Our earliest informant on the condition of the northern nations some sixty years before Christ was Cæsar, and he certainly describes no savages; though, in comparison with the advanced civilisation of Rome, they were no doubt, as he styled them, 'barbarians' in the sense which the word has acquired amongst us. They were acquainted with the use of metals, and had attained to a knowledge of the arts of life far superior to anything which we associate in our minds with the lower races. Moreover, before five centuries had elapsed, these same barbarians had made great progress in the destruction of that empire which vainly expended its strength against them, and had founded a new one, whose civilising power was destined to become the most remarkable in the history of the world. They may have quaffed the blood of the enemy from a cup made of a human skull, and stained themselves blue with 'woad;' but their social organisation and laws—the heritage of the race to this day—must have been the result of centuries of an intellectual growth nowhere approached by savages. Even when Cæsar hurled his armoured legions against men who fought almost naked, the latter could have taught the corrupt capital of that vast empire many a lesson in the domestic virtues and in moral conduct.

Such were the inhabitants of Northern Europe at the moment when history first introduces them to us. The climate was substantially the same as that prevailing now, and the animals and vegetation have undergone little change since that time. In their traditions, there was no sign of any race anterior to themselves, nor of the strange animals and unfamiliar vegetation which we now know to have existed ages before, from the shores of the Arctic Ocean almost to the Mediterranean.

The discovery so far back as 1797 of flint implements associated with remains of fossil elephants, &c., in gravel beds at Hoxne, in Suffolk, raised at least a strong presumption that a race unknown to history had occupied the European area. Up to forty years ago, similar discoveries in limestone caverns, fissures, and rock shelters had strengthened this position greatly; but to those only who were capable of estimating the evidence at its true value, did it amount to conviction. The facts were repeatedly denied, though the remains were publicly exhibited in attestation; and the most absurd theories were formed to explain them away. The stone implements were 'thunderbolts;' the colossal bones were those of the giants of Scandinavian mythology; and so forth! But the comparative anatomists proved beyond question the animal ownership of the huge bones; and the so-called 'thunderbolts' proclaimed their origin as the work of man, by their exact likeness to the stone weapons manufactured by existing savages. The science of Prehistoric Archæology may then be said to have made a fair start. It was known what to look for, and in what places that which was sought was likely to be found. Many workers entered the field; and a mass of valuable and interesting data rapidly accumulated, from which it became possible to reproduce the substantial features of that rude and primitive life, and to picture the struggles of an ancient people to maintain themselves against ferocious animals with the most primitive weapons, in a climate almost arctic in severity.

Although, in view of the large area to be examined, a very small portion only of the earth's surface has been explored, the students of anthropology and archæology have arrived at definite and well-founded conclusions with regard to the antiquity of man everywhere. In the neighbourhood of London, for instance, where investigation has been prosecuted with the utmost industry and persistence, numbers of flint implements have been turned up from the gravels in various localities. Among these are many examples so abraded by rolling that they would seem to have been subjected to the action of a river before being deposited in their present position; while others are stained by colouring matter, usually iron, which does not occur in the beds where they are found. Hence, in all probability they have been re-deposited from still older beds. Similar implements have been discovered in a number of places both in the United Kingdom and on the continent, indicative not only of man's presence, but of a rude stage of civilisation spread over a very wide field.

Wherever the great centres of modern civilisation have been explored, the fact is revealed of the universal prevalence of a 'stone age' anterior to that of metal. The Pyramid builders little suspected that there lay, deep beneath

the foundations of their cities, weapons fabricated by a people who raised neither monuments nor permanent dwellings. How astonished would have been the Homeric heroes, 'the mail-clad Argives,' in all their splendid panoply of war, could they have known what Dr Schliemann—digging there to unearth the far-famed city of Troy—discovered on the very spot where Greeks and Trojans met in that memorable struggle! Troy, itself founded on the ruins of a still more ancient city, is the product of modern times, in comparison with the unwritten history disclosed in the stone weapons which the great German archæologist dug up from beneath those blackened ruins. So far distant is Homer from our time, that we have no certain knowledge of him. Allowing, however, that he wrote ten centuries before the Christian era, he nevertheless knew nothing of the men who fought with stone battle-axes ages prior to his well-armed Greeks, with their metal shields, their swords and spears, their engines of war. Who among the denizens of the 'cloud-capped towers' of Ilium could have pointed to even a faint tradition of that primitive people who once had occupied the very site where then stood the proud city?

Not only in the Old but in the New World is there abundance of evidence, all pointing to the habitation of the earth by man at a period so remote that the oldest records of mankind engraven upon stone are silent about him. It was reserved for the penetrating intelligence of the nineteenth century to discover and interpret signs which had escaped the attention of all former generations.

The most important relics have hitherto been found in natural caverns in limestone rocks—a formation peculiarly liable to be excavated by running water. These occur in various parts of the world, and owing to the shelter they afford, have often been selected as abodes by man and animals. In a cold climate, the cavern is a ready-made house to which man would resort from absolute necessity, if he had not attained the art of building. Consequently, we find that mostly all the known European caves have been inhabited from time to time down to a comparatively recent date. The Briton or Gaul fleeing from his Roman pursuer, and the proscribed Royalist hiding from Cromwell's relentless soldiers, has each in turn sought a caverned refuge; or the smuggler has stored away his brandy kegs where the cave-lion once made his lair. But little did these cave-seekers dream of the wonderful story that could be told by the brown earth beneath their feet, where lay entombed the bones and tools which belonged to a race who had seen elephants with enormous tusks browsing in English valleys, and the rhinoceros wallowing in the mud of the Thames; and whose ears must have been greeted by the roaring of the mighty sabretoothed lion.

Whatever scepticism may have existed in the public mind with regard to the existence of man in prehistoric times, it was completely dispelled by the investigations, in 1865, of Messrs Christy

and Lartet and Dr Falconer into the contents of the caverns in the valley of the river Vézère, in the department of the Dordogne, France; and it may be well to explain here, to those who are not familiar with the subject, the general character of these and similar limestone caverns. The rock, having been excavated probably by the agency of water, presents an irregular series of chambers, containing earth washed in by rain or river, fragments of rock detached from the roof, and a crystalline kind of limestone called stalagmite, which often forms a compact flooring, from a few inches to several feet thick, so hard, that it can only be broken up by pickaxes or blasted by gunpowder. Small fissures in the mass of rock overhead give access to water, which contains carbonic acid, derived from the atmosphere, and from decomposing vegetable matter in the surface soil. The carbonic acid possessing the property of dissolving limestone, the water carries with it minute quantities of carbonate of lime; and as it trickles or drips through the roof and falls upon the floor of the cave, leaves, after evaporation, a deposit which constitutes the stalagmite. This is usually an extremely slow process; so that a few inches may represent centuries. It will therefore be obvious that whatever may be found *beneath* an unbroken flooring of such material, has lain there undisturbed ever since its introduction into the cavern. And this is precisely the situation in which we find the bones of man, and animals which no longer exist, together with the flint and horn weapons used by the savage hunters.

At intervals of some miles along the course of the Vézère are numerous caverns, at heights varying from eighty feet to a short distance above the present flood-mark of the river. All of them contain a dark soil, with fragments of fresh-water shells and plants, and other characteristics of river mud, so that at one time the waters of the Vézère must have flowed into them during the autumn and winter floods. We thus arrive at the conclusion, that the river has cut its way through the valley of limestone rock to a depth of eighty feet, since the highest of the caverns was inhabited by a race of human beings whose remains lie in the earthy deposit. There are very distinct evidences of the occupation of this valley by people in progressive stages of advancement, if we interpret the facts correctly. Assuming, as the excavation of the valley seems to warrant, that the highest of the caves represent tenancy by the earliest inhabitants, those nearer to the present river level will indicate the succession in time of their various occupants.

In correspondence with this view, based on careful examination of all the circumstances, it is possible to divide the caverns into four groups, from highest level downwards: No. 1, Le Moustier; No. 2, Cromagnon; No. 3, Upper Laugerie and Gorge d'Enfer; No. 4, Lower Laugerie, Les Eyzies, and La Madeleine. In number one, we have only the rudest and most massive stone weapons, designed for the largest game. In number two, the weapons are better made, and there are light horn dart points, with which small quadrupeds and birds may have been killed. Further improvement is seen in number three, where the admirably proportioned flint arrow and lance points, and highly finished darts

and needles manufactured from reindeer horn, betoken not only more skillful workmanship, but greater proficiency in the arts of life. In number four, the increasing preponderance of bone weapons over those formed of stone, the finely worked and barbed lance and harpoon points, indicate a race in whom intelligence had taken the place of mere force; and the struggle for existence had consequently become less severe. Only in the last two groups do we find any fish-bones. These are very numerous; they are exclusively those of the salmon, and large fish such as would be easily secured by the harpoon in a manner akin to 'leistering' in the present day. But the inhabitants of the fourth group have left us still more convincing proof of their superiority to their predecessors, in the figures of animals which they carved out of solid reindeer horn and mammoth ivory, or cut with their flint knives on portions of those materials. Besides other animals, there are the mammoth, reindeer, glutton, auroch, horse, ibex, fishes, &c.; and last, but by no means least, a sculptured bust of a woman has been found, and a picture of another standing beside a horse, cut in reindeer horn—probably amongst the oldest representations of the human form in existence. The bold and vigorous execution of these is such as to command our admiration.

Keen observers of wild animals were these savage huntsmen; for see how accurately they have delineated the uncouth body, great carved tusks, and long mane of the mammoth, on a slab of ivory from his own tusk; just as we know the gigantic animal from the specimens, with the flesh still adherent, which have been washed out of their frozen tomb in Siberia. Not less faithfully have these huntsmen exhibited the graceful forms of four or five reindeer, seemingly engaged in mortal combat, cut neatly with a sharp flint point upon a slab of slate. All the figures are in profile, without the least attempt at perspective, exactly in the usual manner of savages of our own time, and like the tentative efforts of our own children. No doubt the carvings of mammoth and reindeer are more ambitious flights of genius, though they are far inferior in execution to the incised figures. This, however, might have been a consequence of the object for which they were designed, namely, to serve as dagger handles, the remainder of the horn being worked into a sharp polished point.

Were there nothing in these caverns, besides these primitive works of art, to assure us of the coexistence of their inhabitants with the animals they figured, and with which, on their hunting excursions, they must have become thoroughly familiar, the evidence would have been conclusive enough; but here are also bones and teeth of those animals mingled with the charcoal and general refuse of many a feast.

It would be impossible to enumerate within the limits of these papers all the articles of workmanship found in these ancient abodes of the mammoth hunters, indicative of their rude life and surroundings; but it would be scarcely chivalrous to omit some notice of the feminine members of the community, who even in those prehistoric times delighted in articles of personal adornment. Thus, the daughters of the chiefs arrayed themselves in necklaces made of animals'

teeth, bored and strung upon sinews or strips of skin; and the art of tattooing, which in the nineteenth century is represented among our fair dames by the rouge-box and brush, was practised by the ladies of the Vézère. Those little pieces of red ochre, whereon the marks of the flint knife may still be seen, were doubtless scraped to form a paste, with which the beauties of that far-distant time tinged their cheeks and lips, in preparation for dance, banquet, or nuptial ceremony.

The men naturally passed most of their time in the chase. That valuable animal the reindeer—in all probability domesticated—furnished almost everything requisite for their comfort. Its skin became their clothing, secured with strips of hide or sinews, drawn through the material with needles made from splinters of bone, and drilled with a sharp flint point. The antlers of the deer were carefully cut into lengths, the 'snags' or points being worked into dart, arrow, and harpoon heads, fixed in cleft sticks and bound with sinews. The 'beam,' or thick, straight part of the horn, was turned to account in various ways. Pieces several inches in length are ornamented with figures of animals, and drilled, possibly for suspension round the neck; and these are believed to have been insignia of rank or *badges* of command. There is an interesting little relic, probably belonging to a chief, forming a whistle, a toe-bone of the reindeer perforated by a hole which goes to the middle of the bone; and upon this primitive instrument one can at this day reproduce the shrill sound with which the ancient huntsman was doubtless wont to call his followers to his side.

The life of these later cave-dwellers was more refined than that of the Moustier savages, who employed only massive stone weapons, and supplied their feasts chiefly with the flesh of the horse. To their slovenly and uncleanly habits we owe our insight into their domestic arrangements. As the long bones of the animals were cracked for the purpose of extracting the marrow, they were thrown aside anywhere on the floor of the cave, among the dirt and ashes accumulated from their fireplaces; and thus weapons and implements became lost in the general refuse.

Among people who dwell in a fertile valley—its fertility being indicated by the abundance of herbivorous game—we should expect at least some rude knowledge of agriculture; but there are neither mortars for pounding grain—with one extremely doubtful exception—nor any implement which could be used in tilling the earth. They were equally ignorant of the art of making pottery or of spinning; and their stone weapons remained unpolished, just as they were hewn out of the parent material.

The actual human remains consist of some half-dozen individuals of different ages, whose bones represent a well-developed race, strong and tall, not at all inferior in anatomical character to good examples of existing savages. One female skull has over the forehead a terrible fracture, clean cut with a massive stone axe, which must have penetrated deep into the brain. What ages have elapsed since that cowardly slaughter of a woman took place! Though the mammoth had passed utterly out of existence before the dawn of history, there

risers up before us now, so long after that fatal blow was dealt, the silent witness to passions which in all subsequent ages have still prevailed.

In any attempt we may make to estimate the lapse of time between the occupation of the Moustier and Madeleine caverns, we are restricted to the physical data alone; for the life of man was passed in that valley during a geological age with animals which are now extinct. Whatever period may be assigned to the action of the river while excavating the valley to so great a depth, from the Moustier to the Madeleine, as to leave even the latter beyond the reach of floods, it must be a matter of speculation resting on the rate of wear and tear suffered by the limestone rock, of which we possess no actual measure. Many geologists would consider a quarter of an inch annually an extravagantly large estimate of denudation; which, however, if we accepted it, would give the Moustier people an antiquity of more than three thousand eight hundred years. Be this as it may, our conception of the lapse of time may be brought to a closer comparison with human chronology in the case of the most recent cave, the Madeleine. The mammoth, as we have seen, was still a common animal in the south of France, together with the reindeer, when man dwelt in that cavern. Since this last of the series of caves was inhabited, the river has cut its channel only a few feet deeper, and those few feet evidently represent the time which is covered by authentic history; for we find no mention of the mammoth in any chronology, however far-reaching it may claim to be, though that remarkable animal was widely distributed over Europe and Asia; and the presumption amounts to a certainty that it became extinct in Southern Europe long before it disappeared from Northern Asia. Yet not the faintest trace of it appears in mythology or tradition, where, assuredly, its memory would have been preserved, had not an immense interval separated the mammoth period from the utmost confines of that epoch when man began to record events. The earliest history of Southern Europe is, in fact, inscribed upon those pieces of ivory, slate, and horn, by a race of savages who erected no monuments, built no houses, and had not even the most primitive conception of written language. In the era of the Madeleine cave-dwellers, the mammoth was still plentiful; the reindeer and glutton had not retreated to the Arctic regions; man had not learned to polish his stone weapons, and was ignorant of the art of making the roughest pottery.

We may be unable to count the passage of time by centuries; but those few feet of excavating work done by the river since it last flooded the cave, present a chronological record in which the extinction of the mammoth would be by no means the earliest event. But from this cave, so comparatively recently invaded by the river, we must look up to the Moustier, so far above it, and endeavour to realise the vast interval of time represented by the gradual erosion of that limestone rock by the Vézère to a depth of eighty feet, subsequent to the last deposit of river-mud upon the *human* and animal relics which it contained. Whatever duration we may assign to this, it is beyond question that a race

of men, who must rank as savages, dwelt in the valley throughout the whole period embraced by this great change in its physical formation, and while the animal life of the country differed totally from that which prevailed in even the earliest historical times.

CONCERNING SEA STORIES FOR THE YOUNG.

AN innate love of adventure and enterprise is the peculiar characteristic of the Englishman; his intimacy from childhood with the sea and all that relates to it, being well calculated to foster and develop this feeling. It is thus hardly to be wondered at that so large a proportion of the rising generation, hearing and reading, as they do, so much of the pleasures and romance of the sea, should be led to direct their aspirations thitherward. The great mysterious ocean possesses for most boys a peculiar and irresistible charm, which fills them with an enthusiasm on all things nautical, that nothing short of actual experience can damp. This enthusiasm would be very proper and commendable were it due to a just conception of the subject, and free from those misleading notions which invariably accompany it—mainly attributable to an implicit reliance on the statements of story-books. A boy dwells with delight on the fictions formed from the rude and imperfect ideas of popular tale-writers, who, by distorting facts and manufacturing adventure, invest 'life on the ocean wave' with a romance as absurd as it is artificial.

The writer who draws inaccurate pictures of ship-life, so long as he provides plenty of highly coloured adventures, seems to enjoy a strange immunity from adverse criticism, and is left to indulge unchallenged in the wildest vagaries of his imagination; indeed, the more exaggerated and fanciful his romances, the better they appear to be received. Fallacies and one-sided statements may be largely dealt in; the betrayal of ignorance, which results from the blundering use of technicalities and manifest inability to reproduce the sailor's manners of speech and modes of thought, is unnoticed in the extravagance of the narrative in which it occurs. In fact, a great deal of what passes for sound and pure literature, proves, when judged impartially, to be little better than pure trash. The absurd practice, for instance, which prevails of crowding more surprising episodes into a single chapter than fall to the lot of a real sailor in a lifetime, is far from satisfactory, and decidedly reprehensible. The works which emanate from the worthiest sources often offend most in this respect, the best work being naturally expected from the most valued writer; as a rule, however, the more he is esteemed, the more an author strives to fill his books with revolting scenes and bloodthirsty rencounters, the morbid character of which cannot be sufficiently decried; and their inventor, by overstepping the wide bounds accorded to writers of his class, is really entitled to no higher reputation than that of a successful adventure-monger.

The position occupied by story-writers, as recognised caterers for the young, is one of great responsibility, and the utmost care should be exercised in avoiding its abuse and in discharging faithfully

the trust pertaining to it. A reform in our juvenile literature is urgently needed. In place of a style so ultra-romantic as that which prevails, we want one pure, rational, and instructive. As at present, many writers engage to describe the sailor's life who are in no way fitted for the task, and whose experience has never been gained but in the unoperative capacity of passenger or amateur. The entertaining works of such practical men as Marryat and Chamier, though far from being faithful representations of life aboard ship, are at least free from absolute misrepresentation, and are not characterised by the free-and-easy treatment the subject receives at the hands of our present authors. The injurious and unhealthy effect of many of our story-books upon the youthful mind is unquestionable.

The deluded youngster with his head full of adventure and sight-seeing in foreign lands, invariably thinks of becoming a sailor. He longs to partake in the deeds of daring of which he reads such glowing accounts; to enjoy life on the 'free, open sea,' where boys are taught to splice, stow sails, mount rigging, listen to yarns, and have a good time generally! But when once actively employed, he soon begins to marvel at the eagerness with which he voluntarily exchanged the comforts of the shore for the miseries of the restless deep. In place of the 'freedom' he seeks, he but too frequently finds a sailor's the most monotonous life imaginable; his only change being the romance to be got out of severe and not unfrequently dangerous labour.

It will be interesting to touch upon some of the chief points regarding which erroneous notions prevail, and which uninstructed book-makers are sedulous in propagating. A popular idea—derived perhaps from seeing sailors when paid off—is that Jack is allowed to take his pleasure ashore, much as he pleases. In reality, he often makes long voyages, and remains, sometimes for weeks, in foreign ports, getting no nearer than a mile or two from the land. The pleasures of the shore are forbidden him, and he must content himself with a distant view of what he has travelled so far to reach. I have known a sailor who had been for two months at Pensacola, Florida, during which time his foot never went over the ship's side. This is no extraordinary case. Boys sometimes get ashore for an hour in the boats, but are expected to stay at the landing-place. If a lad asks leave of an officer, he will probably be told that 'boys come to sea to work, not to go galavantiing ashore.' Liberty for a short time is occasionally granted at the end of a long passage; but this is usually spent in drinking-shops of the worst description, or in other debaucheries, for the beauties of nature soon fail to charm one in whose breast toil and hardship leave little room for sentiment. This is Jack's reward for 'the romance which renders his lot a delightful one.' As a matter of fact, his life is very uneventful; his hardships severe and prosaic; his pleasures few and depraved.

The dirty, menial jobs to which sailors are put would disgust many who study the clean, ideal tars of the story-books, in which their privations and degradations are glossed over. A few facts may illustrate this. In the first place, sailors wash themselves at comparatively rare intervals, and occasionally three or more in the same water. As

a boy, I have myself stood abaft the windlass, hauling back the chain-cable when thickly plastered with mud and filth; I have balanced myself on the combings of a hatchway, and pushed off baskets of coal as they were hoisted from the hold, being well smothered in dust the while; I have groped about in a dirty lazarette amongst greasy paraffin cans and paint-pots; I have been roused from my warm berth in the middle of the night, after a hard day's toil, to face rain, wind, and cold. Of course, it may be very *romantic* to fumble one's way aloft, wet through, and with hands devoid of feeling; or the calls of duty may lead to the cheerful compliance of the sailor as he bends by the hour over an evil-smelling grease-pot beneath the glare of a tropical sun, or stands about decks encased in stiff and clammy oilskins, picking oakum; though to some people such might rather be suggestive of the discipline to which convicts are subjected. As to sailors' food, one could wish that those who in their writings systematically ignore the subject, had to acquire a sense of its importance by practical experience; for this would do much to convince them of their profound ignorance as to the realities of the hard lot they so complacently extol.

The gaudy frippery a sailor wears in pictures naturally takes a boy's eye. A good seaman, however, needs no ornaments to recommend him; he can maintain his reputation equally well in a red shirt or a tarry frock.

Dana, in his *Two Years before the Mast*, gives a graphic account of his own experiences. He says that no one, however great his ability as an amateur, can have any idea of the drudgery of a nautical life unless he has sailed before the mast and experienced it all himself—a remark in which intelligent men invariably concur. Whatever romance the sea may possess is not to be enhanced by the effusions of outsiders—the best of whom fail in depicting its realities.

There are sailors and sailors, and men of worth and probity are to be met with afloat; but the general effect of many others of their class cannot be considered as altogether conducive to the interests of virtue or morality. In placing a boy aboard ship, a serious consideration should be that to do so is to subject him to an ordeal such as most people would shrink from ashore. The pernicious habits a youth acquires at sea will often act to his serious detriment through life, impairing his moral character to a deplorable extent. He moreover has to contend with these evil influences at a time when he is least able to do so, and when his mind is particularly susceptible to impressions; and he soon finds himself indulging in what he was formerly accustomed to regard with horror.

Practically, the inducements offered are not such as would be likely to incline the prudent to select 'the sea' for a profession, the possible advantages to be gained compensating but inadequately for the years of labour and privation needed for their attainment. The supply of good hands of all ranks in the merchant service generally far exceeds the demand; so much so, that experienced and qualified officers find great difficulty in obtaining berths, and are often to be met with serving in subordinate capacities aboard ship. For a lad of moderate ability, with no prospects and but little

ambition in life, the sea of course is just the thing; but sober experience will infallibly convince him that Dr Johnson hit the mark far nearer than is generally supposed in his famous and much ridiculed saying, that 'no man having contrivance enough to get himself into a prison would go to sea.'

These remarks are the result of actual experience, and it is hoped may prove useful in correcting some false notions respecting life aboard ship, as well as in exposing the meretricious character of the literature provided for juveniles; though here we would take occasion to remark that sea stories are but too often written by compliant authors to order of their publishers, whose aim seems to be to inspire youth with inflated notions of what is termed the romantic side of the picture. The would-be tar will always do well to remember, that though life as a passenger may be pleasant enough, life as a sailor is about the hardest, most thankless, and most menial which a youngster can betake himself to.

THE STORY OF AN OLD COAT.

IN TEN EPISODES.

I.

OF course, there was a time when the coat was new. We shall go farther back even than that, and speak of a period when it had no existence, ere ever the idea took possession of the narrow brain of stingy old James Gelsworthy to invest five pounds of his beloved money in a warm garment, of excellent quality, wherewith to protect his lean carcase from the chills of December. It was December in Cribble Street, Mile End, London, E., as well as in Curzon Street, Mayfair, W. Around the mansions of the wealthy and refined, the cruel, snow-laden blast howled in impotent fury, because it could not shake the massive doors or make the heavy, tightly-fitting windows rattle. When it discovered a stray chink, and contrived to sneak through insidiously, thick curtains barred its way, rich carpets checked it, blazing fires warmed it, an equable temperature absorbed it. The bitter herald of a hard winter had to content itself with screaming viciously outside: 'I'm here, and I won't go away. I'll not leave you for months—for months. I'll bring bronchitis, and inflammation, and death to some of you yet. You shan't escape me, with all your tricks.—Whoof! Puff!'

Then the wealthy and refined smiled confidently in their comfortable apartments. They were prepared for the siege.

Far otherwise was it with the poor and vulgar. They shrank and shivered at the fearful menace, for they knew it was no idle threat. The wind-fiend is their savage enemy. He rejoices at their defenceless condition, their miserable dwellings, their meagre food, their scanty fuel, their insufficient clothing. He comes to kill; he tells them so, as he whistles through their chattering teeth. And he never jokes.

The two rows of rickety tenements known as Cribble Street, Mile End, were let out to the poor and vulgar, in suites, generally comprising one room and a cupboard for each family, irrespective of size. At No. 12, a certain back-

chamber—without a cupboard—was occupied by a man, a wife, and a very wee morsel of humanity. The man was young—only three-and-twenty. His name was Mark Roper. The woman was also young—some nineteen years, perhaps—and she was called Pattie. The wee morsel was still younger, being but three days old, and having no name yet decided upon. But they thought of calling her Pattie also—at least Mark did.

Mark Roper's misfortunes may be summed up with terrible simplicity. He was out of work, and had been so for the past six months, in consequence of a strike, which he had no hand in originating, and with which he totally disagreed. During that time, the neat little cottage at Stratford had been given up; the furniture had disappeared bit by bit, the pawnshop had swallowed up their blankets and counterpanes and warm clothing. At present, the room in Cribble Street, whither they had fled as the cheapest refuge upon earth, except the work-house, contained only two chairs, a table, some articles of crockery, and a mattress on the floor, upon which the young wife lay with her first-born folded lovingly in her arms. The parish doctor had attended her; the parish dispensary had provided medicine; the parish overseer had allowed a little oatmeal and a little port-wine—quite as a favour—to help to get up her strength. So she ought to have been grateful, poor thing! Well, and so she was—grateful to God that her husband loved her, and that her child lived.

'Mark! I can't eat any more now. Finish up this basin of gruel for me while it's hot. Do, dear,' she said coaxingly.

'Not I. I can't abide it—I hate it!' he replied, trying to look nauseated by the very idea.

She raised herself upon one elbow. 'You have had nothing but a saveloy all day, Mark; and if you don't swallow this, I'll not taste another drop you make for me—there!'

'But, dear, I don't like it.'

'It's a story. You do. You shall! Finish it at once, or you'll make me ill talking about it. Go on now.'

He took a few spoonfuls, and pretended to drain the basin; but his wife was too sharp-eyed. She watched him closely, and never relaxed her vigilance until the whole was consumed.

'Now I'm satisfied,' she said, sinking back upon the bolster.—'Where is uncle's letter? What time did he say he would come? Six o'clock, wasn't it?'

'Yes, dear.'

'It's nearly that now—don't you think so? Uncle will do something for us. I'm sure he will, when he sees baby. Look at her. Isn't she an angel! Such large brown eyes, just like yours! She's the image of you, Mark.'

'Your uncle may help you, but not me,' returned Mark gloomily.

'He can't help me without you, love—that's one comfort.'

'He'll try it on, though. I know he'll try it on,' muttered Mark, as he walked to the stove and placed four small knobs of coal, with great care, between the bars. But Pattie did not catch the words, because she was listening to a footstep on the landing outside. Then the door

was opened abruptly, and her uncle, James Gelsworthy, walked into the room.

'Phew! Here's a pigsty!—Hope you're satisfied, girl?' was the old man's greeting to his niece.

'It wasn't a pigsty I took her to first,' broke in Mark, with a flash of indignation.

'You shut up, Mark Roper. You're a fool, and you'll never be anything else,' said Gelsworthy, waving him away contemptuously. 'You married Pattie in spite of me. You ran away with her, and thought you were mighty clever, no doubt. But you shan't have much of my money—you shan't.'

'Uncle! dear uncle!' exclaimed Pattie, 'you must help us—you really must, if only for baby's sake. See what a beauty she is! She smiles at you already.'

'O yes. She's all right. I don't mind her, nor I don't mind you; and I'll act straight by the pair of you, if you do what I want.'

'What is that?'

'Why, look here, Pattie. You must just bring your kid, and come back to live with me like you used to, before you took up with that penniless scamp against my will.'

'And what is he to do?'

'Do! Work—emigrate—go to Australy—go to Canady! Anywhere, so long as he keeps out of our way. I don't mind stumping up the coin to pack him off.'

'You want—to—separate—me—and—Mark?' she inquired very slowly, fixing her eyes sternly upon his face.

'Jes so,' said the old rascal, unabashed by the glance; 'that's it. He can't keep you, and I can. If he likes to hook it, I'll help him to keep hisself; not otherwise.'

'Mark!' cried Pattie, sitting bolt upright upon the mattress, as a burning flush mounted to her thin cheeks, and her trembling finger pointed to the door—'Mark! Turn that man out!'

'You ungrateful, disobedient hussy!' cried Gelsworthy in a passion. 'After all I've done for you! Brought you up from a child, fed, and clothed you, beggar's brat that you were!'

That was the last they ever saw of Uncle Gelsworthy, alive.

II.

I suppose it was the keen north-easter and the driving sleet, in the teeth of which James Gelsworthy had to fight his way home that evening, that made him think what a very threadbare, thin, and comfortless overcoat he had on. And seeing that he had worn it now for some ten winters, and had originally procured it second-hand, his reflections upon the subject are not surprising. Anyhow, the following morning, as he gazed from his window at the unabated inclemency of the weather, and turned his eyes upon the dilapidated garment, hanging from a nail in his bedroom door, he settled it definitely in his mind when he muttered: 'That's what I'll do; I'll have a coat made a-purpose.' So he went to a tailor's, and overhauled his entire stock of piece-goods before he finally hit upon a cloth to his taste. It was a heavy, closely woven, waterproofed, drab-coloured texture, of the best quality; similar to that worn by grooms

in livery in first-class establishments. Then he gave minute instructions as to the shape, the size, the pockets, the buttons, all according to his own notions of what a coat ought to be, without any regard to the 'prevailing fashions,' which the tailor vainly sought to bring under his notice.

When the coat was finished and sent home, he took it back to have an inner lining stitched in, because it was not warm enough; and afterwards, he took it back again to get another lining added, because the first was not strong enough. 'I'm not a-going to pay for a concern that'll wear out in a month,' he explained.

By this time, the tailor and his journeymen were thoroughly sick of that coat, and distinctly refused to make any further additions or alterations whatever.

James Gelsworthy was extremely proud of this new item to his limited wardrobe. He wore it on every possible opportunity. He turned it to account by knocking off fires in February, and keeping it on in the house, for the sake of its more economical warmth. He used it as a second counterpane thrown over his bed at night. This last fact was discovered in March by his landlady, who, not having seen anything of him for two days, became alarmed on the third, and caused the door of his room to be burst open. They found him lying upon his bed, still, and peaceful, and cold, with the favourite coat resting across his limbs. James Gelsworthy was dead.

Over the mantelshelf was a bit of paper, fastened with pins; and upon it a few words written in a shaky but legible hand: 'In case of my death, the furniture and other things belonging to me in my two rooms, I give to my niece **PATTIE ROPER**, 12 Cribble Street, Mile End. There ain't no money, only just enough to bury me. I drew it all out and disposed of it months ago. Signed by me, **JAMES GELS-WORTHY.**'

III.

The 'furniture and things' were a real god-send to Mark and Pattie.

'I'll tell you what we'll do,' said the husband. 'We'll sell the lot. I'll give over looking after odd jobs, and we'll get an assisted passage to Melbourne. I've heard as how there's heaps more chance for a poor man in Australy.'

'I'm willing to go anywhere,' answered Pattie, 'so long as we can only manage to stick together.'

The real and personal estate of old Gelsworthy produced about twenty-five pounds in cash—truly a blessing to the extremely impecunious, as any one will know who ever had the bad fortune to stand in urgent want of a similar amount, and the good fortune to come into it unexpectedly just in the hour of need. The last thing disposed of was the heavy drab overcoat, by private treaty with Mr Isaac Solomons, dealer in anything.

'Well, what do you want for it?' inquired Mr Solomons, after having turned it over several times and regarded it suspiciously, as though it were an infected garment.

'Suppose we say thirty bob?' suggested Mark tentatively.

'There's no harm in saying thirty quid, so long as nobody parts with the coin. No, my man; that there coat ain't no use to me—it's too ugly; and my customers is mostly fashion-able inclined.'

'But it's worth something. Look at the quality!'

'Quality! What's quality nowadays? Nothing. It's cut that's wanted; and there ain't no cut about that there, not a ha'porth.'

'What will you give? Come!'

'If I were to speculate fifteen bob on it, I should lose. Shtrike me! I should lose. No; 'pon my honour, I can't do it!'

'Well, fork over. It's no good to me—it don't fit.'

'It ain't much good to anybody, as I can see,' grumbled the Jew. But for all that, he 'forked over' the fifteen shillings immediately; and the coat became the property of Mr Solomons.

IV.

If you had watched Mr Solomons transacting business in his own shop, you would have wondered how, in the name of all the common laws of finance, he contrived to keep clear of the bankruptcy court. Continually to be selling goods without a profit is generally supposed to bring about very unsatisfactory results. But to part with them at an appalling loss—to have them literally wrenched from you by a greedy public, heartlessly taking advantage of the perpetual slackness of trade—ought to culminate in disaster, speedy and complete. And yet Mr Solomons was not submerged. He contrived in some fashion to keep his head above water, and his shoulders too, in spite of the terrible sacrifices he solemnly professed to make every hour of the day. Perhaps it was but a grim joke, a melancholy satire, when he ticketed the coat acquired from Mark for fifteen shillings, as a 'Tremendous bargain—only two pounds ten shillings.'

'Cost me three pounds—s'help me! if I never speak another word!' he exclaimed to the pale and patient faced young woman who stopped to inspect it.

'It would just fit father nicely,' she said, more to herself than to the Jew. 'And very warm and comfortable; but rather a funny shape, isn't it?'

'Funny shape! Why, it's one of Poole's latest styles, made expressly for a markies, who only wore it three times, and then got tired of it.'

'What is the lowest you will take?'

'Lowest! Well, if I'll touch a farden less than two-ten; not if the Prince of Wales was to go down on his bended knees! Ten bob is enough to drop over one article—rather!'

'I am unable to spare more than two pounds; in fact, I have no more with me. If you cannot accept that, I must go without.'

'Lose a pound! lose a whole pound! Oh, shtrike me, I can't, I can't! What with one and another of you, I shall be driven to the work-house,' cried Mr Solomons pathetically.

'Well, then, good-day, sir. I must try and find something that will do, elsewhere.'

'Don't go. Say two-five—make it as light

as you can for me—say two-five!' he pleaded, seizing her by the hem of her mantle.

'Impossible! I tell you, I have only two pounds.'

Solomons groaned, as in anguish of spirit. 'Give us your money!' he said desperately. 'I must try and make it up some other way, I suppose.'

So the young woman carried away her 'tremendous bargain.'

V.

The father reclined in an arm-chair by the fire, smoking a too highly seasoned brier-root pipe. The daughter sat at a small table by the window, colouring photographs. The father's face was of that shrunken, bloated type, frequently observable in drunkards when their usual supply of alcohol has, for some reason or other, been cut off. His eyes were heavy, expressionless, and leaden; his lower lip was pendulous; his chin was unshaven; his hands were dirty. The daughter was graceful and pretty. Her features were delicate; her complexion pale; her expression sweet, sad, and patient. What did it matter to her gin-swilling parent that she worked for him, tended his wants, nursed him when he was ill, was robbed by him when he was well—struggled, laboured, fought to save him both soul and body! Was it not her duty! He was her father! What did it matter to him that her young life was wrecked, her future rendered hopeless, the one love of her girlhood crushed and blighted by his miserable being! That was a simple necessity. He had brought her up to the idea—to hold him over and above all earthly considerations. Was he not her father! The man who had won her whole heart was noble and worthy; yet she would not marry him. The home she might have made a smiling paradise, would never be formed. Well, the sacrifice was required. Somebody must reap the benefit of her existence; and was he not her father!

'That's a wretched ugly thing, that topcoat,' he grumbled from his easy-chair.

'But it fits you, papa. It is nearly new, and above all, it is thoroughly warm and well made. Those are the principal points, with your liability to rheumatism and gout.'

'That's right—fling my misfortunes in my face! Remind me of my ill-health—of my pain and suffering. It's like you! Don't let me forget them, not on any account.'

'O papa!'

'There, don't begin to cry and whimper. I suppose you mean well, and are a good girl, after all.—Got any money, Madge?'

'Not much,' she faltered, trembling.

'I haven't had a drain worth speaking about for more than a week. You have kept me on short allowance long enough, I think, Madge.'

'But see how ill you have been, papa. You know the doctor said you were to drink scarcely anything.'

'Confound the doctor! What does he know about it? Besides, I'm well again now—well as ever. I really must run out and get three pen'orth. Lend us sixpence, Madge.' He always said 'lend.' By no chance did he ever employ the word 'give' in pecuniary negotiations.

After many promises and much whining and persuasion, he wormed the coveted sixpence from his daughter's slender purse. She knew he had no other money, and that it would be impossible for him to hurt himself on that amount.

'I'll try this overcoat for the first time,' he said, as he put it on. 'Yes; you are right; it is very comfortable, and will last me for ages. I'm not hard to please in matters of dress.'

'Do come back to tea, papa,' were her parting words at the door. 'The weather is very rough, and you are not yet strong enough to stay out late. Do come back to tea.'

'Of course, of course! How far do you think I can travel with sixpence—a paltry sixpence?' he inquired sarcastically.

Between two and three o'clock in the morning, he staggered home drenched with rain, and alas! intoxicated.

Madge was accustomed to the spectacle. In silence and without reproach she led him to his room. Suddenly she missed his coat. It was the old story. He had pawned it. She asked him for the ticket, and found that it also was sold for a mere song. The coat she had worked so hard to pay for!

The poor grief-stricken girl, in the retirement of her own room, threw herself by her bedside, and wept in anguish to that other Father who has promised how, one day, He will surely wipe away all tears from the eyes of those that mourn.

VI.

The individual who bought the 'duplicate' from the drunken old man, probably lost or forgot it altogether, as the coat remained undisturbed in the storeroom of Messrs Bate and Grindwell, pawnbrokers, for over the statutory twelve months. It then became an 'unredeemed pledge,' and as such was labelled, hung up, and dangled before the public as a remarkable proof of the manner in which the disinterested vendors were prepared to forego all personal profit for the general weal. The coat was fingered and thumbed and twitched, and tried on and turned over by some dozens of persons, before one Shortmiles, a cabman, took a fancy to it, and eventually became its owner. And now it began to see service. He wore it hard, did Shortmiles. What with snow and rain and frost and sunshine, its original colour grew many shades deeper. Beer stained it, tobacco-smoke impregnated it, cold pork greased it. It saw a great deal of outdoor life in London, and acquired an impudent, reckless appearance. Its big bone buttons seemed to stare in awful astonishment at those mean persons who presumed to offer its master less than double his legal fare. When Shortmiles tossed a coin in the palm of his hand, and inquired of a victim: 'What d'yer call *this*? What's *this* for?' the big bone buttons seemed ready to burst from their places with surprise, indignation, and reproach. The victim could imagine them saying: 'Ay, what *do* yer call it? What *is* it for? *That's* what *we* want to know. Yah—shabby!'

It happened one day that Shortmiles, feeling himself insulted by the remarks of a rival cabman anent the symmetry and attractiveness of his features individually and collectively, including

a definite opinion respecting the lowest market value of his face if put up to auction by a cheap Jack in the neighbourhood of the New Cut, leaped from his vehicle and challenged his tormentor to personal combat. The gauntlet was at once picked up, and the battle began.

How furiously it raged—how women screamed, 'Shame! why don't you part 'em!' and men replied, 'Get out! why don't you leave 'em alone!'—how a stately policeman, with slow and measured step, approached the scene, forced his way through the crowd, and said: 'Now then, stop this 'ere; show us your badges, both on yer'—how the two combatants were summoned before the magistrate, and fined—and how they ultimately shook hands and swore eternal friendship: are not all these things matters of trifling concern, in comparison with the following fact? When Shortmiles was preparing for the duel, he took off his coat, folded it carefully, and placed it under the box-seat of his cab. Of this he was certain. After the struggle, when he returned to his post, the coat was gone. Of this he was also positive; and he never set eyes upon it again.

'OVER THE WAY.'

No fresh, young beauty, laughing-eyed,
Who reckons lovers by the score,
But just a sweet old maid, who died
While I was yet in pinafore.

She lived upon the shady side
Of that old-fashioned country street;
A spreading chestnut greenly tried
To screen the door of her retreat.

A tiny garden, trim and square;
A snowy flight of steps above;
And sweet suggestions in the air,
Of all the flowers the poets love.

Within the trellised porch there hung
A parrot in a burnished cage—
A foolish bird, whose mooking tongue
Burlesqued the piping tones of age.

A branching apple-tree o'erspread
A rickety old garden seat;
No apples sure were e'er so red!
Or since have tasted half as sweet!

In Memory's enchanted land,
I see the gentle spinster yet,
With watering-pot in mittened hand,
Gaze proudly at her mignonette.

And when the Spring had grown to June,
She'd sit beneath the apple-tree,
And dream away the afternoon,
With some quaint-volume on her knee—

A gray-robed vision of repose,
A pleasant thought in Quaker guise;
For truly she was one of those
Who carry heaven in their eyes.

HIS LORDSHIP'S PRIVILEGE.

THE TRIAL OF A PEER.

FOR the first time in the annals of our jurisprudence of the present century, the High Court of Parliament was in 1841 convened entirely as a judicial assembly, and sat on the 16th of February to try a remarkable and interesting case. The Court consisted of the peers of the realm in full parliament assembled as triors, assisted by the Chief Justices and the judges. The President was the Lord High Steward of the kingdom, Lord Denman, specially appointed under Her Majesty's royal sign-manual; the prisoner was Lord Cardigan, a peer of the realm, the charge against him being a true bill of indictment for felony. The case was notable in several respects, and presents some points of curious interest. It was the first indictment under the statute to repress duelling, which statute made duelling a felonious crime in principals and accessories, even though no loss of life should happen. It was the first time in this century that a peer had been arraigned for felony, sixty-four years having elapsed since a previous case. It was the last occasion on which a peer of the realm could claim his privilege to avoid the punishment to be awarded for his criminality. Its curious result, too, illustrated in a marked degree the inexorable rule of the law of evidence as then administered, that the proof should not be at variance with the indictment, a result which could not occur now, as the law was subsequently altered, to obviate such technical objections. The Court happily has not sat since; and the case furnishes the solitary instance of its functions having been exercised in modern times.

Public interest was so much exercised by the approaching trial, that at one time it was rumoured the Court would sit, as it had previously done, in open Westminster Hall, which alone could accommodate all those persons desiring to be present; but it was resolved to fit up the Painted Chamber, in which the peers had met

since the destruction by fire of the old House of Parliament; and this was done at considerable expense. The benches, galleries, and floor were covered with crimson cloth, and the walls draped with crimson hangings; the spaces were allotted out for the high officers of state, the peers, the counsel learned in the law, the officials; and so far as the limits would allow, for strangers, of whom the greater part were ladies. None was admitted to the trial except by ticket of the Lord Great Chamberlain, who some days previously issued his official notification of the dress to be worn. A similar notice was issued to the peers themselves. The House of Peers had appointed a special Committee to search for precedents of the ceremonial to be observed, though Her Majesty the Queen had signified her intention not to be present.

On the day of trial, the scene in the Painted Chamber was a most magnificent and imposing one. The peers were gorgeously robed, wearing the collars of their respective orders and their decorations; the single exception being the noble prisoner, who was in plain dress, pursuant to the order of the House. The judges in their scarlet and ermine gowns, with their chains and collars of office and their quaint caps; counsel in their full-dress wigs; and the peeresses in splendid toilettes, formed a gathering picturesque and imposing. We collect from the lengthy entries in the Lords' Journals that the stately ceremonial was strictly in accordance with the precedents recorded in the earlier authorities; and indeed we find the courtly observances had followed the elaborate ritual compiled by Lancaster Herald in an old and similar case.

Shortly before eleven o'clock A.M., the Lord Speaker, in his stately official robes, entered the House, preceded by the Purse-bearer with the purse, the Serjeant with the mace, the Gentleman-Usher of the Black Rod with the Lord High Steward's staff of office, and Garter King-at-Arms bearing his sceptre—all in procession.

The proceedings were opened by prayers being read. The roll of peers was then called over

by the Clerk-assistant of Parliament, beginning with the junior Baron. The Clerk of the Crown in Chancery, making three reverences to Lord Denman, knelt, and then presented to His Lordship on the woollack the Commission under the Great Seal appointing His Lordship Lord High Steward; by whom it was handed to the Deputy-Clerk of the Crown in the Queen's Bench, who had made the like reverences, and received it kneeling. After proclamation for silence, he read the commission at the table, all the Lords and other persons standing up uncovered by order. The Lord High Steward then rose, and making obeisance to the Throne, took his seat in the chair of state provided for him on the uppermost step but one of the Throne; Garter King-at-Arms and the Gentleman-Usher of the Black Rod, with profound obeisances to His Grace, took their places on the right of the Lord High Steward; and both holding the white staff, presented it, on their knees, to His Grace.

Proclamation for silence was again made by the Serjeant-at-Arms; and the Deputy-Clerk of the Crown proceeded to read the Queen's writ of certiorari, the return thereto, and the bill of indictment against the accused. The Yeoman-Usher of the Black Rod was then commanded to call in James Thomas, Earl of Cardigan, to appear at the bar for the discharge of his bail. His Lordship immediately entered; and advancing to the bar, made three reverences, one to His Grace the Lord High Steward, and one to the peers on each side; who returned his salute. He then knelt, until the Lord High Steward acquainted him he might rise; and His Lordship was thereupon ordered into the custody of Black Rod, who conducted him within the bar, where he remained standing, while His Grace informed him of the nature of the charge preferred against him.

The noble prisoner was then arraigned in due form by the Deputy-Clerk of the Crown, who asked of him: 'How say you, James Thomas, Earl of Cardigan, are you guilty or not?' To which he replied in a firm voice: 'Not guilty, my lords!'

The Clerk. How will you be tried, my lord?

The Earl. By God and my peers!

The Clerk. God send Your Lordship a good deliverance.

All persons summoned to give evidence were then commanded to present themselves; and His Grace the Lord High Steward removed his position from the steps of the Throne to a large table below it, preceded by Garter, Black Rod, and the Purse-bearer; the Serjeant-at-Arms standing at the lower end of the table. Ushered in with that stately pomp and heraldic formality essential to judicial proceedings involving the honour of the peerage, this remarkable trial began.

To the uninitiated, it may seem that the ordinary criminal courts of the country presided over by Her Majesty's judges were sufficiently able to try the indictment charged on the noble prisoner, without the attendant pomp and magnificence; but they had no jurisdiction to try my lord. The famous twenty-ninth chapter of the Great Charter, and the statute first Edward VI. cap. 12, sec. 14, declare an effect that any of the nobility must be tried by the nobility

who are their equals; and this law is again repeated in a subsequent statute. As a peer of the realm, therefore, 'His Lordship's privilege' was claimed for him to be tried by his peers; and the indictment which had been found against him by the grand-jury at the Old Bailey was removed accordingly, by writ of certiorari, into the House of Peers.

The crime alleged in the indictment against the Earl was feloniously shooting, with intent to kill and murder, one Harvey Garnett Phipps Tuckett. We shall see how the sworn facts established this charge, framed in so dangerous a shape, against my lord.

On the afternoon of the 12th September 1840, two carriages quickly approached Wimbledon Common from opposite directions. On reaching an appointed spot, the carriages stopped, and from one of them alighted the Earl of Cardigan, Lieutenant-colonel 11th Hussars—he who so gallantly distinguished himself subsequently in the memorable charge of the Six Hundred at Balaklava—attended by Captain Douglas. From the other, Captain Harvey Tuckett, late of the same regiment, accompanied by his second, Captain Wainewright. Sir James Anderson, the eminent physician, was also present.

Into the causes of the quarrel, we will not enter, though the public mind was much exercised by them at the time; it is sufficient to say the dispute arose out of regimental differences, in which the noble Earl felt himself affronted by Captain Tuckett, and demanded satisfaction of him.

The preliminaries arranged and distances measured, the Earl of Cardigan and Captain Tuckett confronted each other with loaded pistols. A pistol-case with the Earl's name and arms, was found upon the ground afterwards. Their first exchange of shots was ineffectual; at the second attempt, however, Captain Tuckett fell, wounded by the shot delivered by his antagonist. A neighbouring miller, with his wife and son, had witnessed the occurrence; and the former being a constable, took the Earl into custody with the smoking pistol still in his hand. Captain Tuckett was removed by Sir James Anderson, he first delivering a card, inscribed 'Captain Harvey Tuckett,' to the constable. The Earl admitted to the police that he had fought a duel, and had hit his man, but not dangerously. These were the simple and plain facts proved. They seemed only too plain and convincing; for the Earl, it was said, shortly before the trial began, had executed a deed of gift in favour of a relation of all his lands and effects, to avoid the forfeiture thereof to the Crown, which then would have happened on his conviction as a felon; a forfeiture which, by the way, was abolished afterwards by statute on the 4th of July 1870.

The crime was clearly against the statute, and there was no attempt to hide the fact of the Earl's criminality; he himself had even admitted it. What, then, could be his defence?

We should state that neither Captain Tuckett, who had recovered, nor his second, nor Captain Douglas, the Earl's second, tendered evidence; for the very sufficient reason, that they would have convicted themselves out of their own mouths of a like offence against the statute. Sir James Anderson, too, though called as a

witness for the prosecution, declined, for a similar reason, to answer any question relating to the occurrence he had witnessed, having been cautioned by the Lord High Steward that he need not do so to his own incrimination.

The evidence was closed for the prosecution; but it was apparent that the counsel for the Crown were in a dilemma. The evidence pointed clearly to the shooting by the Earl of Captain Harvey Tuckett, whereas the indictment alleged the crime against him of shooting one Harvey Garnett Phipps Tuckett. The identity of the two persons had not been proved with the particularity then required by the inexorable law of evidence; the flaw was that technically called a variance. Here, then, was an unexpected loop-hole for escape, which was seized immediately by the noble prisoner's astute counsel, Sir W. Follett. He took the objection at once. It was insisted in reply by the Attorney-general—afterwards Lord Campbell—for the Crown, that surely it was unnecessary to produce and prove the prosecutor's baptismal certificate! On the other hand, it was contended that if strict proof of identity were not required, a man might be executed for the murder of a person whom he never saw. An elaborate and learned argument ensued there and then on the whole point. Strangers were ordered to withdraw, including the noble prisoner; and the House proceeded to deliberate upon the case, the spiritual lords withdrawing by leave, according to custom.

When the doors were again opened, the Lord High Steward was questioning each peer separately, beginning with the junior Baron; and he proceeded through the long list of Viscounts, Earls, Marquises, and Dukes in the following form: 'Thomas Lord Monteaule of Brandon. How says your lordship? Is James Thomas, Earl of Cardigan, guilty of this felony whereof he stands indicted, or not?' Whereupon each peer rose in his turn, and placing his right hand upon his breast, said: 'Not guilty, upon my honour.'

When the question was put to the Duke of Cleveland, His Grace said, with emphasis: 'Not guilty, *legally*, upon my honour.' The last peer called was the Duke of Cambridge.

Their lordships, including the Lord High Steward himself, had unanimously resolved that the Earl was not guilty of the crime alleged.

The Serjeant-at-Arms then said: 'Yeoman Usher, call in James Thomas, Earl of Cardigan;' and His Lordship was placed *outside* the bar.

Thereupon, the Lord High Steward addressing him, said: 'James Thomas, Earl of Cardigan, you have been indicted for a felony, for which you have been tried by your peers; and I have the satisfaction of informing you, you have been found not guilty by a unanimous sentence; and you are discharged.'

The Earl of Cardigan at once bowed and retired. His remarkable trial was at an end.

Proclamation was made to dissolve the Commission; and His Grace the Lord High Steward, standing in front of the Throne, received his white staff again from the Gentleman Usher of the Black Rod; he held it in both hands, and broke it in two, thus dissolving the Commission. The Lord High Steward's office was thereupon vacant; and my lords immediately adjourned.

Captain Douglas, the Earl's second, was after-

wards acquitted on the same grounds, on a similar indictment as an accessory, at the Old Bailey.

But though the prosecution of the Earl was abortive, the case yet bore some fruitful result; for attention had been drawn by it to a remarkable personal privilege which was still available for His Lordship, though it had been dormant very many years. It was rumoured amongst the lawyers, that if the Earl had been convicted, he would claim the benefit of the peerage, to avoid his punishment, transportation for life; and this new phase in the case heightened the extreme interest felt in the trial.

'His Lordship's privilege' in this respect was somewhat similar to the benefit of clergy, which had been previously abolished in the year 1827, and which ancient right enabled those *who could read* to claim, under certain conditions, immunity from the legal punishment for their offences. The benefit of peerage arose out of the statute first Edward VI. cap. 12, sec. 13, which gave immunity to peers and peeresses, on their conviction for felony, though they *could not read*—not an uncommon fact in the sixteenth century; and it appears by the old reported cases, that on the privilege being claimed, a peer was instantly discharged by the Court from punishment upon payment of his fees. He could, however, claim this privilege of the statute but once only. Its effect was simply to set aside punishment; as a convicted felon, his lands, goods, and chattels were still forfeited to the Crown. But the statute seventh and eighth George IV. cap. 28, abolishing benefit of clergy, did not mention in terms the *benefit of peerage*; and the point, it was said, was arguable that a peer was not deprived of it. The rumours respecting this privilege soon reached the ears of the Lord Chancellor, Lord Cottenham, who shortly afterwards introduced a Bill repealing the old Act of Edward VI., and declaring once and for all, that on conviction for felony, every peer shall be liable to the same punishment for felony as any other of Her Majesty's subjects, notwithstanding any law or usage to the contrary; and this Bill passed into the statute-book on the 21st June 1841, as the fourth and fifth Victoria, cap. 22.

A laudable result certainly, that the Lords and Peers of Parliament, of their free-will and motive, should have unanimously deprived themselves of one of their ancient personal privileges!

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

CHAPTER II.—'THE BLIND BOW-BOY'S BUTT-SHAFT.'

ON the western coast of England, there is a narrow bay which is bounded on each side by a headland of igneous rock. The smaller and more northerly headland is locally known as Daffin Head; and the larger headland on the southern side of the bay is called Welbeck Head. For some half mile, Welbeck Head runs gently up from the mainland, its grass growing sparser, and its prehistoric old bones declaring themselves more plainly, until you come upon broken rocks with no other covering than lichen, and then go on by paths which increase in difficulty for another half mile. There, suddenly, you reach a bit of seeming fairyland—Welbeck Hollow. A carpet of green turf, soft and fine, is belted by trees;

and above the topmost branches rise the veritable bones of old earth, lichen-spotted and hoary with rain and sunshine—the rain and the sunshine of thousands of years. In the centre of the grassy space is one great isolated rock; the tombstone, as the country legends tell, of a beautiful young Princess buried there by a cruel magician. The perennial tears of the beautiful Princess flow from the southern side of this vast boulder in a sparkling stream, which brawls inland for a mile, and then returning, ends its brief life in salt waters.

Beyond the Hollow, the Head grows precipitate and even terrible. It is tall enough to bathe its hoary forehead now and then in storm, and can push a bare defiant scalp at the very thunders. It rises like a wall on the seaward side, and overhangs a little, as though it threatened to tumble headlong. Nervous tourists keep clear of its edge; and even strong-headed people, tempted to lie prone there and venture one look sheer down to the wrinkled sea, have confessed to something of a thrill of fear.

On its southerly side the Head has neither terrors nor splendours. It slopes quietly to the mainland meadows, and bears on its wide bosom a pleasant park and a quiet country mansion. This quiet country mansion is called 'Lumby Hall'; and men, women, and children bearing the name of Lumby have lived there almost from time immemorial. The Lumbies were always a solid household, reverencing the wisdom of our ancestors, and believing blood to be thicker than water. They were a quiet and inoffensive people; but they were known to be hard and implacable in enmity. If you had a Lumby for a friend—all the Lumbies were proud of this, and made it an honourable tradition, to be maintained at all hazards—you had a friend who would stick by you like a brother. But if you had a Lumby for an enemy—the Lumbies were proud of this also, and made an honourable tradition of it—you had to face an enemy not to be appeased or conciliated; a man relentless, unreasoning, who hated you root and branch, you and yours to the ninety-ninth relationship.

The elder Lumby had inherited this nature, and had transmitted it to his son. They both took a pride in it, and were pleased to think that it was English. That was old Lumby's sacred shibboleth. If the *Standard*—he was a staunch Conservative—told him that a thing was un-English, he voted against it in the House of Commons, in whose collective wisdom he furnished a unit. He liked good old English sports and pastimes; and without having a grain of vulgar cruelty in his nature, he would have welcomed the return of cock-shying and bull-baiting, simply because those sports were old-fashioned, and had once been popular in this island. He mourned over the gradual evanishment of the good old English penal laws; he drank unwittingly much good old English port. That, he believed, had a continental origin, and it was one of the few things he did not disdain on that account. He was not in the direct line of the good old, county house whose name he bore, but had inherited the estates from a childless uncle. The city Lumbies, of whom he was the head, had always been a little despised by the county Lumbies; but the county Lumbies

had died out, and the city branch ruled in their stead. Mr Lumby had gradually released himself from the toils of labour; and though he would not accept the position of a sleeping-partner, he had exercised of late years but little supervision over the doings of the firm, and was not much more than its nominal head, except that he drew the lion's share of its profits.

Gerard Lumby the younger, with whom this history has much to do, was cut by nature on the lines of the paternal pattern; but the world being thirty years older when he came into it than it had been at his father's birth, his social and political conservatisms were of a milder type. He walked homeward with the Yankee's odd-sounding name in his mind, and smiled to think of the quaint earnestness with which the fellow had promised help in any day of need. Taking the way by the lane, the youth whistled as he went, out of mere jollity and youth. By-and-by he was met by an open carriage, drawn by two handsome chestnuts, driven by a fat coachman, of rubicund countenance, who wore an exceedingly crisp and curly wig. The lane was so confined, that Gerard had either to retreat, or to mount a bank on one side or another. He chose the readier alternative; and laying his disjointed rod on the grass, he leaped upon the mound, caught a sturdy overhanging ash-branch, and waited for the carriage to go by. From this height of vantage, he saw that it had one occupant, a lady, who carried a sun-shade, and carried it in such a position that her face was hidden.

Now, Gerard knew, or supposed he knew, everybody who kept a carriage within ten miles; but this equipage was strange to him. A thing of that sort is matter of interest in the country, and he wondered who the lady might be. She, while yet a dozen yards away, saw from beneath her sunshade one of Gerard's feet swinging clear of the mound, in readiness to drop when the carriage should have passed; and coming out of the pretty silken shelter to see to whom the foot belonged, herself became visible. The average of beauty in these favoured islands is high, and Gerard had seen pretty faces in plenty. People who live in the west of England need not travel far to look for feminine charms; but Gerard had never seen anything to approach this new vision. She was charmingly dressed, but somewhat quaintly, and she wore a profusion of lace. So much Gerard could have told you, and no more, for he was as ignorant of millinery as I am. Her face was beautiful, and not with any merely common type of loveliness, but with that soft yet haughty splendour which belongs alone to some few Englishwomen, and is at once loftier and more charming than any form the Greeks have left us. Millais might have painted it, and made himself twice immortal; but no mere marble could have carried more than half its charm.

The lady at a guess might be twenty. Gerard was five-and-twenty. The unknown beauty shot one shaft at him in passing, and sent it barbed with a smile. A queenly little inclination of the head acknowledged the trouble the passing carriage gave him. Off came Gerard's hat in a moment, leaving his crisp curled hair and

frank forehead open to the view. With one foot planted on the grassy bank, and the other swinging loose, the strong brown left hand stretched freely out to grasp the bough—the attitude was as graceful as that of Mercury new lighted. The young lady's eyes regarded him with demure admiration for a second, and then she hid herself with her sunshade, and the sun seemed shaded from Gerard's eyes.

It is very natural for young men of five-and-twenty to fall in love; and it is in accordance with the decrees of Nature that some of them should do it suddenly, without prescience, premonition, or warning, and indeed in barefaced defiance of all likelihood. The ways of falling in love are as various as the natures of men and women. Some, of the critical, cautious, and unimaginative sort, are inclined to set down love at first sight as a figment of the poet's and the novelist's invention. But there is an actual moment of time—if it could only be caught—at which anything has its beginning; and though I, for one, have not much faith in the raptures of passion which take rise at a single glance, I nevertheless have seen enough of love and lovers to believe that even one glance may slay all chances of bachelorhood and spinsterhood in a pair of youthful lives. Here it was not two but one that fell, and even he did not now begin to guess that he was wounded.

Our youthful Gerard was not much of a hand at the poets and fictionists; and being hit with 'the blind bow-boy's butt-shaft,' took to wondering what was the matter. Had he been given to verse-making, he might have gone home to write a sonnet about his vision, and so have fanned love's little flame into a premature fire, which should have died for want of fuel. As it was, he took up his rod, and sauntered along the lane with the beautiful face before him, not consciously or intentionally recalling it, yet renewing his passing glimpse of it again and again, almost as if by actual sight. The queenly head just bent a little, the lovely face smiling, the violet eyes turned upwards, still holding him in sight while the head bowed—My poor Gerard, you are a smitten man. And who amongst us, from whose 'topmost head the thickset hazel dies,' would not have changed places with you, if it were but for a month or two, an hour or two, a mere five minutes, to be young again, and once again in love?

So Gerard strolled home, and the beautiful face bore him company. The broken-haired terrier hailed him with a voice of joy, and careered about him in wild circles; but meeting with no response to outspoken affection, followed disconsolately at a distance with his moist tail between his legs. Through the gates, with their crumbling pillars of gray stone bearing the Lumby arms, along the shady avenue, and across the trim-kept lawn, the beautiful face bore Gerard company. He sat down, and smoked a pipe in its society; but feeling, somehow, a little restless, he arose, and with no definite idea of action, strolled round to the stables.

'Gerard!' cried a pleasant girlish voice; and the young man turning, saw a pretty sight—a young lady, namely, of some eighteen years, fresh and bright and happy, with a face in which innocence and piquancy charmingly blended.

'Well, Milly?' said Gerard.

'We have had visitors this afternoon whilst you were away,' she said. 'Guess who they were.'

'Who were they?' asked Gerard languidly, trying to get up a show of interest.

'Guess,' she said.

Gerard, with his hands in his pockets, his hat drooping over one eye, and his pipe stuck in one corner of his mouth, looked like a protest against intellectual effort. But he responded gallantly to the challenge. 'Val Strange?'

'No.'

'Then I give it up,' said lazy Gerard.

'Guess again.'

'Milly,' said Gerard appealingly, 'don't you think it's too hot for guesswork? Who was it?'

'Our new neighbours,' said Milly, nodding gaily. 'Mr Jolly and his daughter. And, O Gerard, I think she's the most beautiful girl I ever saw! And she wore such lovely lace!'—Gerard flushed a little.—'And Mr Jolly,' pursued Milly with great vivacity, 'is a little man, with a face like a Normandy pippin—brown and shrivelled, you know. And they're going to give a big dinner and a ball, and we're all invited!'

'Great news, eh, Milly?' said Gerard.

'And,' said Milly, in breathless pursuit of her theme, 'they have such a coachman, Gerard, in such a wig, and a wonderful port-wine face like an old-fashioned vintner; and I'm so sorry you missed them, for they have only been gone an hour.'

Gerard had begun to put things together. Yet what had he to blush for? 'I met a young lady in a carriage just now,' he said; 'but she was alone.'

'Oh,' said Milly, 'Mr Jolly came on horseback. He is an old friend of the Mortons, and has gone to Daffin Head to see the General.'

'M—m,' said Gerard, blushing again, through all his assumption of indifference. 'Carriage I met was a landau. Pair of chestnuts, very handsome horses. Very fat coachman. Rather a pretty girl inside.'

'O Gerard!' cried Milly, 'what a shame to call her "rather pretty." She's beautiful. I never saw anybody half so lovely, even in a picture.'

'Perhaps,' said Gerard, making much pretence of cleaning the stem of his pipe with a stalk of grass—'perhaps I saw some other young woman.'

'"Young woman" indeed! Why, you know everybody else for miles.'—Ladies fire those quaint conversational double-shots at times. 'And I'm sure if I were a man, I should have fallen in love with her at first sight.'

'But being a young woman,' said Gerard, repeating the obnoxious phrase, 'your notions of manly conduct are not valuable.'

'Perhaps not,' said Milly. 'But I wish you had been here to meet them.'

'I shall see them at the feed,' said Gerard, still very busy with his pipe, and turning more than half away from Milly. What had he to blush for? It made him almost angry with himself that he should be so foolish.

'All you Oxford men are vulgar,' said Milly with decision. 'You speak of a dinner as though

you were horses. You call a ball "a hop," and you talk of money as "rhino" and the "stumpy." I wouldn't talk slang, if I were a man.'

'But being a young woman,' said Gerard, repeating himself, 'your notions of manly conduct are not valuable.'

'And, O Gerard!' exclaimed the young lady, 'it's my first ball; and will you practise the *deux temps* with me?'

'As much as you like,' said Gerard.

'Thank you,' said Milly. 'That is kind. The ball is this day six weeks; and I am to wear'—Then the young lady drove into millinery detail; and Gerard having conquered the imaginary obstacle in his pipe, recovered composure, and listened with a good-humoured smile, understanding nothing.

'And very nice you'll look in it,' he said; 'and I wish you lots of partners.'

'Aunt is going to return the visit this day week,' said Milly. 'I am going as well.'

'All right,' said Gerard.—'I say, Milly! I'm going up to town next week. There are jewellers in town. Who knows? I might find a bracelet, or a necklace, or a pair of earrings, or something of that kind. Eh?'

'O Gerard,' cried Milly, 'you are kind!'

'Not a word about it now,' said Gerard in grave badinage. 'The governor might stop my allowance if he heard of such extravagance. Mum's the word!'

Milly nodded with a grave face and sparkling eyes; and Gerard, with an answering nod of the head, strolled on to the stables. When he was alone again, the beautiful face came back to him, and he sauntered on solemnly, thinking of the coming dinner and the ball, and wondering with a surprising interest whether the young lady would remember him. He was absent-minded and silent through the quiet family dinner that evening, though Cupid's butt-shaft did not yet so rankle in him as to spoil his appetite. His mother, a sedate lady of six-and-forty, large and matronly, with honest gray eyes like Gerard's own, remarked his preoccupied looks; but his appetite appeased her fears. Mr Lumby senior was nursing his first gout, and was free from the toils of the House of Commons for the remainder of the session. He drank mineral waters at dinner; and though he looked with longing eyes at the decanters and the claret jug, he suppressed himself like a hero. Between Gerard's preoccupation and his sire's grievance at the mineral waters, the table was very silent.

'Father,' said Gerard suddenly, 'I think I shall ride over and see Val Strange to-night.'

'Why?' asked the elder briefly.

'Rupert is getting a little thick about the legs,' said Gerard, referring to his favourite horse. 'And it's just the night for a quiet ride. I left a portmanteau and dressing-case there, so that there's no need to take anything with me.'

'All right, my lad,' said Lumby senior heartily. 'Come back to-morrow.'

'Of course,' said Gerard; and having kissed his father and mother, he went his way. The good-night kiss in this old-fashioned household was a habit carried on between father and son from Gerard's childhood, and was always followed by a solemn shake-hands. Gerard did not kiss

his pretty little second-cousin, though perhaps you and I might have chosen Milly's lips in preference to those of Lumby senior. But possibly Milly might have resented us.

The blind boy's butt-shaft rankled, though ever so little. That curious longing for solitude, that almost unconscious desire to be alone with fancy, which assails the least imaginative of men under Love's earliest influences, was upon him. He started briskly enough; and Rupert's pace would have overtaken the halting Hiram's steps before the gates of the Manor House were reached; but Gerard had not gone far, when he suffered his half-formed dreams to run away with him. The reins dropped loose on the horse's neck. The swift trot became a leisurely walk. The shadows gathered closer, flowing on from the east in dim pursuit of the descending sun, and Gerard was in the narrow lane again waiting for the carriage to go by, and looking down for one brief second, a thousand times recalled, into a pair of wonderful violet eyes, that smiled and then were hidden.

But at this period of its existence, Love has its impatience, its little bursts of temper, and its sudden longings for swift motion, as well as its liking for dreams. Rupert, not being in his master's confidence, was astonished at the sudden dig of the spur; but after one angry curvet, he laid himself out for speed, and dashed along the level high-road at a rattling pace. He drew rein at the town, and went through its dimly lighted main street at a sufficiently sober pace; but he made Rupert lay himself out again along the stretch of road between town and Manor House, and had so roused the blood of the thoroughbred by this last spin, that he had as much as he could do to hold him in hand when he reached the darkened avenue.

'Look yere!' said a voice from the darkness. 'Say which side o' the way you want to hev, an' I'll take the other.'

'Is that you again?' asked Gerard, recognising the voice.

'Good-evenin', Colonel,' said Hiram, recognising Gerard in turn.

'You have delivered the letter? Or are you going now?'

'I hev been thar,' said Hiram, reminiscent of Dr Watts's hymns; 'but I cannot say I still would go.'

'Why not?' said Gerard. 'What's the matter?'

'Wal, Colonel,' returned Hiram, 'Mr Strange's flunkey is a deal too over-cooked for my taste.'

'What is the matter with him?' asked Gerard.

'If you're goin' thar,' returned Hiram, 'you can make inquiries into the natur' of his complaint yourself. An' it's like master like man, up thar, Colonel. I reckon, though, as you're another sort from that kind, an' I wish you good luck, sir, an' piles of it. Good-night.'

'Good-night,' said Gerard, and rode on.

Hoskins answered the bell in wrath, being persuaded that the tramp had returned. 'Well, now, what is it?' he demanded, opening the door and confronting the visitor with an air of lofty scorn. Then beholding Gerard, to whom he was indebted for countless tips, he abased himself inwardly, and made excuses. 'I beg your parding, sir,' said Hoskins with much humility; 'but there have been a very trying party ringing

at the bell, sir, on'y this minute, an' I fancied, sir, as 'ow 'e'd come back again. Beg parding, I'm sure, sir.—Mr Strange is in the billiard-room, sir. Shall I 'old the 'oss, sir?—Send him round to the stables? Yes, sir.'

Gerard entered the house, and made his way to the billiard-room. 'My American friend has been raising a shindy here,' he said to himself as he walked up the hall. Strange was making a stroke as Gerard entered the billiard-room, and there was a look half of vexation and half of comedy on his face. Hearing Gerard's step, he turned, and met him with a pleasant smile. 'Things were quiet at home,' said Gerard, 'and I felt inclined for a ride. I met my Yankee in the avenue; I suppose he delivered the note? Queer fish, isn't he?'

'Rather,' said Strange, looking half vexed again.—'Lumby, the man in the arm-chair is Reginald Jolly.—Rags, this is Gerard Lumby. You've heard me speak of him often.'

'Many a time,' said the little man.—'We're going to be neighbours, I believe.'

'I believe so,' said Gerard; and fell to wondering whether this could be the father or the brother of the young lady he had seen in the lane. Then remembering Milly's description of Jolly père as a little man with a face like a Normandy pippin—brown and shrivelled, he decided that this was not the father. The little man was bald enough to have been a grandfather; but his face was curiously young, and his age was a thing bewilderingly uncertain.

'I like your Yankee, Mr Lumby,' said the bald-headed little man, apparently unconscious of Gerard's scrutiny.

'I don't,' said Strange.

'What has he been doing?' asked Gerard. 'He doesn't seem to have agreed with Hoskins either.'

'Oh,' said Strange lightly, pausing on a stroke, 'he did a little high-comedy pretence of wounded feeling, and threw down a half-crown I gave him.'

'Pretence?' said the bald-headed man. 'Not a bit of it. He was real enough.' Hiram's defender then told the story, with a ludicrously close imitation both of the American and of Strange. 'Why should he throw half-crowns away?' asked the narrator. 'He hasn't many of 'em, I'll be bound. No, no, Val. The man was hurt, and he let out with a facer.—You know he was hurt, Strange, and you're sorry you said it. Come now; you know you are.'

'Rubbish!' said Strange.

But the little man insisted. 'Come now, Strange; you know you are.'

'Well, then,' said Strange, 'I am.—Will you have a game, Lumby?'

Gerard consented; and as the game went on, they fell to talk of other matters. It came out incidentally that the bald-headed man had been at Oxford during Gerard's last term there. 'He can't be younger than I am,' said the puzzled Gerard to himself. He began to fish delicately for an answer to his puzzle. 'We had a call this afternoon,' he said, 'from Mr Jolly and your'—He paused for the bald-headed man to fill up the blank.

'Grand-daughter,' said the bald-headed man.

This fairly staggered Gerard. 'I was away from home,' he began rather helplessly, when

Strange broke in with a shout of laughter. The little man smiled with cheerful self-approval, and took a drink.

'How old do you think he is?' cried Strange.

'Treat me respectfully, if you please,' said the little man with an air of dignity. 'I am one-and-twenty. I have arrived at man's estate.—It is a common fallacy, Mr Lumby,' he continued, rising, and addressing Gerard with much solemnity, 'that I am bald. This is not baldness,' laying his hand on the top of his shining head. 'It is forehead, sir; forehead.' Then he sat down again, and smiled in renewed self-approval. 'The lady,' he continued, 'who called this afternoon at Lumby Hall, was my sister Constance.'

Gerard went on with the game; and the little man resumed his big cigar. 'Constance,' said Gerard inwardly. 'A pretty name.' He liked it so well that he repeated it to himself. He thought the violet eyes looked faithful. 'Constance—constancy.' What nonsense was this? Why should the face so haunt his memory? Why should the name so cling to him? The three young men sat late together, and Gerard was dull and lively by curious fits and starts. He went to sleep remembering the violet eyes, and he dreamed of them.

ANCIENT EUROPEAN SAVAGES.

PART II.

THE celebrated caverns at Bruniquel, in the south of France, tell the same story in almost every particular as those of the Vézère. We have the bones and skulls of human beings imbedded in the stalagmite—of which, by the way, there is a large mass in the geological collection at South Kensington containing these poor remains of our predecessors. There we may see the identical bony cases of the brains whose intelligence was equal to the combat with and victory over the huge elephantine mammoth, with such rough weapons as could be fashioned from a flint stone by prolonged labour and no little skill. They also were no mean artists. With their flint knives they carved the figures of the reindeer and mammoth on long pieces of the horn and tusks of those animals; but always with an eye to utility as well as ornament; for the remainder of the material was worked to a sharp point, intended to be used as a dagger, the carved figure being that part grasped by the hand. They, too, ornamented pieces of reindeer horn with boldly drawn figures of horses; but there is no such thing to be found as a polished implement. Over these relics had accumulated a bed of stalagmite no less than five feet in thickness, which had remained untouched for ages, until it was broken up by French archaeologists.

Switzerland also affords evidences of a mammoth period and contemporary savages. In 1874, Herr Conrad Merk undertook to make a thorough exploration of a cavern in the Jura limestone at Kesslerloch near Schaffhausen, which had not been suspected to contain anything but some mould and the ashes of fires and rubbish left by wandering gipsies who occasionally used it. When the surface earth was removed, however, a stalagmite floor was laid bare, and beneath

this were found the now well-known signs of human occupation. This subsoil consisted of loam mixed with charcoal, and a great quantity of bones, evidently the result of long-continued feasting. About a ton and a half of the remains of mammoth, rhinoceros, reindeer, glutton, and other animals were collected, besides rough flint implements and bone weapons of the same type as those from the French caves. Every one of the large bones had been broken to get at the marrow. Round the numerous cooking-places were arranged flat slabs of stone, on which we may suppose the inhabitants sat during the day and slept by night, to avoid the damp floor. The ladies adorned themselves with tastefully made ornaments, earrings carved in bone, horn, and other substances, with shells and teeth drilled for a like purpose. If they pierced their ears, the operation must have been performed with a sharp splinter of bone, a method calculated to inflict considerable pain. But it is almost needless to observe that neither civilised people nor savages shrink from positive torture, when the object to be attained is that of enhancing their personal charms in accordance with the fashion of the time. The toilet was supplied with 'rouge' in the form of red peroxide of iron ground upon stone slabs, whose surfaces retain as fresh as ever the stain of this material, of which several lumps lay near them.

To the Kesslerloch people we must accord a very high place as artists, if not the highest among cave-men. Almost every animal familiar to them appears to have been made the subject of portraiture either by sculpture or by engraving. Thus, they embellished the handles of their short swords or daggers with figures of the horse, musk-ox, reindeer, &c. Particularly good is the drawing of a horse; and still more characteristic that of a reindeer grazing beside a river or lake, which, it seems, the draftsman has endeavoured to represent by a series of strong lines under its feet, crossed by others intended for grass or rushes. Efforts of this kind, far as they may fall short of our standard of art, betoken aspirations and an intelligence which we cannot but respect, when exhibited by a race whose time must have been fully engaged in providing the mere necessities of life. To the archaeologist, these figures have another significance. He sees in them the incontrovertible evidence of man's co-existence with animals which became extinct long before language had come to be expressed in its rudest and most primitive symbolical or written forms.

Although we in Great Britain cannot produce remains of equal interest with those on the continent, the caverns of Derbyshire, Yorkshire, and especially Devonshire, bear emphatic testimony to the presence of a people on the same level with respect to the arts, and familiar with the same animals. To Mr William Pengelly we owe the investigation of the Devonshire caverns and the description of their contents. He worked at this task with the utmost patience and industry for eight years, averaging five hours a day. Every shovelful of earth was carefully sifted, and each object as it was discovered was labelled with a number corresponding to a reference to its exact position in the deposits, that there should be no possible mistake about its com-

parative antiquity. So conspicuous an example of enthusiasm in the cause of science, and of conscientious pursuit of knowledge for its own sake, has rarely been given to the world. The conclusions arrived at have, consequently, a value in relation to archaeological research which it would be difficult to over-estimate. The accompanying table shows at a glance a sectional view of Kent's Cavern, Torquay, with the nature of its deposits, and the relics found in or beneath them, in the order of their succession from the surface downwards.

Black Mould.	Bones of existing Animals and Man; Bronze Articles and Pottery. The Romano-British Era.
Granular Stalagmite, averaging twenty inches thick. Black Band of Charred Wood and Bones. Soft Cave Earth.	Human Jaw. Implements of Bone and Stone. Bones of Rhinoceros, Mammoth, Reindeer, Great Elk, Grizzly Bear, Sabre-toothed Lion, and Hyæna. Bone Bodkin, Pin, and Harpoon.
Crystalline Stalagmite, averaging about three feet thick. Breccia.*	Bones of Cave-bear almost exclusively, and worked flints.

The solid bed of Limestone Rock.

The human jaw imbedded in the lower portion of the upper stalagmite floor is undoubtedly contemporary with the mammoth, &c. The cave, once flooded by the stream which ran through the valley, is now some seventy feet above the reach of water. It seems certain, then, that that amount of excavation has been done since the place was resorted to for shelter by the mammoth hunters. Generation after generation of men in all probability used it while this mass of material was accumulating; for even below the *lowest* stalagmite flooring are the works of their hands—namely, worked flints. From a consideration of these facts, we derive only a vague idea of the lapse of time, though at the same time they impress us with a sense of its vastness. Some nineteen centuries ago the Romans found these valleys in precisely the condition they present now. Between the metal and stone ages there is a great chasm of time, which history has done nothing to bridge. We can only regard with wonder the signs of the action of natural forces, whereby valleys have been scooped out, and races of animals mysteriously extinguished, without the ability to apply to these events any of our measures of time.

The south-west of England wears a totally different aspect to-day from that which it presented to our savage predecessors. Not only have the valleys been excavated from seventy to one hundred feet, but the waters of the ocean now sweep over forests which in these old days flourished on the shores of Cornwall. This we learn from an examination of the strata

* Breccia, namely angular fragments of limestone rock cemented by an enveloping paste.

penetrated by mining shafts. At Carnon and Pentuan the shafts passed through strata in which were submerged forests, with the stumps of trees standing erect in the soil where they grew, implying a large subsidence of the shores in this district. The uppermost twenty feet of the soil at Pentuan consists of river sand and gravel, with sea-sand just below it extending for fifteen feet, and containing the bones of whales, marine shells, &c. Deeper still is a forest bed with the bones of deer and oxen and human skulls; and deepest of all, another forest, nearly sixty feet from the surface, with oyster-shells attached to the tree-stumps. These conditions clearly indicate an extremely gradual movement of subsidence. First the old land surface must have subsided without disturbing the position of the trees. Then the sea washed over it, accumulating a great mass of sand; and, with another geological change, twenty feet of mud, &c. was laid upon the spot by a river. We cannot possibly picture to ourselves the character of the country as seen by those old-world folks who once gazed upon Cornish scenery; and since then, some thirty-five feet of material has been piled above their last resting-place. The coastline, the disposition of hill and valley, and the direction of the streams, must have been so completely changed, that a map of the past physical geography of the locality would present features at total variance with its appearance to-day. Could those ancient savage inhabitants of Devonshire and Cornwall revisit the scenes once so familiar to them, they would find themselves in a strange country, bereft of many a landmark with which they had been acquainted.

We need only refer to the Yorkshire and Derbyshire caverns to remark, that the association of man with extinct animal forms is equally clearly made out there, as elsewhere. Whether British savages were as competent artists as those of the Vézère and Kesslerloch, there are as yet few opportunities of judging. The roughly etched outline of the head and fore-quarters of a horse, from Robin Hood's Cave, Derbyshire—the only considerable known attempt at pictorial illustration—does not convey a favourable impression of early British art.

This brief survey of the discoveries in European caverns admits of some very definite conclusions. It has been found convenient, in accordance with the facts, to give a distinctive title to one of these early periods of human existence—namely, the 'Mammoth Period.' It presents identical characteristics in all localities, and denotes the universal presence of the elephantine monster, usually of the reindeer and cave-bear, and sometimes of the rhinoceros, sabretoothed lion, and glutton, associated with the works of man. All the weapons and implements are rough-hewn. There is a 'family likeness' in these, and in the bone weapons, which indicate a uniform level of intelligence and similar conditions of life. The efforts in art attain much the same standard, and both the tools and materials employed were alike; moreover, animals familiar to the designer, but unknown to us in the flesh, are portrayed. Finally, there is no pottery, no sign of spinning or weaving, and not a solitary implement which could be used for agricultural purposes. So far as their

bones enable a judgment to be formed, the mammoth hunters were not inferior in physical powers or cranial capacity to many existing wild races—with one or two exceptions. The celebrated Neanderthal skull does, however, exhibit most remarkably the characters of an extremely low human type.

The next period in unwritten European history which we have to consider differs very materially from the former. After the extinction of the mammoth and his companions, there is every reason to believe a marked change took place in the climate, though no doubt this was brought about by slow degrees, and might have extended over as many centuries as all the dynasties of China. The people who succeeded the cave-dwellers were not only far advanced, comparatively speaking, in the arts, but they lived in artificial dwellings, and had exchanged the rude habits of the hunter for pastoral and agricultural pursuits. Contemporary with, or perhaps anterior to these last, were the 'midden-makers,' whom we know only by certain large refuse heaps termed 'kitchen-middens,' abounding in Scandinavia, and found also in Scotland and more remote parts of the world. Every one who is acquainted with the country districts of these civilised British Isles has seen a midden on a small scale outside many a cottage door. That heap of cinders and rubbish, if carefully sifted and examined, would reveal with tolerable certainty the villager's condition in life. We should learn from the fragments of bone, and possibly from the shells of whelks and periwinkles, what he ate; and scraps of broken crockery, a rusty knife-blade, and such trifles would let us into the secret of the *ménage*. The midden-making habit will indeed never be eradicated. It survives everywhere in the form of the dust-bin, the highest civilised expression of an ancient institution; and it would surely reappear in its pristine nastiness before the door of every house in the alleys of our great cities, if their inhabitants were left to their own devices. Thanks, however, to the uncleanly practice, we learn from these great middens, composed of mussel, oyster-shells, &c., with here and there a scrap of rough pottery and a more or less polished stone implement, that large village communities established themselves on the shores of the Baltic Sea, and probably dwelt in mud huts. An indolent, but by no means unintelligent race this would seem to have been, secure in their freedom from the attacks of large carnivorous animals; while the climate permitted them to pass much of their time in temporary habitations, or even in the open air. There can be no doubt that since these mounds were raised on its shores, the bed of the Baltic Sea has undergone a very considerable alteration; and a greater volume of fresh water now enters it than when the midden-makers feasted on the oyster, cockle, mussel, and periwinkle. Nature herself has left us unimpeachable testimony to this. All the shells in the mounds are of full growth; indicative of thoroughly salt ocean water, in which only can these molluscs attain their complete development; whereas the shells of the same species living in those waters now reach but a third of the natural size, owing to the admixture of fresh water. The Baltic, then, either has not at present so free a communi-

cation with the ocean, or the volume of fresh water delivered into it is very much greater. Whichever alternative we accept, some efficient geological cause has evidently brought about conditions of existence for these shell-fish so unfavourable to them as almost to lead to their extinction; and this, we know, is an extremely slow process.

The last and in all respects the most advanced of European savages were the 'lake-men.' They are even entitled to rank as barbarians who have travelled some distance on the road towards civilisation. The discovery of the singular lake-dwellings or villages in Switzerland, led to the search for them elsewhere, with the result that the habitations of these people were found in lakes or estuaries in France, Austria, Scotland, Wales, and Ireland. In principle of construction they differ little, though there is some variety of shape, the usual form being rectangular, while in some cases it is circular. They were in effect wooden huts with walls of 'wattle' or interlaced boughs, plastered with clay, and thatched with reeds and rushes. For the sake, probably, of security, they were raised on piles in the shallower parts of the lake, and sometimes connected with the shore by a causeway, built in the same fashion as the platform on which the hut itself stood, with transverse beams laid across the piles. The piles consisted usually of round poles, sharpened to a point by burning or by chopping with a stone axe, and driven into the soft bed of the lake. Great skill was exhibited in more than one example by the mortise and tenon work employed in joining the timbers; but the cross-poles were more commonly laid on the ends of the piles, and kept in place by wooden pegs. Little else but the ruins of these structures remain in the bed of the lakes to tell us the history of their inhabitants—a history, nevertheless, clearly enough established by the numerous relics to be found on the sites of the dwellings.

We have now left the age of rough and unpolished weapons far behind, together with the strange animals of the mammoth period, and have entered upon a new era of progress—an era marked by the existence of polished implements. Much of the people's time must have been passed in fishing, as testified by the bone hooks and nets made of hempen cord, though agricultural and pastoral occupations seem to have engaged their attention even more fully. Not only do the bones and horns assure us of the domestication of the ox, sheep, goat, and pig; but the refuse of these animals shows conclusively that they were herded on the causeways, or in pens near the edge of the water, while the faithful dog guarded the flocks of these primitive farmers.

Simple as the domestic life of the lake-dwellers was, there were in it some of the leading elements of civilisation. The common use of pottery, the woven fabrics, sometimes embroidered with tasteful designs, and the hearths composed of slabs of stone, present to our minds a picture of household comfort, with suggestions even of refinement. The men tended the fields of wheat and barley, and stored the grain in their huts, leaving to the women the task of pounding it in stone querns, and preparing cakes, of which portions resembling the Scottish 'bannock' have been

found among the ruins of their homes. The 'crannoges' of the British Isles differed from the Swiss lake-dwellings in some particulars of construction, and must have been inhabited at a period when the use of metals had already become known. Inasmuch as about two hundred of these lake settlements have been explored in Switzerland alone—and almost all belong to the 'neolithic' or later stone age, of polished weapons, &c.—it is evident that that country was fairly well populated. The social intercourse, division of labour, and industrial pursuits of such communities separate them by a long interval from the primitive mammoth hunters. Here, at all events, were the outlines of civilisation. That one important step had been taken—the cultivation of the earth—whence all the permanent advancement of the human race has sprung all over the globe.

It might be supposed, then, that it would be possible to connect these people with the history of Europe; but there is no warrant for bringing them within its range. Caesar, our earliest informant on the condition of this part of the world, makes no mention in his description of Helvetia, as he named Switzerland, of these remarkable dwellings, which could not have escaped the observation of his soldiery, and certainly would not have been left unnoticed by so careful a writer. Had such an omission been possible, however, Tacitus, writing about a century later from the most complete sources of information, would have supplied it. In fact, these settlements had disappeared at least fifty years B.C., and probably very much earlier than that. The men conquered by the Roman legions were well acquainted with the use of metals, and lived in twelve towns and four hundred villages upon the land. They were either the descendants of the lake-dwellers, or a race who had invaded the country and supplanted them. In any case, we are compelled to admit no insignificant lapse of time for the change of habit, and that advance in material progress, which had been attained when we first obtain a glimpse of the Helvetii in Caesar's pages.

Notwithstanding the evidence philology presents of the Caucasian origin of the Teutonic races, and of a great movement of immigration into Western Europe, some remnants of the lake-dwellers—themselves possibly descendants of the cave-men—may have survived, and have become absorbed into the Aryan stream of population. In that event, the most powerful and intelligent nations of the modern world would have in their veins an admixture of the blood of those men, whose condition, when their lake settlements flourished, was in no respect superior to, and in all essentials identical with that of the existing lake-dwellers of the Philippine Islands and New Guinea.

THE STORY OF AN OLD COAT.

IN TEN EPISODES.

VII.

A CERTAIN loathsome lodging-house, situated in a back slum, whither we must now repair, was nothing else but a nest of thieves—wretched, ill-clad, hungry thieves; outcasts from the more sturdy and bolder ranks of crime; despised by the clever burglar who took his fifty or hundred

pounds worth of 'swag' at a haul; ignored and disowned by the dashing swell-mobman or the accomplished pickpocket. These poor creatures were only stall-lifters and area-sneaks—men, women, and children who were willing to risk the terrible punishments of the law for sixpence. A number of them were assembled in an underground back kitchen, discussing the good and bad luck of the day. They separated themselves into little groups of twos and threes, and established temporary partnerships on the basis of uniting their pilferings and 'going whacks' in the profit.

Presently the door opened, and a man with a detestably cunning expression of face, and having a stumpy horse-whip in his hand, entered the room.

'Well, my lads and lasses, how are you all getting along?' he said. 'I was just driving round this way, so I thought I'd give you a look in. Got anything in my line to-day?' He walked round, and rapidly inspected the various little piles of articles presided over by the respective 'firms.'

'You're a-picking,' grumbled one lean and tattered *chevalier d'industrie*; 'and it ain't fair.'

'I allus pick, and pays extry for it—yer know I do,' replied the dealer. 'I on'y wants boots and clothes—nothing else ain't no good to me; not at a gift.'

Having selected sundry odds and ends; and having paid for them, after considerable haggling, out of a big bag of silver and copper, he stuffed his purchases pell-mell into a canvas sack and carried them off. At the top of the street he mounted a clumsy cart, drawn by a melancholy pony in a decline. A drive of about an hour and a half took him to the other end of London, where his destination was a dingy shop with the announcement—'Marine Stores—Wardrobes bought and sold.'

With the assistance of his 'old woman' and his 'two gals,' the contents of the canvas sack were re-examined and appraised. Among other things, it contained the coat that Shortmiles had lost a few hours before.

Some days later, a stout and comfortable-looking old gentleman, with benevolent blue eyes and an amiable double-chin, stepped cheerfully into the 'Stores,' followed by a thin man, whose more than shabby exterior and general appearance of extreme depression proclaimed that he was very hard down on his luck.

'Have you got such a thing as a strong warm topcoat?' inquired the stout gentleman.

'A topcoat?' said the dealer suspiciously. 'What sort of a coat do you mean? Do you want to buy one, hey?'

'Of course, I do. Do you think I shall ask you to make me a present of one? I want a coat that will fit this man here. Anything that's warm and tidy will suit.'

'Oh, werry well; then I think I can show you just the harticle you'll like;' and the wary dealer, feeling he was safe, produced the garment whose adventures it is our business to trace.

In the end, the stout gentleman paid for it, and the thin man wore it, an arrangement which was mutually satisfactory.

'Now, Reeves,' observed the former, as they

quitted the shop, 'you said you could get a good job at once, if you only had your tools out of pledge and a coat to cover you. Here is the money for the tools—fifteen shillings. Take them. And may God prosper you, my man; may God prosper you!'

Two big tears coursed slowly down the rough cheeks of the mechanic, as he grasped for a moment the extended hand of his benefactor. 'I'll never forget this, sir—never!' he murmured in a broken voice. 'It ain't for the likes of me to ask your name and who you are; nor yet to offer to pay you back when better times come to me—as they will now, as they will now. But you've saved me from worse than death this night, sir. Believe me, I never raised my finger to take what didn't belong to me afore. It was only want and desperation that ever gave the devil a chance to put it in my head. I shall get work now, thanks to you; and I'll be an honest man still, as I always have been.'

'Yes, yes; of course you will,' said the old gentleman, nodding his head in friendly assent, while his kind mild blue eyes glistened moistly under the gas-lamp. 'And look here, Reeves; if ever you get better off, and come across a poor man in want of a little help, you help him, Reeves, d'ye see—you help him!'

VIII.

The blessing which the good Samaritan had invoked upon the man he had saved from disgrace and misery, came down upon him. Reeves prospered. Bit by bit, his cottage grew into a cosy home, that he loved more and more every day; his children became plump and rosy-cheeked; and his wife bright-eyed and happy. But in all this new-born prosperity, the grateful mechanic never forgot his true friend's parting injunction to be tender to others in distress. It will only be necessary to mention one occasion upon which he succeeded in imitating, very closely, the sublime example of magnanimous charity that had been his own salvation.

Reeves was returning from work. It was rather late; and what few people were about were hurrying out of the blinding sleet and piercing blast as fast as their legs could carry them, and that was at no remarkable speed, on account of the atmospheric opposition they encountered. At one moment, the wind suddenly increased to the fury of a hurricane, and compelled Reeves to seek temporary shelter in a friendly doorway. He was not alone there. Some one else had adopted the principle of 'any port in a storm.' It was a man—gaunt, hollow-cheeked, ill-clad, shivering, and miserable.

'What a fearful night—ain't it?' observed Reeves, in a gentle voice.

'S'pose it is. I don't care; it's all the same to me,' returned the man hoarsely.

'I don't want to be rude,' continued Reeves, in the same tones of sympathy, 'but you seem to be hard up. I've been in the same case myself, and I can pity you. I'm only a working man, and I know what hard times mean.'

'It ain't that alone what's the matter with me, mate; although you're right, so far. It would puzzle anybody to be wuss off than I am just now. But it's sorer that's a-killing me,

more than want. I'm a-dying, mate, that's what I am.'

'Come, come; don't talk like that; you'll feel better after a good supper and a comfortable night's rest. And I've got a bob or two as will pay for them.'

'You're a man—a true brick! It does a chap good to speak to the like of you. I thought the breed had died out. But it ain't suppers and nights' rests what'll give me back my wife. I want my wife! I've been hunting for her high and low all over London, from one end to the other, for the last six months. And I can't find her. I can't come across her nohow. O Mary, Mary! why did you run away from us?—why did you leave me and the children when we was so fond of you. You know we was! Why did you go?' He leant his forehead against the rough bricks, and wailed forth the agony of his breaking heart, unconsciously. Presently, he drew himself up and shook his emaciated fist in fierce rage. 'Curses!' he cried—'a million black, bitter curses on the man as 'ticed her from me! If I had him by the throat now—so, like that—I'd tear him limb from limb!'

For some time Reeves said nothing. He felt he was in the presence of a trouble which no words of his could assuage. But by-and-by, when the poor fellow's passion had spent itself, he ventured: 'Look 'e here, friend. You'll find your wife one day, either on earth or in heaven. God pardons such weak, misguided creatures as she; and if you should never meet her *here*, you will *there*, depend on it. You don't know how she has suffered; you don't know how she has repented; you don't know how her fault may have been blotted out and her sins forgiven. Mate, I sha'n't say anything more about it, because I can't help you in that matter. But I can do so in another. When I get home, I shall find a bright cheerful fire, plenty to eat and drink, and a warm change of clothes. You won't have such luck as that. The togs you've got on now wouldn't be much use to you in summer, let alone such a night as this. I'm going to leave you my overcoat—that's what I'm going to do. It ain't elegant; but it will stand a thundering lot of wear yet; and it's warm and waterproof. Here, catch hold of it,' continued Reeves, divesting himself of the garment, and throwing it over the man's shoulders. 'Don't mind me. I can buy another to-morrow, thank God. You'll find three or four bob in the left side-pocket; get yourself a glass of something hot, a jolly good supper, and a clean shake-down.—No thanks, old chap; I'm not used to 'em. Good-bye, and good luck to you. I'm off!' Suiting the action to the word, Reeves darted out of the doorway, and quickly disappeared from view down an adjoining street.

A quarter of an hour later, the recipient of the generous mechanic's bounty was recruiting his exhausted frame with half a pork pie, and a pint of hot ale strongly flavoured with ginger. While he was disposing of this, to him, delicious fare, his eyes rested upon a ten-days-old newspaper, that chanced to lie on the bar of the public-house in which he stood. All at once a gray, ashy hue overspread his face; the knife slipped from his trembling grasp; with shaking fingers he seized the paper, and gazed at one

short paragraph with such an expression of horror and despair, that the barman on the other side was startled, and said: 'What's the matter? Are yer ill?'

'Read that for me,' replied the man wildly. 'I can't see—I feel as if I were going blind. Read that.'

The barman took the journal and read at the place indicated: '*Found Drowned*.—The body of a woman, aged about thirty, and evidently belonging to the poorer classes, was yesterday taken out of the Thames, near Woolwich. She had on an old cloth jacket, much worn; common black alpaca dress; jean petticoat; coloured stockings; and buttoned boots, rather dilapidated. Is marked with a small scar over the right eyebrow. In the pocket were found a leather purse containing fourpence in coppers, and a bit of card that had evidently been written upon, although the words "Joe" and "forgive" were alone legible. The body had suffered from long immersion. It was taken to the mortuary.'

'Thank you,' said the man mechanically, passing his hand over his clammy brow.

'It don't mean trouble to you, I hope?' asked the barman feelingly.

'I'm Joe,' replied the other, as he staggered to the door and left the house.

He walked on and on, quite heedless of the mingled rain and snow, that blew in gusty torrents from every point of the compass. Other pedestrians might grumble bitterly, or swear savagely, at finding themselves out in such uncharitable weather. This man could scarcely have told whether it was mid-summer or mid-winter. He didn't care. All weathers were the same to him now. It was late when he found himself on Westminster Bridge; and it was quite deserted. Deliberately he climbed one of the centre buttresses and stood outside the parapet, gazing into the dark abyss beneath. Then he took off the coat which Reeves had given him a few hours before, folded it up tightly, and flung it back on to the bridge. 'I won't waste that,' he muttered. 'Some other poor un may pick it up and be glad of it. That kind-hearted chap said as how I should one day meet Mary on earth or in heaven. I know where to find her now; but it isn't *here*.' He crouched down, and then suddenly sprang forward. The gloom swallowed him up. The waters closed for ever over him.

IX.

The coat experienced a few rapid and uneventful changes of ownership, after this, in the way of being bartered and sold 'in the trade.' Within a week, it became the property of a gentleman who never saw it, or even knew of its existence. The gentleman had a large house at Notting Hill, employed men-servants and maid-servants, owned horses and carriages, used massive silver plate at his six o'clock dinner, and was treated with marked respect by his bankers in Lombard Street. He also had an extensive warehouse in the city, where he carried on a highly remunerative business as an 'exporter of second-hand wearing apparel.' He was a big merchant. His books showed many thousand pounds a year net profit. But his grandfather had tramped

the streets of London with three or four hats on the top of his head, and a sack slung over his shoulder, as he sang out 'Ole clo'!' at regular intervals, like the minute-gun at sea. There were people who could recollect it.—Strange, that there always should be people whose memories are so terribly distinct upon any subject we most particularly wish to relegate to oblivion. The gentleman of Notting Hill disliked any reference to the 'founder of the firm.' He felt strangely ashamed of his ancestor, dead and gone. There is a mighty difference, thought he, between walking about to pick up a few shabby garments here and there, and buying them wholesale by hundreds and thousands, to be packed in heavy bales, 'marked and numbered as per margin,' and shipped to the uttermost ends of the earth!

X.

We are now going across the sea, on the lightning wings of fancy. We want to look up some old friends of ours and find out how they are getting on. It will be recollected that Mark Roper, with his wife Pattie and their baby, emigrated to Australia, there to court that better fortune which had persistently refused to smile upon them in the 'land of their birth. Three years have passed since they first set foot upon the shores of the new country with a capital consisting of a very small amount of money and a very large amount of pluck. The latter has stood them in good stead, as it will anybody who only makes up his mind to rely upon it steadily. Pluck is one of the best substitutes for more substantial property that a man can possess. Mark found it so. At first, he had a very rough, uphill battle to fight. Circumstances let him have one or two powerful slaps 'straight from the shoulder,' just to try what metal he was made of. He always gave forth the true ring and came up smiling. Then circumstances turned round in a friendly manner, patted him approvingly upon the back, and said: 'You'll do!' And he did do, as well as he could wish, and far better than he expected. He has thrown over his original trade long ago, and is part owner of a small sheep-run 'up country.' His home—surrounded by a large and well-cultivated garden—is a cottage built of logs and corrugated zinc; rather rough to look at outside; but exceedingly bright and cosy, if we give a peep at the interior, as we shall take the liberty of doing.

Pattie is there, busily preparing a supper of unusual abundance. She expects her husband home to-night, after an absence of six days. He has been to Melbourne, where he will endeavour to pick up two or three steady young fellows to work on the 'run,' as their stock is increasing, and more help is required. Very different does the young wife look now, compared with when we saw her stretched upon the pallet in Cribble Street, Mile End, sipping the parish gruel. She has changed into a comely, blooming woman, with a glow of health and contentment upon her face most pleasant to behold. 'Baby' Pattie sits on a high chair at the table, watching her mother's culinary operations with great intentness, and trying to dip her little fingers into everything within her reach. In the corner is a cradle,

where a pretty boy of twelve months reposes quietly, with his great blue eyes wide open, staring at the ceiling, and exhibiting a perfectly philosophic indifference to the rattle of plates, pots, and pans, mingled with the incessant chatter of his sister.

By-and-by, the wife's attentive ear caught the sound of wheels. She flew to the door, and saw a wagon, drawn by a pair of strong horses, rapidly approaching. Directly she appeared, the man who was driving gave the reins in charge of another, leaped to the ground, and ran to meet her. It was Mark Roper. He caught her in his arms and kissed her. To see this happy pair, you would have thought they had been parted for years instead of for days. They loved each other as fervently as ever.

When the wagon drew up near the door, Mark introduced the two young men he had engaged at Melbourne; and then they proceeded to unpack and carry into the dwelling a number of tools, implements, bundles, and parcels—the last named containing household comforts and necessities, such as people supply themselves with in quantities, when they live nearly two hundred miles away from the principal town, to which they can only pay very occasional visits. After a gigantic supper had been disposed of, the two new 'helps,' weary with their long journey, retired to rest; and Mark and his wife settled themselves down for a quiet chat upon affairs in general, particularly their own.

'What a lot of clothes you have brought!' said Pattie, as she examined a motley heap of garments before her.

'Yes,' observed Mark. 'We shall want them all. The fresh hands have plenty of rough work before them, and will wear them out soon enough, I warrant.'

'Here is a great ugly heavy coat. Whom do you intend this for?'

'Oh, that—they threw it in cheap, so I took it. It will serve somebody a turn in the rainy season.'

'The lining wants coming out; it is all going to pieces,' she remarked, taking up her scissors and snipping away at some loose rags.—'Hullo! What's this!'

'What's what?' inquired Mark, over the tankard he was lifting to his lips.

'This! There is another lining underneath, and something stitched inside it.'

'Rip it open, then, my dear.'

No sooner said than done. In another moment Pattie drew forth a thin oil-skin envelope and laid it on the table.

'What's in that, I wonder?' cried Mark, holding it up to the light. 'Paper of some kind, I can see. Slit it open gently with a knife, girl. Don't tear anything. Be careful.'

'It's bank-notes!' exclaimed Pattie, pale with excitement. 'Look! One, two, three, four, five.'

'By Jove! so they are. Five Bank of England notes for—for— Why, Pattie, they're for a thousand pounds apiece!' The rustling wealth shook in his trembling hand as he spoke.

'And here is something else, Mark—a bit of paper with writing upon it. What does it all mean?'

'Read it,' said her husband.

Thus it ran: 'Whoever finds this money—five thousand pounds—may keep it. I give it to them freely. It's all mine, and got honestly. (Signed) JAMES GELSWORTHY.'

'Uncle's money!' cried Pattie, gasping with astonishment.

'And your uncle's coat!' added Mark in the same tone. 'I remember it well now, torn and dirty as it is. I might have known it by the buttons. To think—only to think that it should have come back to us again, when I sold the whole concern more than three years ago for fifteen shillings!'

THE ROARING GAME.

CURLING is now such a general winter game, that most of our readers must be more or less familiar with it. For the sake of the uninitiated, we would, however, explain—as indeed we have explained on former occasions; see, for instance, *The Rival Lairds—Chambers's Journal*, April 27, 1878—that it is a game played with stones on the ice, somewhat in the same manner as bowling is played on the green. It is played either on a natural loch, or on ponds specially prepared for the purpose. Each stone is shaped like a cheese, and smoothly polished on the under side, with a handle on the upper side. They vary in weight, according to the strength and fancy of the player, from thirty to fifty pounds. The game is generally played with four on each side; each player being furnished with two stones, and a besom for sweeping the ice, and thus accelerating the progress of the stones in their passage up the rink towards a mark called the tee. A stone is played alternately on each side. The piece of ice on which a game is played is called the rink. At each end there is a central mark, named the 'tee,' with concentric rings around it, for convenience of determining shots. Towards the tee at each end the stones are alternately played, as in ordinary bowling on a lawn, and the stone nearest the tee counts a shot gained, or, if several stones belonging to one side lie nearest the tee, these count for the side.

The player, in order to insure a steady grip for his feet, delivers his stone from a notch made in the ice, or from a piece of sheet-iron termed the 'cramp,' generally forty yards distant from the tee towards which he is playing. At the head of each side there is a 'skip,' who gives directions to his players, and plays after the other three men on his side have delivered their stones. Besides the skip and the one who is playing, there are other two on the same side in the game, who, if required, sweep, as we have already indicated, in front of the stone, to accelerate its progress towards the tee.

There are many points in the game, such as drawing, guarding, striking, and wicking, which require very great skill, and which only curlers can appreciate. The game may be played either for a certain specified time, or until one side gains a certain specified number of shots. While eight players are all that are required for one rink, curling clubs generally have many rinks engaged at one time. Many parishes have their parish clubs, and play matches or bonspiels against each other. Medals are generally played for annually by the members of each club, and

friendly contests are engaged in by rival clubs and districts; while in Scotland the great curling event is the match between the north and south, under the auspices of the Royal Caledonian Curling Club.

When a black frost has been keen for two or three nights, the curling pond becomes the great centre of attraction. The natural loch, as a rule, forms ice most free from bias. Keen curlers can scarcely restrain themselves till the ice is in perfect order, and often snatch scratch games on ice that is insecure, lest the frost should prove fickle. When the ice has become sufficiently strong, in many districts all other duties and occupations are forsaken, and every one who can handle a stone and a besom, repairs to the curling-pond. With eager anxiety the morning dawn is watched. By many, a hurried breakfast is made, so eager are they for play. The scene, the gathering, and the enthusiasm are such as can be seen nowhere else,

When hill and valley, dale and doon,
Ring wi' the social band.

The rinks are soon made, as a rule parallel to each other, forty yards in length. When the tees, the rings, the hacks, and other necessary marks have been made, the rinks are swept from end to end, and play begins. Cautiously, and with less of demonstration, the first few ends are played, till enthusiasm warms up, and banter and more noisy demonstration are awakened.

There are certain expressions and phrases that are common to the whole curling fraternity; but each district has some peculiar phraseology of its own; and almost every club has one or more members who are noted for their ready wit and appropriate mirth-stirring remarks. A bonspiel is a source of rarest enjoyment to keen curlers, and is scarcely less interesting or amusing to spectators who understand the game. While the game is, in more senses than one, proverbially a slippery one, yet this only adds to its interest. But here, as in all things else, skill and knowledge will, as a rule, bring success. A most pleasant characteristic of curling is, that betting has never to any great extent been associated with it. The main stakes, if any, are coals or meal for the poor, or beef and greens for victors and vanquished.

Until within the last few years curling was an essentially Scottish pastime. As far as can be ascertained, the first mention of the game is made by Camden in his *Britannia*, published in 1607. When speaking of the island of Copinsha, he says that there are 'found on it plenty of excellent stones for the game called curling.' As this notice shows that the game must then have been somewhat widely known, we may safely conclude that in the sixteenth century, if not prior to that era, it must have been practised in Scotland. The game might very naturally take its rise among masons. When they gathered for their work, and found that the frost prevented them, they might naturally amuse themselves by throwing or rolling stones along the ice to some object. They would at first select some stones naturally adapted for the purpose; then by-and-by they would shape and polish them. Masons, in many instances, are still the keenest as well as the best curlers. This may arise partly from the fact,

that in frosty weather, when their normal work is impracticable, they have more leisure for practising the game, and partly from the training of the eye and hand which their daily occupation gives to them.

The old name for curling is *Kuyting*, and in all probability the game at first was more like quoiting on the ice. Some old stones that still exist seem to favour this view, both from their size and shape, and from having a niche for the finger and thumb. These would seem to have been thrown rather than skimmed along the ice. In the Carse of Gowrie there is a model of a curling-stone in silver, which tradition says was given by James IV., himself a keen curler. As far as we know, the oldest curling-stone is one found at Dunblane, bearing date 1551. Now, James IV. was killed at Flodden in 1513, thirty-eight years before that date. Another old stone was found in a wall near Torphichen, bearing date 1611. During the past year, when taking down 'Maggie Osborne's House' in Ayr, the workmen came upon a very old stone, a huge oval piece of granite, with a hole for the handle, and polished by friction on the ice. This stone may have been in the wall for several centuries.

As might naturally be expected, the stones of olden times were of rather a rude character, and quite innocent of that modern invention of double soles—the one 'keen,' and the other 'dour.' Specimens still exist of the 'three-neuked' stones, formed like a cocked hat. Some old stones seem to have been rare runners and rare wearers. Almost every club has some specimen or some traditions of its old curling-stones and its old mighty curlers. Some families are quite noted for their curling prowess; and occasionally a rink, composed of the members of one family, have proved the most formidable to meet. The present generation must regard itself as but a degenerate race when it hears or reads of the weights of the stones which its forefathers played. In the Lochmaben Club there is a very ancient stone called the 'Hen,' about seventy pounds' weight, of rather an uncouth appearance. She was reputed to have had a kind of instinct by which she would get on to the *tee*; and having got there, she at once 'clocked,'* and almost refused to be moved. It is reported that on one occasion a very strong player was in the act of throwing a stone of about seventy pounds' weight, when the skip countermanded his orders; and while waiting for new directions, simply held his stone at arm's-length in the air, and then played it to the mark. In the possession of the Cupar-Angus Club we read of stones, 'Black Meg,' sixty-six pounds; 'Fluke,' seventy-two pounds; 'Cog,' eighty pounds; 'Suwaroff,' eighty-four pounds; and while these were allowed to be played, there was one prohibited, 'The Saut Backet,' one hundred and sixteen pounds—a clocking hen, indeed! There must have been 'giants in those days.'

As every good curler is aware, there is a great art in the delivery of the stone; and every player, to be successful, must learn to stand naturally in delivering it, so that the stone may leave the hand without any friction or 'hanging.' Any one who begins by soling his stone well, will

almost to a certainty become a good player. The player should invariably keep his eye on the besom or object for which he is playing, and not look at his feet, or stone, when delivering it, or he will certainly make many mistakes and misses.

Good curlers are well aware of the effect which the turn of the wrist—for the purpose of giving a rotatory as well as a forward motion to the stone—at the moment of delivery, exerts upon the running of the stone; and they use 'out-turn' or 'in-turn,' according to the necessities of the game. This at first is a little perplexing, but it is soon learned. It should be done entirely by the wrist, and not by twisting the whole arm. Unless a stone has a turn given to it when it leaves the hand, it will almost certainly assume one, and it will be a mere matter of accident which turn it will take, and thereby deviate from its true aim. As the stone rotates, there is a certain amount of friction that takes it more and more to the side, in the direction in which it is rotating. And when the stone is played, allowance has to be made for this by the skip, who, when he gives his directions, makes the player 'borrow' so much ice. By this twist of the wrist, biases in the ice can also be very much overcome; and the player who with either turn can calculate aright, will often thus take shots that would otherwise be impossible.

In a keen game, every player feels as if the game depended on each shot that he plays. The Lead is one of the most important positions in the game, and should, if possible, be intrusted to an old and steady player. Sweeping is a most essential part of the game; and good sweepers are invaluable. They should be entirely at the word and command of the skip. He alone is in a position to judge as to when and where sweeping is necessary. A sweeper has no right to think for himself on that matter; he is there to sweep, not to judge. In nine cases out of ten, the skip will be the best judge, if he is fit for his position. The post of skip is, of course, by far the most important one. A skip must not only be a good player, but have a great knowledge of the game; he must be of quick, ready, and comprehensive observation, fertile in resources, sound in judgment, and be possessed of the confidence of his men. Each end will vary, and he will require, accordingly, to vary his tactics and directions. A skip should invariably place his broom on the very spot at which he wishes the player to aim, as it greatly aids the eye. He also requires considerable knowledge of human nature to enable him to keep his men always in good playing humour. There is also demanded from him a close observation of the run of the different stones, that he may vary his directions accordingly. He should, as a rule, be able to judge and determine for himself what is the best play; but he should not be offended by his third player now and again directing his attention to something that may have escaped his observation. But as little as possible should the sweepers be round the *tee*; their position is half-way down the rink, ready to sweep.

Among the most scientific curlers, what is known as the cautious game is followed in preference to the 'loud' or striking game. Curling is not a game of merely muscular strength, but a game of skill and science. Stones beyond the

* In Scotland, a hen sitting upon eggs is said to be clocking.

tee in the early part of the game, seldom count in the end. The quiet game affords the greatest scope for displaying first-rate skill. In three cases out of four, a tee-length shot will accomplish what is but too often missed by a running shot. In these cases, the tee-length shot will be in the rings, and may be of much use as a side shot, whereas the running shots will be spent. Young players, more especially, require to be taught that this cautious style of game is in the end the winning play. True curlers, above all things, wish to cultivate good fellowship and good feeling on the ice. Let no curler ever try, by rudeness, or unmannerly word or act, to irritate or disconcert a player. Let all be fair and honourable. Let every man preserve his own self-respect, and give like respect to others. But let every curler be keen to win his game, as if life or death hung upon the issue. Any one who joins the game in this form and spirit, will get health to body, mind, and heart, in one of the noblest, manliest, and most exciting outdoor games that the world has ever known.

Curling has within recent times greatly extended, and is now very general over the whole of Scotland, as may be learned from the *Annual* of the Royal Caledonian Curling Club. While there are many that have not joined its ranks, that Society, as we write, includes about five hundred and fifty Clubs; four hundred and twenty of which are in Scotland, twenty-five in England, three in Ireland, ninety-two in Canada and the United States, two in New Zealand, one in Russia, and one in Norway. The admirable rules which the Royal Caledonian Club have adopted, are now generally recognised by all curlers.

Although curlers are familiar with the game in their own country, there are many who are not aware of the somewhat altered conditions under which it is played in Canada. The Dominion offers facilities for curling which Scotland does not possess, and Scotchmen have carried their game with them to their adopted land. With four months of steady frost each season, there is abundant opportunity for practising the game. Young Canadians are, in many instances, making it the Dominion winter game. Owing to the intensity of the frost, as well as the amount of snow that falls, the game has, as a rule, to be played under cover; and when daylight fails, gas is turned on, and the game proceeds as merrily as ever! In certain places, long sheds, used as stores in summer, are taken advantage of for this purpose. One Club, during a season, actually curled up-stairs, while a new rink was being built! A huge granary was hired, and flooded with three or four inches of water; and it was doubly a roaring game, the floor acting as a sounding-board. Some of the Clubs have now splendid buildings, with cloak-rooms, lunch-rooms, and every convenience and comfort. They are built long enough, and wide enough, for two rinks, separated from each other by a passage between. The floor is made level and water-tight. Water to the depth of three or four inches is run on with a hose. Two nights of keen frost are sufficient to make it one solid mass, presenting a beautiful, level, unbiassed sheet of ice. When this gets a little worn by play, or becomes accidentally 'twisted' by severe frost, it is

flooded anew at night with another inch of water, and is in the morning again ready for use. The cold is so intense as occasionally to register thirty or forty degrees below zero. During the winter there is seldom more than one thaw, and that only for two or three days about New Year. 'Tramps,' or steeled cramps attached to the player's feet to grip the ice, are not permitted; and no one is allowed to play without overshoes, so that no speck or flaw shall mar the ice-board. Strange to say, the more intense the frost is, the more 'dour' and dull does the ice become!

There are now, among the Canadians, many curlers who would be formidable opponents even to our crack rinks in this country. They think little of travelling five hundred miles to play a spiel. And true curlers from this country, representing our National Club, would find from the Curling Brithers of Canada a welcome such as only curlers can give to enthusiasts in the Roaring Game.

'54.

A TALE OF THE BALTIC.

We were cruising in the Baltic in glorious Fifty-four,
The Rooshians' whereabouts so strong to know,
When one night, in wind an' sleet, we parted from the fleet,

An' daylight found us right amongst the foe.

The Rooshians down upon us bore;

They were thrice our strength, an' more;

But our Cap'n, as he came on deck, says he:

'You but be firm an' true, an' I'll surely pull you through,

An' soon we'll have the lubbers on our lee;

Boys, hurrah!

An' soon we'll have the lubbers on our lee.'

Then we sent throughout the vessel a loud an' ringing cheer,

An' a shout that made her very timbers thrill;

For says we, the skipper's right, there's nothing for 't but fight;

So let us up an' at 'em with a will!

An' if the chance of war should fate

Our transfer from to-day must date

To that station chaplain calls Eternity.

In Freedom's lap we'll die; with our latest breath we'll cry—

We're Britons, an' we'll never captives be;

Boys, hurrah!

We're Britons, an' we'll never captives be.

So we tackled them three Rooshians, alone upon the sea—

(Ay, you landsmen well may wonder how 'twas done);

An' we fought them, tooth an' nail, till they one by one turned tail—

My eye! you should ha' seen the lubbers run!

Then the Cap'n cries: 'Pipe hands to prog,

An', boas'n, just pass up the grog!'

Then filling up a bumper glass, says he:

'Here 's, comrades, great an' small, a health to one an' all,

An' confusion to the lubbers on our lee;

Boys, hurrah!

An' confusion to the lubbers on our lee.'

THE SMALL FOLK'S POSTBAG.

THERE is no sweeter greeting than a letter from a little child, a genuine juvenile letter, unprompted and uncorrected; full of mistakes, perhaps, but full also of simplicity—the very fragrance of childhood. Unfortunately, few such letters add their light weight to the load of Her Majesty's postmen; seldom the weak unsteady writing of small hands comes to any of our doors demanding quick entrance by the loud official knock. It is surely one of the big busy world's mistakes, that the small folks send so few genuine letters and get so few; they and the postbag are strangers—comparatively.

But in carrying other people's letters, they have a very intimate acquaintance with the post-office. Have we not seen a living Tower of Babel, built of ragged little ones, swaying about near the pillar-box, while the top hand aimed a letter at the slit? The poorer children always carry the family correspondence, in one or two journeys a month, to the office or pillar; but the little people who know more about pothooks and hangers, and have more materials at hand, have far less to do in any way with letters. Boys and girls at boarding-schools certainly do write home; but the letters seldom can be called their own. They are not, indeed, tutored by the Complete Letter Writers, which recommended to former generations a pattern letter from an accomplished young prig at school to an awful personage at home—a Paterfamilias of formal tastes and awe-inspiring character. Tom has not to grapple with a book of pattern epistles in the letter-writing hour at his school-room desk; but he is chilled by the knowledge that Mr M'Quilter presiding yonder, will supply him gratis with punctuation by-and-by; and when the whole pile of letters is finished on the master's desk, and Tom recognises his own by that sputter in the top corner, he will watch during five agonised minutes, reading his letter anew in the facial contractions of M'Quilter, the hums and haws and lurking smiles; and Tom will have guarded beforehand that those irritating

smiles shall be few, and that there shall be no reckless vent given to comicality, lest it might be gravely read aloud as a warning example of the absurd.

Poor Tom! he had sufficient warning in that way once. Did not M'Quilter read out a certain unlucky letter—hurriedly written, honestly desirous of telling news at home, but somewhat confused by flowing freedom, innocent of punctuation?—that letter in which Tom wrote a summary of events: the death of Bess the mare; the visit of the Colonel, and the jolly good 'tip' he gave before leaving; the surprise of the boys that the old horse went off so suddenly; the coming 'exam.'—its toughness and hard cramming; the decease, through over-feeding, of the guinea-pigs that he hoped Kitty would have from him at Christmas, and like them; and the alarming news, that a bad attack of gout and the mange were shared in some indistinct manner between Old Pluto and Dr Smithers. Alas! poor Tom, the Tommishness has departed out of his letters since then, under the too keen consciousness of the future spectacles and pencil, and cold judgment by the rules of art. His letter now might belong to that staid and studious Jenkins, or to anybody else; and he is even censured for the sputter on the corner, till he cuts a hole in it with his scraping penknife, and then is detected in having imprinted upon it that human seal, of which it is said no two can be alike—the imprint of the thumb; and finally he copies his letter all over again, less Tommish than ever, but a credit to the school of Smithers.

Tom's sister is at the College for Young Ladies, one of the fashionable 'gardens of girls,' where young ladies of ten and eleven begin their college life, and walk out two and two—'schools' in general being somewhat behind the age now, and beneath the level of learning for 'exams.' and 'matrics.' Tom's sister writes her weekly letter too, wins the golden opinion of Miss Spraitlace, and is even amongst the advanced pupils, who are rewarded for their trustworthy conduct, and still more for their sound judgment about straight lines and

commas, by being allowed to despatch letters to their parents without any supervision. But the advanced pupils put in their letters nothing that they would have omitted if the letters were addressed to 'Dear Mamma and Everybody Else.' Little Miss Ethel takes by nature more pleasure in a careful letter than Tom ever would. Ethel has the feminine instinct of neatness and grace. If Matilda-Jane, diving under the table after a pen, jerks her elbow—especially when the letter has progressed faultlessly over that second page that was not so nice to write on—a fearful scene of recrimination ensues; and Ethel will quarrel and weep over a blot, such as Tom, by the licking and swallowing process, would change in a moment into a faint purple moon in a damp atmosphere. If no accidents occur, Ethel's letter is a triumph of the Straitlace teaching. It is evenly written in even lines from 'My dear Mamma' down to 'Your affectionate daughter.' Miss Straitlace approves of 'affectionate daughters,' as more elegant than 'loving children'—what Mamma thinks is another thing; but Ethel knows that especially in correspondence elegance and style are to rule supreme, if she hopes to write in after-life 'a lady's letter.'

Ethel's epistle studiously shows the 'lady's letter' characteristics—except the precious postscript. Miss Straitlace is known to consider postscripts the mark of a mind wanting in order and method, particularly if they have not 'P.S.' prefixed, and properly punctuated. Ethel knows all about punctuation; her commas are like a cruel scattering of her own fair little eyelashes. She knows all about grammar, and succeeds in not writing a single sentence as she would have spoken it. She knows all about the dignity of letter-writing; and there is nothing frivolous about this epistle, written in the finest succession of points, with a confusing family likeness between the 'ns' and the 'us,' and the most scrupulous regard to crossings, dots, and elegant tails. Shut it up, Ethel, fold it mathematically straight, and direct it with practised confidence that the envelope is not upside-down! You are proficient in the *writing* of a school letter; but no one has cared to teach you what the letter itself should be.

Neat and legible letters, of course, the little ones should be taught to write; because legibility—the distinct forming of every word—is a better quality than any mere uniformity or prettiness of writing, and because an ugly careless letter is almost a slight to the person who is to read it. But before all else, it should be impressed upon young letter-writers that they are to write down exactly what they would like to say; that the letter that reads like talk is the best letter; and the formal one that never would have been spoken is the worst. When the children learn to speak faultlessly, and pick up in time the conversational habit of orderly sequence of ideas, their letters will naturally become perfect in wording and arrangement, but will still be a faithful transmission of the *vivd-voce* speech of the writers. If this common-sense principle of teaching letter-writing were introduced, there would be a new and immense pleasure added to the life of all child-loving old folks; at some time or other, the children would find need of sending letters; and the prattle of the little ones, their fresh talk

breathing happy ignorance of all but their little world, where small cares, joys, and interests stand around them magnified—the very sound of their voices echoing out of the words they might have said—all this could be kept indelible and ever fresh; and in how many cases of distance, time, or sorrow, the old letters would become precious as gold!

It would also remove from children's minds much of the difficulty of learning to write letters. If the boys and girls are still too young to go to Dr Smithers' or Miss Straitlace's, a letter even to their loving and beloved Uncle John, is a labour approached with dread. They are shown where to begin, and after choosing a commonplace beginning about the pleasure of writing (!), or the safe receipt of the last letter, they beg to be 'set going just down the first page,' or to be told something to say. The beginning was easy; it was as fixed as a chess-opening; but facing three and a half blank pages, the brain-ransacking of the children is pitiful—and the pen-chewing, and the jealousy of the one that has first found something to say, and is going ahead. At last, they all 'go ahead,' and get their sheets turned inside-out for page two; during which process six-year-old Baby, who has been printing in pencil, questioned by Jack, reports about her sneezy cold, the picnic to-morrow, the pigeons, Tabby's kittens, the settlement of the monkey's name as Pongo, and Mab learning music. And Jack bursts out in a fury, that he has written every bit the same thing, only beginning with the picnic, and ending with the kittens and the cold; while Mab, with equal resentment towards both, as if they were marauders in possession of her exclusive property, complains: 'That's the very thing I've got—my music, and the picnic and Pongo, and all the rest of it down to Baby's cold! Uncle can't read the same thing over three times, you stupid Jack! Baby, begin again with something else to say.' Then, probably, some peacemaker interposes, issues new writing-paper, and divides the universal topics into three separate lists: Baby is to keep her own 'sneezy cold and the kittens,' and Mab her own music and the pigeons, and the picnic; Jack may have the picnic too, and Pongo; but they are all to say a great deal more about the items of news. After this there is peace, until they become stranded again, and don't know what to put next.

The whole letter, which Uncle John will receive as a spontaneous greeting, written 'with great pleasure,' is in reality a dreary, prolonged effort; and yet, if Uncle John were there, Mab, Jack, and Baby would hug him to pieces with genuine welcome, and make his head ache with three lively versions of information, all given irrepressibly and at once. Do let the peacemaker that hit on the plan of dividing the news fairly, explain to the children that they are to send their hugging welcome in words freely to weary, work-tired Uncle John, and that they are then just to think what they would say if they were talking, and say it that minute in the first words that come. This, and this alone, is teaching children to write the letters that are worth getting. The handwriting, the spelling, the neatness of the whole, are only the externals, important in their way, but not so important as the substance, the soul of the letter. As other teaching progresses, the writing and the spelling

will come right; but children's letters will not be a pleasure to the senders and the receivers, until the first lessons in letter-writing are the unfettering of child-nature, rather than the fettering of it by art and rule.

But when they write letters, children expect to be answered. Writing letters to little ones is like speaking to them; it is one of the arts the heart teaches. And though we write to them without the inspiration of seeing their bright expressive faces, we have another inspiration in knowing that a letter is a rare delight to a child; it is read over time after time; it is laid by and kept, if it has come from a loving hand.

It is remarkable that some of the most learned and brilliant minds have left, among their weighty and witty published correspondence, the most charming letters to children. Charles Dickens took the trouble to write a long tissue of jokes to a boy who wrote to him about the justice that ought to be done to the good and bad characters in *Nicholas Nickleby*. Sydney Smith, on getting a letter over-weight from a grandchild, sent an answer beginning: 'Oh, you little wretch! your letter cost me fourpence,' and promising that he would pull all the plums out of her puddings, steal her dolls' clothes, give her no currant jelly with her rice, and kiss her till she could not see out of her eyes. Another time, when he was writing to a boy who was recovering from illness, he put an element of boyish interest into his congratulations, by saying that the surgeon was skilful, and he would soon be well; and adding, that in the Trojan War the Greek surgeons used cheese and wine for their ointments, and in Henry VIII.'s time cobbler's wax and rust of iron were used—'so you see it is some advantage to live in Berkeley Square in the year 1837.' Again, he found something pleasant to write to a little friend who was going away to Boulogne: 'Lucy, dear child, mind your arithmetic. You know, in the first sum of yours I ever saw, there was a mistake. You carried two (as a cab is licensed to do), and you ought, dear Lucy, to have carried but one. Is this a trifle? What would life be without arithmetic, but a scene of horrors? You are going to Boulogne, the city of debts, peopled by men who never understood arithmetic.' But the prettiest part of this letter is its beginning, where he advises Lucy not to tear her frock any more, but to be like her mother, 'frank, loyal, affectionate, simple, honest; and then integrity or laceration of frock is of little import.'

One of the best letter-writers that ever covered paper with talk, was Jeffrey of the *Edinburgh Review*; and his correspondence contains gems of letter-writing to his grandchildren, those 'imps of the third generation,' whom he called the light of his eyes, and the love of his heart. We shall close our plea for a better kind of attention to the small folk's postbag, by giving an example of one of his delightful letters, written from his charming summer retreat of Craigcrook, near Edinburgh: 'MY SONCY NANCY!—I love you very much, and think very often of your dimples and your pimples, and your funny little plays, and all your pretty ways; and I send you my blessing, and I wish I were kissing, your sweet rosy lips, or your fat finger tips; and that you were near, so that I could hear, your stammering

words, from a mouthful of curds, and a great purple tongue (as broad as it's long); and see your round eyes, open wide with surprise, and your wondering look, to find yourself at Craigcrook! To-morrow is Maggie's birthday.' Then he tells about the bonfire and the merry-making that is to be; about the garden full of flowers; Frankie's new wheelbarrow, with which he does a great deal of work, and some mischief now and then; the good health of all the dogs—Foxey, Froggy, Neddy, Jacky, and Dover, and their present separate appropriation by himself, Tarley (little Charlotte), Frankie, and Granny. Next he sends the donkey's compliments, and hints that the donkey believes he is sending them to a near relation. 'Frankie,' who is described as hammering in the corner to flatten the carpet, is reported to be 'very good and really too pretty for a boy, though I think his two eyebrows are growing into one—stretching and meeting each other above his nose! But he has not near so many freckles as Tarley—who has a very fine crop of them—which she and I encourage as much as we can. I hope you and Maggie will lay in a stock of them, as I think no little girl can be pretty without them in summer.' So the letter winds on, past the pea-hens who are suspected of laying somewhere in secret; the papacook who pretends to know nothing about them, and does not care a farthing; the slow kitchen-garden; and the hope that the grandchild will come to Craigcrook with a lapful of green peas—until at last the 'loving Grandpa' comes to the end of his sheet, with 'Bless you ever and ever, my dear dimply Pussy.'

Does not this letter descend most winningly to the level of the young eyes it was meant for? Soncy Nancy! How applicable, doubtless, to his little Scottish grandchild. Dimply Pussy, a woman grown; perhaps lived to be a grandma, with dimply pussies of her own to love. Are not its home-pictures bright with nature, with life, love, and innocence? And may not a letter to a child be a thing worth doing well?

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

CHAPTER III.—'I LIKE THE PRIMROSE WAY,' SAID STRANGE.

AFTER breakfast next morning, Strange and his guests were enjoying the day's first cigar.

'I want you two men to come home with me, and let me introduce you to my governor and my sister,' said Reginald Jelly.

This invitation jumped with Gerard's desires, and his cheek coloured with pleasure, unmarked by his companions. 'What do you say, Val?' he asked with as great an assumption of indifference as he could wear.

'I'm very sorry,' said Strange; 'but I can't come.—I didn't tell you of my last bargain, did I, Lumby?'

'No. What is it?'

'I've bought a yacht, a beautiful thing, that sails I don't know how many knots an hour; and I'm going to sail round the world in her "from China to Peru." What do you say to coming along, eh?'

'Val's a noble sailor,' said Reginald. 'To my personal knowledge, he has crossed the British Channel several times; and I believe, but I'm not quite certain, that he has been to the Isle of Man.'

'Ireland, you depreciatory ruffian! Rotterdam! Antwerp! Lots of places!'

'Yes,' said Reginald; 'you're a mighty seaman.'

'Ah, well,' said Strange; 'I'm a better sailor than you are.'

'I don't believe it,' the little man returned. 'You suffered more than I did, when we crossed to Calais together last summer.'

'Well,' said Strange, reclining luxuriously in an arm-chair and puffing a cloud of smoke towards the ceiling, 'I like to face a difficulty. I like to battle with something that gets me down and rolls upon me, to begin with. The sea has always beaten me until now, and I'm resolved to become an accomplished seaman.'

'He'll provision himself for a year,' said Reginald, 'and he'll start for Pekin or Pernambuco; and before he has been out a day, he'll feel unwell, and order himself to be put in at the nearest port. I'll wager half-a-crown that he never gets a hundred miles from British shores. I'd offer more; but I can't afford it.'

'I am resolved on making a voyage round the world,' said Strange, laughing good-humouredly. 'Will you come, Gerard?'

'Eh?' said Gerard, waking up, at the sound of his own name, from a dream of the violet eyes.

'You're dull this morning,' cried Val cheerily. 'Wake up, man. I'm going on a voyage round the world. Will you come with me?'

'No; thank you,' said Gerard; 'sailing's dull—duller than I am.'

'Thought you'd jump at the chance,' said Val. 'I know you're a first-rate yachtsman.'

'I got tired of it,' said Gerard in reply, and lapsed into his day-dream.

'You'll get tired of it too,' said Reginald, turning anew upon Strange.

'Don't be too sure of that,' he replied. 'You only know one side of me. There's a good deal of the Spartan in my constitution. I find hard-ship pleasant. I like a rough-and-tumble life. I should revel in a campaign.'

'You'd pretty soon revel out of it,' said the little man with some disdain. 'Call yourself a Spartan, you Sybarite? Rough-and-tumble? Gammon!'

'Pooh!' said Val, a shade less good-humouredly than before. 'You don't know me, my good fellow.'

'Don't I?' returned the sceptic. 'Who went out of training for the College Eight on the very first day, and was caught by me in the act of smoking whilst brewing cider-cup?'

'Very good cup it was too,' said Val, striving to propitiate his critic.

But the little man arose, and stood over him sternly. 'Who always went headlong for the Newdegate, and wrote twenty lines, and then chucked it? Who came back from his last lounge in Brussels, and—'

'Never mind more instances,' said Strange. 'I admit them all. I don't care to live by line and rule. I don't want to be hampered by

restrictions. As for the training, I never believed in the system. I should have pulled as well after a cigar and a glass of cider-cup, as I could have done without them.' He laughed with renewed good-humour. 'But you must needs come prowling round, like the tyrannical dwarf you are, to see what I was doing. It was you who ordered me out of training, not I who went out of it.'

'I ordered you out of the boat,' said the little man, still standing over him. 'A precious cosun I should have been, if I hadn't.'

'I don't believe in training,' said Strange, with much decision. 'We overdo it, and go stale.'

'You never overdid it,' said his late coxswain severely. 'You are an idler by nature, plus circumstance. You are disgustingly rich, and that fact fosters your natural proneness to self-indulgence. You wallow in gold and purple and fine linen. Your feet are set for ever in the Primrose Way.'

'I like the Primrose Way,' said Strange. 'I am fond of primroses.'

'Many there be,' quoted the coxswain with an unbending air, 'who go the Primrose Way to —'

'Say the workhouse,' pleaded Val languidly. 'I know! Regy, my boy, you're perpetually preaching. You're too energetic and too shamelessly and outspokenly good, for me. Now, look at me. I am athletic by stealth, and blush to find it fame. I cover up my good works. I don't brag of them.'

'You are a lotus-eater and a Sybarite,' said the little man severely. 'And you crown your offences with a crown of aggravation, when you come and crow over a hardy son of the soil like me, and call yourself a Spartan.'

'I am a Spartan,' said Strange lightly. 'I'll do this voyage and something more.'

'Who is going with you?' asked Gerard, waking up again.

'Gilbert. You remember Gilbert at Oriel? First-rate man for the commissariat.'

'Ah,' said Reginald, relighting his cigar, and looking round at Strange with an expression most comically like that of a parrot bent on mischief; 'he's another Sybarite. Wanted to train on truffles and Heidseck's monopole!'

'Did he?' said Strange, laughing. 'The good old Billy. It was like him. Well, he has the complete control of the commissariat department, and *carte-blanche* to lay in what he likes. He has found a wonderful cook, a sort of nautical Soyer; and he's invented a capital wine-case to swing on—I forget what the things are called; but the wine doesn't get shaken in any sort of weather.'

'It's a very Spartan sort of expedition altogether,' said the critic. 'I hope you've a piano on board!'

'Of course,' said Strange. 'A crate of books. Cards, backgammon, chess, everything in that way we could think of. Because, you see,' he continued with a chastened air, 'there's a good deal of tedium in living aboard a yacht; and since I am rather a man of action than otherwise, I'm likely to find it dull.'

'Poor Spartan!' said Reginald, with a comic crackling laugh.

'There is no form of humour so cheap as the catchword,' said Val sententiously. Then the two laughed together, and Gerard came out of a new day-dream.

'I suppose,' said Gerard, 'you remember that you are engaged to run up to town with me, next week?'

'No. Am I?' asked Val, sitting up with an air of apology. 'So I am. I'm really sorry, Lumby; but I'm afraid I can't keep Gilbert waiting. You'll excuse me, won't you?'

'Certainly, if you wish it,' said Gerard, a little ungraciously.

'I'll write, and put Gilbert off for a week, if you like?' said Val with a penitent look.

'No,' said Gerard heartily, forgetting his momentary pique. 'Don't do anything of the sort, for me. I don't know that I've any special reason for going, after all.'

'It's curious,' said Strange, sinking back into his arm-chair again—'it's very curious that I should have forgotten that engagement. If there's a thing I'm careful to do, it is to remember an engagement.'

At this moment, Hoskins entered with a telegram, which he handed to his master. 'Excuse me,' said Strange; and opening the missive, he laid down his cigar and read it.

'Dear me!' he said, rising. 'Here's poor Gilbert wiring to me to say that we made arrangements to sail yesterday. I thought it was Thursday; and the day turns out to have been Tuesday. I was going down this afternoon to join him.—Well now,' turning upon the gleeful Reginald, who was chuckling at this practical illustration. 'What is there to laugh at?'

'Nothing in the world,' the little man responded. 'Pack up at once; wire to Gilbert; and start by the next train.'

'I'm afraid I must,' said Val, a little ruefully.—'Hoskins! Find out the first train for Bristol.'

'Yes, sir,' said Hoskins, and departed.

'Have you made any arrangements to reduce your establishment, while you sail round the world?' asked Reginald.

'O no,' said Strange. 'The voyage round the world is not an enterprise to be undertaken without experience. We shall make preliminary voyages, and get gradually inured to the work.'

'You can catch a train in an hour and a half from now,' said Reginald. 'Off you go; and we'll ride with you to the station; and then'—bowing solemnly to Gerard—'perhaps Mr Lumby will do me the honour to come and lunch with me at home?'

'Very happy,' said Gerard, rather clumsily. His heart began to beat with some irregularity, and he was conscious of a curious restraint.

Val, having made his moan about the breaking up of a pleasant lounge, and having enlarged on the disagreeableness of railway travelling in the summer-time, went off to superintend his packing; and in due time the three started; Strange lolling in an open carriage, surrounded by sundry portmanteaus, and his companions riding on each side of him. Arrived at the station, the Spartan-minded mariner fortified himself for the journey, which was to last an hour and a half, by the purchase of all the daily and the

comic papers; and parted from his friends in a sudden burst of high spirits and alacrity.

Gerard and his new acquaintance rode away together leisurely. The young fellow was in a singular tumult, and had before this begun to suspect the truth concerning himself. Yet the truth, to a man so little sentimental, seemed absurd and laughable. To have seen a girl for a second or two, and to be thrown into a flutter by it for four-and-twenty hours, and to find the rout of sense and senses growing completer even then, was an experience which would have seemed ridiculously improbable in any man's case to Gerard; and that it should happen to him, made him ashamed of himself. We can read with equanimity of the folly even of sages; but that we should ourselves be vulnerable, though we make no especial claim to wisdom, is startling to discover. This stalwart young Briton had indulged in no flirtations—had never played with the grand passion—had spoken despitefully of it—bragged a little in his secret heart that he was not a lady's man; and believed himself, when he thought about the matter at all, to be cut out for a comfortable bachelorhood.

IS THE INTERIOR OF THE EARTH MOLTEN OR SOLID?

THE question of the condition of the earth's interior, like that of the plurality of worlds, is one which does not submit itself to the process of direct and tangible experiment, hence any knowledge that is to be derived on the subject is mainly inferential. We cannot descend to the central core of the globe, any more than we can ascend to Mars or Jupiter, and are therefore constrained, in dealing with either question, to content ourselves with such outlying phenomena as are within our reach, and to argue from the little that is known to the much that is unknown.

The original condition of the globe, previous to its assuming its present shape and dimensions, cannot be certainly known; but there are indications that it was at the first in a comparatively soft or plastic condition, as is attested by its present shape. A body of this plastic nature, rotating rapidly on its axis, would, in consequence of the centrifugal force caused by the motion of rotation, have a tendency to bulge out at the equator, and to contract itself at the poles, thus losing its strictly spherical form, and becoming orange-shaped. This indeed is the shape which the earth has assumed, and hence may be taken as supporting the theory that its material was originally in a pliable condition.

But while the earth was in this state of plasticity, and gradually assuming its present shape and configuration, a cooling process was at the same time going on, tending to solidify the mass. As we know from analogy, the earth would begin to cool first at its surface—that is, the heat of the exterior parts would be lost by radiation or diffusion into the surrounding medium. The portion so cooled would gradually undergo a hardening process, till in course of time a crust was formed round the whole exterior of the globe. Two questions, therefore,

are suggested in this relation: Did this process of cooling continue till the whole mass of the earth to its very centre was hardened and solidified? or, Did it stop short at a certain distance below the surface, thus forming an inclosing crust around the uncooled molten mass of the interior, like the rind of an orange round its juicy pulp?

Various theories have been from time to time advanced as to the interior condition of the globe, many of them of a purely fanciful character. The great astronomer Kepler, for instance, in seeking to account for the ebb and flow of the ocean-tides, depicted the earth as a living monster, the *earth-animal*, whose whale-like mode of breathing occasioned the rise and fall of the ocean in recurring periods of sleeping and waking, dependent on solar time. He even, in his flights of fancy, attributed to this earth-animal the possession of a soul, having the faculties of memory and imagination. Another great astronomer, Halley, was opposed to the idea of the globe being solid, 'regarding it as more worthy of the Creator that the earth, like a house of several stories, should be inhabited both without and within.' For light, too, in the hollow sphere, he thought provision might in some measure be contrived. So recently, indeed, as within the last hundred and fifty years, equally singular notions have been entertained regarding the earth's interior. Sir John Leslie, like Halley, conceived the nucleus of the world to be a hollow sphere, but thought it filled, not with inhabitants, but with an assumed 'imponderable matter, having an enormous force of expansion.' Other scientists by degrees peopled this hollow sphere with plants and animals—two small subterranean planets, named Pluto and Proserpine, being supposed to shed over this central world their dim and mysterious light. Others supposed that the central air was rendered self-luminous by compression, and hence the two planets were not required. A certain Captain Symmes, who lived in the present century, was strongly convinced of the truth of Leslie's theory. He held that near the North Pole, whence the polar light emanates, was an enormous opening, through which a descent might be made into the hollow sphere, and sent frequent and pressing invitations to A. von Humboldt and Sir Humphry Davy to undertake this subterranean expedition! But these imaginative conceptions must one and all be set aside, and the subject treated on more prosaic though not less interesting lines.

The first question, then, that occurs to one who thinks of the character of the earth's interior, is, What is the weight of the earth—is it comparatively light or comparatively heavy? This question has been answered; and though the answers given, as the results of separate and independent forms of experiment, are not all precisely alike, yet they so closely approximate to each other, that they may be said to constitute among them something like an authoritative reply. The density of the earth is found to be as nearly as possible five and a half times as great as that of water—that is, our globe is equal in weight to five and a half globes of the same size composed of water. But as the average or mean density of the rocks composing the crust of the earth is only

two and a half times greater than that of water, it must follow that the layers of material of which the mass of the earth's unknown interior is composed must be of much greater density than the rocks at the surface. Moreover, that density may be supposed to increase by compression the nearer we approach the centre. Were the internal materials of the same nature as those at the surface, they would at the depth of a few miles be so compressed—supposing such extent of compression possible—as to give a much greater mean density to the whole mass than the ascertained facts will admit of. For instance, it has been calculated that water at the depth of three hundred and sixty-two miles would be as heavy as quicksilver. Now, this metal at the surface of the earth is fourteen times heavier than water; therefore, water at the depth of three hundred and sixty-two miles would be rendered by compression fourteen times more dense than it is in its normal condition. Following the same line of calculation, marble would, at the centre of the earth, be one hundred and nineteen times more dense than it is at the surface. Professor Judd, however, in his recent work on *Volcanoes*, expresses the opinion that the ascribing of such almost unlimited compressibility to solid substances can be supported neither by experiment nor by analogy; as various considerations point to the probability that solid bodies yield to pressure *up to a certain limit and no farther*, and that when this limit is reached an increase in pressure is no longer attended with a reduction in bulk.

It was in view of the difficulties which attended this enormous compression of the ordinary materials found at the earth's surface, that physicists had recourse to the theory that the interior of the globe was a mass of molten matter surrounded by a solid crust. This theory commended itself to Fourier and Humboldt; and after their time, had come to be accepted almost as an ascertained truth. Among other arguments advanced in support of the theory, was the fact, of which there cannot be any doubt, that a high temperature exists in the earth's crust at some depth from the surface. The borings that have been made and the shafts sunk in connection with mining operations, prove that a more or less regular increase of temperature takes place as we penetrate downwards, the average rate of increase being about one degree Fahrenheit for every fifty or sixty feet in depth, although the rate of increase varies very much as between different localities. From the data thus obtained, Professor Judd has calculated that, supposing the heat to go on increasing in the above ratio, there will be found, at a depth of nine thousand feet, a temperature of two hundred and twelve degrees Fahrenheit—sufficient to boil water at the earth's surface; while at a depth of twenty-eight miles the temperature will be high enough to melt cast-iron, and at thirty-four miles to fuse platinum.

'So marked,' says the last-named scientist, 'is this steady increase of temperature as we go downwards, that it has been seriously proposed to make very deep borings in order to obtain supplies of warm water for heating our towns. Arago and Walferdin suggested this method for

warming the Jardin des Plantes at Paris; and now that such important improvements have been devised in carrying borings to enormous depths, the time may not be far distant when we shall draw extensively upon these supplies of subterranean heat. At the present time, the city of Buda-Pesth is extensively supplied with hot water from an underground source. Should our coal supply ever fail, it may be well to remember that we have these inexhaustible supplies of heat everywhere beneath our feet.

But while the author we have just quoted admits the existence of this increasing temperature within a limited depth from the earth's surface, he yet thinks it would not be safe to infer, as some have done, that at a distance of forty or fifty miles from the surface the materials composing our globe are in a state of actual fusion, as both theory and experiment indicate that under increased pressure a greater degree of heat is required to melt solid bodies. Even water, for instance, in that curious apparatus known by the name of Papin's digester, is retained by high pressure in a liquid condition at a temperature far above the boiling-point, which temperature, but for this pressure, would have entirely converted the liquid into steam; and, should the strong vessel which contains this super-heated liquid be fractured, the water immediately flashes into steam.

But there is still another class of phenomena that bear upon the question of the earth's interior—namely, the phenomena of volcanic action. The study of the materials ejected from volcanic vents proves that even at very moderate depths there exist substances differing greatly in density, as well as in chemical composition. The lightest lavas are more than twice, and the heaviest more than three times, the weight of water. And materials of even greater density have been ejected by volcanic action. In seeking, therefore, to account for the fact that these dense materials were ejected from the earth's interior in a more or less molten condition, a simple explanation was afforded by the supposition that our planet consisted of a fluid central mass inclosed in a solid shell or crust. This shell or crust was, in proportion to the mass of the earth, regarded as but a thin film of hardened material, through which the molten internal matter, from the expansion due to heat, or the disturbances occasioned by local displacements, occasionally forced an opening, pouring itself forth in streams of red-hot lava, and exhibiting all the other manifestations of volcanic action.

But geologists and astronomers have been led, as the result of a more careful and critical examination of the question, to doubt the hypothesis that the earth consists of a great fluid mass surrounded by a comparatively thin shell of solid materials. The general stability of the earth's crust seems to them to be irreconcilable with the supposition that, at no great depth from the surface, the whole mass of the globe is in a liquid condition. And if, as against this objection, it be supposed that the solid crust of the globe is several hundreds of miles in thickness, it is difficult, Professor Judd argues, to understand how the local centres of volcanic activity could be supplied from such deep-seated sources. Then again, if all igneous products were derived from

one central reservoir, we might fairly expect to find a much greater uniformity of character among those products than really exists. In some cases, indeed, materials of a totally different composition are ejected at the same time from closely adjoining volcanic districts. 'Whatever,' he goes on to say, 'may be the cause of volcanic action, it seems clear that it does not originate in a universal mass of liquefied material situated at no great depth from the earth's surface.' It is now very generally admitted, both by astronomers and physicists, that if the earth were not a rigid mass, its behaviour under the attractive influences of the surrounding members of the solar system would be very different from what is found to be the case, and the necessary rigidity would not be obtained were the greater mass of the earth fluid. 'That the earth,' continues Judd, 'is in a solid condition to a great depth from the surface, and possibly quite to the centre, is a conclusion concerning which there can be little doubt.'

Seeing, therefore, that this hypothesis sets aside the central subterranean fluidity from which all volcanic action was supposed to have emanated, an explanation of the phenomena of volcanoes and earthquakes must be sought in directions consistent with this theory of the earth's solidity. It is impossible to give in the space at command more than a brief note of the conclusions that have been arrived at in the attempt to settle this question. The first branch of the hypothesis advanced is, that the increase of heat with the depth does not extend to the whole mass of the earth; that some parts of the earth's interior are of a very different temperature from others; and that there are known to exist such chemical and mechanical agencies as are capable of producing high temperatures within the crust of the globe. The presence of water, and of other liquid and gaseous substances in a state of ever recurring admixture with the fused rock-masses, consequent upon these high temperatures, is believed to be the main cause of the violent displays of energy exhibited at volcanic centres. 'Volcanoes are usually situated near coast-lines, and if we imagine fissures to be produced by which sea-water finds access to masses of incandescent rock-materials, then we can regard volcanic outbursts as resulting from this meeting of water with rock-masses in a highly heated condition.'

There is, as may be expected from this hypothesis of the existence of zones of varying temperature at a moderate depth below the surface, an intimate connection between the phenomena of volcanoes and those of earthquakes. Earthquakes undoubtedly occur occasionally in districts that are not now the scene of volcanic action; 'but it is none the less certain that earthquakes as a rule take place in those areas which are the seats of volcanic action, and that great earthquake shocks precede and accompany volcanic outbursts. Sometimes, too, it has been noticed that the manifestation of activity at a volcanic centre is marked by the sudden decline of the earthquake tremors of the district around, as though a safety-valve had been opened at that part of the earth's surface.'

The powerful vibrations and tremors of the ground beneath our feet, which we call an earthquake, may therefore be nothing more than the

effects of the contact of water, as well as of certain gaseous bodies, with the incandescent rocks which form these strata or bands of high temperature; and the shock which follows may be due to the expanded and antagonistic elements thus brought together forcing for themselves a vent or passage through the less solid and less resisting of the surrounding or superincumbent strata. When the matter thus liberated finds its way to the surface, and discharges itself through the fissure which it has made in the earth, we call that which would otherwise have affected us as an earthquake, a volcano; so that these two remarkable manifestations of power in nature may be said to be twin forces, the product alike of fire and water under compression; the one force operating underground, and making the foundations of the earth to shake and tremble; the other force bursting a way for itself to the surface through the inclosing barriers of rock, and scattering destruction around it.

That this theory of earthquake shocks and volcanic outbursts is consistent with the cognate hypothesis of a solid and not a fluid globe, does not appear to admit of much doubt; and it may even be an element of satisfaction to timid folks to know that they do not, as hitherto supposed, live on what is merely a thin cooled crust over a mass of molten fire, but on a solid body, strong and rigid in all its parts.

A MYSTERIOUS DUEL IN 1770.

FROM AN OLD MANUSCRIPT.

IN TWO PARTS.—PART I.

IN the summer of 1770, my father, General—then Colonel—Tolmers Brandon, was commanding an infantry regiment quartered at Portsmouth. During the summer of that year, having obtained a short leave of absence, my father determined to take a trip to the north, to see some of the beautiful scenery of Cumberland, and to my great joy, took me with him as his travelling companion. I was then between ten and eleven; but having been trained entirely under my father's eye, I was rather more advanced and manly, perhaps, than most boys of that age.

After travelling about Cumberland, we came upon a spot so especially beautiful, that the Colonel determined to halt for two or three days, although the only accommodation we could get was at a pretty little quiet inn, close to a village, on the top of a hill, about ten miles from Carlisle. How thoroughly well I remember it! A fine old elm grew on one side, under which was a horse-trough, and close by a tall post bearing the sign of the *King's Head*. His most gracious Majesty George III., though then only thirty-two years of age, was represented as a coarse middle-aged man, with a red bloated face, an enormous Roman nose, and a vast pigtail, and dressed in scarlet regimentals, a huge cocked-hat and plume, with his drawn sword 'sloped' over his right shoulder—in fact, as fierce and savage-looking an 'old' weather-beaten soldier as could be desired. But the simple villagers always considered this to be a very good portrait of their sovereign lord and king.

The high-road passed in front of the inn, and just beyond, turned sharply to the right, where

it entered the village. The little hostelry, though confined for space, was yet beautifully clean, comfortable, and well conducted. It possessed a very fine garden, from which the most enchanting views were obtained of mountain, lake, and valley. Part of it was arranged, and most carefully kept, as a bowling-green. This lay on one side of the house, and ran parallel with the high-road, from which it was only separated by a hedge. The best room was appropriated to my father; and I was accommodated in a small apartment next the kitchen, on the ground-floor, with a window opening upon the bowling-green.

The second night of our sojourn was unusually hot and close. We had retired early, according to my father's wont; but my room was so stuffy that I could not sleep, or even rest; and after tossing about most uncomfortably for a long period, I got up, and putting on a few clothes, threw open the window and stepped out on to the bowling-green. The night was exquisite; the full moon was shining in all her glorious splendour—it was in fact nearly as light as day. After walking about the garden, I returned to the bowling-green, and sat down in a pretty arbour covered with creeping plants. The air was soft and deliciously cool, and everything seemed to induce to calm enjoyment, which was enhanced by the profound stillness that reigned around, broken only by the murmur of a distant waterfall. Whilst thoroughly enjoying this beautiful scene, the village church clock struck one, and I fancied I heard the sound of wheels and horses' feet approaching. In a short time I saw a vehicle come in sight and pass slowly along the high-road; and as my arbour was on the opposite side of the green, I could readily observe, in the bright clear moonlight, that it was a large family coach—such as country squires often drove—drawn by two tall fat horses, and attended by coachman and footman in liveries and cocked-hats. It turned the corner before mentioned, to proceed through the village, as I supposed; not so, however, for it stopped immediately, and I heard the door open and the steps let down, and the sound of feet approaching the inn.

'Belated travellers,' thought I. 'It's little use your trying the *King's Head*, for we certainly can't take you in.'

But this was not the intention of the party. It was not the inn, but the inn garden which they required; for they all stopped at the end of the bowling-green farthest away from the house, where the hedge happened to be very loose and thin. One of the party instantly pushed himself through, and walking a few steps into the green, stood still and looked carefully round. From my having been brought up entirely amongst soldiers, all military uniforms were perfectly familiar to me; and I therefore instantly recognised the huge gold-laced three-cornered cocked-hat, scarlet cloak, jack-boots and spurs, and heavy sword worn by the intruder—who was an immensely tall and broad-chested man—as the uniform of an officer in one of His Majesty's regiments of heavy dragoons. I observed that he was a very handsome man, with aristocratic well-cut features, and seemed to be under thirty years of age.

Having completed his survey, he strode across

the green with that peculiar long swinging stride so common to cavalry-men, and went direct to the open window of my bedroom, and stood motionless for a few moments with his head bent down, apparently listening. Having satisfied himself, he returned to the gap, and said in a loud whisper, and a strong Irish accent: 'Sure, and they're all fast asleep; in with ye.' A second man now pushed through the hedge, dressed exactly like the first—clearly, another cavalry officer—and he was followed by two gentlemen wearing light-coloured coats and cocked-hats richly ornamented with silver, lace ruffles and white silk stockings; and each carried, according to the fashion of the day, light rapiers. Without uttering a single syllable, the whole party came forward, and the two last-mentioned gentlemen at once began to divest themselves of their hats, coats, and waistcoats; both then rolled up the shirt-sleeves of their right arms, and drawing their rapiers, were immediately placed by the two officers, their seconds, in position; and I now comprehended that the object of this untimely visit was evidently to fight a duel. The combatants, after saluting, at once threw themselves on guard, and the fight began in profound silence.

Although I was not yet eleven, I had been instructed and drilled in many military exercises, but more especially in fencing; so I was peculiarly interested in the scene now transpiring before me—the first fencing in real deadly earnest I had ever witnessed; and I was not slow in discovering that both the gentlemen were 'cunning masters of fence,' and thoroughly at home in the handling of their rapiers. The moon was so intensely bright that I could plainly see the faces of both. One was short and slightly built, but marvellously lithe and active. He was exceedingly dark and swarthy in complexion, his heavy thick black eyebrows almost meeting over the nose, contrasting strangely with his white powdered hair; and I somehow felt certain he was a foreigner. The other was taller and stouter, and not so active. He had a round full face, a very fair skin, a clear pink complexion, and was evidently a genuine Englishman.

The fight began by a succession of sharp rapid attacks on the part of the foreigner; which, however, the Englishman parried with consummate skill. For a long time this attack and defence went on, neither party obtaining the smallest advantage, and I rather fancied that the foreigner was getting exhausted, from the ceaseless and amazing activity displayed by him; whilst the Englishman did little else than guard and parry. A thick cloud suddenly obscured the moon, when the dark man exclaimed, in an unmistakable foreign accent: 'Holdt, holdt; ve can-not zee!' These few words, with those of the Irish officer already quoted, were all I heard uttered by any of the party throughout all that terrible time. Even during that fearful pause, whilst the combatants stood calm and still, almost like two statues, not a word was uttered; and when the cloud passed away, and the glorious moon again shed her calm and gentle light on this scene of deadly strife, at a sign from the seconds, the duel began again in profound silence, and was continued precisely as before, without wound or scratch to either party. During the whole of

the fight, the seconds remained near their principals, standing almost motionless, with their arms folded beneath their long red cloaks. At length the foreigner began apparently to lose his temper at being so continually foiled, and was working himself into a violent passion; whilst the Englishman continued to preserve his cool and calm bearing. After some cautious manœuvring, a furious and desperate attack by the foreigner now commenced. The lightning-like rapidity of his thrusts and his wondrous activity of foot, were amazing; but I felt certain he was exhausting his strength. I did not fail to observe, also, the ease and the little exertion with which his attacks were parried. When this had gone on for five or six minutes with but little pause, the foreigner, suddenly advancing a step—apparently to make doubly sure—delivered a tremendous thrust, which must have instantly ended the fight, had not the Englishman very dexterously turned the blade aside, and throwing his whole weight forward in one sudden and powerful lunge, under his adversary's guard, drove his rapier completely through his body, and with such extraordinary force, that two inches or more of the blade came out under his left shoulder. As the Englishman withdrew his sword with a jerk, the foreigner staggered forward a step, threw up his arms, and fell to the ground, dead. At this instant the village church clock struck two. Two o'clock in the morning of the 19th of July 1770, was a moment to be remembered by me to the last hour of my life.

The Englishman, as soon as he had sheathed his sword, cast one steady look at his fallen foe, and then turning, gathered up his clothes under his arm, and at once retreated through the gap in the hedge, followed by one of the officers; whilst the other—the tall one—knelt down by the prostrate form of the foreigner, first, apparently, to make sure that he was dead; and secondly, to search for something seemingly hidden inside the breast of his shirt. At length he pulled out what looked like some papers, tied with ribbon, which he thrust into his pocket, and hastily followed his companions, leaving the dead man just where he fell. Immediately afterwards, I heard the door of the carriage violently shut to; and the vehicle was rapidly driven away—not past the inn, but through the village.

All this time, I must honestly confess I was so deeply interested in what, according to the military teaching of that day, I considered a perfectly fair and honourable proceeding between two gentlemen, that I never, for a moment, thought I had any right or business to interfere or cause interruption by raising an alarm in the little inn. But as soon as the party had retired through the gap in the hedge, I rushed from my hiding-place in the arbour, and knelt down by the fallen duellist, to ascertain if he was really dead. He was lying on his back, with his arms out; and I could see, boy though I was, that he was indeed dead. I therefore ran back to the inn, and at once awoke my father, telling him in a few hasty words what had happened, and begging him to get up instantly. The Colonel, without a moment's delay, threw on his dressing-gown, and descended to the bowling-green; and after carefully examining the body, satisfied himself beyond doubt that the man was really dead.

We then roused the landlord; and ordering lights to be lit in the little coffee-room, which contained a large table, my father directed the hostler to go at once and fetch the nearest medical man and the constable of the village. Then with the assistance of the landlord, he carefully raised the corse, and carried it indoors, to await the arrival of the representatives of surgery and law; whilst I followed with the coat, vest, and hat of the deceased. The medical gentleman soon made his appearance; and after a regular and very careful examination, it was found that the poor fellow had been run completely through the heart, the sword coming out—as I had seen—at his back. The hemorrhage had been excessive, as a matter of course; his clothing was entirely saturated, and a large pool of blood remained in the garden. The deceased was slightly built, but of very good proportions. His face was singularly swarthy, with dark eyes and heavy black eyebrows, that gave altogether a hard and stern appearance to the features. His hair was fashionably dressed, powdered of course, and tied behind in a queue. We came to the conclusion that he was either Spanish or Portuguese, for the few words I had heard him speak clearly showed by his accent that he was not English.

When the constable arrived, my father proposed to search the pockets, to ascertain if possible the name of the deceased. First, a large silk purse was found, containing a considerable sum of money in gold and notes; next, a splendid gold watch, chain, and seals, one of which bore a crest with the initial 'G.' under it; and my father on opening the watch discovered it was French make, and bore the name of the most celebrated Paris manufacturer of that day. In the coat pocket were a gold snuff-box, also bearing the single initial 'G.' in brilliant on the lid within a wreath of myrtles beautifully enamelled; a heavy old-fashioned gold pencil-case; a small gold pouncet-box or vinaigrette, beautifully chased; a very fine cambric handkerchief; and a pair of white kid gloves. On each hand he wore a massive ring; that on his right set with diamonds, and the one on his left with rubies. His right hand, when he was lifted from the ground, still grasped an elegant silver-mounted rapier, such as was then usually carried by men of fashion. The weapon, like the watch, bore the name of a Paris maker. His linen was of the finest description, marked, like the snuff-box, with the initial 'G.'; and his lace cravat was secured by a brooch set with brilliants; whilst his knee and shoe-buckles were of elegant chased gold. The coat and breeches were of fine light-blue cloth, richly laced with silver; and his long waistcoat was of embroidered white satin. The large and jaunty cocked-hat was also laced with silver, and bore the name of a Paris hatter. This was all we could discover. Had he possessed a card-case or pocket-book, or papers of any sort, they must have been removed by the tall officer when he took what looked like a packet from the bosom of the dead man, as already related.

At the request of the constable, my father took charge of the valuables and clothing, and ordered that functionary to communicate with the nearest magistrate and the coroner as speedily as possible. So well were these orders carried out, that by eight o'clock in the morning the magistrate arrived. He was a fine genial man about fifty, a Colonel

of militia, an admirable specimen of a thorough English country gentleman. He received my father in the most courtly manner; and this curious incident of the mysterious encounter originated an acquaintance between them which ripened into a lasting lifelong friendship.

(End of Part I.)

THE DIFFERENCE OF A DOT.

DECEMBER and May, in the persons of Mr Josiah Blend and Miss Barbara Paul, were united some half-dozen years ago in the holy bonds of matrimony. People who knew them both were much amazed at the alliance; for the refined and lady-like Miss Paul—had she waited—might have had 'something' younger and handsomer than the venerable, ancient, and many-wrinkled Josiah.

Being a successful Glasgow merchant, the aged Josiah was rich; and naturally their acquaintances concluded that his money was the chief attraction. Perhaps it was. It is not for us to impute motives either good or bad; but there were not lacking prophets enough, even in the small circle of their personal friends, who ventured to foretell a short, sharp, and decisive marriage campaign, in which the young wife would punish the old man, and finally come out of the conflict, under the shelter of a 'judicial separation,' with spoils sufficient to maintain her in a competency for the remainder of her natural life.

They proved false prophets. Whether money was at the bottom of it or not, the pair lived as happily and as lovingly as any two lovers could hope to do. This was so till a certain year, when two different circumstances conspired to bring matters to such a crisis, that the judicial separation seemed inevitable.

Josiah was on the whole an inoffensive old fellow; but when his usually sluggish temper was once quickened into action, he was prone to let it carry him to such an extreme length, that no one could defend him. Barbara was patient to a fault, and tended him with a loving and faithful devotion admirable in one so young. The two unhappy causes which threatened for the time being to end their married life, were very dissimilar in themselves, though in the end they got somewhat mixed up. They were—Barbara's cousin Charlie Robinson, and a telegram.

'Barbara,' said the antique Josiah one morning at the breakfast-table, 'I wish that cousin of yours,—"Dear Charlie," as you call him—would not come here so often and monopolise so much of your time.'

'I do not think he does take up much of my time,' responded his wife, in a mildly surprised tone. 'But I do not see very well how I could prevent him coming, unless I shut the door in his face.'

'You might do worse!' growled Josiah; 'a great deal worse. I hate him, with his pretensions, his stuck-up airs, his general humbug. Why, I heard him call you his "dear Babs" last night, when he wanted you to sing with him!'

'You are not jealous?' laughed Barbara reproachfully; 'surely not. That is the name he called me by when we were children. But I'll tell him you dislike it, and no doubt he'll desist.'

'You would be better to tell him not to come at all, as his company is not wanted. I overheard him say last night to that empty-headed chum of his, that I was an old fossil! Worse still, he said: "That old fogey Blend has a pile of cash; but he is a miserable old skin-flint, and won't part with it." That was gratitude for you, after finishing a couple of bottles of my old Burgundy and smoking half-a-dozen of my finest cigars. He is an impudent scamp.'

'There surely must be some mistake,' urged his wife. 'Charlie would never say that.'

'He did, though,' retorted Josiah angrily; 'I'm quite certain. Better tell him never to come here again.'

'I would rather not, if it please you,' reasonably replied his wife; 'it would be very unnatural for me to do so.'

'You consider it more natural that I should be abused in my own house!' cried Josiah, now at a white-heat. 'Am I to understand you positively refuse to do so?'

'Well, I do not refuse,' replied Barbara, with considerable tact, going over and kissing him affectionately on the cheek—'I do not absolutely refuse; but I most respectfully decline!'

Josiah was forced to smile at his wife's equivocation, and resolved to do the thing himself. He did it neatly too. He wrote to Charlie, saying, that in future it would be esteemed a favour if at any time he intended calling, he would 'send intimation of his intention beforehand, to prevent disappointment.' Charlie took the hint, and did not call again.

A few months after this, Josiah caught a slight cold, and got otherwise out of sorts, so that the doctor ordered him to go down the Clyde, for change of air. It so fell out that Barbara's mother took seriously ill at the same time; and as Barbara was an only daughter, she had to remain at her mother's bedside, and permit her husband to go away alone, of course on the understanding, that when her mother got better, she would at once hasten to her goodman.

Josiah went to a certain town on the coast which we shall call L—, and engaged rooms with his old friend Mrs Meikle. During the first week, he did not improve, though Mrs Meikle was very attentive. Several letters passed between man and wife, so that Barbara was advised as to his condition, and not a little anxious about him; but her mother was still dangerously ill. Next week, her mother rallied, but Josiah got worse. At last he had a severe bilious attack, and was confined to bed, so that the presence of his wife was imperatively necessary. He instructed Mrs Meikle to telegraph for her; and this was the telegram which was delivered to his wife:

'MRS MEIKLE, L—, To MRS BLEND, Woodburn House, Glasgow.—Your husband is dead. Come down at once.'

Great consternation was the result. On the previous day, Mrs Blend had received a piteous note from Josiah, saying he was 'very ill,' and stating that he had been 'vomiting frequently,' and that his head was 'splitting;' so that she never questioned the accuracy of the telegram. Neither did her father, nor her cousin Charlie, who was sent for in the emergency. She was fearfully shocked at the unexpected intelligence,

and rendered well-nigh helpless; while the two men sagely shook their heads, and attempted to console her with some reflections on the liability of old age to sudden death, which were well meant, but unfortunately ineffective. Charlie undertook—as of course he was expected to do—all the arrangements in connection with the funeral. He went to the cemetery that afternoon, and ordered the grave to be opened in three days; he put the usual notices in the papers; issued the customary black-bordered announcements; went to the undertaker's, and ordered a handsome coffin to be taken down to L—, by the first train in the morning; and indeed, did everything necessary with his usual business-like promptitude and despatch. Then he went to the Telegraph Office, and forwarded this message:

'CHARLES ROBINSON, Woodburn House, Glasgow, To MRS MEIKLE, L—.—Telegram received. Mrs Blend very much grieved. Will be down by first train to-morrow. Do best you can till then.'

Mrs Meikle read the message to Josiah, who smiled sweetly at his wife's loving concern and wifely anxiety. It was very good of her to be 'much grieved,' and to ask Mrs Meikle to do all she could for him. Mrs Meikle noticed his pleased expression, and jocularly observed that he seemed to be getting better even with the thought of her coming down, and had no doubt that a sight of her would do him more good than all the medicine he had taken. In the morning, he felt so well that he got up; but his happy anticipations of his wife's arrival did not last long. Lifting the telegram, which Mrs Meikle had left lying on the table, he read it, and was horrified to discover—what Mrs Meikle had failed to read on the previous evening—that the message was not from his wife, but from the hated Charlie Robinson. The demon of jealousy took possession of his old soul, and dread suspicion set him on the rack of mental torture.

'Charlie Robinson at Woodburn House!' exclaimed he to himself. 'Has he actually been there all the time I have been away? I believe her mother's illness has been merely a blind; and yet the telegram says she is grieved, "very much grieved." Ay, ay, that must be because she has to come away from his delightful society. They will have had a fine time of it, calling one another "Dear Charlie" and "Dear Babs." Well, this is the last straw, and no mistake. I'll make both of them suffer, or my name's not Josiah.'

These and similar thoughts occupied the convalescent merchant fully till the arrival of the train.

That same morning, Mrs Blend and Charlie took their places in the train. Mrs Blend had spent a sleepless night, and had been regretting over and over again that she had not been permitted to see her husband in his last illness. She was dressed in deep mourning; her heart was very sad, and her mind was filled with 'thoughts too deep for words.' Her cousin, the merry and talkative Charlie, had tied a crape band upon his arm, and he too was sympathetically silent. The two undertaker's men and the coffin were also in the train. Charlie thought, and rightly too, that however well adapted the West Coast might be for supplying the necessaries of life, a coffin of a suitable size and material was not a thing that

could be obtained there on the shortest notice. That was his reason for taking one down with him, in order to bring the body up to town.

The four persons formed a melancholy procession to the house of Mrs Meikle. Barbara leaned heavily on Charlie's arm, while genuine tears of sorrow chased one another down her blanched cheeks; and the two men followed discreetly at a distance, with the coffin on their shoulders.

Mrs Meikle opened the door, and grasped both of them by the hand warmly, observing that it 'was a fine day;' but neither of them could reciprocate her greeting, and therefore sadly and silently shook hands. Without another word, Mrs Meikle showed them up-stairs, and they summoned all the courage at their command to enter the gloomy chamber of death. Charlie quietly and gently pushed the door open, and ushered in his cousin. She entered, and lifted her eyes to the bed; but it was vacant. Then she looked wildly about the room, and—there was her worthy husband in the flesh and in life, standing at the window in his dressing-gown, grimly looking down on the coffin which the two men had upon their shoulders at the gate below. With a fiercely angry glare he turned upon his wife. Her widow's weeds and the coffin showed there was some monstrously strange thing afoot. He was about to speak, when his wife uttered a piercing scream, and sank fainting to the floor.

The two men, heedless of the fallen Barbara, stared at each other for a moment; Josiah, with mingled hate, contempt, and jealousy; Charlie, with open-mouthed wonder and astonishment. Josiah's busy brain rapidly found a possible explanation. 'They intend,' thought he, 'in my weak and nervous condition, to kill me by the shock of viewing my own coffin, and the preparations they have made for my funeral.' But he felt strong and able to outwit them.

'What is the meaning of all this?' exclaimed the irate Josiah to the thunder-struck Charlie. 'Who is the coffin for? Eh?'

'It's all a mistake'—began Charlie, in a conciliatory tone.

'All a mistake, is it?' roared the infuriated old man, on whom contending passions and tumultuous thoughts were beginning to tell. 'All a mistake, is it?' repeated he, attempting to get within striking distance of Charlie. 'I should rather think it *was* a mistake that I am alive and—and—kicking.'

Charlie dodged round the table, to escape the blow which the fierce Josiah aimed at him with his foot. 'It is a mistake,' cried Charlie once more, across the table. 'The message'—

'Confound you and the message!' yelled the aged one, continuing the chase. 'Nothing would please you better than to see me in my grave. Get out of the room, you confounded whelp!'

Charlie got cool, as Josiah's fury increased. He was struck with the ridiculousness of running and dodging each other round the table; and then, when he thought of the coffin at the door, he could no longer suppress a fit of uncontrollable laughter. 'Hear me a moment,' gasped Charlie—with tears of laughter coursing down his cheeks—'one moment, Mr Blend, and I'll explain. It's really very ludicrous! That coffin down below makes me'—

'You would bury me alive, would you, and

laugh in my face, you vile scamp!' roared Josiah, picking up a carpet footstool and hurling it at Charlie's head, while the latter ducked, as the swirling footstool with projectile force swept the dressing-table clear of its ornaments.

'Out of my sight!' screamed Josiah, now fairly demented.

The young man still hesitated, hoping to explain; but Josiah seized the poker, and would have used it as a projectile, had not Charlie, still convulsed, fled precipitately down-stairs and out at the front door. When he got there, he requested the two men to carry the coffin back to the station; and afterwards adjourned with them to the only hotel in the place, to explain, and laugh immoderately at this most amusing misunderstanding.

Meanwhile, Josiah helped Mrs Meikle to put his unconscious wife to bed. Thereafter, he hurriedly donned his apparel, threw on his overcoat, and rushed off down-stairs.

'Where are you going?' inquired Mrs Meikle, who had sent for a doctor.

'Going? I'm going to my lawyer in Glasgow to get a divorce. I'll not stand tricks like these,' cried Josiah, as he angrily flung himself out and violently slammed the door behind him.

At the station, he got a *Herald*, where he read: 'On the 21st instant, suddenly, at L—, in the sixtieth year of his age, Mr Josiah Blend, much regretted.'

'Much regretted! m'hm,' muttered the old man sneeringly. 'A month or two would have seen the two cousins married. Oh, I see it all, I see it all!'

When he arrived in town, as he was crossing the streets on his way home, he met his old friend Mr Maxton. 'Dear me, is that you, Josiah? You are advertised as dead in to-day's papers.'

'Get out of my way, you old fool!' replied the reckless one, his temper in no degree improved by his journey up to town. So saying, he tore along the street, leaving Mr Maxton gazing after him in speechless amazement.

When he arrived at his house, the servant who opened the door nearly jumped out of her skin with fright; but Josiah pushed past her, and marched into the parlour, where a few male and female friends were assembled, presumably for the purpose of condoling with the widow upon her expected return to Glasgow. They received Josiah at first in silent astonishment; but immediately afterwards with a hearty cheer, which was the first thing to make him think an error had been made, and that there was no intention to kill him with fear. The shaking of hands and the subsequent explanations tended to cool down his wrath; and as the fever of excitement left him, he began to feel his weakness and physical prostration returning, and ultimately was compelled to accept the situation with the best grace possible under the circumstances.

When the telegram was shown to him, he went to the Postmaster to demand an explanation, an apology, and compensation for loss and damage.

'Look here!' said he. 'I was bad with a bilious attack, and got my landlady to send this telegram: "Your husband is *bad*; come down at once." One of your operators made it *dead*, and thereby caused a most frightful misunderstanding. I think you will admit,' said Josiah, with studied severity of

tone, 'there is a very great difference between being bad and being dead?'

'Yes; there is a great difference certainly,' replied the Postmaster pleasantly; 'and I'm glad the mistake is not the other way; for if you had been dead, instead of bad, I would not have been favoured with this visit.'

Josiah had not looked at the error in that light; but not wanting to acknowledge the Postmaster's urbanity too readily, he replied: 'That's all very well; but it does not explain one of the most stupid blunders I ever heard of. The clerk should be horsewhipped!'

'I am exceedingly sorry the mistake has been made; but if you will bear with me a moment, I'll explain. The difference between "bad" and "dead" is not very great in the telegraph alphabet; it is altogether in what is technically called *spacing*. According to the dot and dash system of telegraphy,' continued the Postmaster, who took pencil and paper to illustrate it, 'the word "bad" is thus written and spaced:

b — . . . a . — d — . .
the word "dead:"

d — . . e . a . — d — . .
being exactly the same number of beats or dots and dashes; and when telegraphed thus:

— — — . . bad,
and
— — — . . dead,

you will observe there is, after all, only the difference of a dot. I am glad, however, that the dot has turned out to be in your favour.'

'I am very much obliged to you,' said Josiah, 'for your lucid explanation. I pray you, however, to call the clerk's attention to the matter. Had I known it might have been an unconscious error, instead of a grossly careless one, I would not have troubled you. Good afternoon!'

With this explanation, Josiah was pacified and pleased. He restored Mrs Blend, on her return from the West Coast, to her former position as queen of his heart; but though he regrets his hasty violence, he has not yet quite conquered his aversion to Charlie Robinson.

POPPING THE QUESTION.

POPPING the question is in many instances a very simple and easy affair. Long intimacy and a tacit understanding have prepared the way and reduced to a minimum the difficulties of the situation. The proposal has been anticipated, and, to all intents and purposes, accepted, long before it is made; and the formal declaration is a source of neither embarrassment and anxiety on the one hand, nor surprise and indecision on the other. Even without these advantageous conditions, some men have no more difficulty about a proposal of marriage than they have about any ordinary business negotiation; just as, on the other hand, there are some who would be overwhelmed with bashfulness and confusion under the most favourable circumstances. At the same time that the former may appear too

matter-of-fact, and the latter conspicuously deficient in manly self-possession, the matter under consideration—whether on account of difference in wealth or degree, or fifty other probable motives of uncertainty—is often one of such delicacy that it would involve, for nineteen out of every twenty suitors, a very considerable amount of hesitation and doubt.

Irresolute swains should, however, bear in mind that 'faint heart never won fair lady,' and their reticence would surely be overcome if they reflected for a moment on Shakspeare's dictum:

That man that hath a tongue, I say, is no man,
If with his tongue he cannot win a woman.

Constitutionally timid men might, if necessary, resort to some such expedient as that of the youth whose bashfulness would not admit of his proposing directly to the object of his affections, but who at length summoned up sufficient courage to lift the young lady's cat and say: 'Pussy, may I have your mistress?' To which the young lady very naturally and cleverly responded: 'Say yes, pussy.' Bashfulness on the part of lovers, and want of courage in connection with popping the momentous question, have formed the subject of many a story. Here is one.

A gentleman had long been paying attention to a young lady whom he was very anxious to marry, but to whom he had never ventured to declare his passion. When opportunity offered, his courage deserted him, and when he was resolved to speak, the fair one never could be found alone or disengaged. Driven to desperation, he one day succeeded in accomplishing his purpose in a somewhat remarkable manner, at a dinner-party. To most people, a dinner-party would hardly seem the most suitable occasion for overtures of this description, especially when, as in this instance, the lady is seated at the opposite side of the table from her admirer. The latter, however, was equal to the occasion. Tearing a leaf from his pocket-book, he wrote on it, under cover of the table: 'Will you be my wife? Write Yes or No at the foot of this.'

Calling a servant, he asked him in a whisper to take the slip—which, of course, was carefully folded and directed—to 'the lady in blue opposite.' The servant did as requested; and the gentleman, in an agony of suspense, watched him give it to the lady, and fixed his eyes, with badly disguised eagerness, to try and judge from her expression how the quaintly made offer was received. He had forgotten one thing—namely, that ladies seldom carry pencils about them at a dinner-party. The beloved one was, however, not to be baffled by so trifling an obstacle. After reading the note calmly, she turned to the servant and said: 'Tell the gentleman, Yes.' They were married in due course.

The difficulty of proposing to the young lady is not always the most serious one the suitor has to encounter. Popping the question to one's prospective mother-in-law, or 'asking papa,' is frequently the more arduous undertaking of the two. When Professor Aytoun was wooing Miss Wilson, daughter of Professor Wilson, the famous 'Christopher North,' he obtained the lady's con-

sent conditionally on that of her father being secured. This Aytoun was much too shy to ask, and he prevailed upon the young lady herself to conduct the necessary negotiations.

'We must deal tenderly with his feelings,' said glorious old Christopher. 'I'll write my reply on a slip of paper, and pin it to the back of your frock.'

'Papa's answer is on the back of my dress,' said Miss Jane as she entered the drawing-room. Turning her round, the delighted Professor read these words: 'With the author's compliments.'

The language in which a proposal ought to be made is a point which has exercised the minds of lovers more than most others connected with their suit. In plays and novels, as a rule the hero asks the heroine to be his wife in flowery and romantic expressions, even if he does not throw himself at her feet and indulge in a wild outburst of impassioned adoration. It is not too much to say that in real life proposals are seldom, if ever, made after this fashion; indeed, any young man who ventured to go through such a performance would be pretty sure to get laughed at for his pains. In Lord Beaconsfield's last novel, an eccentric old nobleman pops the question in the following matter-of-fact language: 'I wonder if anything would ever induce you to marry me?' This was evidently intended as a fresh illustration of Lord Montford's eccentricity; but it is really much nearer the terms in which the average man proposes, than is the average proposal of the novelist. The Americans, we know, carry everything to extremes, and we are told that the New York young men have reduced the formula of the critical proposition to a couple of words—'Let's consolidate.' Nothing, however, could be neater or more ingenious than the proposal of the Irishman, who thus addressed the rustic beauty upon whom he had set his affections: 'Biddy, darlint, they've been tellin' me there's too many of us in the world. Now, if you an' me get the praste to make us two wan, troth an' wouldn't there be wan the less?'

Different customs prevail in different countries in this as in other matters. A curious ceremony, for example, is associated with popping the question among the Samoyedes of Russia. When a young Samoyede desires to marry, and has come to an understanding with the damsel of his choice, he visits her father, and, with a short stick, taps him, and then the mother of the maiden, on the shoulder. He then demands the girl in marriage, and offers the father and mother a glass of vodka which he has brought with him. As a token of his good-will, the father drinks the vodka; he tells the young man he has no objection, but that he must ask the girl's consent. A few days later the young man comes again, this time accompanied by what servants he has, and provided with plenty of vodka. His retinue remain outside while he enters the room and seats himself by the side of his lady-love. The father hands the young man a glass of vodka; he drinks half, and hands the half-full glass, under his left arm, to the girl, who finishes the draught. The father then gives his daughter a glass of vodka, and she in like manner drinks half of it, and presents the remainder, with her left hand under her right arm, to her lover, who drains the

glass. After this, the father hands a piece of raw meat to the young man, who eats it, and then takes a piece from the floor, eats half, and presents the other half, under his left arm, to the girl to finish. She in turn takes a piece of meat from the floor, eats half, and hands the other half, under her right arm, to the young man to finish. This extraordinary ceremonial would appear to complete the transaction, and may be regarded as synonymous with our engagement. The feasting and other ritual necessary to ratify the contract generally take place soon or immediately afterwards.

The most fitting occasion for a proposal of marriage is another point to which lovers attach no little importance, and rightly so, for an inopportune suit would in all probability prove unsuccessful. The great aim should be to hit the tide which in the affairs of love, as in those of men, 'leads on to fortune.' A romantic situation or surroundings have generally been regarded as peculiarly appropriate to the proposition of the all-important question. There is on record at least one instance of a proposal having been made in a balloon while soaring up into the empyrean; and numerous engagements have no doubt been made under equally novel and romantic circumstances. The lover, however, who waits for an occasion of this kind may find himself forestalled by another who has wisely taken advantage of the first favourable opportunity. 'So you would not take me to be twenty?' said a young lady to her partner, while dancing the polka one evening. 'What would you take me for then?' 'For better, for worse,' replied he; and he was accepted. Here is another case in point. Riding home from the hounds after a certain famous county meet, a lady observed to her companion: 'Why should we not marry, Sir John?' 'Ah!' said Sir John, 'that is what I have often thought myself.' And married they were.

The latter anecdote recalls the controversy which has so often been waged as to whether it is competent for a lady to pop the question. Without entering into that question, even so far as the leap-year prerogative is concerned, we shall simply quote an interesting example, the heroine being no other than the wife of M. de Lesseps. This distinguished lady was at La Chesnaye, when all Europe was astir about the achievements of the Suez enterprise. One day, in the garden, she saw De Lesseps walking on a terrace. She plucked a rose, and going up to the widower, begged of him, for her sake, to wear it at dinner. He asked whether she did not mean it for his son. No; it was for himself. De Lesseps explained to her that he was on the wrong side of sixty, while she was not yet nineteen. That did not matter; what his age was had never occurred to her. She had only thought of his greatness and his goodness. In short, he was her *beau idéal*. How was it possible for a man reared on the sunny side of a Pyrenean mountain to reason down the feelings this confession aroused? Time was given to Mademoiselle de Praga to reflect, and she was made to understand that no friendship would be lost were she to change her mind after the banns had been published. The marriage, however, was celebrated contemporaneously with the Suez fêtes.

The Marquis of Lorne conversing recently on Canada as a field for emigration, observed to the present writer that young women who went out to that country would get an offer of marriage about every day. *Apropos* of this remark, we may cite the following brief anecdotes, which graphically illustrate the rapid progress that matrimonial negotiations make in real emigrant life.

'How did you manage to win her affections so quickly, Dan?' asked one settler of another. 'The recipe's worth knowing.'

'Oh, that's simple enough,' replied Dan. 'The first night I arrived at the lodging-house at Auckland, I found myself sitting next to a young woman at supper, who I soon found was one of the newly arrived emigrants. I looked her over, and saw a round, strong, cheery-looking lass, with a laughing face, and thought she'd do. I didn't know how to go foolin' around her to find a soft place, but just spoke a word or two with her, and when we come out into the passage, I gives her a squeeze and a kiss. Says she: "How dare you?" Says I: "I wants to marry you, my dear."—"Marry me!" says she, laughing. "Why, I don't know you." "No more do I you, my dear," says I; "so that makes it all fair and equal."—She didn't know how to put a stopper on that, so she only laughed and said she couldn't think of it. "Not think of it?" says I, artful like; "not when you've come all those thousands of miles for the purpose?"—"What do you mean?" says she, starting. "Come now," says I, "don't tell me. I knows what's what. When a man immigrationises, it's to get work; when a woman immigrationises, it's to get married. You may say so at once."—Well, she wriggled a bit; but we were spliced two days afterwards.'

One day, a widower from New York State appeared in Lansing, Michigan, on business. The same business carried him over to De Witt, eight miles away. When *en route*, he stopped at a log farmhouse to warm his cold fingers. He was warmly welcomed by the pioneer and his wife, both of whom were well up in years, and after some general talk, the woman asked: 'Am I right in thinking you are a widower?' 'Yes.'—'Did you come out here to find a wife?' 'Partly.'—'Did anybody tell you of our Susie?' 'No.'—'Well, we've got as bouncing a girl of twenty-two as you ever set eyes on. She's good-looking, healthy, and good-tempered, and I think she'll like your looks.' 'Where is she?'—'Over in the woods here, chopping down a coon-tree. Shall I blow the horn for her?' 'No; if you'll keep an eye on my horse, I'll find her.'—'Well, there's nothing stuck-up or affected about our Susie. She'll say Yes or No as soon as she looks you over. If you want her, don't be afraid to say so.'

The stranger heard the sound of her axe, and followed it. He found her just as the tree was ready to fall. She was a stout, good-looking girl, swinging her axe like a man; and in other two minutes he was saying: 'Susie, I'm a widower from New York State; I'm thirty-nine years old, have one child, own a good farm, and I want a wife. Will you go back home with me?'

She leaned on the axe, and looked at him for

half a minute, and then replied: 'Can't say for certain; just wait till I get these coons off my mind.' She sent the tree crashing to earth; and, with his help, killed five coons, which were stowed away in a hollow.

'Well, what do you say?' he asked, as the last coon stopped kicking. 'I'm yours,' was the reply; 'and by the time you get back from De Witt, I'll have these skins off the coons and tucked up, and be ready for the preacher.'

He returned to the house, told the old folks that he would bring the preacher back with him, and at dusk the twain were married. Hardly an hour had been wasted in courting, yet he took home one of the best girls in the State of Michigan.

Before a man makes a proposal of marriage, he ought to consider well the answer he is likely to receive, as well as how he is prepared to reply to certain queries which may be asked of him in return—such, for example, as that of the young lady who, though

Scarce for emotion could she speak,
Yet did she ask in accents meek,
'How much have you a year?'

In these days of Married Women's Property Bills, when the 'equality of the sexes' is so stoutly contended for in this and other respects, the lady takes a much more active share in the negotiation of such matters than in former days. However secure a woman may seek to make her position in the matrimonial firm, it is not often that she avows at the outset her intention to act as general manager throughout in the direction of affairs. This occurred, however, in the case of a boating friend of ours, who recently asked a pretty but somewhat strong-minded young lady to 'row in the same boat' with him for life. 'On one condition,' she promptly answered; 'and that is—I steer.'

For the benefit of rejected lovers, we shall in conclusion quote the following sage advice, which, with some modification in very exceptional cases, they would do well to follow: 'If a girl once refuses to marry you, don't make a noodle of yourself by hanging around her and persisting in your suit; for if you do cause her to relent, and she becomes your wife, you will never hear the last of your courting pertinacity as long as your wedded life lasts. The safest way, in nineteen cases out of twenty, is to take a girl at her word.'

A GOOD DIGESTION.

THE largest measure of human happiness, it has been truly said, results from a perfect digestion. In the race of life, a sufferer from dyspepsia (indigestion) is not only heavily burdened, but the infirmity of temper begotten by the ailment so overshadows and warps what may naturally be a fine disposition, that he oftentimes becomes a nuisance not only to himself, but also to his friends. A bad or indifferent digestion begets bad or indifferent work, for the simple reason that the sufferer is unable to work up to his own powers. Whether a man be poet or printer, statesman or stationer, he can never hope to make his mark in the world, or live comfortably

and happily, if he fail to properly digest his food.

We trust that the following hints—for which we are indebted to Mr Andrew W. Tuer, Editor of *The Paper and Printing Trades Journal*—supplementary to our paper in a recent issue (No. 927) on the subject of Dyspepsia, may not only be the means of bringing relief to the sufferer, but may rout the enemy altogether. The commonest and most distressing symptoms of indigestion are a sense of weight or oppression in the stomach after partaking of a—generally unenjoyed—meal, often followed by irritability of temper, depression of spirits, and a sense of general discomfort vaguely termed 'out of sorts.' An attack may last for days, or for weeks, or be so long continued as to become almost chronic. Medicine may give temporary relief, but that is all. The cause of the mischief, which may be taken to result from a fermentive process communicated to every meal almost as soon as swallowed, must be removed. An antiseptic must be looked for, that, while stopping or killing the ferment, will be harmless to the system; and we find it in glycerine, which was first mentioned in connection with indigestion about eighteen months ago by Doctors Sydney Ringer and William Murrell, in a joint article in *The Lancet*, wherein its use was recommended in cases of flatulence, acidity, and pyrosis. Glycerine is not only an antiseptic or ferment killer agreeable to take, but appears to possess the singular quality of passing through the digestive organs unchanged.

A drachm of glycerine mixed in half a wine-glass full of water is to be swallowed with, or immediately after each meal until the enemy takes to flight, which in an ordinary case will be in from one to two days, and in an obstinate one, perhaps a fortnight. Sooner or later, unless the predisposing causes are removed, another attack will follow, and the glycerine will have to be resumed.

'Predisposing causes' having been referred to, it must now be the endeavour to find out what they are, so that a perfect cure may be effected and the glycerine discarded altogether. One's own common-sense would suggest that food known to disagree should be avoided. Indigestion is often set up at the earliest, and to the dyspeptic, the lightest meal of the day, at which he probably confines himself to crisp toast buttered as soon as cold, bread-and-butter with a very lightly boiled egg, or a little fat bacon, the whole moistened with a little tea. In the word just used, 'moistened,' probably lies the 'predisposing cause.' The food, when only half chewed, is moistened with a sip of tea to expedite its departure to the stomach; but to insure its digestion, be it ever so simple, the food must be thoroughly masticated and receive during the process the necessary moisture from the saliva. Food should be swallowed without any extraneous aid in a liquid form, and ought never to be washed down. A sip of tea may be taken between the bites, but not when there is food in the mouth, of which a fair quantity ought to be disposed of before the tea is even thought of. The tea itself, by being slowly sipped, receives its share of the saliva, and is rendered more digestible. And this assertion is borne out by the fact, that many

persons who cannot digest milk when gulped or drunk down quickly, readily do so when it is slowly sipped.

The habit of taking one's breakfast in the manner recommended is so very easily acquired, that, after the first trial, no inconvenience will be felt; in fact, the food will be enjoyed, and the pleasure of the meal greatly increased. Indiscretions committed at the dinner-table are credited as the cause of many dyspeptic attacks; but probably more may be traced to the pernicious habit indicated and indulged in by so many persons at breakfast and tea.

A final hint as to the tea at breakfast. The epicurean method of making it, and that, we believe, practised by professional tea-tasters, is to put a single spoonful—let it be of the best and without any admixture of green—into a breakfast cup, which is filled up with boiling water, covered with a plate or saucer, and allowed to stand for three minutes only, when—after decanting into another cup, so as to dispose of the leaves, which will remain behind—the tea is made. Sugar is added to taste, and lastly milk—and very little, if any, of it. Tea made in this manner is not only most deliciously aromatic, but most digestible; for the bitter tannin, which is apt to harden—literally to tan—the food in the stomach, is left behind.

THE SHADOWED CROSS.

In wedded love our lives had twined
One year—one careless, golden year—
And then he died, my darling died;
And, for the joy that harboured there,
My heart was filled with dark despair.

I traced the haunts he loved the best
In dear, lost days—alas, so brief!
And Mem'ry's breathings, once so sweet,
But fanned the furnace of my grief:
They brought no tears to my relief.

At early dawn I sought his grave,
'Mid quaint-carved stones, o'ergrown with moss,
And lo! upon the hallowed mound—
In seeming emblem of my loss—
There fell the shadow of a Cross.

And, kneeling there in tearless woe,
Methought I heard my darling say:
'O love! thy grief a shadow is,
Which, as a dream, shall pass away,
Where shadows melt in cloudless day!'

Then found my anguish vent in tears,
Strange tears of heav'n-born peace, that shed
Around my soul a holy calm:
And when I rose, thus comforted,
The shadow from the grave had fled!

OUR JUBILEE YEAR.

REMINISCENCES OF A LONG AND BUSY LIFE.

THE year 1882, now commenced, happens to be the JUBILEE year of CHAMBERS'S JOURNAL. The first number having been issued on Saturday the 4th February 1832, the work, consequently, on the 4th February 1882, will have existed fifty years. Though an unusual, this is not an unprecedented fact in the history of periodical literature, and I am not disposed to make more of it than it is worth. I think, however, that I am fairly entitled to feel gratified at the singular success of a work which, relying on the support of no party or sect, nor on any species of artistic attraction, should have so long kept its ground, and that now, after a lapse of fifty years, should, judging by circulation, be more popular than it was in the early stages of its career. There is more than this literary and commercial success to be thankful for. It is that the hand which penned the Introductory article in the first number of the Journal in 1832, has been spared to write the present address. The varied circumstances of the case stir up so many strange recollections and considerations, that I may be excused for offering some remarks appropriate to the occasion.

The first idea that occurs in a very prolonged retrospect is the prodigious change that has taken place in the social conditions of the country. I feel as if living in a new world, yet with the wonted tokens of antiquity observable as of yore. Old notions and prejudices have silently passed away. The denser forms of ignorance have disappeared. Many pretentious bugbears have been exploded. Grievous indications of poverty in many quarters have been superseded by symptoms of individual and national prosperity. There used to be frequent uproars about the anticipated ruin of labour by the introduction of machinery. Although machinery has in almost all the industrial arts been freely introduced,

there is more employment of labour than ever. By the removal of taxes which pressed severely not only on the absolute necessities of life, but on many articles in common use, a great saving has been effected. All imported food was taxed; salt was taxed to more than thirty times its natural value; soap was taxed; leather was taxed; paper of all kinds was taxed; newspapers were taxed; candles were taxed; window-lights were taxed; spring-carts, such as are now largely used by tradesmen, were taxed; post-letters were taxed according to distance, so that some people could not afford to receive them. At one time, as I recollect, tea was sold at eight shillings a pound; and sugar was four times the price it now is. Through the removal of so many exactions, and from other causes, the humbler classes are now better paid for their labour, better fed, better clothed, and better housed; they are likewise much more thrifty, as is testified by the large deposits in the Savings-banks. Perhaps the most remarkable thing of all is the change as to facility of transit by sea and land through the agency of steam, while telegraphic communications are effected with the swiftness of lightning. Life may not be extended in point of years, but time is immensely economised, and a man may now do more than double what he could attempt to overtake fifty to sixty years since; this, indeed, may be called one of the prime factors in national advancement, which is seldom adverted to. I could refer to numerous meliorations that have occurred in the general political organisation without having provoked disturbance. Common-sense now dispassionately settles matters formerly left to the dominion of temper. Notwithstanding a thousand apprehensions, the envied fabric of British constitutional liberty remains unchanged—only, I think, materially strengthened, with

the grand old monarchy towering over all, and with its foundations securely anchored in the affections of the people.

Born in 1800, I am excluded from any remembrance of the great convulsion in France; but the surgings of that terrible affair were still everywhere visible. Bonaparte was a name of terror. The British Islands were a universal camp. Soldiers were seen, and the beating of drums was heard in all directions. A resolution to preserve the country from invasion, seemed to animate all hearts. The oldest of my distinct recollections as concerns public events was the Battle of Trafalgar, October 21, 1805, when I was over five years of age. At the firesides were heard congratulations on the victory, which at once settled Napoleon's projects of invasion; these tokens of joy, however, being saddened by the intelligence of the death of Nelson. It has been always something for me to say with a sense of satisfaction that I remember that great naval achievement, the Battle of Trafalgar.

I was not fated to receive more than a plain education in the place of my birth, a small country town in the south of Scotland. Matters there were still somewhat primitive. In the schools I passed through, there was not a map, nor a book on geography, or history, or science. The only instruction consisted of the three Rs, finishing off with a dose of Latin. It was a simple and cheap arrangement, diversified with boisterous outdoor exercises, and a certain amount of fighting, in which I was forced to take a part. My instruction in Latin came abruptly to a conclusion. Lieutenant Waters, in one of the old novels, says, with more energy than elegance, that he still bore the marks of 'Homo' on his person. I likewise have the honour of bearing similar evidences of my acquaintance with Homo. One day, not being quite prompt in answering a question in Latin grammar, my teacher, in one of his irascible moods (which were always distinguishable by his wearing a short bottle-green coat), lifted a ruler and inflicted a sharp blow on the top of my head, which almost deprived me of consciousness, and which, while leaving a small protuberance, is on occasions, after an interval of seventy years, still felt to be awkwardly painful. So much for my acquaintance with Homo. With every respect for his agency in mental culture, I shortly afterwards bade the academy good-bye; and so ended my classical education, or school education of any kind.

It was a miserable business; but after all, I have reason to think it was the best thing that could have happened. An over-cramming of classical learning might have sent me in a wrong direction. I had secured the means of self-instruction through books, and that was deemed sufficient. All depended on making a proper use of the means. My brother Robert, two years younger, more docile and meditative, took kindly to Homo, and continued to prosecute his studies in that

direction some time longer. Both, however, were alike anxious to make up for deficiencies by self-reliance. A little room we occupied was our college. Every spare hour, morning, noon, and night, was devoted to books. We went right through a circulating library, which the small town had the happiness to possess, besides devouring every book within the domestic circle. Light and heavy literature were equally acceptable. The object was to fill the mind with anything that was harmlessly amusing and instructive. At from ten to twelve years of age we had in a way digested much of the 'Encyclopædia Britannica,' and by this means alone we acquired a knowledge of the physical sciences, not a word of which could have been learned at school. Useful as it proved, such a method of rushing on from book to book is certainly not to be commended. Fortunately, we had good memories, with some sense of discrimination. Robert's memory was wonderful.

Like storms, which though appalling, are sometimes beneficial, misfortunes in ordinary life are occasionally blessings in disguise. A quiet home was suddenly plunged in tribulation. My father, a man of benevolent disposition, but with no great vigour of character, was ruined by inconsiderately, as a merchant, giving credit to a parcel of unprincipled French prisoners of war on parole. It was a clean sweep; and it would have been utterly disastrous, but for the interposition of my mother, a woman of singular nerve and resolution, by nature a lady, and whom circumstances made a heroine. There was nothing for it but to seek a new and more promising scene of operations. By a wise resolution, the family removed to Edinburgh in December 1813; thus quitting a locality where their lineage had existed in the modest position of small proprietors since the days of Robert Bruce. The wrench was sharp, but imperative. At this point, I feel it desirable for a moment to lay aside any consideration of the career pursued by Robert, my younger associate, and to confine myself to a personal narrative.

Anxious to be employed in some way connected with literature, I was, in May 1814, apprenticed for five years to a bookseller. He happened to be a relentless disciplinarian; but that perhaps was rather a good thing for a young fellow entering the world. As our family had soon occasion to remove to a situation a few miles from town, it was my luck to be consigned to the lodging of a decent but penurious widow, in which humble refuge I am to be supposed as endeavouring to live for some years, and to make both ends meet, lodgings and shoe-leather included, on a revenue of four shillings a week. It was a hard but somewhat droll scrimmage with semi-starvation; for, as concerns food, it was an attempt to live on threepence-halfpenny a day. Yet, it was done, and I never thought much about it. I was in the midst of a busy and enlightened community; and if I did at times feel hungry, I enjoyed a charming indulgence in the Pleasures of Hope. I was young, healthy, and resolute in perseverance. It was a most fortunate circumstance that nobody knew me, or cared any-

thing about me. Acquaintanceships would have been thralldom. Isolation was independence. I was, in short, left to fight the Battle of Life in my own way. Youths, generally, make a great mistake in the cultivation of acquaintances, who only embarrass them. The world at large is the true reliance. At intervals, I pursued educational matters in a small way. I made experiments in electricity with the aid of an apparatus which I managed to purchase from very limited savings. I likewise made a study of French, with which I was slightly familiar from recollecting the language of the French prisoners of war. On Sundays I carried a French New Testament in my pocket to church, and pored over its construction in relation to English.

At the time I entered on the busy world, there was much to exhilarate the youthful mind. The close of the French war was coincident with the commencement of the Waverley Novels. When 'Waverley,' in three volumes, was issued in 1814 by Constable, there was a great commotion in the trade; my being despatched for relays of copies, and carrying parcels of them to an eager class of customers, being one of my amusing facts to look back upon. There was a great mystery as to the authorship of this and the speedily succeeding fictions; but it in time fastened down on Walter Scott, whose bulky figure and good-natured countenance were familiar in the streets of Edinburgh. The great victory at Waterloo in 1815, when Bonaparte was done for at last, caused immense public rejoicings. It was the end of a frightful and protracted effort, that had loaded the country with an almost unendurable amount of taxation.

The outburst of the Waverley Novels was followed by various symptoms of mental awakenings in the Scottish capital. There were two striking indications of the kind, each the antipodes of the other. The *Scotsman* newspaper, in the Whig interest, sounded the death-knell of hundreds of vexatious abuses, and caused a prodigious sensation. Taking an interest in its projected appearance, I, in the enthusiasm of the moment, made a push to buy the first copy issued; but such was the crowd, I failed in the attempt; I, however, was able to secure the second copy that was handed out (January 25, 1817). The price was tenpence, owing to the limitation of advertisements, and the costly government stamp. Yet, the sale was immense. This is one of my pleasant retrospects. The *Scotsman*, in its modernised form and price, has long been the leading newspaper in Edinburgh. The other circumstance to be noted was the publication of *Blackwood's Magazine* by an enterprising bookseller of that name (April 1817). It drew around it a number of able literary supporters, Wilson, Lockhart, the Ettrick Shepherd, and others, whose *jeux-d'esprit* speedily gave the work a renown, which, with good management, has carried it on till the present day.

Having elsewhere* related some of the queer incidents in this period of my life, I pass on to a subject more immediately on hand. My apprenticeship came to a close in 1819, and with

five shillings in my pocket—to which sum my weekly wage had been latterly advanced—I was left to begin the struggle of independent exertion. I was fortunate in the moment when thrown on my own resources. A London bookseller, who had come to conduct a trade-sale in Edinburgh, sought my assistance to arrange his specimens. I willingly lent my aid; and this worthy person, understanding that I wanted to begin business, but had only five shillings of capital, gave me an excellent selection of books on credit to the value of ten pounds. Borrowing a truck for the occasion, I wheeled the books to a small place of business I had secured in Leith Walk; and there I exhibited my stock of books on a stall, which I constructed of wood bought with the five shillings. Again, fortune proved favourable. The books were speedily disposed of, and a fresh stock was ordered. A good start had been made. After discharging all my obligations, I had a few pounds over, and by following a rigorous system of thrift, things were decidedly looking up.

In the petty business I had begun, there was much idle time, particularly in wet weather. As a relief from ennui, and if possible to pick up a few shillings, I took to copying small pieces of poetry with a crow-pen, for albums, in a style resembling fine print. This answered so far; but it was slow work, with no prospect of permanent advantage. A brilliant idea shot up. I must have a press and types. There was the small drawback of having no practical knowledge of printing, and no money wherewith to buy a proper stock of materials. As for the knowledge, that hardly cost a thought. In casual visits to printing offices, I had seen types set, and impressions taken. There was surely no difficulty that a few days' experience could not overcome. Then, as regards money, I happened to have three pounds on hand. As if good luck was determined to follow me, a person offered to sell me a small hand-press, and a quantity of types sufficient for a beginning; price of the whole, including type-cases, only three pounds. The types were dreadfully old and worn. They had been employed for the last twenty years in printing a newspaper. The press could print only half a sheet at a time, and made a fearfully wheezing noise when the screw was brought to the pull. These were untoward circumstances that could not be helped, and had to be made the best of. I actually, with these poor appliances, began the business of a printer in addition to my small bookselling concern. After a little time overcoming every difficulty, I managed to execute an edition, small size, of the Songs of Robert Burns, with my own hands bound the copies in boards with a coloured wrapper, sold the whole off, and cleared eight pounds by the transaction. It was all found money; for the work had been done early in the morning, and during bad weather.

My next exploit was of a more ambitious description. It consisted of nothing less than trying to print a periodical, of which Robert was to act as editor. It was to come out fortnightly, and extend to sixteen octavo pages. The eight pounds realised by the success of my Burns, helped to purchase a new fount of letter for the occasion. The old jangling press was still to do duty. The name of the aspiring periodical

* *Memoir of Robert Chambers, with Autobiographic Reminiscences of W. Chambers, 10th Edition, 1878.*

was *The Kaleidoscope*, which went through a brief career of eight numbers, between the 6th October 1821 and 12th January 1822. The papers, mostly of a humorous character, were nearly all written by Robert. I was not able to do much in the way of writing. The setting of types, and the toil of working the press, besides other business duties, were enough, and more than enough, for, under the heavy labour, I considerably broke down in health, and was fain to give the whole thing up. After this, I for a time stuck to bookselling and to job printing. The larger class of letters required for hand-bills, such as 'Dog Lost,' I cut in wood with a penknife. I also printed some small pamphlets of the nature of chap-books, which I was occasionally able to pen. One of them was a History of the Gypsies.

From 1822 till 1832, much writing to little purpose; I was, however, gaining literary experience, and from having to write at short intervals in the course of business, I acquired a facility in letting down and taking up subjects abruptly which has proved useful through life. The works latterly undertaken and executed were the *Gazetteer of Scotland*, a tremendously heavy job—and the *Book of Scotland*, a volume which sketched the special legal institutes of the country; now deservedly forgotten and out of print. Robert had meanwhile taken honours with his pen. The *Traditions of Edinburgh*, a work of historic and antiquarian interest—which was the last of my feats in type-setting, and drawing impressions with the hand-press—was issued in 1824. It at once brought fame and pecuniary advantage. Walter Scott called on Robert to compliment him on the work, and assist him with suggestions. At this time, we had each separately removed to commodious central places in Edinburgh. The period was not a very agreeable one in which to live. In the reign of William IV., there were so many things to correct, that society was kept in constant perturbation. In the midst of political contentions, connected with the Reform Bill, came an alarming epidemic of Asiatic cholera.

Although the period was in various ways dismal, there were occasional gleams of a brighter day. Schools of Arts and Mechanics' Institutes sprang up through the influence of thoughtful individuals. The Society for the Diffusion of Useful Knowledge was founded. Above all, there sprang up a class of low-priced periodicals, mostly worthless and ephemeral, but being popular among the 'masses'—a word which had come into vogue—they answered the purpose of showing how the wind blew. Here, said I, pondering on the subject, is my chance. I have waited for years for a favourable gale, and it has come at last. Taking advantage of the growing taste for cheap literature, let me lead it, if possible, in a proper direction; let me endeavour to elevate and instruct, independently of mere passing amusement; and in particular, let me avoid political, sectarian, or any kind of controversial bias. The matter being important, I in the first place consulted Robert on the subject; but he declined to connect himself with the project, though he promised to help with occasional papers. No further time was lost in cogitation. In January 1832, I issued the prospectus of

the present *Journal*, and the first number appeared on Saturday the 4th of February. It contained an introductory article, written in a fevered state of feeling, as may be judged by the following passages.

'The principle by which I have been actuated is to take advantage of the universal appetite for instruction which at present exists; to supply to that appetite food of the best kind, in such forms and at such price as will suit the convenience of every man in the British dominions. Every Saturday, when the poorest labourer in the country draws his humble earnings, he shall have it in his power to purchase, with an insignificant portion of even that humble sum, a meal of healthful, useful, and agreeable mental instruction. Whether I succeed in my wishes, a brief space of time will determine. I throw myself on the good sense of my countrymen for support; all I seek is a fair field wherein to exercise my industry in their service.' I concluded by notifying the subjects which would receive particular attention.

On the 31st of March 1832, being about six weeks after the commencement of *Chambers's Journal*, appeared the first number of the *Penny Magazine* of the Society for the Diffusion of Useful Knowledge. It is learnt from Mr Charles Knight, its publisher, that the *Penny Magazine* was suggested to him on a morning in March, and that the Lord Chancellor (Brougham), who was waited on, cordially entered into the project, which was forthwith sanctioned by the Committee of the Society. The *Penny Magazine*, begun under such distinguished auspices, and which, as is understood, had a very large circulation, terminated unexpectedly in 1845; though not without having exerted, during its comparatively brief career, an influence, along with similar publications, in stimulating the growth of that cheap and wholesome literature which has latterly assumed such huge proportions.

High as were my expectations, the success of the *Journal* exceeded them. In a few days there was for Scotland the unprecedented sale of thirty thousand copies; and shortly afterwards, when copies were consigned to an agent in London for diffusion through England, the sale rose to fifty thousand, at which it long remained, with scarcely any advertising to give it publicity. Some years after this, the circulation exceeded eighty thousand. Robert's views having now considerably changed as regards the importance of the undertaking, he was admitted a partner at the fourteenth number; and from this time is dated the firm of W. & R. Chambers. The early success of *Chambers's Journal* was perhaps partly due to the fact, that at that time the price of newspapers was usually sevenpence, owing to the heavy stamp and advertisement duties. *Chambers's Journal* being free from these exactions, and being a sheet at the price of three-halfpence, while in point of size it was nearly as large as a newspaper, was accepted as a great bargain in reading. It found its way to nooks and corners of the country to which no such papers had ever penetrated, the instructive and entertaining nature of the articles making it a special favourite with young people. Even until the present time, I continue to receive communications from individuals embracing recollections of the vast pleasure with

which as boys they hailed the weekly appearance of the *Journal*. One or two of these may here be presented, as a curiosity.

The head-master of a large and important school in the neighbourhood of London writes as follows: 'You sowed the seeds of my advancement forty years ago. In a village in Cambridgeshire, there were five poor boys whose united weekly wages amounted to seven and sixpence; one of them had given him by a gentleman off the stage-coach a *Chambers's Journal*. The boy read it; and got four more to hear it read. I was one of them; and we agreed to take it weekly. But the difficulty was, how was it to be paid? for one shilling and sixpence a week would not afford literature. I was always presented with a halfpenny a week for the missionaries, and so were two others. The other two could not contribute; but as their share, they would walk seven miles to fetch it. For ten years we stuck together, and were able to do a great deal to educate ourselves. Now, mark the result. I am the head-master of a large and important free school; another was till lately the head-master of Queen Elizabeth's Grammar School at Bristol; another became a clergyman; the fourth is now a retired builder; and the fifth is one of the largest sheep-farmers in New Zealand.'

Another writer 'remembers how eagerly the *Journal* was read, in its early days, by all classes. At a country town seventeen miles from Edinburgh, a little band of young men used to walk out two or three miles on the road to intercept the carrier, and bring in the parcel of *Journals* consigned to the local bookseller for more immediate distribution. It was too slow work for these impatient spirits to wait delivery of the parcel in the usual course of carrier-work. Going home on the Saturdays, dozens of young men might be seen reading their copy of *Chambers's* by the way.'

The year that saw the beginning of *Chambers's Journal* brought gloom over the literary world. After an unavailing search for health in the south of Europe, Sir Walter Scott returned to Abbotsford in the course of the summer—to die. The scene was gently closed on the 21st September 1832. The funeral of this illustrious Scotchman was appointed to take place on Wednesday the 26th. Out of regard for Scott, Robert could not remain absent; and in a vehicle procured for the purpose, I accompanied him to the funeral. We felt as if taking a part in an historical pageant, amid scenery for ever embalmed by ballad and legend. The spectacle presented at the final solemnity—the large concourse of mourners clustered under the trees near the ruins of the Abbey of Dryburgh, the sonorous reading of the funeral service amidst the silent crowd, and the gloomy atmosphere overhead—is one never to be obliterated from remembrance.

The impetus given by the success of the *Journal*, and the prospects that immediately ensued, had the effect of expanding a small, into a large business establishment. We never for a moment entertained a notion of transferring the publication of the *Journal* to any publisher outside. From past experiences, that was a species of assistance not required; neither did we need to employ the capital of others to

carry on the undertaking; husbanding the profits that accrued, that was enough for all purposes. From the outset, the rule was laid down never to give bills, but to pay for paper and everything else in ready-money; and after fifty years, that remains the governing principle of the firm, with at the same time a rigorous abstinence from speculations apart from our own business. There, in a few words, is the secret of the now large and prosperous concern of W. & R. Chambers. From the first, there was no time lost in financial scheming, nor in any distraction of the mind to matters of a foreign character; all was concentrated in advancing the single object in view. There was no playing with Fortune, nor frittering away time with frivolities and personal indulgences. Providence had carved out a career suitable to our faculties and instincts; and that career has been strictly followed—namely, that of endeavouring to instruct and harmlessly entertain through the agency of the press. Any other course of conduct would probably have been attended, as in the case of hundreds of similar adventures, by shipwreck and lamentation. Young men of ambitious views are apparently too much in the habit of treating their assigned work in the world as if it were a bit of passing amusement. It is, on the contrary, to be viewed as a matter of earnest and very serious concern.

I shall not expatiate on the number of works small and great, designed to promote the cause of popular instruction, in which we have been from first to last engaged; it is sufficient to say that the whole have been of a character designed to impart useful knowledge in a familiar and agreeable form, and if possible, to cultivate the moral and intellectual faculties of the people. They have, in reality, been a method of educating through the medium of print. Political topics have been studiously avoided, or more properly left to the acknowledged organs of public opinion. So, likewise, matters of a religious nature have been resigned to their appropriate exponents; while no less care has been exercised to exclude subjects or references calculated to wound sentiments of delicacy or propriety. The aim throughout has been to be original and concise, without being coarse and abrupt. Our operations in literary production have not been narrowed to a country or district, but have borne reference to the English-speaking race all over the globe; the consequence being that they are perhaps as well known in the United States and in the colonies as at our own doors. Our more laborious and crowning efforts in the cause of cheap and instructive literature have consisted in the execution of several series of school treatises; and also that now pretty well-known digest, *Chambers's Encyclopædia, a Dictionary of Universal Knowledge for the People*, 10 vols. 8vo, of which the sale has been, and continues to be, very considerable.

It need hardly be explained that alike in editing *Chambers's Journal*, and in preparing the various works here indicated, we have been much indebted to a large body of contributors, and particularly to a succession of able literary assistants. The following names are worthy of being specially mentioned: Mr W. H. Wills, Mr

Leitch Ritchie, and Mr James Payn, as having been acting editors of the *Journal*; and Dr Andrew Findlater, as the erudite acting editor of *Chambers's Encyclopædia*. Nor can our gratitude be withheld from those who have aided in conducting the business portions of the concern; I would more especially refer to Mr William Inglis, ever accurate, true, and faithful in presiding over the accounting department for the long period of fifty years, and who is now happily a member of the firm. Last, not least, thanks are due to the hundreds of skilful artisans, who, by good conduct, have helped to promote the stability of the firm. Here it may be incidentally mentioned that the agency set on foot in London at the commencement of the *Journal*, was, for sufficient reasons, eventually withdrawn, and in its stead a branch of the business was established in Paternoster Row, which has proved in all respects successful.

While thankful for having got over the difficulties that oppressed my early morning, the prosperity of later times has been sadly clouded by the loss of friends and acquaintances, a host so numerous as to make me feel almost as if left alone in society. In my experience, life is liable to be exceedingly imbittered by contentions, which are, after all, speculative and exclusively of private concern, or to be sweetened by an opposite course of conduct. The following is a reminiscence in point. A few years after I began the *Journal*, a Roman Catholic nunnery was set up in a pretty and salubrious suburb of Edinburgh. It was a thing with which the public at large had nothing to do. The ladies who had chosen this retreat under their religious guides, were quiet, well behaved, and unobtrusive. Nevertheless, in the vehemence of sectarian dislike, their windows were broken nightly by persons unknown, under apparently no restraint from the police. The circumstance was so disgraceful, that, by a letter in the newspapers, I called the attention of the city authorities to the outrage, and it was immediately stopped. Shortly afterwards, I was unexpectedly waited upon by Bishop Gillies, a gentleman and scholar connected with the Roman Catholic body, who came to thank me for what he was pleased to call the great service I had performed. This led to a long and agreeable intimacy, both in this country and on the continent. Gillies, now deceased, is one of my pleasant recollections. I mention the fact to show how, by a little act of kindness in the spirit of Christian charity, and costing nothing, one may do much to sweeten his passage through life.

Of other acquaintances which grew up around me, recollection embraces dear old George Thomson, the well-known correspondent of Burns, and grandfather of Mrs Charles Dickens; Lord Murray, a judge in the Court of Session, noted for his affability and his delightful literary parties; Dr Andrew Combe, the author of some admirable works on Physiology in relation to the Preservation of Health; Sir Adam Ferguson, the early acquaintance of Sir Walter Scott; Dr John Hill Burton; Mr James Simpson; and Mr Charles Maclaren, the amiable and accomplished editor of the *Scotsman*, with whom I had the pleasure of making an excursion among the extinct volcanoes of Auvergne, and of visiting

with him Gergovia, near Clermont, the desolate mountain site of what had been a fortified city, heroically defended by a tribe of Gauls against the overpowering conquest of Julius Cæsar with his Roman legionaries.

With the view of procuring distinct knowledge respecting the system of elementary education in the Netherlands, which was reputed to be singularly unsectarian, yet satisfactory to all parties, I made a deliberate tour through that country in 1838, everywhere visiting schools in my route, and bringing away a stock of information on the subject, which was published on my return home. It is gratifying for me to know that the system of elementary education now introduced into Great Britain, appears to possess some of the important qualities which I found in full operation in the schools of Holland.

Looking back to this period, I have reminiscences of an acquaintanceship with Lord Kinnaird, whom I had the pleasure of visiting, by invitation, on two separate occasions at his beautiful residence, Rossie Priory, in the Carse of Gowrie. At these visits, I met choice parties of noble and scientific persons, from whose conversation much was to be learned and appreciated. On one of these occasions, the principal scientific guest was Sir David Brewster, under whose kindly directions, some experiments in optics and photography were made for the amusement of the company.

Having written a number of articles on the subject of Emigration, I felt considerable interest in the operations of the New Zealand Land Company, which proposed to colonise New Zealand on a plan somewhat resembling the New England settlements in the seventeenth century; one settlement to be for members of the Church of England, another for Scotch Presbyterians, and so on. While on a visit to London, I procured some information on the subject from Mr Edward Gibbon Wakefield, a leading spirit in the Company's affairs. In the district set aside for the reception of Scotch settlers, it was arranged that the name of the chief town was, by way of attractiveness, to be New Edinburgh. It was no business of mine what they called the town; but without damage to the plan, I thought an improvement might be suggested, which I did as follows, in a letter to the editor of the *New Zealand Journal*, published in London, November 11, 1843: 'If not finally resolved upon, I would strongly recommend a reconsideration of the name New Edinburgh, and the adoption of another infinitely superior and yet equally allied to "Old Edinburgh." I mean the assumption of the name Dunedin, which is the ancient Celtic appellation of Edinburgh, and is now occasionally applied in poetic composition and otherwise to the northern metropolis. I would, at all events, hope that the names of places with the prefix "New" should be sparingly had recourse to. The "News" in North America are an abomination, which it has lately been proposed to sweep out of the country. It will be matter for regret if the New Zealand Company help to carry the nuisance to the territories with which it is concerned.'

The letter bore my signature—for I have made a point of never writing an anonymous letter—and the hint was taken. The name New

Edinburgh was changed to Dunedin, which it now bears. On a late occasion, September 1880, I received a complimentary letter from the Municipal Council of Dunedin which bore an interesting reference to the circumstance. It should be added, that the plan of settlement in New Zealand according to ecclesiastical distinctions, has been long since and very properly abandoned.

From this time, business transactions took me frequently to London, where I enjoyed the acquaintance of Richard Cobden, Sir James Kaye Shuttleworth, Sir James Clark, Dr Neil Arnott, David Roberts, R.A., Douglas Jerrold, Mark Lemon, Charles Knight, the Rev. Sydney Smith, Samuel Rogers, and others. Two of these old London acquaintances still survive, Mr John Bright, M.P., and Mr Edwin Chadwick, C.B.

The manner in which I became acquainted with Sydney Smith is too remarkable to be omitted. In 1844, when residing in Greek Street, Soho, one day about noon a carriage drives up to the door; not a vehicle of the light modern sort, but an old family coach, drawn by a pair of sleek horses. From it descends an aged gentleman, who, from his shovel hat and black gaiters, is seen to be an ecclesiastical dignitary. I overhear, by the voices at the door, that I am asked for. 'Who in all the world can this be?' A few minutes solve the question. Heavy footsteps are heard deliberately ascending the antique balustraded stair. My unknown visitor is ushered in—his name announced: 'The Rev. Sydney Smith.' I hasten to receive so celebrated a personage as is befitting, and express the pleasure I have in the unexpected visit—wondering how he had discovered me.

'I heard at Rogers's, you were in town,' said he, 'and was resolved to call. Let us sit down and have a talk.'

We drew towards the fire, for the day was cold, and he continued: 'You are surprised possibly at my visit. There is nothing at all strange about it. The originator of the *Edinburgh Review* has come to see the originator of the *Edinburgh Journal*.'

I felt honoured by the remark, and delighted beyond measure with the good-natured and unceremonious observations which my visitor made on a variety of subjects. We talked of Edinburgh, and I asked him where he had lived. He said it was in Buccleuch Place, not far from Jeffrey, with an outlook behind to the Meadows. 'Ah!' he remarked, 'what charming walks I had about Arthur's Seat, with the clear mountain air blowing in one's face. I often think of that glorious scene.' I alluded to the cluster of young men—Jeffrey, Horner, Brongham, himself, and one or two others, who had been concerned in commencing the *Review* in 1802. Of these he spoke with most affection of Horner; and specified one who, from his vanity and eccentricities, could not be trusted. Great secrecy, he said, had to be employed in conducting the undertaking; and this agrees with what Lord Jeffrey told my brother. My reverend and facetious visitor made some little inquiry about my own early efforts; and he laughed when I reminded him of a jocularity of his own about studying on a little oatmeal—for that would have applied literally to my brother and to myself.

There was some more chat of this kind, and

we parted. This interview led to a few days of agreeable intercourse with Sydney Smith. By invitation, I went next morning to his house in Green Street, Grosvenor Square, to breakfast; and the day following, went with him to breakfast with a select party, which included my old and valued friend, Mr Robert Carruthers of Inverness, now deceased, at the mansion of Samuel Rogers, St James's, when there ensued a stream of witticisms and repartees for pretty nearly a couple of hours. This was assuredly the most pleasant conversational treat I ever experienced. On quitting London, I bade good-bye to Sydney Smith with extreme regret. We never met again. He died in February the following year.

There were two lady authoresses by whose acquaintanceship I felt honoured; each remarkable for delicacy of taste, discrimination of character, and facility of description, with a keen sense of humour. The first of these to be mentioned was Mrs Anna Maria Hall, the wife of Mr S. C. Hall. Of English parentage, but born and educated in Ireland, Mrs Hall was essentially Irish in her quickness of apprehension, her vivacity, and geniality of disposition. She wrote for us a large number of Stories of the Irish Peasantry, each with a distinct moral purpose, that were much appreciated by the readers of *Chambers's Journal*, of which she was always an acceptable contributor. She resided with her husband at a pretty villa, at Brompton, called The Rosary; and there, every time I was in London, I was happy in making occasional visits.

The other lady authoress I have just referred to was Miss Mitford, who lived at a pleasant roadside cottage, environed by flowers and shrubs, in the neighbourhood of Reading, Berkshire. It was a short run by rail from London, and at every opportunity, I paid a visit to this charming old lady. In her character, she was a matchless specimen of a well-educated Englishwoman, correct in taste and feeling, clever and self-reliant. As a describer of rural life and scenery in their happiest and most genial aspects, she is allowed to have been unrivalled. Although considerably advanced in life, she had the liveliness and winning manners of a child. Some women never seem to grow old, and she was one of them. Her tongue ran on so incessantly concerning the details of village life, that each of my visits might have afforded the materials of a popular article. Short in stature, and with a tall, gold-headed cane in hand, she invited me to walk with her through the adjoining green lanes in the neighbourhood; at every step the trees, wild flowers, and birds, offering objects of garrulous remark. She was not the least reticent regarding her own history. She told me how, ever since girlhood, she had been thrown on her own resources, through her father, Dr Mitford's singular indiscretion and extravagance. He had spent a fortune, and even squandered twenty thousand pounds, the proceeds of a prize in the lottery. After all was gone, he had to depend on the industry of his daughter, who supported him with her pen. I have known several cases of fathers oppressing children by their heedless misconduct, but never one so bad as this. By a thriftless parent, who

preyed on his daughter's sense of filial duty, she was condemned to celibacy, and endured a struggle for existence in her old age. Yet, she was ever cheerful, and resigned to her position. Her works will always be prized as among the most precious in English literature.

There was another and younger lady authoress who furnished many contributions to the *Journal*, and whom I frequently saw in London; this was Miss Camilla Toulmin, a writer of great versatility of talent, and poetic fancy. Depending entirely on her pen, the quantity of work she got through was extraordinary. This lady still survives, and though married, and known as Mrs Newton Crosland, she to a certain extent continues her literary career—from first to last a meritorious instance of tasteful and patient industry.

As an apprentice boy, while delivering a parcel of books at a house in Charlotte Square, Edinburgh, in 1815, I was accidentally mixed up with an infuriated mob, who smashed in the windows of Sir John Marjoribanks, Bart. M.P., and Lord Provost of the city, who had rendered himself popularly offensive by sustaining the import taxes on corn. That was my first experience of what were known as the Corn Laws. For years afterwards, these Corn Laws, in the form of sliding scales and otherwise, were a continual source of discord in the country; the landlord class generally insisting that corn of all sorts should be taxed on importation; while the middle and lower classes, who acutely felt the necessity for food being as cheap as possible, insisted as strenuously that the whole Corn Laws from top to bottom were an error, and that corn should be imported free of duty. The end of the desperate struggle is well known. Sir Robert Peel, yielding to representations on the subject, and now avowedly a convert to Free Trade, carried a measure to put an end to the Corn Laws in 1846. I was present at a public evening meeting in Manchester that took place to celebrate the extinction of these odious statutes. The meeting did not break up till past midnight. When the clock struck twelve, which marked the close of the tax on corn, the whole audience rose to their feet, and uttered loud shouts of triumph and mutual congratulation. It was an interesting and memorable scene.

About this period I made a number of excursions through England, Scotland, and Ireland, for the purpose of describing the more interesting scenes and circumstances that came under notice. One of my visits was to Sunderland, in the neighbourhood of which I seized the opportunity to descend a coal-pit to inspect the workings at a depth of eighteen hundred feet. I afterwards published an account of my visit to this, I believe, the deepest coal-mine in the world. Another of my excursions was to Rochdale, to procure correct particulars regarding the co-operative system. I also visited the Channel Islands.

I had visited France several times: to see the prison discipline at Roquette and Fontrevaux; to see Voisin's method of rousing the dormant intellect of imbecile children at the Bicêtre, and so on. I again visited the country in 1849, during the Republic which ensued after the abdication of Louis-Philippe; on this occasion remaining longer than usual in Paris, and

seeing more of the domestic life of the people. For this let me acknowledge myself indebted to the Dowager Countess of Elgin—a Scottish lady of the Oswalds of Dunnikier—who by some means found me out in lodgings I had secured in the Rue de Helder, No. 2, with a splendid outlook on the Boulevard des Italiens. On several occasions I visited the Countess at her mansion in the neighbourhood of the Rue du Bac, on the south side of the Seine, and which had been a palace of some pretension in the days of the old monarchy. Here she introduced me to her two accomplished daughters, one of whom, Lady Augusta Bruce, was subsequently married to the very Reverend Dr Stanley, Dean of Westminster.

The evening parties of the Countess, composed of a mixture of English and French, were quiet, simple, and effective. There was no parade or finery; the numerous guests, lounging about the floor of a large saloon, or seated on sofas, having their enjoyment in conversation. There was no other festive entertainment than a cup of tea; and as no one seemed to attend with the view of eating and drinking, this was apparently sufficient—the whole thing forming a singular contrast to the extravagant doings of Swellodom which one occasionally sees in England. At these parties, I met with persons of distinction connected with the government, among whom I may mention M. Lamartine and M. Léon Faucher. Lamartine, with his tall, elegant figure, and composed manner, was, I think, the most remarkable man I was ever introduced to, or conversed with. I spoke to him, and complimented him on his wonderfully beautiful work, the *Voyage en Orient*—Travels in the East—which had been translated for circulation in England. M. Léon Faucher was greatly more conversable. He inquired into and was interested in our system of poor-laws, municipal government, and other topics connected with social economy, on which I did my best to give him some information.

On one of these evenings, I was introduced to a young Frenchman, son of a noted revolutionist during the Reign of Terror, who had afterwards saved his life by hiding himself, and changing his name, until he could again appear publicly. He had recently died, and his whole effects were about to be sold, in order that the proceeds might be equally divided among his family. The articles were said to be curious; and such I found to be the case, on going to see them in an old dignified mansion, near the Temple. To the antique furniture, I paid little attention; my interest was concentrated in a large saloon, containing a billiard-table, on which was spread out for inspection a large variety of small articles, along with some old books and papers that were deemed historically precious. My attention became riveted on an open sheet of paper with the identical proclamation which Robespierre had begun to write at the Hôtel de Ville when his assailants burst in on him, and he was shot through the jaw. He had got only the length of scrawling the words, 'Courage, mes compatriotes,' when being struck, the pen fell from his hand, and big drops of blood were scattered over the paper. Bearing these marks of discoloration, how strange a memorial of the horrors of 1794! I said to

the young gentleman, who claimed an interest in the property, that if the articles were sent to be disposed of by public auction in London, they would certainly bring a larger price than if sold in Paris. To this hint, he bowed, but made no remark. I presume the collection was broken up and sold shortly afterwards.

To show me the way to this ancient out-of-the-way mansion, I was obligingly accompanied by my friend, Mr Mackellar Robertson, a Scotchman settled in Paris, in a street near the Port St-Denis, from whom I experienced numerous acts of hospitality, and who was untiring in his friendly attentions to his countrymen. His residence, forming a commodious and prettily furnished *étage*; also his wife, Madame Robertson; and a young lady cousin, along with their pet dog, Buck, a species of Skye terrier, of great sagacity, and affectionate disposition, are printed indelibly on my memory. The group was unique. All are now dead and gone. The faithful Buck attended the funeral of each member of the family in succession. When the last had disappeared, he lay down in an agony of despair, and with a mournful cry, which spoke the depth of his emotion, expired. It was a striking instance of the attachment of the dog to those who had been kind to him, and whom he loved. No one will say that dogs do not sometimes die of a broken heart!

In the course of a conversation with Mr Robertson concerning the political condition of France, I said I could not recollect having anywhere seen how the post-letters in Paris were delivered, if delivered at all, on the days when fighting took place on the streets, and cannon were firing at the barricades set up by revolutionists; that I did not quite understand how the postmen managed on these occasions. In reply, I learned that in the execution of their duty, the postmen on such occasions ordinarily went their rounds as usual; that when they came to a place where there was desperate fighting, they took refuge in a doorway or common-stair for a few minutes until the volley was fired, and then resumed their perambulations; that these Frenchmen, in fact, encountered dangers of this sort with marvellous bravery, though often running extraordinary risks. One day in which the fighting had been very severe on the adjacent Boulevard, the postman arrived with letters, and pointing to a round hole which had been made by a bullet in passing through his hat, only jocularly remarked that it was *fort drôle*. Had the bullet passed a few inches lower, the poor fellow must have been inevitably shot dead, an innocent victim of revolutionary violence.

The courtesies I received from the Countess of Elgin during my visit to Paris in 1849, have left very agreeable reminiscences. This much respected lady died in 1860. As regards the general appearance of affairs, I could see that things were in a most unsettled condition. At times, I expected some public disorder, and almost wished myself safe in England. The streets were frequently thronged with long lines of National Guards shouting and singing, and with flowers fantastically stuck on the ends of their muskets. They seemed to me troops under no proper control, and in a state of semi-mental derangement. Looking out on the Boulevards to scenes of this description, I felt that a crisis

of some sort could not be long postponed. The *coup d'état* and assumption of despotic power by Napoleon III. did not at all surprise me. A tyrannical despotism has in all ages been the natural sequence of impending anarchy.

In 1853, I crossed the Atlantic in a Cunard steamer, and visited Nova Scotia, Canada, and the United States, of which an account was afterwards published. What I saw of the growth of large cities, of vigorous manufacturing industries, and other evidences of prosperity in the States, was exceedingly gratifying. The kindly hospitality extended to me everywhere was heartily appreciated. By Franklin Pierce, then President of the United States, I was affably received at the White House. My brother, Robert, afterwards visited the States; he also made an excursion through Norway, and visited Iceland, of all which he wrote an account in the *Journal*.

At the time I commenced the *Journal*, the duty on paper paid by the manufacturer was threepence per pound-weight, which formed a grievous burden on every sort of publication. About 1840, publishers generally began to make earnest efforts to get rid of this tax, which pressed with special cruelty on the cheaper class of works. In this movement, which on a lesser scale resembled the Corn Law agitation, I took a somewhat conspicuous part. There were good reasons for my doing so. The *Miscellany of Useful and Entertaining Tracts*, issued by W. & R. Chambers, and which extended to twenty shilling volumes, with a circulation of eighty thousand copies, was absolutely choked to death by the tax. The anticipated profits on the work were literally nothing, for the whole had been absorbed by the duties on paper. The government, with no trouble or risk, having got all the profits on this popular little work, it was given up. Cases of this kind were impressed on the attention of the legislature. Mr Milner Gibson, M.P., zealously helped the movement, which was at length successful. The repeal of the paper-duty took effect on October 1, 1861. Already, in 1853, the advertisement duty, eighteenpence each, had been removed; and in 1855, the newspaper stamp was abolished; wherefore, with the abolition of the paper-duty, 1861, the press in all its departments was set thoroughly free from fiscal exactions. In these few facts, young people will learn how newspapers have been so wondrously cheapened and extended in circulation.

In the spring and summer of 1862, I was able to fulfil a long-desired wish to visit Italy. The journey was not easily performed, for there were still few railways. I had to begin by being dragged in a diligence amidst the snow, across Mont Cenis; and there were other difficulties. But I was rewarded by the visit to Rome, Florence, Milan, Naples, Pompeii, and Vesuvius; of all which I gave an account in a volume entitled *Something of Italy*.

At home, a new phase of life awaited me. In 1865, the citizens of Edinburgh were in want of a Lord Provost, and, to my surprise, fixed on me for the distinguished office. I had hitherto shrunk from taking any prominent part in public affairs; and on the present occasion only acceded to the general solicitations from a wish, if possible, to promote certain measures of social improvement. From a consideration of

the state of large cities, I had arrived at the conviction, that the insalubrity, the vice and misery that prevail among the more abject classes, are traceable, in a great measure, to that inveterately wrong system of house construction which consists in narrow courts and alleys branching from the main thoroughfares. I felt that if I could possibly obliterate by legislation the hideous resorts in these quarters, a good deed would be done. Hence, with the able assistance I received from Mr J. D. Marwick, town-clerk, and a small but faithful band of adherents, the Improvement Act of 1867. It is not for me to pronounce an opinion concerning this municipal measure. The other day, taking up a London newspaper designated *Land*, I observed the following statement: 'No fewer than two thousand eight hundred unwholesome houses have been pulled down in Edinburgh since 1867, and over half a million have been spent since that year in city improvements. In 1863, the death-rate was twenty-six per thousand per annum; now it is twenty per thousand.'

One of the duties of the Lord Provost, as is well known, is that of ceremoniously delivering a burgess ticket to distinguished strangers to whom the Magistrates and Council have voted the freedom of the city. It fell to my lot during my period of office to present this token of citizenship to several persons of eminence; among others to Lord Napier of Magdala; Mr John Bright, M.P.; and Mr Disraeli, then Chancellor of the Exchequer. The presentation to Mr Disraeli took place on the 30th October 1867, in the presence of a very large concourse of citizens. On the previous day, he was entertained at a public banquet; on which occasion, in proposing the health of the Magistrates and good wishes to the city generally, Mr Disraeli was pleased to refer in terms so eulogistic to the literary operations in which I had been concerned, that I shrink from copying them from the newspapers of the day in which they appeared.

The Lord Provost of Edinburgh happens to be an ex-officio member of the Commission of Northern Lighthouses, a body invested with the duty of managing all the lighthouses on the seacoast of Scotland and Isle of Man. The Commissioners own a powerful and well-equipped steamer called the *Pharos*, employed on matters connected with the service; and in which a select number of them make an excursion annually, with a view to inspection of a certain number of the lighthouses. On two occasions, I was elected to be, one of the party. My first trip was in 1866, when I was taken along the west coast of Scotland, among the Outer Hebrides, and had an opportunity of visiting that wonderful triumph of art, the Skerryvore lighthouse, rising to the height of a hundred and fifty feet, up which I had the satisfaction of climbing to the top. This is one of my very marked reminiscences.

My second excursion, which took place in 1867, was along the east coast of Scotland, from the Firth of Forth and Bell Rock lighthouses, to the Orkney and Shetland Islands. Independently of the satisfaction of seeing these islands under very advantageous circumstances, I had the pleasure of visiting the scenery described by Sir Walter Scott in his romance of the *Pirate*; a pleasure somewhat enhanced by the considera-

tion that Scott had visited the islands in circumstances not unlike my own; for his voyage was made in company with the Commissioners of the Northern Lighthouses in 1814. By way of amusement, I wrote an account of my two excursions in the *Pharos*, which appeared in the *Journal*, and was afterwards embodied in a small volume printed for private circulation.

When, at the end of three years, my period of office expired, I allowed myself to be re-elected for a second period, in order if possible to effect a particular and unexplained purpose. Although authorised by Parliament, the operation of the Improvement Act depended on the decision of the trustees, such being the members of the Town Council. In point of fact, certain new streets through dense and insalubrious neighbourhoods were relinquished, in spite of all my exertions. This I do not cease to regret; for had the Act been carried out in its integrity, the death-rate in the city would, in all likelihood, have now been only fifteen instead of twenty per thousand per annum. A proposed new thoroughfare, now known as Jeffrey Street, was still in doubt when I entered office the second time. I knew there was a party determined, if possible, to prevent the formation of the street. My object, on the contrary, was to employ all reasonable means to get the street formed. I therefore returned to office to battle the point under perhaps improved auspices. The tug of war came off on the 16th of July 1869, when I fortunately carried a motion to form the street in question. Having thus effected my object, I at the end of the first year gave in my resignation, and was glad to retire into private life.

The quietude of later times, interspersed with occasional visits, for the sake of health, to the south of France, was painfully signalised by the decease of my life-long coadjutor. Dr Robert Chambers died at St Andrews in the spring of 1871, from what seemed to be a failure of nature, due to excessive mental exertion, leaving a family to mourn his loss. His Moral and Humorous Essays, written in his early strength and power of observation, gave a certain tone to the *Journal*, which, with other characteristics, the work, it may be hoped, will steadily maintain. His more elaborate productions were the *Domestic Annals of Scotland*, 3 vols. 8vo; the *Cyclopædia of English Literature*, in which he was assisted by Mr Carruthers of Inverness; and the *Book of Days*, 2 vols. 8vo, the execution of which, and the copious investigations required for it at the British Museum, no doubt contributed to his death-blow.

My own literary efforts in recent times have been confined chiefly to essays on subjects of social concern for the *Journal*. A *History of Peeblesshire*, a work involving some historical and antiquarian research, was executed by me as a matter of amusement during a residence of two or three summers in the country. It appeared in 1864; and was followed by the *Memoir* of my brother, with autobiographic sketches, 1872. That, so far, closes my account. Obligated, by advanced age, and an infirm state of health, to live almost the life of a recluse, the more active professional duties connected with the conducting of the firm, along with the editing of the *Journal*, have for some years past been in the hands of my nephew, Mr R. Chambers.

An incident never for a moment contemplated was the offer by the University of Edinburgh of conferring on me the honorary degree of Doctor of Laws, which was bestowed on me in a way too complimentary to be rejected or readily forgotten, in 1872. More lately, another species of honour came unexpectedly in my way. In June 1881, Mr W. E. Gladstone, M.P. and Prime Minister, made an offer to me of a knighthood. This I respectfully declined.

I have now presented a sketch of the leading particulars of my long and busy life, leaving out matters of private detail which could be of no public interest. I have also briefly explained how *Chambers's Journal* originated, and what followed under the firm of W. & R. Chambers. Possibly it may be thought I have been too precise in specifying the date and circumstances connected with the commencement of the *Journal*; but the singular confusion of ideas which seems to prevail on the subject must be my excuse. I see it constantly stated that the *Penny Magazine* preceded *Chambers's Journal* as a cheap periodical, which is distinctly the reverse of the truth, and that papers of a greatly more recent growth were the pioneers of this species of literature. From what has been stated, it would be hard to determine what paper was the pioneer. But I am entitled to repeat, as a matter of historical truth, that *Chambers's Journal* sprung into existence on the 4th of February 1832, and has outlasted hundreds of rivals which, under the best advantages, courted public favour.

Whether as a personal or bibliographic narrative, the sketch is possibly not without interest, from its throwing a certain light on a branch of human knowledge. It has certainly been unaccompanied with brag or pretension, and is left to take its chance in sweeping along the great vista of Time. As has been already said, in the course of a long life the world

has been prodigiously changed, and I am not unconscious of being changed with it. How long, with care, existence may be protracted, I am unable to say; but be the period long or short, my feelings remain identified with *Chambers's Journal*, which it was my fortune to originate, and in the cherishing of which my literary efforts, such as they are, will not, at fitting opportunities, fail to be exerted.

With little to be grateful for as regards treatment at school, I have from various considerations ever entertained an affectionate remembrance of the place of my birth on the banks of the Tweed. In 1859, I presented the small town with an Institution, designed for moral and intellectual improvement, consisting of a Public Library of fifteen thousand volumes, a Museum of Art, a Reading Room, and a Hall for lectures and public assemblages. Though the gift has been seemingly prized, I should, after a lapse of twenty-two years, have some difficulty in saying whether its originally anticipated advantages have to any material extent been practically realised. Another of my acts in later times, which I merely glance at for the sake of rounding off a too long narrative, has been the restoration of that fine, old, historical monument, the Cathedral Church of St Giles, Edinburgh, which, for more than three hundred years, had been allowed to sink into a discreditable condition. The work is now considerably advanced under the direction of a skilled architect, Mr W. Hay; and I trust that God may grant me life and sufficient health to complete the undertaking. I have, however, made arrangements to secure the completion of the works, in the event of my decease.

To the great number of friends who have been looking forward to some sort of address from me on the present occasion, I send a cordial greeting.

W. CHAMBERS.

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

CHAPTER III. CONTINUED.—LOVE'S FIRST DRAUGHT IS SWEET ENOUGH; IT IS ONLY IN THE AFTER-TASTE THAT WE DETECT ITS BITTERNESS.

MR JOLLY'S newly occupied residence lay, as the crow flies, not more than a mile and a half from Lumby Hall. From the roof of one house, the chimney-pots of the other could be descried; but the lower ridges of Daffin Head lay between them; and the Grange, like the Hall, looked southward, and was protected from northerly winds. Not half a mile from the gates of the smaller house, light craft could lie comfortably at anchor; but they were hidden from view by a little mound, and a feathery belt of firs, whose sombre and unchanging green stood out against the pale blue of the hazy summer sky. Between this small anchorage and the front of Lumby Hall, rose the crags of Daffin Head, round which many a white sail floated into sight in the summer weather, when the ranks of pleasure closed up alongside the ranks of trade. In days that came later, Valentine Strange took harbour within the shadow of those dusky pines, bearing within himself a

deeper shadow than they could throw, a shadow which widened from himself, as such things will, and cast its gloom on many. Now, beyond the shadow of the gloomy pines, the sea murmured in the sunshine and the sea-mew called, and the white sails glittered, and the distant haze trembled in the heat, and there was no sense of anything but rest and peace above this quiet haven.

But rest and peace are for the restful and peaceful, and the most exquisite of Nature's moods is caviare to the unquiet mind. Poor Gerard's heart beat dolefully as he rode by his companion's side to meet the goddess who was henceforth for so long to rule over him. Yet shall not the reader, if I can help it, picture to himself a mien disturbed, a countenance unsteady. The tremors Gerard felt were inward and were hidden; and the little man riding with him could not have guessed, keen as he was, that Gerard had a tremor to hide.

It is probable that a handsome man cannot be seen to greater advantage than on horseback. Gerard had a noble figure and a well-set head—a trifle too haughty in its carriage, as I have written already—though the frank good-humour

of his face had something of a denial for that haughty bearing. His face was plain; but if you will think of it, you may be surprised to discover how little that matters in your estimate of a man, so long as the expression is one of openness and sweet temper. A young lady looking idly through the open spaces of a Venetian blind, thought well of the young man's presence as he swept up the avenue and alighted at the door. A young lady with wonderful violet eyes, a young lady of very lovely form and exquisite feature and colour, and attired in a morning dress of pure white, with lace ruffles at the wrists and throat. Her brown hair rippled over her shapely head, and grew low upon her broad fair forehead, as in Mr Power's charming bust of Clytie. She stood a minute to look at the new arrival, and recognised him. Then she turned, and for half a minute surveyed herself in a mirror, and finding herself faultless at all points, glided to her own room to add a touch to perfection.

When she descended and met Gerard in the cool dimness of the morning-room, and the bald-headed man said, 'My sister Constance,' the thing seemed ludicrous. Constance, muslin and laces and all, looked as though she might have risen, like Aphrodite, from the white sea-foam, a creature of inspiration, and not of vulgar birth. No such fancies were likely to cluster around her brother, who was decidedly unromantic in aspect.

'You have ridden from the Manor House at Brierham?' she said. 'Then I am sure you must be hungry. Shall I order luncheon?'

Now, as a conversational effort, there was nothing especially remarkable in this utterance; but I doubt greatly whether Gerard had, up to that time, ever listened to human speech which so pleased him. It was spoken with a smile which was delicious to look at. The clear silver voice came through such smiling gates of pearl and coral, such exquisite white teeth, such beautiful lips, that nothing it could say could be commonplace.

He that loves a rosy cheek,
Or a coral lip admires,
Or from star-like eyes doth seek
Fuel to maintain his fires,
As old Time makes these decay,
So his love shall waste away.

Is that so? Always? Perhaps it depends on the nature of the lover, with whom, in some rare and happy instances, age cannot wither, nor custom stale the beauties that won his heart in youthful days. Beauty is a good gift, and I will not decry it. With a heart already prepared to yield, as Gerard's was, such rare and supreme charms as those he saw before him were sure of victory. He drank in Constance's words, and unconsciously stored them in his memory; so that years later he recalled the little commonplaces, the 'nothings' of politeness and good-breeding spoken on that happy morning. His eyes were hungry for her face, when

he forced them to look away, lest his gaze should embarrass her. He was too agitated to be happy, yet he thought himself so. Love's first draught is sweet enough; it is only in the aftertaste that we detect its bitterness.

'The hour approaches Tam maun ride.' It comes, that inexorable time, when we must go back to harness from the pleasant reaches of the river and idle summer days; or to our own lonely rooms, after the society of our best intimates; or into the wide Inane, which dwells everywhere save where our love may be.

'We shall see you often, I trust, Mr Lumby.' Thus the elder Jolly, a brown and withered man of five-and-fifty, with a dreary bent towards table oratory. Gerard would fain have said something, though no more than a word, to tell Constance how heavily time bade fair to drag with him until he should meet her again; but he restrained himself, and said good-day politely, and no more. So, he loved and rode away. The inland-reaching meadows, the yellow sands that ran up from the sea to meet their sparser grasses, the familiar headlands, and the bay—how dreary they all looked to the new lover's eyes! There was an altogether novel restlessness upon him, and the fiery Rupert felt it, and fretted beneath it.

'Do you want to gallop?' said Gerard. 'Gallop, then!' He laid the reins loose, and the horse shot out across the turf with an exultant bound, and his master encouraged him with voice and hand. But not Rupert's noblest pace could carry Gerard away from himself. Says the quaint old songster:

I attempt from Love's sickness to fly, but in vain,
For I am myself my own fever and pain.

And Gerard was as near himself as ever when he checked Rupert at the foot of the hill which led homeward.

'Father,' said the love-tormented youth, an hour later, 'I think I shall run up to town to-morrow. There's nothing doing down here just now. Strange has gone away yachting, and I'm a trifle dull.'

'Very well, my lad,' said Mr Lumby. It was his almost invariable answer to any expression of Gerard's will; and indeed, the father's continual indulgence might have done much damage to a mental constitution less firmly knit than Gerard's.

'I meant to go next week,' said Gerard, 'and I may as well run up at once. The close of the season is coming; and I shall miss everybody if I delay much longer.'

'Very well, my lad,' said Lumby senior once more. 'Shall you want any money?'

'No,' said Gerard; 'I think not. If I should, I'll call on Garling.'

'Very well, my lad,' assented the father once again. Garling was Mr Lumby's right-hand man, the captain of his host. Mr Lumby's father had bred Garling to business, and he had grown up into control side by side with the present head of the firm. He rather looked down on the younger partners; but since they looked up to him, and had been trained to business under him, things went more smoothly than they commonly do when subordinate officers take the upper hand.

In the evening, after dinner, Gerard strolled from the house, and almost unconsciously walked towards Daffin Head, and sitting down within sight of the Grange, gave himself up to his own thoughts. Two days before, he had felt no especial interest in that eligible and desirable country residence. He had been familiar with it from childhood, and had known the people who had lived in it, a rather low and horsey set, who had come to grief upon the turf a year ago, and had disappeared, unregretted, from the county horizon. He had shunned the place all his life, except for the interchange of mere formal civility; and now it had suddenly become the very heart of his world, and began to draw him to itself, as though it were the seat of the centre of gravitation. He sat and looked at it as the shadows gathered, and in a little while lights began to twinkle in its windows. Through the dusk he strolled on again nearer and nearer by devious ways, until he passed the lodge gates. There was a possibility that young Jolly might be straying thereabouts, and might meet him and ask him in. At that fancy he turned unaccountably shy, and began to dread a chance encounter. Then meeting nobody, he felt disappointed that his dread had not been realised; and in that mood, with a vague hungry feeling superadded, he walked home again.

His youth and health and the open-air life he led were enough to stave off for the present that attendant upon first-love, by doctors called *Insomnia*. He slept soundly till the morning grew gray; and then he began to dream again of the violet eyes, and awoke restless and disquieted. I think that a manly youngster is always pretty certain to show fight in a matter of this kind, and not to yield himself tamely and without a struggle. It was at this time that Gerard, making brief preparation for his visit to town, resolved against the tenant of his heart, and turned rebel against Love. But the fight was unequal, and he was driven from the field of defiance with all his forces routed. He bought the promised presents for Milly; and surveying the treasures of the jeweller's trays, wished that he had the right to buy up the stock for Constance and lay its riches at her feet. He made calls, and received cards for the last receptions of the dying season, and was dull at all of them. He went to the Opera, and Patti's liquid notes flowed unheard about his ears. He went to see Toole, and yawned dismally through a three-act farce, called a comedy, at which everybody in the house save himself shouted with laughter. Then, at the end of a week, he went home again, and made Milly happy by his presents, and happier still by the promised waltzing lessons.

We become so soon habituated and inured to any new method of feeling or thinking, that in a day or two the new way seems as familiar as the old. Gerard might have been in love for a year by the time the Jollies gave their house-warming dinner, such a part of his life had love become. He dressed for that event with extraordinary care, and began to think slightly of his own personal appearance. Until then, barring that general satisfaction with himself which is common to youth, he had not thought about it at all, and his new opinions abased him. Constance did the

honours of the house like a queen, he thought; and indeed she was the object of much encomium. Such beauty could scarcely go unapproved; and it was the general opinion that Miss Jolly was a very charming addition to the county society. Perhaps it was only natural that the ladies should express less enthusiasm than the men; but they were reserved in their judgments, and refrained from the encomiastic flights in which members of the more impressionable sex indulged.

Dinner over, Gerard manoeuvred to be near Constance, and found himself assisted by Milly. There was nothing easier or less embarrassing in the world than to talk to Milly; and that young lady having none of the shyness which Gerard felt for Constance, led the way to where she stood, taking the irresolute lover with her. It was as if a mastiff should have taken shelter behind a pigeon, this big tanned Gerard wavering deviously towards his love under cover of the dainty Milly. Constance once reached, was gracious enough. There was no chance for a confidential talk, for she played hostess, and was busy with her father's guests. Yet may the historic Muse record their converse, if but as a guide to future lovers, as chance conversations are set forth in foreign phrase-books for the help of tourists.

Gerard. Very warm, is it not, Miss Jolly?

Constance. Very warm indeed.—My dear Mrs Weatherley, how do you do?

[Mrs Weatherley, after sundry commonplace, retires.

Gerard. You were not in town at the end of the season?

Constance. No.

Gerard. Everything was very dull. Dullest time I can remember. I was longing to be back in the country all the time.

Constance. Were you indeed?

Gerard (beholding an opportunity for saying something brilliantly complimentary, but not quite knowing what to say, or how to say it). Yes.

Constance. My dear Miss Pennfeather, I have so been wishing to see you.

[Gush. Miss Pennfeather retires.

Gerard. I hope you'll excuse me, Miss Jolly, but you must really allow me to congratulate you upon the decorations. I'm rather a judge of that sort of thing, and they're really charming.

Constance. I am so glad you like them.

Milly. Aunty is beckoning me with her fan. Will you give me your arm?

[Gerard bows to his idol, and retires.

Constance. My dear Agnes, I am charmed to see you.—How do you do, Mr Dolby?

[The strains of music overpower all voices.

Gerard piloted Milly across the room, and surrendered her to the care of his mother, and then retired to a doorway, against which he lounged, looking on the glittering scene with no lightness of heart. He reviewed the conversation above recorded, and wrote himself down an ass for his share in it. How different he was from Constance! How far removed from her—how much beneath her! The unprejudiced observer fails to see the truth of all this. Miss Jolly was very beautiful, but she was not a Minerva for wisdom. There was nothing in her converse to dazzle us who are not in love with her. Yet let no youth or maiden smile superior over Gerard's

raptures and his self-disdain. You, who laugh, have yet to go through your experiences. We who are middle-aged, have had *our* day, and we remember; not without unavailing longing for the past.

(To be continued.)

MY HIGHLAND COLLIE AND HER ADOPTED KITTENS.

A TRUE STORY.

THE story of Rollo and her contest with the gray cat and the kittens, recorded in No. 921 of your *Journal*, has reminded me of an affectionate Highland collie which adopted two kittens under perilous and painful circumstances.

In the days of my youth, no iron bands of railway had bound North and South Britain together. Drove of Highland cattle passed through my native village every autumn on their way to London; and the sagacity and fidelity of the Scotch collie dogs excited my admiration. At that time, my father farmed in three counties, Nottinghamshire, Leicestershire, and Lincolnshire; and the interchange of stock from county to county and from farm to farm necessitated the use of a good shepherd-dog. Much of my time in youth was spent in assisting to drive the cattle and sheep. How often I coveted a dog of the true Highland breed! But so strong and mutual was the affection between drover and dog, that no gold would part them. And as the dogs I refer to did not understand English, and I was a stranger to Gaelic, no purchase would have been profitable.

One day, as my father and I were riding on the old Roman Road, called by us 'The Fosse Road,' which skirts the borders of the counties of Nottingham and Leicester, we met a drove of Highland oxen quietly travelling and grazing on the rich and luxuriant grass, where no tool of Macadam had lifted a sod or broken a stone. The drover and his dog were standing by the side of an ox which had fallen down sick in the rear of the herd. Which of the two, Sandie or his dog, was the more afflicted, I cannot say; for while the drover stood mutely pondering over the fallen ox what to do, the dog was licking the face of the poor beast in tenderest sympathy. My father put the drover out of all trouble by proposing to take care of the ox. With many thanks, the drover left the beast under our care. In a few hours it was able to rise; and we put it in a large pasture close to the place where it had fallen down. The ox speedily recovered; and, in full sympathy with our Scottish ancestry, we made a pet of the beast for Scotland's sake. In course of time the drover came as usual, and was overflowing with gratitude for the kindness shown to the animal. As nothing could be accepted beyond a fee to our shepherd, the Highland drover insisted on giving something more in return. He appealed to me, and asked me what he should give. I replied: 'Bring me

a Highland shepherd's pup next summer.' With an expression of delight, he promised.

The next summer, the grateful drover walked into our house, and pulled out of a small side wallet a veritable Highland pup, and after saluting it with a hearty kiss, put it into my hands with a prayer that it might prove as 'guid as its mither.' I called it Gipsy. It became to me as a sister, and lay in my arms by night, was carried on my saddle by day, or followed at my heels when sufficiently strong to go about the fields. To say that Gipsy understood my words in reference to her duty, is no exaggeration; and to record all her excellences and fidelity would lead me from my story.

Riding home one evening with Gipsy at my pony's heels, I saw a group of boys standing by the side of a bridge, throwing stones into the brook, and shouting, as lads do when hunting water-rats. I found that the object of their sport was two kittens, which they had thrown into the water; and the attempt made to escape by the little creatures was fun to the cruel lads. I saw that the kittens must be either stoned or drowned; and, pitying the helpless things, I drove away the lads, and asked Gipsy to fetch them out of the water for me. She entered into the work as heartily as if a drop of my pity had been instilled into her nature. She laid them alive at my pony's feet; and then rearing herself up to my stirrup, she put each kitten into my hand. I put them into my coat-pockets and rode home. A little new milk and a warm bed by the fireside soon brought back life and play. To my surprise, Gipsy, instead of retiring alone to her own bed, took the two kittens with her, and nestling down in her quiet way, allowed them to lie all night cuddled in beside her. In the course of a few days I found, to my surprise, that Gipsy was rich in milk, and the kittens sucking away as heartily as if she had been their mother!

As Gipsy had been allowed to keep but one litter of pups, and the lactiferous period had long since passed away, it being thirteen months since the weaning of her last pup, I was astonished to see how her generous nature had responded to her sympathy for the half-drowned kittens, and how nature itself had so strangely assisted in the good work. The sight of Gipsy suckling her kittens was the attraction of the village, and the talk of the farmers in the neighbourhood.

The kittens grew rapidly into good-sized cats. But alas for Gipsy! her end was tragic. In the early harvest-time of the following year, we were taking in a stack of old wheat infested with rats, and had called off three Irish labourers from their reaping to assist us. The rats were numerous; and one of the Irishmen was more enthusiastic in the sport than his fellows. Armed with his blackthorn shillelah, Paddy made havoc with the rats. Alas! one misdirected blow from his shillelah fell upon Gipsy's head and stretched her lifeless!

There was universal mourning in all the household. I am not ashamed to say that I wept bitterly, and deplored the loss of her friendship far more than the loss of her usefulness with the flocks and the herds. Years have passed away since I buried Gipsy beneath the lilac trees of the garden; friend after friend has departed this

life; yet the strokes of repeated bereavements have not altogether effaced from my remembrance the pangs which I suffered by the untimely death of my faithful Highland collie.

A MYSTERIOUS DUEL IN 1770.

IN TWO PARTS.—PART II.

COLONEL DACRE took the deepest interest in this remarkable duel, and declared he would use every available measure, privately and officially, through the Embassies, to try to discover the name and position of the deceased. He impressed upon me how important a personage I was in the matter, having been the one solitary witness of the sanguinary scene; made me tell him again and again the whole of the circumstances of the fight down to the minutest detail; and seemed not a little pleased at my animated description of the duel, and knowledge of the use of the sword, as well as what he was pleased to call the clear and intelligent answers I gave to his searching questions. I may be pardoned—writing now years after, and as quite an old man—this little bit of vanity; but the recollection of it is as vivid as if it had happened but yesterday, instead of half a century ago.

The coroner's inquest was held the same afternoon; and I felt all the importance of my position as the only available witness of the actual death. Of course, there could be but one verdict, and that was speedily recorded. In a couple of days, the burial took place in a vault in the village church, at the suggestion of Colonel Dacre; for, he said, inquiries might lead to the discovery of his name and family; and it might be ultimately necessary again to produce the body for identification. All the village and neighbourhood turned out to witness the funeral procession from the inn to the church, Colonel Dacre having himself undertaken the whole of the arrangements; and he, my father, myself, the doctor and the landlord, acting as mourners, followed the coffin to its last resting-place. An inventory of the property and clothing belonging to the deceased having been made, the whole was taken formal possession of by the colonel, in his capacity of magistrate.

A consultation was then held as to the next steps to be taken; and Colonel Dacre invited my father and me to dine with him at his old Manor-house that day, in order to mature their plans, which were ultimately carried out. Paragraphs were inserted in both country and London papers relating the story of the duel, and describing the deceased very minutely, and asking for information. The French, Spanish, and Portuguese Embassies were communicated with, and inquiries made as to whether any nobleman or gentleman of name or rank was reported missing. All this was not only done, but a great deal more; and in process of time, answers were duly received from all quarters, but with the same utterly unsatisfactory result. It was all to no purpose; nothing was discovered, and no light thrown upon the strange mystery. Colonel Dacre then wrote to the makers of the sword, watch, and hat, whose names and addresses in Paris those

articles bore, detailing the circumstances of the duel, and describing the person of the deceased. But the answers received were, that as many of those articles were continually sold to young gallants of fashion without even a knowledge of their names, it was simply impossible to give any information, or even conjecture, on the subject. Subsequently, Colonel Dacre laid the whole case before the Home Office authorities; and, not to weary the reader further, I may add that everything was done, and every possible means adopted, to discover who the deceased really was, but without the smallest result.

Speculation, of course, was rife; and various theories were started on the subject. Was the deceased some foreign adventurer? Or was he a sort of gentleman gambler, detected perhaps in some flagrant act of cheating, which might have led to a quarrel? Or was it some love affair? Or some political entanglement? The last two suppositions were perhaps favoured by the evident anxiety shown by the unfortunate man's companions to secure the packet of papers from his breast. Ordinary every-day papers would more probably be carried in the pocket, and not concealed inside the bosom of the shirt. Then again, he had, by his expensive and elaborate dress, evidently associated with gentlemen, and had been considered in the light of a gentleman, by being permitted the privilege of a duel—a privilege only accorded by gentlemen to their equals. Then again, who were the cavalry officers, and how came they there? The nearest cavalry barracks were at York and at Lancaster, both places very many miles distant from the scene of action.

But conjecture only wore itself out; all was dark and impenetrable uncertainty; the beginning and the end were alike lost in the deepest mystery.

Exactly fifty years after the duel—that is to say in the year 1820—when I was sixty years of age, and vicar of Wakerham, I was asked by a very dear friend to take his place as special preacher in aid of the Society for Promoting Christian Knowledge, at the parish church of Keldon, in a distant part of the county, of which the Rev. Desmond Hiffernan was the vicar. The date of the approaching Sunday I found was the 19th of July, a date only too well remembered by me.

I duly arrived at Keldon vicarage the previous Saturday afternoon, and was received by the vicar with the utmost cordiality. He was an Irishman by birth, and a man of genial polished manners. He led the way at once into a lofty and handsome drawing-room, which I had no sooner entered, than my eyes and attention were alike instantly riveted on a beautifully executed oil portrait which occupied the end of the room. It represented a cavalry officer, of tall and elegant proportions, standing by his horse. He wore the uniform of half a century before, namely, a gold-laced three-cornered cocked-hat, a scarlet cloak, jack-boots, and long heavy sword. I looked earnestly at it, whilst busy memory carried me back just half a century, to a bright moonlight night, and the bowling-green of a little country inn, and the terrible tragedy there enacted. Yes; the more I looked, the more convinced I felt. There were

the finely cut aristocratic features, the tall grand figure, nay, the identical uniform. It must be he! I was recalled from my reverie by the vicar, who, observing my fixed and earnest gaze, said, with a sigh, looking at the picture: 'My uncle Dennis—Captain Dennis Hiffernan. He was aide-de-camp to General Montgomery; and was killed, poor fellow, with the General, at the attack on Quebec in 1780.'

'Was he not a very tall and finely built man?' I asked.

'Six feet four and a half without his shoes; and I don't know *how* many inches across the chest; and a perfect Apollo in shape and figure.'

'It is a very striking likeness, surely,' I said.

'O yes,' replied the vicar—'admirable. It is considered one of Gainsborough's happiest efforts. But, may I ask, did you ever see him, as you seem so much interested?'

'Yes,' I replied, speaking very slowly, and with my eyes still fixed on the portrait. 'I certainly did see him once, and only once—for I am sure I cannot be mistaken—exactly fifty years ago—to-morrow will be the very day—and under circumstances so peculiar and romantic, that, if you like, I will relate them.'

To this the vicar, who expressed himself deeply interested, readily agreed; and seating ourselves near the open window, I gave him a detailed account of the duel and all that followed it; and I then inquired whether he had ever heard of the occurrence.

'If my father,' said the vicar, 'the late Colonel Hiffernan, had been alive, he, no doubt, could have told us all about it, for he was always in his brother's confidence. My uncle Dennis, I'm afraid, was a terrible fellow, always in scrapes or mischief of some kind or other; but warm-hearted, noble, and generous to a fault.'

After a pause, during which the vicar looked meditatively at the portrait, he said: 'Now you have mentioned the circumstance, you seem to have awakened a sort of indistinct recollection of my having heard my father speak of a duel fought by a great friend of my uncle's, a Yorkshire squire, at which my uncle assisted as second; that the adversary was killed; and that his dead body was left just where he fell, but against the strong remonstrances of my uncle. If I am not mixing up several of Uncle Dennis's questionable adventures—for they were only too numerous, I am sorry to confess—I have an idea that the opponent was a French West Indian, a man of great wealth, but an unprincipled libertine, and an inveterate gambler. One thing I very well remember often to have heard, and that was, that my uncle's friend had a beautiful but flighty wife; but whether it was the lady, or cards, or politics, that occasioned the quarrel, I cannot pretend to say; but from your account of the papers taken from the man's breast, I should be inclined to think it was the lady, and that probably these were letters of hers which the husband had discovered, and of which he desired to gain possession. Being a West Indian—supposing this to have been the man—and possibly having no friends in Europe, would account for his being wholly unknown at the Embassies, or indeed anywhere else.'

After another pause, the vicar, speaking almost to himself, added: 'Ah! poor Dennis; I'm afraid you were a very sad and foolish dog in your day. Had your brother been here, he would have told us all.'

After dinner, when the ladies had retired, and the vicar and I were alone, he again referred to the subject, saying that he had just called to mind a circumstance, which he should otherwise have probably entirely forgotten, as of little moment, had not my story awakened in his mind an idea that this circumstance might prove a sort of connecting link and sequel to my narration.

'A young naval officer,' continued the vicar, 'the son of one of my parishioners, was at home on leave a few months ago. He was a most pleasant and chatty companion, and full of anecdote. He casually mentioned that, whilst serving on the West India station, he had more than once been ashore on the island of Martinique, and spoke of a beautifully situated mansion known as the Château Giraudière, standing on a fine estate which had been long without an owner, and for possession of which the lawyers had been for years past desperately quarrelling and fighting. The story was that it had belonged, about half a century ago, to an immensely rich planter, of French extraction, named Giraudière; and that his only child and heir, a son about twenty-five years of age, had gone away on a pleasure trip to visit the capitals of Europe. He had been to Paris, Berlin, Brussels, and London; but at the last place all trace of him had been lost, and he had never more been heard of. It was supposed in the island that he had been shipwrecked at sea on his return home; and although every effort and inquiry had been made by his father, and everything done that could be done, no tidings were ever received of him; and when the old father died, the estate and château, which had been left by will to this son, went to ruin for want of an owner. Now,' continued the vicar, 'putting our stories together, and remembering the initial "G." on the snuff-box, the French accent, the French-made watch and sword, and the dark swarthy complexion, is it not quite possible that the man you and my uncle saw killed in the duel in the garden of the Cumberland inn fifty years ago, was none other than the identical son and heir of the French planter M. Giraudière, so long missing from Martinique?'

'It is more than possible—it is most probable,' I replied, deeply interested in this curious revelation. 'But unfortunately, everybody in any way connected with the mysterious affair is dead and gone long ago, including my father and Colonel Dacre; and as the planter appears to have left no relatives whatever except his lost son, I fear that inquiry of any kind would now benefit no one, except perhaps the lawyers, who seem to have got the business entirely in their own hands.'

A long and interesting conversation then followed; and both Mr Hiffernan and myself came to the conclusion that the best thing to do would be to carry out the old saying, 'Let bygones be bygones!'

I may add that the watch, snuff-box, sword,

and other valuables, that had belonged to the deceased, are most carefully preserved as interesting curiosities by the representatives of Colonel Dacre; and that a tablet was put up in the church of the village with the following simple inscription:

In a Vault beneath this Church
are deposited the Remains of
A YOUNG GENTLEMAN,
aged about 25 years,
Whose Name, Rank, Residence, or Country
are alike unknown.
He was killed in a Duel, fought by Moonlight, in the
Garden of an Inn in this Village, on the Morning of the
19th of July 1770;
And his body was left where it fell,
to the Loving-kindness and Christian Sympathy
of Strangers.

BESS!

A CHARACTER SKETCH.

I.

THE light of early morning was just beginning to pierce the murky air which at all times hangs like a dimly transparent veil over and around Black Regis, as I entered that typical Black Country village. A long straggling row of tumble-down huts, boasting two shutter-covered windows and one shattered door, constituted the chief feature of the place; the few houses in fair repair being quite subordinate. In each of the huts aforesaid might be found a little forge, or 'smithy' fire, an anvil, a large number of small square iron bars, and hammers for shaping the same into nails. And in these huts work one or two young women or girls, engaged throughout the livelong day in the occupation of nail-making. From early morning until late at night you can hear the ceaseless tap, tap! tap, tap! of the small nail-hammers wielded by the muscular amazons of Black Regis. A strange sight truly. I was long of opinion that nail-making was a species of labour confined to the male sex; and I confess I would rather have remained under that delusion; for I cannot help feeling a certain repugnance at beholding women engaged in such occupations.

Black Regis is, as I have said, a murky place; being darkened by the smoke and chemical fumes that arise from coal-pit shafts, iron and chemical works, and the like, in the immediate surroundings. To a stranger, this smoke, with its accompaniment of variegated fumes, is offensive, and well-nigh intolerable. But the inhabitants of Black Regis inhale the poisonous atmosphere uncomplainingly, and are possibly ignorant of its nauseous character.

Black Regis is a dull place socially as well as atmospherically. There is no place of public amusement or recreation other than the public-house, and the half-levelled surfaces of refuse used as a cricket or gambling ground. But these were sufficient for such as have no higher craving or more laudable ambition. 'Good enough for them as is in it!' was the emphatic assertion of the chief personage of this sketch—Bess! Bess what? Nothing else. Nothing but plain, simple, honest Bess. She had apparently no other name. 'And don't want none neither!' was the

triplly strong negation in which she replied to the same query put to her by myself. 'What's the use o' having more'n one name? It don't make you any better, nor any richer. It only takes longer to say, and ain't noways a bit o' use.'

'But it would be rather awkward,' said I, 'if everybody had only one name. We could not get on in the world at all.'

'Well, p'raps not. But that ain't nothin' to do wi' me. There ain't no use as I can see on for such as me to have more'n one name. We ain't known more'n two or three mile away from home; an' nobody cares to know whether we has a name at all or not, for that matter, so long as we pays for all as we get, an' don't come no capers. Why, sir, what do it matter to you whether my name's Bess, or Sal, or Liz, so long as you gets to know what you wants to know from me, an' pays nothin' for it?'

This was a cut. The off-hand manner in which the speech was delivered, and the twinkle of the eye which accompanied the last clause of it, showed me that Bess was no fool, but a sharp, shrewd young woman, who had fathomed the curiosity that had led me to seek the otherwise unwelcome interior of her little hut. She had an eye to the 'siller' too, I thought; that last hint of hers telling me plainly that she did not expect to talk to me for nothing. I took up two or three of the nails she had forged, and telling her I would take them home with me as a sample of her skill, requested her to accept a trifling equivalent.

'There, go on! That was only my chaff. I don't mind your talking a bit; only there's so many fools comes gabbin' here, and expectin' me to waste my time foolin' wi' 'em. I didn't think as you was one on 'em; but I thought I'd try you. You see, you never knows what's in the pit till you sinks the shaft, and then you see as whether there's anything worth working, or only rubbish.'

'Well, Bess—I suppose I may call you Bess?'

'Why, of course, what else could you call me, I'd like to know?'

'Of course, I'd forgotten that. Well, what was that affair of Bill Thomson being saved from drowning, that I heard about this morning?'

'I thought as much! I knew you'd come a-fishin'. I never see such fools as some men is. Can't take care o' theirselves, and then kicks up a lot o' bother when anybody does a bit of a thing for 'em. Bill ought to ha' known better than to go an' fall into the canal, an' him drunk an' all. An' he ought to ha' known better than to go an' make a lot o' palaver an' talk about me pulling of him out. Why, anybody 'ud pull a man out o' the water as couldn't get out hisself. There ain't nothin' to make a fuss about in that. If somebody else had a-heard him holler instead o' me, they'd a-run an' hauled him out by the hair as I did.'

'But you nearly lost your own life—did you not?'

'I dunno! P'raps I did. I know I was under the water a bit. You see, women's petticoats hang about their legs, an' is a trouble to 'em. But there, I never see such a fool as that Bill is, anyway. Next time he falls in, he'll stop in for me—if there's anybody else about to pull him out.' The latter part of the speech was

added apologetically, as if she were ashamed of having been so mean as to say she would not help anybody in distress.

A good soul, Bess. Rough, uncultivated, unrefined, but still noble in a rugged way, and possessing the true qualities of heroism—courage and humility. Black Regis was the better for her presence. She was in some degree a restraining influence for good. Her companions and associates almost unconsciously feared her censure, and were often deterred from committing unworthy actions by the thought of what Bess would say. In difficulty they ran to her. She could advise, and better still, assist them in their needs; and many an act of true charity was performed by her.

None could quell a disturbance quicker than she. When the authority of the policeman would have been laughed at, she could command respect and order. Upon one occasion she caught a miner ill-using his wife, and, calling the men who stood listlessly by 'a lot o' faint-hearted fools,' took the case in hand herself, and gave the man a good beating. This raised her very high in the estimation of the Black Regisites. Nothing so popularises a person in the eyes of the vulgar and untutored as muscular superiority—supremacy of brute-force. From that time forth the appearance of Bess upon the scene of action was sufficient in most cases to stay the hands of the combatants.

The Bill Thomson affair was not so simple as Bess tried to make it appear. She had really saved the man's life at the risk of her own, and only succeeded in crawling to the edge of the canal after very great difficulty, holding the senseless Bill in her powerful arms. How she came to be near him when he fell in, she never quite clearly explained. 'She was just out for an airing, that was all, when she heard him holler,' she had said when questioned upon the subject. But I am inclined to think there were other and more sufficient reasons than this, as the sequel will perhaps show.

Bill declared he owed his life to Bess; that she was a brave lass, and he would do anything she liked for her if she would only ask him.

Practical Bess, having the cause of his mishap clearly in mind, returned simply: 'Then give up drinking for three months.'

'I will. If I don't, blow me!' emphatically answered Bill. Those who are not acquainted with the daily life of such men as Bill in such a place as Black Regis, will not be able, I fear, to appreciate the sacrifice he was making in promising to abstain from intoxicating liquors for three months. But I am inclined to think in this matter also that other considerations than respect and gratitude influenced Bill's decision. We shall see.

II.

Twelve months later I was in Black Regis again. I could discern no change in the place, save perhaps that the air seemed even more murky, and the fumes more nauseous than ever. There were the same straggling rows of huts, and I could hear the same ceaseless 'tap, tap! tap, tap!' of the hammers. At the *Rising Sun* I made inquiries respecting Bess, and was some-

what amused, but only partly surprised, to find that she was married—to Bill Thomson. Bill, true to his promise, had abstained from drink for the specified three months, and, at the expiration of that time, had paid a special visit to the hut of Bess to inform her of the fact. She was busy with her work as Bill strolled in, and to his humble 'Evenin', Bess!' characteristically replied: 'Now then, what are you after now? Don't come here foolin' round, for I ain't no time to talk.'

'Well, Bess,' apologetically responded Bill, 'I've kept my promise.'

'What promise?' queried Bess, striking the bar of iron at the same time, and causing a fan-shower of sparks to fly round the hut.

'Why, about the drink. It's three months to-day since I promised as I wouldn't have any more, an' I ain't neither.'

'Well, do you feel any worse for it?'

'I feel a good sight better, an' I've saved a bit o' coin too. I shouldn't ha' done it but for you, Bess; an' I come to see if you'll go shares in it. It's as much yours as mine, you see, for if it hadn't been for you, I shouldn't'—

'Here, stow it!' interrupted matter-of-fact Bess. 'What d' you take me for? Think I want your coin? I never see such a fool in all my life.'

'Won't you have it, then?'

'Have it? No! What 'ud I have it for? 'Tain't mine.'

'Well then, Bess, I tell you what I'll do,' said the desperate Bill; 'I'll make a bargain with you. I'll promise to be teetotal for another three months, if you'll promise to be my wife at the end of 'em.'

Bess was silent. This honest proposal was perhaps not quite unexpected; but honest Bess knew not how to meet it. She replied: 'I never see such fools as some men is;' but it is said she stealthily wiped a tear from her bright brown eyes, and gulped down a lump that rose in her throat.

'Come, Bess, what d' you say?' coaxingly inquired anxious Bill.

'What do I say? Why, that I never see such a fool. What on earth d' you want to throw yourself away on a good-for-nothing like me for? I ain't no mortal use only to myself; an' what's the use o' you tying a tin can like me to your tail to scamper through the world wi'? Of course, I'd sooner go wi' you nor anybody else—allays thought so—but then I never thought as you'd ask me.'

'Then it's a bargain?' asked Bill.

'Well, I might do worse. But mind you, not a word to anybody about it, or over you go. I ain't a-goin' to have folks a-talkin' about me.'

'Not a word, Bess. Bless you, old gal.'

The three months passed away, and, all preparations having been secretly made, Bess and Bill were quietly married, only two particular friends being informed of the affair before it came off, and they only on the very morning of the ceremony.

There was great excitement at Black Regis when the marriage was made public, and all determined on giving some testimony of their goodwill. A private subscription list was opened at once, and as Bess had kept her love-affair such

a secret from them, they thought it only fair that they should keep their intentions secret from her. There was something rudely noble about this arrangement. When the money had been collected, the difficulty of providing a suitable present arose. What could they give her? Some one suggested giving her the money, and allowing her to spend it as she thought proper. But this was indignantly negatived. They knew Bess too well to think she would accept a gift of money from them. It is a strange but wholesome characteristic of the English people, that the smallest present of manufactured goods is thankfully accepted and gratefully acknowledged, while a gift of money is rejected as an insult. After much consultation, it was decided to present her with a tea-service and—a cradle! The latter article is generally considered by such people—and not always them alone—as an indispensable article of domestic furniture, and therefore a suitable thing to present to a person newly married.

The presentation was made at night, and for once Bess was speechless. Good, simple soul, the possibility of such an expression of regard from her rough neighbours had never occurred to her. She could only mutter demurely her customary, 'I never see such fools as some folks is,' and then hide her face in her hands and burst into tears. So kind herself, the kindness of others usually so rough and emotionless, was too much for her.

Bill thanked the friends for their gift, and pointing to the weeping Bess, said: 'You see, boys, she ain't used to this sort o' thing, an' it's kind o' knocked her over. I know you means well, an' I shan't forget it. But if it's all the same, perhaps you wouldn't mind leaving Bess an' me alone a bit till she kind o' gets over it. You see, I don't want you to think as I don't think enough of what you've done; only, you see, she ain't used to this sort o' thing, an' it's kind o' knocked her over.'

The audience kindly left the newly married pair together.

Six months had passed away since the marriage, when I once more stood in the hut of Bess—now Mrs Thomson. As I entered, she looked up with a smile of recognition, and a hearty: 'Hullo! here again, sir? Why, what on earth do you see here, to make you come back again?'

'Not much, Mrs Thomson, truly,' I replied, laying great stress upon her new name. She blushed crimson as she laughingly replied: 'Ah! I thought as they'd tell you as soon as you set foot in the place. I never see such born idiots in all my days.'

'Well, I must congratulate you on your marriage; and I hope you will be happy together.'

'Well, you see, Bill was such a fool, an' couldn't take care of hisself. You know I had to fish him out o' the water once. But he ain't tasted drink since, an' he promised as he wouldn't if I'd marry him. An' you see it was a pity to see a fellow like Bill goin' an' makin' such a fool of hisself; so I thought I might as well take care on him, as leave him to somebody worse than myself. I ain't a bad sort, if I am a bit rough; but men is no good if they ain't got some'dy to look after 'em.'

Then, as if suddenly remembering something, she threw down her hammer, and bidding me 'Come here a minute,' hurried out of the hut to a little one-story house that stood close by. Opening the unlocked door, she bade me enter, and then with the air of a duchess, threw open a little cupboard door with one hand, and pointed to a prettily furnished cradle with the other.

'Oh! Your wedding presents?' I exclaimed.

'Yes!' she replied with some pride, and with the shadow of a tear glistening in her bright eye. 'They ain't much, sir; leastways, they don't seem much to you, I s'pose; but you know we're poor folks about here, an' has to work hard for all as we get, an' it was all they could afford; an' it *was* good of 'em, wasn't it?'

At the recollection of the presentation episode, the truant tears overflowed the reservoir of feeling, and trickled down the dusky cheek. I am not ashamed to confess that the water stood in my own eyes as I huskily replied that 'it *was* good of them.'

I think I never realised so fully before the true worth of a genuine, though humble gift, and the sunshine of gratitude and joy it will shed upon the heart and life of an honest recipient. There was more robust joy in that heart of Bess's over that cradle and those cups and saucers, than is felt by the majority of richly dowered brides, any one of whose presents would be a modest competence to such as she.

'Ah! sir, we ain't all as black as you'd think from our faces. We're rough outside, an' not over-nice; but we know how to feel, an' to help each other.' Casting one hasty glance at the household treasures, she once more repaired to the little hut, and taking up her hammer, commenced her labours again with renewed vigour.

'Well, Mrs Thomson'—

'Now then, none o' that! Call me Bess.'

'Well then, Bess, I must be making my way back.'

'Won't you stay an'— You'll excuse me, sir, for asking you—but won't you stay an' have a bite with us? Bill 'ull be home directly. Ah! there he is—an' he'll be glad to see you. We can't offer you much; but what we have, you're welcome to.'

I scarcely knew what to say to this proposal. I really wanted to leave Black Regis by the first train; but I was afraid that I should offend Bess if I refused to accept her invitation. I therefore determined to stay.

I found Bill a rough-and-ready honest fellow, like the general class of people inhabiting such districts. But he had not the natural sagacity and shrewdness of Bess, who was literally his 'better-half.' He knew this too, and looked up to her as a superior being. During her temporary absence, he said proudly: 'She's a good un, is Bess, sir; an' she's more in her head than a good many as thinks they're clever. Saved my life too, sir. Ah! she's a good un, is Bess!'

And I quite agreed with Bill.

III.

Other six months elapsed before I once more set foot in Black Regis. My first impulse was

to walk straight to the hut of Bess; but remembering that, on the occasion of my former visit, I had received much valuable information respecting her from the landlord of the *Rising Sun*, I determined to pay a passing visit to ascertain if anything unusual had occurred during my absence. In reply to my query, 'How is Bess?' the face of the landlord became at once sorrowful and distressed, and I then learned for the first time that poor Bess was dead.

In a disjointed fashion, I managed to glean the following facts from my informant. Some months after my last visit, a great event occurred in the Thomson household—a son and heir was born to Bill. Of course, there was great rejoicing in Black Regis. Everybody in the place took an active interest in the affair, and discussed the future prospects of the little stranger over pipes and beer, and at house corners, as keenly as though some event of national importance had transpired. Bill was peculiarly excited; Bess was calmly happy. Only one feeble complaint she uttered when informed that the child was a boy: 'I'd rather it had been a gal: men is such fools!'

After this she settled down to the inevitable with good grace, showing great affection for the little life thrown upon her care. A few days after the occurrence, Bill, who had been staying at home to wait on his spouse, went to his work again as usual, leaving Bess with her child dependent upon the friendly assistance of kindly neighbours. As the evening came, Bess grew perceptibly anxious. Could she have spoken her fears, she would have said she was wondering if Bill would be tempted by his mates to take drink on the joyful occasion of the birth of his child. She knew he was not hard to persuade when surrounded by friends, and besides it was a recognised custom to drink the health of a child when born. Bess did not say anything to the neighbour who came in to attend to her, but she was terribly anxious nevertheless. The time for his appearance passed, and the shades of the autumn evening fell. Still he did not come. Should she ask some one to go and inquire for him? No! she must not let them think she doubted him. He would come all right yet. Something had happened at the works to detain him. The suspense grew terrible. She could bear it no longer. Excitement gave her strength. Rising from her bed, and leaving the infant asleep there, she with some difficulty pulled on her clothes. She was tottering feebly towards the door, when her straining ear caught the sound of a muffled cry. She had heard that cry once before. It caused her heart to leap and the blood to course like fire through her veins. Strung up with the energy of a strong soul roused by the cry of duty and danger, she sprang to the door and rushed wildly out into the chill darkness of the deepening night. Straight to the dangerous pool of the canal she staggered with a peculiar instinct bred of fear, and the remembrance of a former adventure there. As she reached the edge of the bank, she saw a clenched hand disappearing beneath the surface of the mud-stirred water, and heedless of all but the one fact of her husband drowning there, she plunged wildly in and clutched the horny fingers with a desperate grasp, and with almost superhuman strength succeeded in dragging

the unconscious Bill to the sloping edge of the canal. Having accomplished this, her poor human nature could do no more. With a feeble cry for help, she sank down in the shallow water exhausted and insensible. Hearing her cry, two or three neighbours rushed to the spot, and quickly carried the husband and wife to their humble abode. With great promptitude and care they attended to poor Bess, and sent for the doctor to attend to Bill.

But for Bill it was too late. The strong man had breathed his last. They dared not tell Bess, for fear the shock should be too much for her. Bill's body was removed to a neighbour's house, while the doctor set about measures to prevent serious consequences to the devoted wife. But alas! no medicine could avail. The shock had been too severe. In a few hours she was delirious and in a raging fever. The burden of her ravings was Bill. 'I never see such a fool as Bill. He ain't no more sense than a child.—Ha! my little pet.—Ah! I wish he'd been a gal, men is such fools. You promised me you'd swear off the drink, an' here you go foolin' around, an' fallin' into the canal.' Then suddenly changing, and speaking to the doctor. 'Sh-h-h! Don't let Bill know as I'm dying. He's such a fool, an' 'ull carry on so. Tell him I shall get better. But when I do go, make him promise to take care o' the kid.—You will, won't you? It ain't no fault o' his, poor little soul. I wish he'd a-been a gal, though. But then he ain't; an' maybe he won't be such a fool as Bill. Make him swear off the drink when he grows up; it makes men such fools. Ah! you'll put him in the little cradle? I thought I should ha' rocked it myself; but Bill can do it instead. It was good of 'em, wasn't it though, to give us that? God bless 'em!'

And thus poor Bess rambled on. The struggle was fierce and short with her. In forty-eight hours after the time she was carried all wet and senseless to bed, her heart was stilled for ever. Poor Bess!

They buried Bill and her together in the little churchyard, the greater part of Black Regis following the remains in procession, and shedding tears over the grave. Something had gone out of their lives. They felt its loss, and knew that it would never be supplied.

There was only one thing left for them to do after they had laid their idol in the ground, and that was to take care of the child. A meeting was held to talk over the best method of performing their duty in this respect. After much discussion, a simple and efficacious plan was decided upon and agreed to. They would support the youngster by weekly offerings. A box would be kept at the *Rising Sun* to receive the free-will offerings of as many as cared to contribute towards the maintenance of the child. It should be called 'Bess's Box.' This sacred duty performed, the meeting dispersed, but only to reassemble the next night to discuss another matter concerning the departed Bess. It would not do to allow her grave to have no protection from the sacrilege of those who in a short time would see only a green mound. They must protect the sacred dust with a tombstone. The tombstone was erected, and the grave surrounded with hanging chains attached to four small stone pillars.

The landlord of the *Rising Sun* accompanied

me to the churchyard, but not before showing me 'Bess's Box,' and thanking me for my tribute. We stood beside the little mound with uncovered heads, and looked down upon the green sod that covered the heroic woman who had had

The homage of a thousand hearts,
The strong, deep love of one.

I thought of that cheery face, those sparkling eyes, the genial smile, and the welcome voice silent for ever.

On the neat little stone at the head of the grave were the words, characteristic of the rough people who had inscribed them : 'Here lie BILL THOMSON, and the Queen of Black Regis, BESS.'

THE MONTH.

SCIENCE AND ARTS.

EIGHTEEN months ago, a joint Committee was formed of members of the Kyrle Society and the National Health Society, to consider the possibility of ridding the Metropolis of its canopy of smoke, and of lessening the unhealthy character of London fogs. After many public meetings had been held, it was determined that a Smoke Abatement Exhibition should be organised ; and the opening of this Exhibition at South Kensington has been not the least interesting event of the latter days of the past year. The exhibits are divided into six Sections. Section One includes Fire-grates, Kitcheners, and Stoves of all kinds. The Second Section deals with Gas-heating Apparatus ; the Third with Hot Air, Hot Water, and Steam-warming Contrivances. The Fourth includes Gas-engines, and Furnaces and Boilers for general industrial purposes. Section Five comprises Fuel of all kinds ; and Section Six is devoted to Chimney-flues, Ventilating Apparatus, and foreign exhibits.

We are glad to see that explanatory Lectures are to form a prominent feature of the Smoke Abatement Exhibition. It is too much the fashion in this country to leave visitors to our Museums and Exhibitions to find out for themselves, or to try to do so, such information as could be easily given to them by explanatory labels or short lectures. Thus, it is possible for such a visitor to stand before an archaeological treasure of the greatest interest without having the least idea of its value or history. From the opening Lectures already given at South Kensington, we have promise that no one who wishes to gain information as to fog, smoke, and the means for preventing them need remain in ignorance. One lecture, on 'Economy of Fuel for Domestic Purposes,' by Mr Fletcher of Warrington, is of special interest. He dwells in particular on the advantages of using builders' fireclay for domestic stoves, in lieu of metal ; and of the possibility of so arranging fireplaces and flues that several rooms could be raised in temperature by the fire in one.

The British Goat Society, of which the Duke of Wellington is President, and which now numbers two hundred and forty-two members, has just held its annual meeting. This Society

has started a system by which cottagers are supplied with goats at a reasonable cost ; and the number of applications for animals far exceeds the number it is at present possible to obtain. The Society proposes the establishment of a Goat Supply Company to meet this want ; and it is also proposed to take measures for the removal of the restrictions at present in force as to the importation of goats from abroad. In the course of the proceedings, the President alluded to the extraordinary prejudices which existed against goat's milk ; and also remarked that it might be taken for granted that in cases of disease, goat's milk was far more valuable than that yielded by the cow.

Mr George Wilson of Weybridge gives in a letter to the *Times* a valuable hint to farmers. Requiring some hurdles as a sun-shade for plants, he used ordinary hurdles, but found that they soon rotted away through contact with the moist earth. He then hit upon the expedient of coating them with gas-tar ; but the brush would not reach the interstices, and the plan failed. By arrangement with the local gas-works, he then sent the hurdles to be *dipped* in a tank of tar ; and the neighbouring farmers are so impressed by the notion, that they too are having their hurdles treated in the same manner. The application of the tar has the effect of a brilliant black weatherproof varnish.

The horses of Ohio and Western Pennsylvania have recently been attacked by a new disease, which resembles in all its symptoms influenza in the human subject. It lasts for about ten days, when it disappears under good nursing and rest, without leaving any secondary complications. The disease spreads very slowly, and does not seem to be contagious ; but it has caused much inconvenience in the districts named.

Those persons who denounce vaccination in the human subject may have their doubts removed by studying the paper on the Protective Effect of Vaccination, read by Dr Henry Tomkins the other day at Owen's College, Manchester. He showed that the most striking evidence of the efficacy of vaccination came from the smallpox hospitals themselves. During forty years' experience at Highgate, no nurse or servant who had been re-vaccinated was ever attacked. The students who attended the Hospital for Clinical Instruction were favoured with a like immunity from the disease. This last circumstance gave Dr Tomkins the opportunity of combating an argument often put forward by the opponents of vaccination—namely, that nurses and others attached to smallpox hospitals become inured to the disease from constant exposure to infection ; therefore they are safe. The students referred to only attended the Hospital for a few hours once a week, and yet not one of them was attacked. The Doctor, in conclusion, defied anti-vaccinators to produce any half-dozen unprotected persons who could go through the same ordeal unharmed. Might not some of the anti-vaccinators themselves be induced to undergo the experiment ?

The Minister of Commerce in France has lately, in view of some projected canal works, consulted the Academy as to the best precautions to be taken to insure the health of the navvies employed. As a result, M. Colin has drawn up a

Report for the guidance of the authorities. He notices in this Report that marshy exhalations are not the sole cause of the fever which attacks the open-air worker, but that virgin soil newly turned gives forth germs from which arise intermittent fevers. He recommends special diet as being more valuable than drugs for guarding against these diseases; and notes that workmen should, if possible, not remain on the ground at night. He also points out the advantage of keeping large fires burning, so as to create air-currents, and of stimulating vegetation on newly turned ground.

The largest photograph ever produced is now to be seen in the Art Gallery of the American Institute in New York. It represents a panoramic view of the Centennial Exhibition of Philadelphia, and measures ten feet in length by eighteen inches in width. It has been printed from seven different negatives; but the places where these negatives join have been so carefully treated that their detection is impossible. We may notice in this connection that gas-fitters are making use of photography in exhibiting to their customers full-sized pictures of the gas-flames given by various burners. For a long time past, such photographs have been used in lighthouses where oil is burnt, so that the keeper can have a standard to look to as he trims the lamp.

Although there are only three British lighthouses where electricity is at present in use, we may feel sure that the present excitement concerning that form of illumination will eventually cause many of the old oil-lamps to be superseded. The latest important advance in this interesting question comes, strange to say, from the Antipodes. Mr Henry Sutton of Ballarat, Australia, has invented a new form of storage-battery, which is said to give far better results than the notable 'box of electricity' due to M. Faure. This invention formed the subject of a paper lately read before our Royal Society. It is worthy of mention that Mr Sutton, with commendable generosity, has not protected his invention by a patent, but offers it freely to the community at large. This is not the only rival to M. Faure's storage-battery; for besides many of French origin, both Mr Brush and the indefatigable Edison have produced a battery of this description.

It is curious to notice how the former opponents of the last-named inventor are now obliged to acknowledge that the type of electric lamp to which he first called attention is, after all, the most likely to solve the problem of domestic illumination. Two years ago, when the so-called 'cardboard lamp' of Edison depreciated the gas shares here to an unwonted extent, there were many who declared that the invention was the creation of speculators for the purpose of influencing the stock market. The cardboard lamp now furnishes a type upon which all the so-called 'incandescent systems' of lighting are modelled. The fact that this system has, by the aid of storage-batteries, been successfully applied to the lighting of a train on the Brighton Railway, would seem to indicate that the time cannot be far distant when it will be used for domestic purposes.

The recent fearful accident in Vienna, which resulted in the deaths by fire and suffocation of some hundreds of human beings, has had the

good result of calling the attention of the authorities to the very inadequate provision against fire in most of our public buildings. Unfortunately, theatres and other places of amusement are built of such inflammable materials, that a spark is almost sufficient to set them in a blaze. We hear of a great many inventions for rendering wood and other substances fireproof, but these inventions seem never to come into actual use by builders. We trust that a trial will be given of the new unflammable Asbestos Paint, which, judging from certain experiments lately made at the offices of the Asbestos Company, 161 Queen Victoria Street, London, would seem to be a valuable aid in the prevention of fires. In the experiments referred to, wood, paper, calico, gauze, &c. were coated with the paint and afterwards submitted to the action of flame, which they one and all resisted. Cubes of wood coated with the paint were placed on a coke-fire, with the result that the interior was reduced to charcoal, while the exterior formed a thin unburnt shell. The new paint will lend itself to the employment of any tint, and will resist the action of acids.

It has long been known that the ingenious Chinese were enjoying the use of many conveniences of life before they came to be invented by western nations. Of these we may mention the magnetic needle, the printing press, and gunpowder. It would seem, from a paper read by Mr J. Dreyer in the December number of the Royal Irish Academy, that the Chinese were also far advanced in the science of astronomy, and actually anticipated some of the ideas of Tycho Brahe three hundred years before that great astronomer was born. In the seventeenth century, the Jesuit missionaries made their way to Peking, and soon showed the Emperor and his wise men that in spite of their wisdom, they did not know quite all that had been discovered by western scientists. The Emperor was so impressed with what he heard, that he commissioned the Jesuits to furnish him with new instruments for his observatory; and the old ones which were thus superseded were put away and forgotten. It is to these old instruments that Mr Dreyer in his paper calls attention. Photographs have lately been obtained of them. They show that these old contrivances, constructed by a Chinese astronomer, Ko Show-King, bear a striking resemblance to the instruments with which the great Danish astronomer observed the comet of 1585.

Many of our London readers, remembering the fearful explosion on board a gunpowder barge some ten years since, whilst passing along the canal which runs through the Regent's Park, may be aware that it has ever remained a moot-point whether the catastrophe in question was not in reality occasioned by the escape of petroleum vapour—as from a single sample, probably concealed—which, creeping along the deck, ultimately met with a source of heat sufficient at one and the same time to explode both it and the entire cargo of gunpowder. Certain it is that many dreadful accidents have been clearly traced to the neglect of adequate foresight both in regard to the storage and transport of petroleum; the peculiar danger arising from the fact, that this body, even at low temperatures, emits a heavy and highly explosive vapour, which is ever ready to make its way in a most insidious manner to

any light, even if far distant. In 'Dittmar's Patent,' a Russian invention, we are promised reasonable immunity for the future from the dangers already spoken of. The patentee in part solidifies the petroleum, reducing it to a body like wax; and it is distinctly asserted that the dangers and difficulties of transport will in this way be overcome. Doubtless, a good deal of reliance may be placed in the statement, since the petroleum in this its altered physical state would not by any means yield the explosive vapour with nearly the same readiness as when its usual conditions prevailed.

Off the coasts of England, Scotland, and Ireland, eight hundred and twenty-six ships were actually lost, British-owned vessels forming three-parts of this total. As in former years, a great many losses were due to collision between vessels, one hundred ships being sunk in this manner. Produce of all kinds, being the various cargoes destroyed or swallowed up by the sea, amounted to nearly one million tons; and although it may seem incredible, we are told that no less than one hundred and thirty-two thousand four hundred and fifty-nine tons of coals were lost. This article of commerce being mostly obtained from Great Britain, and carried in British 'bottoms,' is an important item in the year's losses; and the utter destruction of such a necessary article, bears a sensible relation to the supply and demand, and consequently was sufficient to affect the market value of the mineral. During the past five years, no fewer than five hundred and sixty-four thousand four hundred and fifty-nine tons of coals have been lost at sea by the destruction of the vessels in which they were being carried. And yet this is only one item of the great general loss occasioned by such disasters.

It is not too much to say that most of the collisions which occur between ships at sea might be avoided if each ship were aware of the course intended to be steered by the other. A rough-and-ready mode of doing this has long been in use. It consists of sounding the steam-whistle once, twice, or thrice, for the three signals, 'Starboard,' 'Port,' and 'Astern.' This system has the disadvantage that in foggy weather, when a signal of this description is most needed, it can easily be confounded with the sound of fog-horns and other whistles which in a crowded roadstead are sounding at the same time by dozens. To meet this difficulty, Messrs Smith Brothers & Co., of Hyson Green Brass Works, Nottingham, have invented a kind of combination whistle which will give three distinct and different signals—a high pitch note for 'Starboard,' a low note for 'Port,' and the two together for 'Astern.' It would be well if these musical whistles were applied to locomotive engines as well as steam-vessels, when the unearthly shrieks which frighten horses and disturb everybody in our crowded cities, might be dispensed with.

An instrument, called the Holophote Course Indicator, has been invented by Mr J. H. A. Macdonald, Q.C., Edinburgh, having for its object the prevention of collisions at sea. It is specially intended to diminish risk of collision at night, by enabling vessels approaching or crossing, to inform each other what helm they are on, and instantly to indicate any change of helm; and by

enabling the officer in command to sweep with a powerful light the water over which the ship's course will take it, so as to know whether it is clear. The Holophote Course Indicator consists of an electric light with a reflector, which is fixed on a movable arm or handle. When the helm is amidships, the reflector projects the light straight ahead, the arm being held fast by two pegs or detents, which are under the control of the helm by an electric connection. When the helm is ported, an electric circuit is formed, by which one of the detents holding the arm is withdrawn, leaving the reflector free to move, so that the light sweeps from ahead to starboard. When the light has gone round a certain number of points to starboard, a screen rises up and shuts it out from view. The arm is then brought back to amidships, when the screen falls down, and the light being again exposed, the manœuvre of sweeping round to starboard, screening out, and bringing back to amidships, can be repeated as long as the helm remains ported. If the helm be put to starboard, the other detent is removed, and the exactly converse manœuvre can be performed, the light sweeping round from ahead to port. Thus, the strong beam of the electric light is waved, indicating every alteration of the course of the vessel whenever it is made, just as a man driving a carriage can give an indication of his course to another driver by a wave of the hand. It is well known that a most frequent cause of collision is the uncertainty on board one vessel of what is being done by another. One vessel may alter her course, and swing round many points, while the distance is rapidly diminishing between her and another, before those on board the other have any warning of the change. The Holophote Course Indicator enables the change of helm to be signalled instantaneously. A model of the instrument has been sent to the Exhibition of Electrical Apparatus at the Crystal Palace, Sydenham.

EXPERIMENTS WITH SNAKE-POISON.

It is evident that the proposed injection of permanganate of potash in cases of snake-bite continues to find favour with many experimenters; for, following up the work first taken in hand by Dr De Lacerda, we now gather from the *Indian Medical Gazette* that satisfactory results ensued upon the recent prosecution of experiments on the part of Dr Vincent Richards. We are told that this gentleman, having mixed permanganate of potash with what he considered a fully fatal dose of cobra virus, hypodermically injected the mixture direct into a vein, without causing the death of the animal experimented upon. We must, however, receive with caution any statement to the effect that a never-failing antidote has been discovered, though we cannot but express the fervent hope that some real good may accrue from the experiments which are being conducted by so many independent investigators; and if success be ultimately proclaimed in the present search for a specific in the matter of snake-bite, it might not prove a question of any great length of time ere medical science would with equal felicity enter upon a course of experimental inquiry which might in the end light upon a successful

mode of treatment to be applied to a still more terrible malady—namely, hydrophobia. In many of the pathological changes ultimately wrought, this dreadful disease strikingly approximates to the more sudden fell stroke of snake-bite. One remarkable difference may, however, be noted: it is quite possible that all the premonitory symptoms of hydrophobia may distinctly manifest themselves, and yet shortly pass off, leaving the patient but little worse than before; but in the case of cobra or rattlesnake virus, it is extremely rare for recovery to take place when the various symptoms have once been fairly ushered in. A person fairly bitten by a cobra will be dead within twenty-four hours; but if bitten by a rabid dog—if by a rabid cat, so much the worse!—hydrophobia may supervene after a period ranging commonly between four and ten weeks from the inception of the virus.

We are indebted to *The Scotsman* for the following remarks upon this interesting subject: 'There are several substances now known to have the effect, when mixed with snake-venom, of diminishing, if not altogether destroying, its virulence. Mr Pedler, in a recent communication to the Royal Society, drew attention to several of these, and especially to the chloride of platinum, which forms, with cobra poison, a precipitate highly insoluble in water, and with little or no poisonous action. However effective such substances may be in neutralising poison outside the body, they fail to overtake and neutralise the subtle venom once it has got the start in the blood. Were the chloride of platinum injected first, it would probably disarm the poison entering behind it.

'In a recent lecture on Snakes, Professor Huxley drew attention to the fact, that the poison-bag of the venomous snake is simply a modification of the salivary gland of the harmless species. The fact that the salivary gland was the poison laboratory of the venomous snakes, appeared to him to point out the direction in which lay the solution of the difficult problem of the cause of snake-poisoning, and of a probable antidote against it.

'Much light has been thrown on this subject by the recent researches of Selmi, Lacerda, and Gautier. Professor Selmi, several years ago, discovered in the putrefying bodies of animals certain poisonous substances which he called *ptomaines*, and which he found to produce, when introduced into the living body, symptoms very similar to those of snake-poisoning. Dr Gautier's investigations on the *ptomaines* led to the important discovery that those poisons are being constantly generated in the normal excretions of the living body, and that they are present in minute quantities in most of our tissues, being, indeed, one of the results of the waste continually going on in these. The more rapid the waste of tissue, the greater will be the quantity of those poisons formed; and thus it might be expected that the carcase of an animal killed immediately after prolonged and severe exertion, would be unwholesome; and this is a fact that has been frequently observed. A writer in the *Journal of Science* for December last gives the instance of a roebuck which had been caught in a snare, and had died after a

prolonged struggle. "All the persons who partook of its flesh," he says, "became seriously ill;" and two of them, so far as he recollects, died in consequence. They were poisoned, it may be presumed, by the excess of *ptomaines* generated in the animal's tissues. Dr Gautier then examined the venom of the lance-headed snake of Martinique, and of the cobra, in each of which he found an alkaloid possessing all the properties of the *ptomaines*. After tracing those poisons which have thus been shown to be normal products of organic existence in the venom of snakes, he next sought for them in human saliva—the product of those glands which, in the serpent, yield poison. From three-quarters of an ounce of saliva he obtained by evaporation a dry residue of four grains; and on redissolving this in tepid water, and injecting a quantity of the liquid beneath the skin of birds, he found that they generally died with symptoms very similar to those of snake-poisoning. Something very like "the poison of asps" may thus be said to have been found under our tongues; and Dr Gautier's investigation throws light on the fact, that the bite of an enraged man or other animal is dangerous, and has not infrequently proved fatal. If the venom of serpents were something absolutely new and unknown among other animals, it would be difficult to understand how, on the theory of evolution, it had been produced. The whole thing, however, becomes plain when it is found that in the venom of snakes we have, in a modified and concentrated form, what already existed, and is still to be found, in the saliva of non-venomous animals. It is not a creation of anything new, but a modification of something old.'

FADING INTO CHANGE.

A GRADUAL failing in the Summer light;
Bright sunsets dying in the crimson West;
Brown leaves that fall in the quiet Autumn night;
A swift decay in flowers we love the best;
A flush of Life, slow-deepening into Rest;
A wintry wind beneath a threatening sky;
Snow-flakes that fall, and gather, and then die!
Spring, with its changing winds and leafy vest;
Full Summer, with its wealth of flowers that lie
Sparkling like gems upon a monarch's crest;
Then round to Autumn! So our brief years fly,
So run our days! Sometimes in sunshine drest,
And oft in cloud! So fleeteth fitfully
Each little life into the Great Eternity! J. H.

The Conductors of CHAMBERS'S JOURNAL beg to direct the attention of CONTRIBUTORS to the following notice:

- 1st. All communications should be addressed to the Editor, 339 High Street, Edinburgh.
- 2d. To insure return in case of ineligibility, postage-stamps should accompany every manuscript.
- 3d. MANUSCRIPTS should bear the author's full Christian name, surname, and address, legibly written; and should be written on white (not blue) paper, and on one side of the leaf only.
- 4th. Poetical offerings should invariably be accompanied by a stamped and directed envelope.

Unless Contributors comply with the above rules, the Editor cannot undertake to return ineligible papers.

Printed and Published by W. & R. CHAMBERS, 47 Paternoster Row, LONDON, and 339 High Street, EDINBURGH.

CHAMBERS'S JOURNAL

OF
POPULAR

LITERATURE, SCIENCE, AND ART.

Fourth Series

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 945.—VOL. XIX. SATURDAY, FEBRUARY 4, 1882.

PRICE 1½d.

A WORD IN SEASON.

THIS day fifty years ago, we issued the first number of *Chambers's Journal*; and here we are still in the land of the living, ready as far as possible to do our duty in the way of attempting to instruct and amuse the public. The office we voluntarily assumed as a Journalist, is sometimes perhaps not very gracious. It may occasionally grate on the feelings of those addressed; but this is a matter which one with conscientious convictions must not regard. We would not needlessly try to disturb popular notions that, however absurd, are of no great importance. Many things in themselves ridiculous, are not worth writing about, and ought properly to be left to the remedial influences of time. So much cannot be said of follies that trench on common-sense, and that, however fashionable, are mischievous in their permanent consequences. Without further discussion, we go to a case in point, which seems to have been strangely neglected by the daily organs of public opinion.

On a late occasion, as universally known, the tomb of a noble family was theftuously rifled of its contents. The embalmed body of the late Earl of Crawford and Balcarres was stolen during the night from the elegantly adorned coffin in which it reposed in a vault connected with the family mansion of Dunecht. It does not appear that any of the costly trappings of the coffin were removed. The theft was simply that of a dead body, of no commercial value; and why it should have been odiously abstracted, remains a mystery, unless it was for the purpose of being restored for an extorted money consideration. There stands the broad fact, at which the public have been very much scandalised. Sympathising with the noble family whose feelings have been so grossly outraged, and sincerely anxious that the remains of the deceased Earl should be restored to his family, we seize upon the occasion of pointing out as lightly as may be the error that had been heedlessly committed in a method of entombment that was susceptible of such a vile species of

larceny. In plain terms, why was the body of the deceased Earl not buried in the earth, in the manner pointed out by tradition, and we would almost say by religious obligation? If there be one natural law more imperative than another, it is that of consigning the remains of mortality, without unnecessary delay, to the dust which is the common destiny of mankind.

The simple and affecting words in the funeral service, 'Earth to earth, ashes to ashes, dust to dust,' are not to be treated with indifference. They enjoin that which is not only decent and proper, but what is agreeable to enlightened physical science. We would go even a little further. The denial of burial in this manner is a violation of natural rights. Every human being is entitled to claim that, after death, his body shall be allowed to dissolve into its original elements. So far from suffering any degradation in being buried in the earth, it is an honour, and ought to be viewed as a pious realisation of a primary injunction and heritage. Nowhere are we with any authority taught to treat the body of a deceased relative as a thing to be stuffed with chemicals, preserved as a curiosity in an ornamented box, and laid on a stone shelf to fester in state for centuries. Vary the process of attempted preservation as we like, the thing is wrong, and though satisfying a whim, no good can come of it.

In order to be convinced that all attempts at preservation of the mortal frame after death are to the last degree futile, we have only to reflect on the conditions which necessarily attend on dissolution. The body is largely resolvable into gases that naturally seek dispersal in the air, the earth, or anywhere. They must get away, or a fearful state of pollution, dangerous to the health of the living, is the consequence. At all events, something very unsightly will ensue. It is therefore an act of kindness to all concerned to do nothing to obstruct the ordinary and long-established method of sepulture—that is, burial in the earth. With a view to insure speedy dissolution into the original elements, a medical scientist has

suggested burial in wicker coffins. Perhaps this would be to contend unnecessarily with the current of popular feeling. It would be enough if interment were to imply the use of simple wooden coffins, as it used to do within our recollection. Deal boards, though ornamented according to fancy, soon perish, or at least do not seriously prevent the natural process of decay. In walking through a country churchyard, it can be seen that within a few years most of the graves have sunk to a level with the surface, which we may take to indicate that already 'the poor inhabitant below' has less or more mingled with the adjoining dust.

Of course, these explanations will have very little weight with those who habitually regulate their proceedings by what is thought to be fine or fashionable. On this large class of persons we shall accordingly press other considerations, that can scarcely fail to touch their feelings. We wish them to have some regard for the dead. It will not do to place the remains of a dear relative, embalmed or unembalmed, in a durable leaden coffin, and think that a grand thing has been effected. There must be a consideration of the consequences to the deceased, who, if they could speak, would declare that they had been subjected to a grievous outrage. To make this plain, we shall try to relate what has fallen under our notice.

Two or three years ago, it was our fate to inspect officially certain vaults in an ancient church of much historical interest that was undergoing repairs. The object was to ascertain beyond a doubt who had been buried in three leaden coffins. They were doubtless great personages, but there was nothing to tell us who they were, and it was expected that we might find inscriptions of some kind, to throw light on the subject. The coffins, though they had been originally as strong as lead could make them, had been entombed from a century to a century and a half. Their condition was lamentable. The lead was here and there broken into large fissures, through the forcible explosion of confined gases, and it was not difficult to distinguish the contents. All had been embalmed according to the best rules of art. But the result showed how miserable had been the effort to secure an imitation of immortality. The appearance of the bodies generally was that of ragged skeletons dipped in tar, black, horrible, and repulsive; the whole a painful satire on the so-called embalming system. One of the bodies was that of a nobleman of high rank. To think of a man in his social position, who had figured in gorgeous pageants, being condemned after death, by the over-kind solicitude of relatives, to a fate too revolting for description. Had he been a parish pauper, he would have been buried in the earth, and his body would long since have mouldered into dust, while the exuberant gases would have been harmlessly wafted away in the gentle breezes that serve to give life to the vegetable

world. Being a nobleman, he had been, by way of distinction, laid in a leaden coffin, and placed in a gloomy vault, liable to become a piteous spectacle to future generations.

One of these leaden coffins more rent in pieces than the others, contained a form which was recognised by a medical gentleman present to be the remains of a young female, probably a young lady of quality in her day, admired for her beauty and the splendour of her long yellow tresses. What a fate had been hers. On touching the head, a part of the scalp came off, along with a stream of hair that doubtless had at one time been the pride of the wearer. Melancholy sight! And why had the body of this gentle creature with her flowing tresses been consigned to a condition that brought it under the gaze of a body of official investigators, more than a century after dissolution, instead of being decorously laid in the dust, there to sink into the undisturbed rest that had been beneficently destined by its Creator? Let those who maintain the practice of entombing in leaden coffins and vaults, answer the question.

Unwillingly, we have touched on this painful topic, in order, if possible, that the public may be led to give some consideration to a method of sepulture, which we, and many others, hold to be altogether erroneous, if not absolutely mischievous. As concerns the general weal, it may matter little, except as affording a bad example, that certain noble families should adhere to the practice of entombing in vaults in the manner we have feebly pictured. A very different thing must be said when we refer to the interment of distinguished individuals in Westminster Abbey. The body of the greatest man who ever lived is, after all, only a piece of decaying mortality, and we can see no reason why it is to be treated differently from the rest of the human race. Let honours by all means be showered on his memory; let every possible respect be paid in accompanying his remains to the tomb; but let that tomb be in the open air, under the canopy of heaven, where flowers may blossom on his grave. On no account, should it be laid in a leaden or other species of durable coffin, and placed in a confined situation under a roof.

With a firmly entertained opinion on this point, we respectfully object to the growing practice of entombment of individuals honoured by the nation, in Westminster Abbey. If such honours are to be conferred, let there be an open-air spot selected for the purpose, a Valhalla worthy of a great and wealthy nation. It is to be regretted that the grand old fane, on which all look with admiration, is begun to be spoken of as likely soon to be in a condition dangerous to the public health. Already it has been hinted that quicklime should be employed to quell the pestilential exhalations that, in spite of all precautions, escape from the graves underneath the pavement. Expedients of this kind

will but feebly stem the evil. Nature cannot long be outraged with impunity. The pent-up gases will continue to force their way to the surface, and communicate a stuffiness to the atmosphere, that ventilation may attempt to assuage, but cannot possibly extinguish.

We could say much more on a subject so abounding in practical application; but perhaps it is not necessary to go into further details. Fashion has established usages which, though indefensible, are almost too inveterate to be upset, or even to be the subject of remonstrance. The impropriety of burial in populous cities has been recognised by the legislature in sundry enactments. So far, a step has been taken in the right direction. There seem, however, to be still exceptional cases which the law does not touch. Looking to the practice as concerns Westminster Abbey, there appears to be no let or hindrance to intermural interment. The end in this case, we believe, is supposed to justify the means, no matter what inconvenience or absurdities may ensue. As is customary in England, statesmen will look on with calm indifference so long as there is no particular clamour; while Fashion insists that there ought to be no deviations from customs sanctioned by the established practices of a past era. Be it so. We have uttered our note of warning, and trust it may be taken in good part by those who are more specially concerned. What we have said, we believe to be true and deserving of earnest attention. Were our suggestions acted on, they would do a great deal more than put a stop to the scandalous rifling of funeral vaults. They would serve to introduce a degree of common-sense into a custom that bears on the welfare and happiness of the community.

W. G.

MR PUNCH,

OR THE DRAMA AT THE STREET CORNER.

AN unnatural squeaking, merry and shrill, heralds the drama at the street corner. Forthwith there is a scamper of little tatterdemalions, a rush of nursemaids, and a more gradual assembling of folks richer in spare time than in anything else. The squeaking is the voice of Punch. No human organs unaided could afflict the ear with so loud and high a talking treble. In Mr Punch's utterance there are professional secrets involved. Every one is free to know that there is in use a little apparatus formed of two bits of metal and a disc of some stuff like silk, held completely inside the showman's mouth; but what the metal is, and what the stuff is, the showman will respectfully decline to tell, saying only that it is not a whistle, nor a call, but 'an unknown tongue—a secret of the purfession.' The 'unknown tongues' offered for sale at a high price, are of an inferior kind; for there are many sorts, one for the open air, another for use in the house, different ones for speaking and for singing—and for selling. The man can speak in his ordinary voice, or even take a drink, without letting the apparatus be seen by taking it out of his mouth;

and novices in 'the purfession' have to practise continually for months on this unmusical instrument in out-of-the-way corners of parks and commons before they are perfect in its use.

At the sound of this shrill shrieking and squeaking, while the crowd gathers, staring at the upright box with eyes and 'mouths ready to laugh at anything, a still greater number fly from the unknown tongue in supreme disdain. Punch and Judy is, to them, the essence of vulgarity—only what common people like. There is a general objection even to giving Punch a passing glance, albeit he is exerting himself with his whole body and a cudgel to the extreme of puppet energy. But, after all, ye contemptuous folk, there were two men managing that very vulgar show. A dog was there too, a living and intelligent professional dog with a red-and-blue collar, stared at and curiously examined by the street dogs when they meet him off the stage.

And think you, when two men and a dog are working all day from street to street with these poor puppets and a stock-in-trade of pretended jollity, is it not worth while to give a thought for once to what it is all about? The most popular of novelists, clear of sight and quick of sympathy, did not think it beneath notice. His attraction towards the contrasts of life and the oddities of human nature, led him to mingle Punch and Judy with the history of Little Nell, than whom he never imagined a heroine more spiritually beautiful or more exquisitely refined. Out of their meeting came a scene of most complex impressions. Little Nell, in the churchyard, stitching the dilapidated Judy together, while Codlin and Short mend their puppets among the tombstones, and the old man looks on with childish interest and with his vacant smile—this makes a wonderful focus of solemn and ludicrous ideas, the real and the unreal; the grotesque, the vulgar, and the mercenary, side by side with the beauty of innocence and tenderness, and all the great human sorrows of the worn-out mind and of the beggared child. The idea of the showman Short secretly wishing in his rough way to guard the helpless pair from falling into worse hands, is just the kind of pleading for the good heart of the poor that we expect to find mixed with the fancies of one who knew them well. He took the showmen into his story for the same reason that he took heroes and heroines—because they were human; and he never founded them with their puppets. But for the puppets too, and for the show, he had a hankering sympathy; or how could he have hit upon so apt a description of the sad lot of Punch travelling in his private capacity: 'Here was that beaming Punch, utterly devoid of spine, all slack and drooping in a dark box, with his legs doubled up round his neck, and not one of his social qualities remaining.'

In Italy, Punch and Judy in its present form is nearly three centuries old. It was introduced into England by Piccini—called by his successors Porsini—who died about forty years ago, after having exhibited his show for half a century. The puppet play, in which Addison saw Punch in the days of Queen Anne, was quite a different thing. Addison speaks in the *Spectator* of the two shows as 'the opera at the Haymarket, and that

under the little Piazza in Covent Garden—the two leading diversions of the town;’ and a loquacious showman will still describe his drama ‘in two acts’ as ‘not a comedy, neither a tragedy—but a hopera!’ In those old times the Punch of the Covent Garden Piazza danced with ‘a well-disciplined pig;’ and various stories were shown in the box theatre on different days, from Old Testament tales down to Whittington and his Cat. But though every Punch that ever squeaked is a cousin of the Italian Puccinello—or Policinello—the Punch that married Judy dates from the Italian play-writer Silvio Fiorillo, about 1600, and the coming to England of that particular Punch and his indestructible Judy dates from old Piccini.

It may give further interest, though perhaps not thanks, to Piccini's memory, to add that he is regarded also as the father of all that play upon barrel-organs. He got money at an almost incredible rate, and spent it as freely as it came. When Cruikshank made his sketches of the progress of Punch and Judy, he found the old showman at work still, aged and miserably poor, putting up at a public-house in ‘the Coal Yard,’ Drury Lane. From the Coal Yard, Piccini only removed once—to St Giles' Workhouse, where he died a pauper, after having in his day caused an incalculable amount of laughing and brightening of poor faces, and of childish faces poor and rich. This man is said to have made at one time as much as ten pounds a day; his puppets were known to high and low, and it is recorded against at least one Secretary of State, that in the midst of business the voice of Punch could lure him round the corner. As the show became more common, Punch's income dwindled away. According to Mr Mayhew, to whom we are indebted for many secrets of the ‘London poor,’ the exhibitors of Punch and Judy forty years ago collected five pounds a week in the hat; while now, though they still are few enough for every showman to know all the others, and where they are throughout the country, each pair only barely make their living. They have to tramp for it many miles a day, while one of them exhausts himself with the strain of several hours of the instrument in the mouth, and the other, who plays the reed and drum at each ‘pitch,’ has to carry half a hundredweight of stage and properties in transit from one pitch to another. Their stock of puppets is expensive, costing several pounds if it be new; there is a large quantity of cloth and tinsel, the doctor requires the luxury of an *ermine* wig, and the head of each figure costs some shillings when it comes from the hand of the special Punch-and-Judy carver.

Latterly the dialogue has changed, the coarser elements of the original being omitted in the modern versions; and the live Toby is a further improvement, for Piccini had only a stuffed dog where now an intelligent animal is hoisted to the proscenium—much against his will if the truth be told, and with a shamefaced air of feeling too shaky in his part and too big to bite Punch. The length of the performance, the dialogue, and the characters, all vary with the whim of the showman. Originally, the *dramatis personæ* were Punch, Scaramouch, the Baby—always nameless, though imperishable as the Phoenix—a Courtier—intro-

duced for the purpose of taking off his hat with one hand, and stretching up suddenly with a yard of calico neck—a Servant, a Blind Beggarman, a Constable, a Police Officer, Jack Ketch, Sathanas—sometimes called the Rooshan Bear, to spare the sensibilities of the audience—Toby the dog, Hector the horse, Judy, and Pretty Polly, who awakened jealousy in that formidable lady's bosom, and led to the cudgel-wielding which thenceforth found no end. The properties were: the bell wherewith Punch annoyed his neighbours, jocosely making them by dint of torture agree with him that it was an organ, a fiddle, a trumpet, or a drum; the hangman's gallows and ladder; a second back-scene with a prison window; and a large supply of short coffins shown by the reproduction of one, into which the puppet victim was doubled and tidily packed by the hands of Punch himself.

Any public character was also introduced, from Bonaparte, or the candidate at an election, down to Joe Grimaldi. Grimaldi remains under the name of Joey; others have passed away, or come fitfully. There was a Ghost added to the original version, but that awful sheeted Being now sometimes remains in the shades below. There was a Distinguished Foreigner called in to minister to the vulgar contempt for ‘foreigners’ by saying nothing but ‘shallallah!’ There was at another time a certain Jones, the true owner of Toby, who agreed with Punch to struggle for that valuable property till there was risk of dragging the dog in two. Altogether, it is a shifting and changing drama, but its main elements are always the same; and Punch and Judy, with its upright theatre frame and box of limp grotesque puppets, has crossed the Atlantic and even reached the shadow of the Andes; while eastward Mr Punch has travelled also, and his familiar squeak has drawn a pig-tailed crowd about him as himself a Distinguished Foreigner in the streets of Canton.

But for his personal character, and for the morality of this tragic drama, we can say nothing. If we consider his character at all, we must shake our heads at Mr Punch; though before our heads were so high, we have all shaken with laughing at him. If he were not a puppet, we could not tolerate such a monster—a merry monster too; and Mr Punch may congratulate himself that the interest in him is worn out among great dignitaries now, or the Lord Chamberlain's attention might be called to his frightful career of crime and its shocking triumph. Punch not only kills the wife of his bosom, the baby, the doctor, the beadle, and any number of other characters that chance to visit him, except the clown, whose agility, even in escaping, wins his favour; he wades through all the slaughter with the most rampant hilarity; he ensnares and hangs the hangman; he first cheats and then slays his Satanic majesty himself, and finally, uplifting that shapeless heap of horror upon the end of his stick, he whirls below with an extra squeaking flourish of victory. He also avows a cultivated taste which ought to debar him from brutality. He sings the baby to sleep with the lullaby from *Guy Mannering*, or a travesty of it; he professes a joy in music when he is performing on his big bell, or as he facetiously calls it in these days, his piano-sixty; he declares a passion of poetic admiration for Judy the moment before

he causes her to flee, mortally injured, for the interference of the beadle. Piccini introduced into the original version a pretty enough *canzonetta* with native words and melody fresh from the Italian streets, and put it into the mouth of this miscreant. The little song, *Quando penso a la mia bella*, has been translated :

When I think on you, my jewel,
Wonder not my heart is sad ;
You're so fair and yet so cruel,
You're enough to drive me mad.

On your lover take some pity,
And relieve his bitter smart.
Think you Heaven has made you pretty
But to break your lover's heart?

There is a touch of sixteenth century fragments, 'To Phyllis' and 'To Chloe,' about the last lines. It must have been an alarmingly sudden change, when the constable rushed in upon the close of the song, and Punch, slaying him, rejoiced over his corpse to the tune of 'Green grow the Rashes, O !'

The final catastrophe has always remained the same. In the more complete versions the black and horned visitor presents himself first to demand 'Mr Punch that was hanged ;' the imperturbable hero gives him the coffined hangman in the most off-hand manner, and cheats him while they exchange politenesses. But whether this scene be included or not, the arch-enemy is always the last victim. Once, it is said, a showman tried to reform this fearful drama, and as a more proper ending, made his Satanic majesty carry off Punch ; but the crowd dispersed ; his comrade of the reed and drum could not get a copper in the hat ; the attempt had to be given up, and public opinion in favour of Mr Punch had its sway henceforth, and he his triumph, regardless of the proprieties. No doubt the plot owes part of its popularity to the belabouring of beadles and policemen, and to this naughty conduct, too, the Lord Chamberlain might object ; it is on a level with the delight of the crowd at the pantomime, when the clown runs the perennial hot poker through the policeman's body.

Naughty too, it is, that the people should applaud the onslaught upon the gentleman of the ermine wig ; he is naturally disgusted with his 'stick-lickrish—physic ! physic ! physic !' rapped out in a wooden tune on his own head ; but this is clearly an unwarrantable satire upon a learned profession, and an insinuation that physicians prescribe what they would not relish—as if they *could* prescribe anything that anybody would relish ! So also does the victory over the hangman call forth similar wicked applause, when the adroit Punch, pleading that he never was hanged before and does not know how to do it, lures the head of that obliging official into the noose to show him the way. All this is bad enough ; but what is to be said of the fatal skirmish with Judy ?—what of the flinging of the baby 'out of winder,' and in among an unfeeling crowd ? Perhaps, that it is an unfeeling baby. But that is a poor excuse. Clearly the drama does not bear investigation from a moral point of view. The only poetical justice in it is dealt out by Toby, when he barks in protest, and then lays obstinate hold of Punch by the nose ; and yet Punch *never hurts Toby*.

In reality, the play depends for popularity upon the grotesque aspect of the figures, the mystery of their moving with such agility, the rapid liveliness of the plot, and the impudent jokes and horse-play, which are always the fun to make a street crowd grin and laugh. It is the puppets, independent of the plot, that furnish the amusement of children. They do not know, nor would they care to know, that a dexterous hand works Punch, with one finger in his nodding head, and a thumb and finger up his armless sleeves ; and for the younger ones—ay, and for some of the older ones too—it is the puppets themselves that speak in squeaking voices. The murderous stick held so deftly, if awkwardly, between both hands, the wooden raps and knock-down blows, suggest no horror to the little people—nor to the big people either. The diminutive things with their limp bodies and sounding timber heads, are too obviously puppets for their murder to be shocking. If the squeaks became frightened screams, and sank to moans ; if the prostrate Judy bled even the plainest of red paint ; if there was any simulation of suffering such as we see on the larger stage—then the crowd would cease to laugh, Punch would be a miscreant indeed, and the Lord Chamberlain—or Policeman X—would interfere at the street corner. But as it is, the little drama, though its palmy days of novelty are over, is sure to flourish long. All the children like Punch, and the young generations are fresh always, though Punch be fresh no longer. He still attends their juvenile parties, but not so many as he was asked to once—four of a night—lucky rover ! if his own boasts be true. Children are pleased with him, if they be truly childish at all, from the little ladies in evening white and the beaux in knickerbockers, down to the ragged boys and girls, with faces quite as happy, running through the mud after the show. So perceiving him to be a favourite with the little ones—and is not that a certificate of character ?—and trusting he has but a wooden semblance of wickedness, we find ourselves saying to Punch, in the words of the poet : 'With all thy faults, I love thee still !'

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

BY DAVID CHRISTIE MURRAY.

CHAPTER IV.—HIRAM 'LOOKS AROUND FOR SOMETHING TO GET A LIVIN' AT.'

THE *Black Horse* at Brierham was not a luxurious hostel, but it satisfied Hiram Search. It was an easy matter to satisfy him just then, and even the *Black Horse* was more attractive to a weary man than the open fields. Hiram was hungry as well as tired ; and the unpretending inn had bread-and-cheese and cider, all home-made and wholesome. The landlord, discerning Hiram's foreign extraction by his tongue, pressed him to eat. 'I shall charge 'ee vorpence whatever 'ee gets outside on,' said the landlord ; 'zo eed better take thy vill.' He was not the man to go back from this hospitable invitation ; but Hiram accepted it in such good faith, that the watching landlord grew sceptical of profit on his custom. 'You be main hungry, aperiently, mate,' said the landlord. Hiram was too busy to waste

breath in answer. He raised his sharp eyes to the landlord's face and nodded, and then went on with a relishing sip at the cider. The host watched with more philosophy than might have been expected of him, until at last, with a sigh of pure contentment, Hiram pushed away the brown home-made loaf and the white crumbling cheese, and doubling up the huge clasp-knife, returned it to his pocket. After solemnly enjoying a pipe, he paid his bill and went to bed, in a small room with a sloping roof. Small as the room was, there were two beds in it, and on one of them lay a hulking fellow in heavy highlows and a patched suit of cords. A resting-place of any sort was too precious to be quarrelled with; and Hiram, having partly undressed, made sure of the safety of his money, and lay down. He was asleep in twenty seconds, and never moved until the rays of the morning sun struck through the uncurtained window and awoke him. He turned over, to avoid the glare, and became conscious of his patched and hobnailed companion, who was snoring terrifically. Hiram took up one of his own boots and dropped it noisily upon the floor. The man ceased to snore, and by-and-by sat up, yawning and rubbing his eyes, and grumbling in a sleepy undertone.

'Nice mornin', ain't it?' said Hiram.

The hobnailed man looked surlily round, and anathematised the nice morning; then arising, he shook himself, rumbled his coarse red hair with his freckled hands, reached out for a rabbit-skin cap, and, in completion of his simple toilet, put it on, and began to smoke. Hiram gathered his few belongings, and went down-stairs to the inn-yard, where he refreshed himself at the pump. The people of the house were astir already, and one or two heavy fellows, who looked like quarrymen, were taking a morning drink at the bar. The entrance of a policeman created some sensation, and the quarrymen moved uneasily, as in the presence of a native enemy. The official with loud dignity demanded the landlord, who appeared before him smiling in a propitiatory manner and proffering drink.

'I've got information as Corduroy Jim is here,' said the policeman loudly.

Hiram, polishing himself on a jack-towel in the yard, heard this statement, and wondered casually whether Corduroy Jim was the man who had shared his room last night. He looked up to the window, and saw the red-headed man busy at the fastening.

'No affair o' mine,' said Hiram, and entered, still towelling himself.

'Zo a be, Mister Blunt,' said the landlord.

'Well, I want him,' returned the officer, all importance.

'What have he been a-doin' of?' inquired the host.

'Old game,' returned the officer—'poachin'.—Where is he? Let's have a look at him.' The policeman said this with a waggish air, as though there were somehow a joke in it; and the quarrymen gave him the laugh which his glance demanded.

'He be up-stair,' said the landlord. 'He slep' here last night, along o' that young man.'

The official regarded 'that young man' thus indicated, and bent upon him a brow of stern

severity, as though the circumstance had clothed him with suspicion; but Hiram encountering his gaze with a wink and a friendly nod, the glance of authority dwindled and faded; and the policeman, who was a little young at his business, looked sheepish.

'Show the way,' he said, recovering a sense of his importance; and he and the landlord marched heavily up-stairs. Hiram pricked up his ears and listened. There was heard a sudden clatter as of hobnailed boots in the paved yard, and the owner of the rabbit-skin cap and the corduroys was seen in the act of climbing a low wall. Down came the landlord and the policeman roaring 'Stop him!' Nobody seemed to feel a call in that direction, and the officer went in pursuit alone.

'Drabbit un!' said the landlord. 'He haven't paid for 's bed. He must ha' dropped out o' winder!'

Away went the corduroys, and away, a hundred yards behind, went the representative of law. Law came up hand over hand, and then, his breath failing suddenly, stood disconsolate, and watched the hobnails glinting away into the distance. Thus foiled, the officer had no mind to return to the *Black Horse*, but took his melancholy way across the meadows to report his failure. The excitement of the chase having subsided, it came out that the landlord had a double grievance. The illegal sportsman had not only left his bill unpaid, but he had left a contract unfulfilled. The landlord had engaged him to mend half-a-dozen cane-seated chairs, and the mending process had gone no further than the cutting away of the old canes.

'An' now,' mourned the landlord, 'I ain't got ne'er a cheer for nobody to set on in my house. An' as like as naht, it ull be a twel'month avore a cheer-mender puts his foot inside the county.'

'What's your pay for the job?' inquired Hiram.

The landlord named his price; and after a little chaffing, Hiram undertook the work; and being provided with the slips of split cane and the simple tools left behind by the illegal sportsman, he sat down in the shade, lit a pipe, and surveyed his task with the eye of a master of the chair-mending craft. It may be worth while to say that the work was utterly new to him.

'Naow,' said the wily Hiram, with an unseated chair in one hand and a bundle of canes in the other, 'what's your notion? Is theer any partic'lar style you fancy?'

The landlord didn't know as how there was.

'Ain't you got another cane-seated cheer in the house? Very well, then. You'd like 'em to match, I reckon. Bring the cane-seated arm-cheer out, an' let me have a look at it.—That's right. The armcheer's like the father o' the fam'ly, an' you can't help wantin' the childern to feature him, a little.'

Hiram having procured the desired model, examined it closely, and fell into the work with marvellous quickness. Before he had been at it an hour, he was caning away with the greatest dexterity, and whistling at his labour as cheerful as the throstle.

'Wherever one man slips out,' said Hiram to

himself in the pauses of his music, 'there's room for another to slip in. We air so tight wedged on this effete old planet, that if a man once gets outside the crowd, he finds it hard to shoulder in again. But if a feller keeps his eyes peeled, somebody's pe-rennially fallin' over the edge into general space, an' then there's room for another pair o' feet to stand in. Young man in the skin-cap ain't likely to assom this route again for some while. I'll conduct his business for him.'

The first chair being completed, he surveyed the work of his hands with smiling admiration; and having sat upon it to test its firmness, he admired it anew.

'It is sing'lar,' meditated Hiram, 'how pretty a thing looks when a man's done it himself. A cheer-bottom is not an artistic object, regarded in the abstract; but this yer arrangement looks real nice, I dew declare. Whatever a man does, he puts a bit of himself into it, an' then he thinks it's handsome. Human natur,' pursued the philosopher, beginning on another chair, 'would probly work very rusty if it wa'n't greased with a little self-appreciation. That is so. Now, only this mornin' to see that gell in the house here smilin' at herself in a scrap o' lookin'-glass; an' yet if she was to see that head of hers on top of any other gell's figger, she'd laff at it. An' then to see me lookin' at a cheer-bottom as if I loved it—smirkin' at it, like a candidate at a voter—just because I've put it together. We air curious critters, sir; an' no man is free from human frailty.'

His thin clever fingers made no stay whilst he thus communed with himself, talking in a low continuous nasal hum, with only one word audible here and there. He seemed by this time as well accustomed to the work as if it had been his daily occupation; and when the landlord came out to look at him, no suspicion that Hiram was an amateur chair-mender crossed his mind. Hiram finished his work, and the landlord paid the stipulated price.

'If you happen to have the half-sovereign I changed last night,' said Hiram, 'I should like to have it back again.'

The landlord had that one half-sovereign and no other; and Hiram gave silver in exchange for it. Some of the canes remaining over, and the landlord claiming them, Hiram chaffered for them; and went his way with a few loose six-pences to keep the half-sovereign company, and a new trade in his fingers. He approached London by a devious route, going out of his way to any little town where the new trade seemed likely to thrive. Living sparsely, and working wherever he found a chance, he throve so well that he reached the great city with a total stock of fifty shillings, prepared to begin the world anew. At first sight, London struck him as being more than a trifle dingy and oppressive, and he was tired with a long day's tramp. But having secured a cheap lodging and refreshed himself by an hour's rest, he strolled out again on a journey of observation.

'Twopence all the way,' yelled an omnibus conductor, hanging on by his strap at a remarkable angle and gesticulating wildly.

'Be at rest, young man,' said Hiram serenely; 'I will travel all the way.' He tendered twopence.

'Pay when you get down,' said the conductor.

'Here's a land for trust an' confidence,' said Hiram to himself. 'How does he know when a man has twopence?' He sat on the knifeboard and smoked, surveying London. 'I've read somewhere,' he mused, 'that in this triffin' village a man dies every five minutes. That's a chance each five minutes to them that's left. Now, I've been here three hours, an' if my statistics air correct, I've missed six-and-thirty chances already. It's real ghastly to think of, if it's true, an' I suppose it is. Twelve tragedies an hour. Twelve sufferin' souls relieved from twelve sufferin' bodies every hour in this amazin' congregation.' Hiram's thoughts were growing grave, and London was beginning to lay hold of him, as it does with all men who can think and feel. Out of the loud noise and hurrying crowds of Whitechapel, the omnibus rolled on to the solemn quiet which lies when the business of the day is done about the Exchange and the Bank and deserted Cheapside. 'Looks as if there'd been a plague here,' thought the stranger. The streets were as sparsely peopled as those of his native village.

As the omnibus travelled to what seemed a new city, all glare and gloom, the conductor came to the roof to collect his fares. He was a red-faced young man, with signs of drink upon him—blotched, blear-eyed, and puffy. His hot breath struck a blast of gin full in the traveller's face, and Hiram turned his head away disgusted. At that second the vehicle lurched slightly; there was a cry from one of the passengers; and Hiram looking round, missed the figure of the conductor. The man had fallen backwards from the roof, and lay upon the stony pavement with his limbs abroad and his blotched face uppermost. The driver arrested his horses; the passengers descended, and ran to the prostrate figure; people from the pavements and the shops made a crowd about it.

'Stand clear!' cried Hiram. 'Give the man a breath of air.' He raised the helpless head and shoulders; and those in the inner circle pressed back and forced a little space. 'Get a glass of water, somebody,' said Hiram, passing a firm but gentle hand over the man's limbs. 'Right arm's broke,' he said after this brief examination. A glass of water was handed over the heads of the crowd, and reached him half empty. In the conductor's fall, a handful of copper and silver money had been thrown from the leathern pouch he carried, and one or two men busied themselves in picking up the scattered coins. One scarecrow, who had picked up half a crown, was making off with it, when Hiram's long arm and lean fingers shot out after him and seized him. 'Hand over!' said Hiram; and the quaking wretch surrendered his booty, and slipped into the crowd, glad to hide himself. The others, with that mechanical surrender to any seeming of authority which is the most noticeable characteristic of men in crowds, followed suit, and laid their findings in Hiram's outstretched palm. By this time, the driver had cumbrously released himself from straps and wrappages, and had made his way to his injured colleague's side, followed by a policeman. A cab was called, and the man was driven to a hospital. The people dispersed. Some of the passengers, who were scrupulous, paid their fares to the driver. Others, who were not, availed

themselves of the accident, and economised. Hiram resumed his seat upon the omnibus.

'I can't take no passengers without a conductor,' said the driver. 'It's agen the law. I'm a-goin' to drive 'ome now.'

'I've got some money belongin' to that poor feller,' said Hiram, 'an' I'll give it in at the proper quarter.'

'All right,' responded the driver. The 'bus rolled on again, this time to the Company's offices, where the driver told his tale, and Hiram surrendered the money.

'Much obliged to you, I'm sure,' said the official in charge; 'but you needn't have taken the trouble. You might have given it to the driver.'

'Well,' said Hiram, 'I didn't want to lose a chance. I only reached London to-night, an' I'm lookin' around for somethin' to get a livin' at. Wherever one man gets broke, 'pears to me another's wanted to take his place; an' till your man's mended, I'm game to take his.'

'We are rather short of hands just now,' said the official in charge.

'Mind, mister,' pursued Hiram, 'I don't want to take no man's cheese from between his teeth; but I'm game to hold that man's place an' keep it warm till you've got him mended.'

The official smiled, and asked: 'Can you get anybody to give you a character, or be surety for you?'

'I don't know a creetur in the city,' returned Hiram; 'but mebbe that'll do for surety.' He laid two pounds upon the desk. 'The job ain't the sort that takes seven years' apprenticeship to learn, is it?'

'Why, no,' said the other, smiling again. 'Come here in the morning at half-past seven o'clock, and they'll give you an answer at once.' Hiram took up his money, and retired, having made a note of the address. Pausing now and then to ask his way, he walked back to his lodgings.

LAMBETH ART POTTERY.

THE double mass of red-brick building rising from the level of the Albert Embankment, and flanked by a soaring shaft of some architectural pretension, must be a familiar object to many of our readers. Beneath its roof is still carried on an industry, localised on the spot since 1640, but which in this particular factory has received considerable extension and development from the enterprise of its proprietors, the Messrs Doulton. Lambeth pottery, in its most characteristic form—for the modern Doulton ware includes many variations on the original type—is what is technically known as stoneware, supplying an intermediate link between porcelain and earthenware. As a familiar example of its peculiarities, we may take the common manufacturers' ink-jar, in which we have the native whitey-brown hue of the clay unaltered, but glazed with a surface coating of vitreous enamel. Now the nature of this glaze, and the manner of its application, form the cardinal distinction between the various products of ceramic art. Its use is not merely to give that exquisite polish of texture which repels defilement, and is so daintily pleasant to the touch; but primarily, to render the naturally porous clay impermeable

to water, and thereby fit the vessels constructed of it for their most obvious function. This end is attained among uncivilised peoples, by smearing the heated earthenware with tallow; and the Italian and Spanish water-jars at the present day are in similar fashion rubbed with wax, thus rendering them water-tight at the cost of cleanliness. The Greeks and Etruscans used for the same purpose, a carbonaceous glaze, liable to wear off in handling; but the Egyptians were from an early date acquainted with the art of vitrifying ware, a discovery supposed to be due to the accidental observation of the effect of fire in glazing the bricks of an oven.

Italian Majolica is earthenware which, after firing, has been covered with a thin coating of white earth, and then enamelled with a composition of the oxides of tin and lead. The whiteness and hardness of the surface are proportionate to the increased quantity of the former ingredient, and the inferior description of ware, or *mezza majolica*, is glazed with lead oxide alone. This opaque metallic varnish imparts to the ware that pearly lustre, whose secret, believed to have been learned by the Italian potters from the Moors of Spain, Bernard Palissy spent life and fortune in trying to discover. Porcelain, on the other hand, originally composed of finer clay, owes its texture to a thin coating of true glass, evenly formed over its surface under exposure to a very high temperature, by which its substance is partially vitrified throughout. But porcelain and earthenware, while differing in the composition of their surface enamel, resemble each other in that they receive it in the stage technically known as 'biscuit,' after they have undergone the first firing. Plunged then into a solution of the glaze constituents, these substances form a white efflorescence over the porous clay, after it has absorbed the fluid in which they were dissolved. The process is finally completed by the second baking of the ware in the glazing kilns, and the fusion into a thin crust of enamel, of the elements deposited on its surface.

Now, stoneware, such as that manufactured at Lambeth, instead of undergoing this double process, is glazed and fired by a single operation, thus avoiding the risk and expense of a second baking. This result is due to the ingenious process of the salt glaze, introduced in 1690, which consists in throwing a quantity of moist salt into the kiln, where the ware has attained a very high temperature. The vaporised elements of the salt, combining with the silicates of the clay under the influence of heat, form a fusible alkaline glaze on the surface of the ware, which is thus vitrified and rendered impervious to moisture.

It seems the inhabitants of Lambeth sometimes complain of the pungent saline exhalations given off by these glazing kilns; but Mr John Sparkes, in an interesting paper on the Lambeth Pottery, read at the Society of Arts in March 1880, maintains that they are not only innocuous, but positively salubrious, acting as disinfectants throughout the district. It is evident that the salt-glaze process must essentially modify the ornamentation of the ware, since it receives it in the stage of raw or 'green' clay, not, like porcelain and earthenware, in that of biscuit already hardened in the fire. Its crudeness and softness in this condition, while opposed to the reception of flat

colour, render it more easily susceptible of plastic decoration, and we find it accordingly submitted to varieties of treatment, such as fretting and carving the surface, incrusting it with raised ornament, or cutting through an external coating of lighter-coloured earth, to leave a pattern in relief on a dark body underneath. It is its capability for these diversified forms of embellishment that gives its principal artistic value to the Lambeth ware, and may lend some interest to an account of the sundry processes it undergoes, as they were seen by the writer and a party of friends, in a visit to the Doulton factory.

Here, by the courteous permission of the proprietor, we were enabled to follow the clay through the several stages of its progress, and see it grow from a formless mass, into a daintily finished article of use or ornament. The first of these stages is naturally the elementary one, in which the potter's wheel, that most venerable, yet not least wonderful of human inventions, comes into play. There sits each deft workman, his every faculty concentrated on his task, while a boy, in attendance on him, manipulates the stiff paste, nearly of the consistence of dough, and subjects it to the treatment technically called 'slapping.' The mass is, in point of fact, divided by a wire, and one portion flung violently on the other with a sounding smack, the object of this rude handling being to expel all bubbles of air from its substance. To this end it has already been thoroughly kneaded in the vats, and the earth has previously been sifted, dried, and stored in pits to *age*, during which time it undergoes a sort of fermentation. The slapper, roughly shaping the clay into balls of equal size and weight, hands one to the thrower, who seizes it and dashes it forcibly on the wheel, a disc revolving horizontally before him, the motion being produced by machinery. The skilled artisan hollows the mass as it spins, drags its sides upwards, shapes the flexible whirling paste, passes a wire under it, and sets it on the table with its fellows, a perfectly symmetrical vessel, still soft, but completely shaped. So rapid is the process that one workman turns out a thousand of these articles in the day; and his neighbour in the same time produces twelve hundred ink-jars, though these latter require somewhat elaborate manipulation, as the neck has to be narrowed in, and the lip turned over.

The shaping of the wheel is not sufficiently delicate for the finer articles of ware intended for decoration, and they are consequently turned on a lathe after being allowed to harden sufficiently, thus receiving a smoother surface, and being impressed with ornamental mouldings. They are then ready for the artist; and following them a stage further in their progress, we look into a room, where two ladies, the Misses Barlow, are busy at their work, and kindly allow us to watch it, as it grows under their skilled fingers. Each of them is employed in decorating a tankard-shaped clay vessel, Miss Hannah Barlow with designs of cattle and horses, Miss Florence with birds and foliage. They have no paterus or models to copy, but sketch in pencil from imagination, directly on the clay itself, without any preliminary study whatever. The pencil outlines are then cut sharply on the friable surface with a stylus, and the strokes thus made, show, after the article is glazed, like the dark lines of an

engraving. Miss Hannah Barlow's clever designs remain thus simply etched on the ware, forming a central band of decoration on the vase or goblet, the remainder of which is enriched with embossed ornament in colour.

Miss Florence Barlow's outlines, after being etched with the stylus, are filled in with the application of raised colour, known as *pâte sur pâte*. This consists of clay, technically called 'slip,' artificially coloured of the desired tints, mixed to a creamy consistence, and laid on with a heavily loaded camel-hair pencil, within the limiting lines already traced. This lady, on being asked how she attained such mastery over bird form and plumage, as to be able thus faithfully to reproduce them without a model, replied that she kept a number of birds of different species at home, so as to have them perpetually under her eyes, in all their varieties of attitude and movement. It was very pleasant to note the enthusiasm with which these artists spoke of their work, and to see how that free exercise of individual taste which is evidently left to them, prevents that work from degenerating into mere mechanical drudgery.

The Miss Barlows' studio is a specimen of the higher artistic machinery of the Doulton establishment, and from it we were led to a lower class of workroom, where a number of girls and young men were employed in more mechanical processes of ornamentation. Here was one laying on the coloured 'slip,' so as to form a garland of raised leaves on the clay; while another was engaged in filling in with a dark tint, the ground of a delicate foliated pattern carved in relief. A third might be seen forming a beaded ornament, pressing the white 'slip' or liquid paste, a drop at a time, from the apex of a paper funnel, much as confectioners do the sugar icing for cakes or tarts, then rolling each tiny globule between her fingers, and affixing it in its place. A boy, cutting in the limiting lines for the decoration of a vase with bold strokes of the stylus, had no measurement to guide him, and worked by eye alone, though the repetition of the pattern required mathematical accuracy in the exact division of the space.

In other rooms the artists were copying natural flowers, leaves, or similar objects, and then the party proceeded to an *atelier*, where a number of young men were modelling figures and groups in clay, in the same fashion that sculptors first embody their conceptions. Here, however, the modelled clay itself is baked and rendered permanent, instead of furnishing the mould for the plaster cast, destined in its turn to be reproduced in marble. The subjects, principally classical and allegorical, were all from original designs, and the grace and elegance of the figures betokened considerable capacity in the young artists.

The last room visited was in some respects the most interesting, for here we were introduced to the work of a really remarkable man, George Tinworth, who began life as a wheelwright, and the development of whose peculiar genius reflects the greatest credit on his present employers. He works in high relief, in unbaked clay of the natural colour, subsequently, like that in which the statuary groups are executed, hardened and rendered imperishable by firing. This artist goes to the Bible for his inspiration, and treats only

scriptural subjects; but dealing with them in a thoroughly unconventional spirit, he places them before the spectator with full dramatic realism of accessory and detail, giving evidence of high imaginative power. One of his works, the Crucifixion, has been placed in the reredos of York Minster; another, after having been exhibited at the Royal Academy, is now in the Bethnal Green Museum; and two *lunettes* of the Raising of Lazarus, and of Jairus's Daughter, form part of the decoration of the Guards' Chapel in St James's Park. Against the wall of his studio, when our party visited it in November 1880, stood a long panel covered with wet cloths, and when these were removed, a beautiful high relief in clay was disclosed. This work of art was subsequently exhibited in the Royal Academy, 1881. It has the character of a triumphal procession, for it represents Christ's entry into Jerusalem, and recalls, in the life and spirit of the grouping, the reliefs on an antique sarcophagus. Fourteen weeks' labour had already been expended on the work, and though it looked nearly completed, many details remained yet to be added. All the accessories of Eastern life and nature had been carefully studied, and specimens of palm foliage and other tropical vegetation were furnished to the artist from Kew, in order to assist his imagination.

These works of Mr Tinworth's are elaborated, not from a drawing as a preliminary study, but from what he calls a sketch in clay, in which his first idea is embodied. To illustrate this mode of working, he modelled from a lump of clay under our eyes, a tiny figure, under two inches in height, yet perfect in all its minute proportions. Such is the flexibility of the clay, that by a touch of the finger the head could be turned, or the limbs shifted to any desired position. The adhesiveness of the material, too, admits of much greater latitude in its treatment than is possible in cutting a relief from the solid block of stone or marble, as figures can be removed and replaced at will, even at an advanced stage of the composition, if alterations suggest themselves in the design.

From this interesting studio we returned as we had come, through rambling corridors, up and down unexpected flights of stairs, across the great atelier where wheel and lathe were humming, and the ductile clay being ever shaped by subtle fingers, to the artists' workrooms, where human invention was being tasked to discover new combinations of form and colour for its embellishment; and so back to the show-room on the ground-floor, where the results of all this industry and ingenuity are on view.

Although the salt-glazed stoneware has been more especially dwelt upon as the specially characteristic product of the Lambeth potteries, it is by no means the only kind they manufacture. The Doulton Faience, recently introduced, is decorated in the way rendered familiar to the public from the fashion of amateur china-painting, by the application of flat colour to the biscuit, which is then plunged in the glaze-tub, and fired for the second time in the kiln. The *impasto* ware, another novelty in this manufacture, is similarly treated, save that raised decoration is laid on in the form of coloured 'slip' or clay paste, corresponding to body colour in painting. The result is an embossed design, for instance a garland of leaves, or spray of flowers, generally relieved on a

coloured ground, sage green, or maroon red, with a very high surface glaze. The Faience admits of every variety of hand-painting, as may be seen in the show-room, where vases are on view covered with the most richly tinted decoration, flowers crowding each other out of sight, foxglove and camomile, chrysanthemums and campanulas, strewn at random over the surface, as if in emulation of Nature's own prodigality. In contrast with these are others of soberer tone and simpler design, a flight of ducks following their leader on the wing, or a flock of swallows chasing each other among the summer clouds, outlined in sage or olive green on a cream-tinted ground. Conspicuous among the decorations of the stoneware, easily recognisable by its appearance of incrustation, are Miss Barlow's spirited etchings of ruminating cattle or browsing sheep, specially interesting to us, as we have seen them growing under her hand, and those of another artist in the same style, who excels in landscape and rustic figures, drawn with a few decisive lines.

Among the multitude of objects here exhibited, no two are precisely alike, and it is this absence of mechanical reproduction that entitles the Doulton ware to rank as an art manufacture. Individual taste is left free to choose its own form of expression, while preserved from eccentricity by the wholesome limitation of a defined purpose, conditions supplying that medium between formalism and extravagance, so absolutely essential to artistic progress. The staff of artists is principally recruited from the Lambeth School of Design, and a distinctively local character thus attaches to the manufacture, which bids fair, under its present management, to become a conspicuous branch of national industry.

THE DROPPED TELEGRAM.

A TALE IN TWO CHAPTERS.

CHAPTER I.

It was towards the end of a sultry July, that I, Arthur Homely, Barrister-at-law—nominally, though nothing but an idler really—decided to run down to the seaside and enjoy the bracing air of the breezy watering-place Sandmouth. It was a longish journey by rail from my rooms in Arlington Street to Sandmouth; but I reached the end of my journey at about five P.M., and drove at once to the hotel at which I had stayed during a former visit. But at the hotel I was unable to secure a room, and was told that there was not even a garret vacant, so crowded was Sandmouth already. A waiter who knew me, suggested that I should go to Mrs Dollman's boarding-house, which was very comfortable, and where he knew I could find accommodation. I re-entered my cab, and was soon deposited at Mrs Dollman's, where an excellent bedroom facing the sea was allotted me; and having enjoyed a bath and change of clothes, I joined the *table-d'hôte*, which took place at seven P.M.

On entering the room, I saw seated at the table my oldest and best friend, Charley Steinmay, now known as Major Steinmay, V.C. I thought he was still in India fighting against the Afghans, or some other of the numerous enemies of our Indian Empire; for although not thirty years of age, Charley's military career had been a great

success, and his name had more than once been mentioned in despatches; whilst the decoration of the Victoria Cross had been ably gained, not by retreating from a hot fire with a wounded soldier on his back, but by attacking, single-handed, three Afghans who were trying to kill a wounded soldier. Charley was brave as a lion, honourable and truthful, but in some matters simple as a child.

Our recognition was simultaneous. Charley jumped up and rushed round the table to meet me.

'This is a bit of luck,' he exclaimed. 'How did you come here? I've only landed in England two days, and was ordered to come here for my health.'

'What is the matter?' I inquired.

'Slight sunstroke, and the effects of that Peshawur fever, which clings to a fellow, you know, for years, and makes me feel sometimes as weak as a cat.'

Our exchange of information now became general. I learned from him how he had succeeded in India; how he had obtained two years' leave on medical certificate; and was going to recruit his health, and return to India to obtain a good appointment, which would by that time be vacant. I told him how, by a lucky windfall, I was in possession of an ample income, and merely played with the law as a profession, enjoying my liberty and amusements in the manner best suited to me.

The residents at the boarding-house besides ourselves, were a widow and her daughter; a merchant from some inland place, his wife and two daughters; three young men, apparently tourists; and a retired general officer. So small a gathering naturally resolved itself into a kind of social party; and before dinner was over I had spoken to nearly every one present. Our first twenty-four hours passed pleasantly. To meet my old school and college companion again, and talk over old times, scenes, and companions, was indeed a pleasant pastime; and Charley was fresh and young as a boy of sixteen.

The next evening we had taken our seats at the dinner-table, when there entered a lady leading a little girl about five years old. The lady was tall, at least five feet eight, with massive golden hair, a fair complexion, perfectly formed features, and rather wild-looking, expressive eyes. A figure delicately but exquisitely formed. She was dressed in a clinging white Cashmere dress, trimmed with lavender satin, which became her admirably. As she stood for a moment opposite to us, she certainly looked one of the handsomest women I had ever seen. The little girl, however, had a neglected, uncare-for look about her, which contrasted strangely with the costume of the lady. The manager of the boarding-house showed this lady to a chair next my friend Charley, who rose as the lady approached, and remained standing until she was seated. All eyes were turned on the new arrival, who seemed totally unconscious of attracting any attention, and appeared fully occupied in attending to the wants of her little girl. Charley seemed spell-bound by this handsome woman, and during the first few minutes after her arrival did not speak a word to me. I heard the lady, in a clear silvery voice, address herself to Charley, who was soon

engrossed in a conversation which so occupied his time that he ate but little dinner.

When the ladies withdrew, he turned to me, and said: 'One of the most charming women I ever spoke to, and undoubtedly the handsomest.'

'A case of love at first sight, Charley,' I exclaimed. 'But who is she?'

'Her name is Le Ferrier,' he replied; 'and that is her little girl; whether she is a widow or not, I cannot say; but she has not mentioned her husband's name. She lives usually near Manchester, and has come here for her health. What a sensation she would make at Simla!'

'She seems to have made one with somebody at Sandmouth,' I replied.

We shortly left the dining-room; and I adjourned to the smoking-room, to enjoy my quiet pipe, whilst Charley turned off and disappeared I knew not where.

After some time, I heard the notes of a piano, touched by a skilled hand; and soon after the sound of a female voice, full and rich and well cultivated, singing a German song. I was an enthusiast in music, and therefore made my way to the drawing-room, which was the general place of assembly for the boarders; and then saw that the vocalist was Mrs Le Ferrier; whilst Charley was standing near the piano turning over the leaves of her song. In the room was one of the young tourists, who turned out to be Oxford-men, who applauded loudly at the termination of the song; whilst the widow, Mrs Blunt, and her daughter seemed also charmed.

On my approaching the piano, Charley introduced me, as his oldest friend, to Mrs Le Ferrier; and I received from her a cordial shake of the hand.

I had now the fullest opportunity of observing the lady; and whilst I was compelled to admit the beauty of her face and form, yet the shape of her head displeased me. Among my amusements was the study of phrenology; and I had made long and careful comparisons between the theories claimed by this science and my practical experience. Some of these theories I found to be correct; and the head of Mrs Le Ferrier showed an enormous bump of Love of Approbation, an almost total absence of Conscientiousness and Veneration, whilst Self-esteem was very largely developed. Whilst I was making these observations, she and Charley were looking over a list of songs, and shortly commenced a duet, he being a fair singer. Feeling I was one too many, I strolled out on the beach, then returned to my room, and retired.

A week passed at the boarding-house much in the same way, Charley and Mrs Le Ferrier becoming more and more inseparable; and I saw my friend was apparently engrossed with the handsome boarder. He had driven her out, had ridden with her, and walked with her; she appearing to be equally as charmed with him as he was with her. It was at the end of the week, that one evening I was sitting on the beach with Charley, when I put the question plump: 'Who and what is Mrs Le Ferrier?'

'She is,' replied Charley, 'a most unhappy woman. She was compelled to marry a rich Manchester-man, whom she hates, and who is unkind to her.'

'Then her husband is alive?' I said.

'Certainly,' replied Charley.

'Take care, old fellow,' I said, 'that you don't get entangled in a way that might lead you into serious trouble.'

Charley remained silent for some time, and then said: 'When we were boys, Arthur, we never had a secret from each other; and I think I can trust you now. You will admit that she is one of the most lovely women in the world, and she is as nice as she is beautiful. Although nothing has occurred between us in the slightest degree wrong, yet she has confessed that from the first moment she saw me, she felt an irresistible attraction for me, and that I am the first man she has met whom she could love.'

'And this from a married woman, Charley, you don't consider wrong?'

'But, Arthur, think of her condition—having been forced to marry a man repugnant to her, and being tied to him for life. What a slavery for such a woman as she is!'

'Too late to remedy that, Charley; and it shows a want of conscientiousness that she should tell you this, after a week's acquaintance at a boarding-house.'

We were sitting beside some rocks on a retired part of the beach, far away from any gas-lamps, and slightly removed from the usual promenade. Behind us, and not thirty yards distant, was one of the seats placed for the accommodation of visitors, who could there sit and contemplate the breakers as they rolled and swished on the sandy shore. Our pipes had been smoked out, and we sat in silence, each occupied with his own thoughts. Several minutes had thus passed, when we heard footsteps approaching, and though in the darkness it was impossible to distinguish either faces or figures, yet the voice of one of the two persons caused my friend to start and gaze round eagerly.

The couple took up their position on the seat near us, and in reply to a half-whispered inquiry from the man, the female voice said: 'How could you imagine such a thing! I like the Major, of course, as he is very attentive, and is desperately in love with me, and he is useful as an escort; but as to anything more, it is absurd. Besides, I am not likely to be attracted by a sun-dried Indian, when you are near.'

'I am so glad to know this,' was the reply of her companion, whose voice we recognised as that of the young Oxford-man who was staying at the boarding-house.

I put out my hand and held Charley firmly, for he had half started up, but instantly sank down again, and remained motionless till the couple retraced their steps.

'You are a lucky fellow, Charley,' I said, 'to have found out this plant so easily. You see my conclusion about the absence of conscientiousness was about right.'

'Don't mention that woman's name again!' exclaimed Charley. 'What a demon she is; and what mischief a handsome woman can do! I have been a fool, that's all.'

We returned to the boarding-house, and retired to our rooms without seeing any one.

On the following morning, I received a letter from my Uncle Tom, the Squire of Honeywood, saying he was coming that day to Sandmouth

with his wife and daughter, and wished me to find him some place to put up at, if the hotel was full. The hotel was full, and no suitable lodgings to be obtained; but there was room in our boarding-house for my uncle, aunt, and cousin; so I secured these for them.

On that morning, Charley had a few minutes' *tête-à-tête* with Mrs Le Ferrier. What took place, I did not ascertain; but shortly after I saw Mrs Le Ferrier looking red and excited, anger expressed in every feature of her handsome face; whilst Charley was calm, dignified, and self-possessed.

My uncle and party arrived during the afternoon; and though he was not satisfied in having to dine, as he said, with 'all sorts of people,' yet his room being comfortable, he managed to get on without much grumbling. My cousin was a dear little girl, twenty-two years of age; a truthful, honest little woman, clever and sincere, and heiress to rather more than four thousand a year. I at once made up my mind that she was the wife for Charley; but knowing the obstinacy of both men and women in love affairs, I said nothing to my friend as regards my ideas.

That evening at dinner, Mrs Le Ferrier had arranged that the position of her chair should be altered; she sat on the opposite side of the table to that on which I and Charley sat, and next my cousin. My cousin and she had evidently met during the afternoon, and at dinner conversed freely, Mrs Le Ferrier talking in that gushing affectionate manner, in which she was an accomplished artist. My little cousin Annie was evidently taken with the flattery of this handsome woman; and when the two left the room, they walked out hand in hand.

'I think,' said Charley, 'that your cousin ought not to be associated much with Mrs Le Ferrier. She is not likely to be benefited by the acquaintance.'

'I will give her a hint,' I replied.

On our entering the drawing-room, we found my cousin, Mrs Le Ferrier, and young Finch—as the Oxford-man was named—grouped round the piano. Charley at once left the room and walked out on the beach. I remarked that my cousin and Mrs Le Ferrier had struck up a violent friendship, as is the habit with gushing young ladies. They sang duets together, sat talking in subdued tones, and eventually left the room—to retire, as I afterwards found, to the solitude and privacy of Mrs Le Ferrier's bedroom.

It was on the following morning that I first had an opportunity of speaking to Annie alone, and I then said: 'Annie, it might be prudent if you did not strike up such a violent friendship with Mrs Le Ferrier. I don't think she is a desirable acquaintance for you.'

Annie gave a toss of her head, as is the custom with young ladies who are firmly convinced of their wisdom and knowledge of the world, and replied: 'She is the nicest woman I ever met; and we are already the greatest friends. I am not going to give up a friend because of other people's spite.'

'Spite!' I replied. 'What can you mean? I have no spite against Mrs Le Ferrier, and can have no object in cautioning you except for your own good.'

'Thank you,' she replied; 'I can judge for myself.'

'I should like you to see more of Charley, who is my oldest friend,' I said. 'You don't know what a good fellow he is.'

'Thank you,' replied Annie; 'I know enough about him already.'

I was about to make some reply; but the caution which my legal training had imparted to me caused me to reflect. How could Annie have heard anything about Charley, which could cause her to wish to know no more about him, except from her new friend Mrs Le Ferrier? Was my phrenological diagnosis accurate? and was this woman not only deficient in conscientiousness, but possessed of cunning and malice as well? Did she fall into the error of imagining she could defend herself by accusing Charley of some crime? Such proceedings are not unusual in this wicked world.

'You ought not,' I said to my cousin, 'to believe what Mrs Le Ferrier says about Charley.'

Innocent little Annie rose to my fly, and replied: 'She has told me enough to cause me to have no desire for your friend's further acquaintance.'

I smiled at the success of my diplomacy, but saw no means by which to checkmate such malicious cunning. I made up my mind, however, to watch for a chance, and take advantage of the first opportunity of setting matters straight. That Mrs Le Ferrier had slandered Charley, I felt quite certain, but to what extent I could only guess.

Three or four days passed, and all my endeavours to bring Charley and Annie together were failures; she evidently avoided him; and whenever there was a chance of their being alone, she ran off like a frightened hare. Mrs Le Ferrier in the meantime became very intimate with young Finch, who escorted her everywhere, and seemed devoted to her; whilst Charley's recognition was confined to a stiff bow whenever he met her.

My communications with the handsome flirt—for such she undoubtedly was—had been limited to the usual 'good-morning' and a few sentences relative to the weather, &c. She had more than once 'made eyes' at me; and there was on one occasion, as I handed her from a carriage, a sort of tremulous squeeze from her hand. I now determined to play a part; and having been accustomed to amateur theatricals, I felt considerable interest in carrying out on the stage of life the same rôle which I had enacted on the stage of the theatre. More than once, Mrs Le Ferrier caught me looking at her with admiring if not adoring eyes, and somehow I was perpetually meeting her in her walks, and was able to carry little parcels for her. I was gaining ground, and young Finch was losing it. Poor Charley seemed displeased with me, and hinted that I had fallen under the spell of the siren.

In the meantime, my good little cousin was enjoying herself, totally, or at least apparently, unconscious that my old friend Charley seemed singularly attracted by her. Outwardly he was only distantly polite to her, for her manner to him was of the 'stand-off' character; and if he uttered any sentiment of a warmer nature than usual, she gave a cynical smile, and at once commenced speaking on indifferent subjects.

'Your little cousin,' said Charley to me one evening, as we lounged on the sands, 'is a dear little girl; but she seems to have taken a dislike to me.'

'She is young and inexperienced,' I replied.

'True,' said Charley; 'but therefore should be more confiding than suspicious; and yet she always seems to suspect me of something.'

I now made up my mind to obtain from Annie some details as to what Mrs Le Ferrier had said about Charley. I knew the difficulty, but hoped to overcome it. The opportunity soon occurred. I found Annie sitting on the beach one morning after she had bathed; so dropping down beside her, I commenced discussing various old friends and their present condition, and gradually brought Charley to the front, and referred to his military career, and the good fortune he had won in gaining the Victoria Cross and a Majority. I then said: 'Tell me, Annie, what was it Mrs Le Ferrier accused him of?'

'Oh, it's of no consequence,' said Annie, 'and does not matter in the least.'

'But it does matter,' I replied, 'when a lie is told about my oldest and best friend.'

'I promised Mrs Le Ferrier that I would not tell.'

'You did not promise you would not tell me,' I cunningly replied.

'No; not you in particular; but she said, for his sake, I was not to tell any one.'

'Then, as I am his true friend, not likely to be influenced by slander, you see "his sake" does not apply.'

'Well, if you must know,' said Annie; 'she said he professed fierce love to her, and made advances which she as a married woman was obliged to snub; and so she gave him the cold-shoulder, and told me he was not the sort of man for any lady to trust herself with.'

I felt almost too angry to speak, as I reflected on so unprincipled a woman being gifted with such a face and figure. But I determined to leave no stone unturned to make this woman recant, though how to do so I could not imagine.

I continued my attentions to Mrs Le Ferrier, taking care that I gave her no opportunity of accusing me of making love. She was a woman to whom adoration seemed a necessity; and had I not been aware of her, I should have believed that she was half in love with me, and ready to be wholly so. Sandmouth was very full of people at this time, and the sands were crowded every morning, and the promenade every afternoon; but to me, there were only three people in the place, or at least three who engrossed my attention—these were Mrs Le Ferrier, my cousin Annie, and Charley. I had before me a problem to solve, something like those three-move chess problems which appear in the weekly papers; and I was considering what move to make, and how and when to make it. Surely the intellect of a man ought to be a match for the cunning of a woman, I thought; but the difficulty was to get at the truth of the matter. A woman, such as Mrs Le Ferrier, worked secretly, and did not hesitate at the most audacious falsehood; whilst those who were not well acquainted with the peculiarities of the feminine mind, could not believe how the grossest inconsistencies might

appear in the character of one so gifted by nature.

I was in this state of perplexity, when one afternoon, as I was strolling on the promenade, I met an old friend, James Loter, a lawyer at Manchester. We had known each other in business as well as in private matters, and had confidences together which made us trust one another. We walked together away from the crowd, which herded like a flock of sheep, and sat down on the cliffs, to look at the sea. What James Loter told me, I will relate in the next chapter.

THE GREAT MAP OF PALESTINE.

THIS noble work, published by the Committee of the Palestine Exploration Fund, has now been before the public for a considerable time; and it is hoped that the following remarks may awaken an interest in it, and in the survey still going on, of which it is the partial outcome. As a Map alone it is unsurpassed; but when we associate the finished record with the loving, unwearying toil and care which produced it, our interest in it must be still more enhanced. When a great estate changes hands, we recognise the all-important value of the title-deeds and surveys of the property; the wording of the former is carefully conned, and all landmarks carefully compared with the latter. Here we are dealing with a vast historic estate, the title-deed of which is simple and indisputable; and England has distinguished herself in preparing a careful and most minutely elaborate survey of the Holy Land. Let us briefly exhibit the history of the Palestine Exploration Fund, and then examine the great results achieved.

The interest always felt in the Holy Land, and evinced by the records of several distinguished travellers, culminated in the formation, ten years ago, of the Palestine Exploration Fund; and, advised by Captain Wilson and Lieutenant Anderson, R.E., both indefatigable explorers, the Committee 'undertook the survey of Western Palestine, on the scale of one inch to the mile, the object being the complete examination of the whole country with an accuracy approaching that of ordnance work.' The undertaking was originally intrusted to Captain Stewart, R.E., with whom were associated Sergeant Black and Corporal Armstrong, R.E.; the late Mr C. F. Tyrwhitt Drake—who lost his life in the work—being appointed linguist and archaeologist to the expedition. Captain Stewart was invalided home early in 1872; and then Lieutenant Conder, R.E., was appointed, and worked until October 1875, having surveyed four thousand seven hundred square miles. The remaining one thousand three hundred square miles were finished by Lieutenant Kitchener, R.E., in 1877. Thus, six thousand square miles of territory were minutely surveyed and mapped by these indefatigable labourers, comprising the whole of Western Palestine from Dan to Beersheba, and from Jordan to the Mediterranean. The expenses of the work during the years 1872-77 were about three thousand five hundred pounds a year; so that over the five years during which the exploration extended, the expenses were about seventeen thousand five hundred pounds. As a result of this great survey, 'Palestine,' writes Lieutenant Conder, 'is thus

brought home to England; and the student may travel in his study over the weary roads and rugged hills without an ache, and may ford its dangerous streams and pass through its malodorous plains without discomfort.'

It must be borne in mind that these operations embrace only Western Palestine. The American Exploration Fund undertook to explore Eastern Palestine with equal care, and sent out two expeditions, each of which travelled over a small portion of the country. But, unfortunately, it was found that in the sheets which they sent over—they are not published—it was impossible 'to connect the points that were common;' and the 'discrepancies' were 'so large in amount, that it was not possible, by any amount of coaxing, to connect the one with the other.' Under these circumstances, it has been determined to survey Eastern Palestine, under the able leadership of Lieutenant Conder. This great work will embrace the minute exploration and survey, on the same scale, of Bashan, Gilead, and Moab. In carrying through this purpose, the Committee will have to meet the same expenditure of three thousand five hundred pounds a year.

A beginning has already been made with the survey of Eastern Palestine; and Lieutenant Conder returned to Jerusalem in November 1881, having surveyed about five hundred square miles of country. His plans, photographs, and surveys included many places of interest, amongst which were Heshbon, Ammán, and Arak el Emir, the great castle of Hyrcanus. The great feature of the country explored is the number of cromlechs—upright stones with cross-stones atop—supposed to represent the sacred places of the primitive inhabitants; and besides these, the explorers came upon ancient stone-circles, somewhat similar, we presume, to the 'standing stones' of Stennis and other places in Great Britain.

The results of the Western Survey are now published as follows: 'First, a map in twenty-six sheets on the scale of one inch to the mile.' Each sheet of the map is accompanied by an exhaustive memoir containing the geographical, topographical, archaeological, ethnographical, and geological particulars of the country portrayed. The maps have been photozincographed and printed under the superintendence of Lieutenant Colonel Carey, R.E., at the Ordnance Survey Office, Southampton; and present a pleasing contrast of brown and white to the eye. The Atlas is accompanied by a Key Map, which exhibits, in different colours, the portions surveyed in 1871, 1872, 1873, 1874, 1875, and 1877; and, as a proof of the minuteness of the work, it shows seventy-seven Arabic topographical and geographical terms, and thirty-four signs used on the map to indicate vineyards, orchards, gardens, woods, scrub, palms, &c. We have stated that this great work embraces twenty-six sheets, each of which measures twenty-one and a half by seventeen and a half inches. The greatest length of the land lies along thirty-five degrees eighteen minutes of east longitude, and this requires nine sheets; and its greatest width along thirty-one degrees twenty-five minutes of north latitude, requiring four sheets; therefore, to study the whole map, you require a space sixteen feet five by five feet ten inches. Extending them on the floor, you look down on the Holy Land, and can at once take in its salient features of mountain

and plain, river and lake; and you can realise the extraordinary depression of the Jordan Valley.

The maps are also to be had in a reduced form—namely, on a scale of three-eighths of an inch to the mile, reduced from the one-inch map. The whole map is thus brought into six sheets, and will thus, for purposes of consultation, be to many persons a much more convenient form than the large map of twenty-six sheets.

Either set of maps will be highly suggestive to the Biblical student as well as the general reader. If your tastes are merely those of a traveller, you can accompany him step by step, stage by stage, along the classic ascent from Jaffa (Joppa) to Jerusalem; you can see every tree which shelters him, every well which refreshes him, every building which greets his eye. If, on the other hand, your tastes are serious, you can linger round Beersheba, see the same wells and surroundings as were familiar to the patriarchs; you can accompany Abraham step by step on his journey to Mount Moriah; or you can gaze on the surroundings of Machpelah, where he and his repose in peace. You can accompany David in all his wanderings; and in a manner never before attainable, you can realise his various haunts and characteristic escapes. And to crown all, you can follow, with reverent foot, David's Son in His various journeys; you can see the very well at which He sat 'wearied with His journey,' and at a glance, take in the surroundings on which His eye must have rested, the glorious Vale of Shechem, guarded by the historic Ebal and Gerizim. You may realise Safed, the 'city set on a hill;' or wander along the hallowed shores of the Sea of Galilee; and lastly, you can follow the Saviour step by step along His last sad journey to Jerusalem.

The Map is a noble work, and we hope we have exhibited enough of its features to awaken for it, and the Eastern Map which is to follow, the interest which both so richly merit.

MR SUPERINTENDENT'S TEST.

A STORY OF THE MELBOURNE POLICE.

SOME years ago—a good many more, in fact, than I care to recall now—I was wandering very disconsolately through one of the main thoroughfares of Melbourne, debating with myself the advisability of walking down to the quay and offering my services as steward to the captain of the first homeward-bound vessel on which I might see the 'blue-peter' hoisted. Things had gone very badly with me; every enterprise to which I had turned my attention had either fallen through or resulted disastrously to myself; and after vainly trying my luck in the colony for other three years, I came to the conclusion that the sooner I reconciled myself to the utter failure of my attempts the better it would be both for my peace of mind and my constitution.

In this dismal mood, I was listlessly reading over the shipping announcements posted on an adjacent wall, when I came across a notice from the Police Department, intimating, in tersely official language, that a few new hands were needed—hands who were strong, vigorous, healthy, shrewd, good horsemen, and rejoicing in the possession of such other natural advantages

as would inevitably insure their success in any line they chose to adopt. I was a good horseman, healthy, and tolerably strong; my shrewdness I had begun to doubt lately; and as for the rest of the desiderata—well, I suppose I was as well off as most people. Here possibly was a chance for me; at anyrate it was only a few days' delay if nothing came of it; I would make my application and chance it. I returned to my diggings, wrote an official application as per directions; and to make a long story short, received, two days later, a note desiring my attendance at the station on the following day. Here, after a rather stiff examination, physical and mental, and such tests of horsemanship as taking a five-barred gate with my arms folded—which I accomplished successfully—I was told that everything was tolerably satisfactory, and I might expect an official notification of appointment at an early date. Meanwhile, it would be desirable, I was informed, that I kept the matter, as far as it had gone, quite private; a stipulation I had no difficulty in conforming to, since I had not a single friend in the city.

On the evening of the following day, I found at my quarters a second note from Mr Superintendent, conspicuously marked 'Private,' and conveying the very agreeable intelligence that I was temporarily engaged from that day. The letter closed with a request that I would call at once on the Superintendent.

Somewhat to my dismay, I found, on presenting myself, that my permanent appointment was conditional upon my satisfactorily carrying through a special job then on hand. It was an affair of some nicety; and an old hand, from another station, would have been given the work, but for being absent on other business. The matter would admit of no delay; and it was imperatively necessary that it was undertaken by some one not, or seemingly not, belonging to the Melbourne force. In short, I was to do it. The matter was briefly this: A packet of government papers, of high importance, had been stolen from the messenger to whose care they were intrusted; and from information received, it seemed pretty certain that their present possessor—a man fast becoming notorious in the colony—would be walking towards the city next afternoon; and to prevent his intimate acquaintance with the town enabling him to escape, or any confederates attempting his release, I was to wait by a bridge on the line of road, about ten miles out of Melbourne, and get the papers from him. The man was by no means to be shot, or if possible, even hurt; but the papers *must* be secured. Minute instructions as to his appearance, were followed by a pretty plain implication that my career in the force would very largely depend upon my success.

I felt, as may be easily imagined, in anything but high spirits. The prospect of a single-handed encounter with a man of whose resources I knew nothing, and who might blow my brains out before I had a chance of attack, was not cheering. However, there was nothing for it; it was my last chance, and I must embrace it without shirking.

Next day, which was Sunday, I accordingly procured a horse from the station, and taking my revolver with me, started out to try my luck

as a policeman; and about two o'clock in the afternoon, came near the place mentioned. I left my horse at the nearest roadside 'Hotel,' sauntered to the bridge, and leaning over the rail with no very distinct notion of how I was going to act, waited for my man, with what coolness I could muster.

Two hours had passed; the sun was beginning to go down; and I was just preparing to console myself with the notion that the man had got wind of our intention, and gone by another route, when I became aware of the approach of a solitary pedestrian. As he came nearer, I ran over the description of the man I wanted—which I had learned by heart—and at once concluded that this was the individual. He was a tall, powerful, uncompromising-looking fellow of about five-and-forty, muscular enough to have lifted me up and thrown me over the bridge into the shining water beneath. I commenced to walk over the bridge as the man approached it—passed him slowly, and felt sure it was the man.

After going two or three yards, I turned back. Hearing my step, the purloiner of state documents turned round.

'Well, mate, what is it?'

'Can you oblige me with a pipe of 'baccy?' I asked.

'Oh! yes;' handing me his pouch.—'What are you doing about here? You don't look over-brisk. Broke?'

'Pretty nearly,' I replied.

'New arrival, I suppose?'

'Almost.'

'Ah! there are too many carpet-knights flooding Melbourne. Came out expecting to make a pile, got disappointed, and don't like to work for your grub, eh?—Put a screw of tobacco in your pocket—you'll find it pleasant company on the road.'

I nearly emptied the pouch, and handed it back; and as the owner put out his hand for it, I slipped my foot behind his heel and pushed him. He tripped and fell splendidly. I was pretty quick in wrestling, and I took hold of the man's throat with my left hand, put my knees on his chest, and with my right hand felt in the breast-pocket of his coat. He struggled violently, but I thought I should succeed. I got my hands on some papers; but as I was drawing them from the pocket, the ruffian got hold of my right knee-cap with his left hand, and gave it such a terrible wrench, that I believed he had dislocated the joint. Then feeling my hold relax, he suddenly hoisted himself with his right hand, sprang up, caught hold of my wrists, and hurried me to the bridge. Holding me thus, in an iron grip, and glaring fiercely at me, he said: 'I see your game: there's only one way of dealing with the police. Dead men tell no tales; so it's over you're going, youngster.' Suiting his action to the word, he released my hands, and in the same instant grasped me firmly and hoisted me.

My last chance seemed to lie in an old twist I had learned at college. As the man raised me, I placed my feet on the brickwork of the bridge, pushed myself back with all my strength, jerked a little forward, lowered my head, and then fairly twisted under my captor's arm from left to right. My school experience had saved my life; for

the man let go his hold with a cry of pain, and, quick as thought, I sprang on him.

'It's all right, old fellow; take the papers and read them.'

But in the mad excitement of the moment, and remembering my mission, I thought this surrender was only a *ruse* on the part of the ruffian. He sat down on the road in a most undignified fashion, and handed me the papers. The first one that met my gaze was a headed piece of police-office paper, on which was written, 'This is your test for entering the force;' and was signed by the Superintendent.

'Well, young man,' said mine enemy, 'you have passed the last exam.—with honours. You have nearly broken my wrist. But my horse is at the first roadside hotel. If you'll come with me I'll have a drink with you, and get some cold lotion for this sprain. I believe it will be a case of splints and sick leave; but you have done your work well. Bother the arm—how it aches!' (So did my knee.)

The report was satisfactory, and I was appointed permanently. Mr Superintendent's test caused me to be sent on various duties which led me into many rough experiences; but I never believed myself to be so near death as when I was deciding my future with my superior officer.

LAMENT OF ELLEN ON THE DEATH OF HER LOVER.

THE tears that from mine eyelids find their way,
Can ill express the feelings of my heart;
Nor can these tears, though they should flow for aye,
Allay one pain, or ease me of one smart.

Ill-fated youth! consigned to early grave,
Ere manhood's bloom had time to deck thy years;
All unavailing now for me to lave
The turf that hides thee with my burning tears!

In vain they try to chide me of my woe;
Remembrance holds thee ever to my view;
Their sympathies but urge my sorrow's flow,
And wake the anguish of my breast anew.

Each favourite scene where we were wont to stray,
Each shady grove and ivy-mantled tree,
Has cast its robe of lovely green away,
And seems to mourn the loss of love and thee.

The stream that rippled on with gladdening song,
Is hushed, as sympathetic of my woe,
And scarcely murmurs as it glides along;
While every breeze sighs thoughts of long-ago.

Earth has no charms to bind me to it now;
Its joys and sorrows have no part in me,
Since Death has laid his hand upon thy brow,
And chilled the spirit that woke life in thee.

The cheering light of Hope illumines my soul,
And tells me that I do not weep in vain;
Short space of time with fleeting wing must roll,
And then, united, we shall love again.

PRICE 1½d

THE HOME OF A NATURALIST.

(IN MEMORIAM.)

It was a plain old building, and small. It resembled a Scottish farmhouse; and the fields which surrounded it, and the steading, showed that its master was somewhat of a farmer. He had scientific theories regarding agriculture, which he was always putting to practical test. Some succeeded beyond his expectations, others failed; not because Science 'would not work,' but because experiments done on so small a scale cannot pay Science; and then Ignorance, in the form of money-grubbing *practical* farmers, laughed at the naturalist and his theories.

The house stood on a gentle slope, overlooking one of those land-locked firths which characterise the Shetland Isles. Behind, rose a tiny range of hills, whose varied peaks resemble those of the Cheviots. The house was, as I said, small and unpretending, more so than other houses in the place; but nevertheless, a stranger would have his attention attracted to it before all others, because its lawn and garden were surrounded by more than a hundred species of shrubs and trees. In a land altogether treeless, this feature becomes at once a striking and most pleasing one. Every tree was planted by the naturalist himself, with what cost and labour was known to him only. He watched over their growth with the fostering care of a parent, and thought the time and money he spent upon his little plantation well spent. When asked by the sneering money-grubbers: 'Will that sort of thing make the pot boil?' he replied, smiling: 'Certainly; nothing better than sticks for making the fire burn and the pot boil!'

But what was his joy to find, as the years went past, and his trees became acclimatised, that woodland birds were attracted by them, and finding both shelter and food, took up their abode among the kindly branches. Nor did the birds come merely as stray visitors, but as actual residents. The chaffinch and wood-

pecker, the wren and the hedge-accentor—once but rarely seen, and then only as solitary wanderers—now colonised the shrubbery. The cross-bill, the rose-coloured pastor, the fieldfare, the mealy redpole, redstart, linnet, and blackbird, became familiar visitors. The naturalist's heart rejoiced.

But there was one serious drawback to his delightful contemplation of the feathered wood-folk who had so graciously lighted among his greenery. If he loved birds, he also loved beasts, and of all beasts, a cat was the delight of his soul. Now, cats, like naturalists, take intense pleasure in crouching in quiet corners to watch the motions of winged creatures. To be sure, the quadruped's motive for so doing is different from that of the man, and the result is tragically different too. It was the naturalist's misfortune to see often a mangled minnesinger borne past him by the lithe grimalkin that daily sat, sleek and gentle, upon his shoulder while he dined. She shared his meals, and had not the excuse of hunger for her cruelty. He kept more than one cat, and the havoc wrought by those house-tigers among the birds was too terrible. I suppose their master received compensation in the interesting indoor study which his felines afforded. He was always ready to excuse the cats on the plea that 'it is their nature to;' but he did not fail to chastise them at the same time; and his rebuking was not without effect upon some of these bird-fanciers.

The house-pets knew, one and all, that the dinner-bell was a call to meals, and would flock from various parts of the house or fields to the dining-room door and window. Some were allowed to come into the room. More than once, a feminine chorus of remonstrance was raised by the ladies of the family, and the result was temporary banishment of the animals at meal-times; but the edict was seldom carried into force for more than a week, as even those who had been loudest in requiring their absence, missed their dependents so much, that tacit permission for their recall was given. A tax was levied upon every plate and

dish before it left the table, a process which the interested animals naturally regarded as the great event of the hour. All dry crusts and small slices of bread went into the naturalist's pockets; and what pockets they were! They bulged out on each side; and their owner, when wandering about his fields, was usually attended by a motley throng of those who knew well what those pockets contained. Running about his feet after the manner of Skye terriers was Rough, who had lost one eye, and never could bear the smallest allusion to his misfortune. Dogs do not parade their infirmities, nor will their self-respect permit them to claim either charity or indulgence because of misfortune. One or two cats stealthily kept pace with their master's slow step, seemingly unconcerned in all around, but very wide awake internally. An ox with its large tender eyes would appeal for a caress; while a pony would be showing its frowzy brow against its master's shoulder, munching crusts with great satisfaction. Dickhalver, a splendid gamecock, usually stalked dignifiedly by the naturalist's side, as one who thought, and in his own way said: 'You and I are reasoning beings, and must set an example of decorum to the lower animals.' A flock of pigeons would hover over his head, sometimes alighting on any available part of his person. A hooded crow, in his handsome gentlemanly uniform of black and gray, accompanied the procession, taking notes. Some ducks would join it at intervals, though these not unfrequently quarrelled with the cats. Even gulls and cormorants occasionally helped to swell the group.

Benjamin, slight and pretty, with large thoughtful eyes, and the overwise ways of a boy whose life is chiefly spent among grown-up people, would oftentimes slip his wee hand into that of the naturalist, whose mind was never so absent that it could not be recalled by that touch. Then what talks they would have, to be sure! Not unfrequently an elfish girl, with thin pale face and restless gait, would add herself to the group, startling the more refined creatures by her abrupt motions, startling her father yet more by her metaphysical ideas upon every subject that ever stirred the thoughts of a mere human being.

On fine summer days, the naturalist would often effect a disappearance by simply stretching himself at full length in a field of grass—tall rye-grass, where the cornerake delighted to nest, and over which the skylark loved to pour his melody. Very different the harsh cry of the one to the song of the other; yet the naturalist loved the voices of both, and would spend hours in their haunts. One might almost have believed that he slept, so motionless he lay; but the girl afore mentioned would at times invade his solitude, and she always found him gazing straight into the sky, or watching the movements of some insect creeping among the surrounding grasses. If happily he were 'i' the vein,' he would tell her what strange cloud-worlds he saw, and how they were peopled by the creatures of his imagination; and then his fancy would carry her beyond cloudland into the Unseen—almost, she thought, into the presence of the Creator; for Nature's God, he said, was best seen and known through His works. An insect losing its way, and hurriedly creeping

over his dress, would prompt some marvellous tale of the scientific world—tales that have all the charm of truth to recommend them. He always affirmed that insects were among the most intelligent creatures in the world. He delighted in the study of them. He would lay a beetle, or caterpillar, or earwig on his hand, and point out its beauties, until his girl would as soon have thought of shrinking from a flower as from a creeping thing. Spiders were great favourites; bees and ants a never-failing source of amusement.

During the summer months, his home in Ultima Thule was frequently visited by wandering 'scientists,' who were always heartily welcomed, and given every assistance in his power. He was at home on almost every branch of science, although he modestly prefaced any information he had to give with a disclaimer. Being an expert linguist, he could always converse with foreigners in their own tongue. It was amusing to observe the varied expression of different sorts of travellers when they were first introduced to his parlour. The snob looked unutterable disgust; the mere tourist stared his wonder and took notes; the man of science was full of curiosity; the lady rather frightened. It was a curious place, certainly. Over the mantel-piece hung useless flint-lock fowling-pieces that had seen service in their day; also a variety of weapons in use among savage tribes; though how boomerang, tomahawk, lance, or arrow-tube got there, their owner only could tell. Among these were bunches of quills; clusters of pony-hair, that were very suggestive in such company, of scalp-locks; some queer stones, fossils, and pretty shells. On the mantel-piece itself were books of every description, rising tier on tier, all well thumbed, yet frequently covered with dust, which had gathered there *not* by the usual mode, but through his experiments upon the coal and ashes in the grate. He had theories about fuel as well as about everything else; and some of the 'notions' which were thought 'so queer,' are now being recognised as full of practical wisdom. The sideboard was crowded with medicine bottles and the chemical apparatus of his profession. The room, in truth, looked a picture of disorder, but in reality was not so, for its presiding genius knew the exact position of each book and bottle. It was only when others intruded themselves and belongings, that the reign of chaos began.

Besides that parlour, where he usually sat, the naturalist possessed what his children called a den. A den it truly was. Oh, the marvels which came out of that place, and the curiosities and useful articles which disappeared into its depths! There is a tradition in the family that once the piled-up heaps were overturned, and a plough was discovered which had been amissing for years. In one corner of this den there hung a skeleton, which acted as a very effectual bugbear to over-curious children and servants. One shelf contained medicine bottles out of number, with brown-paper parcels, bones, and boxes. One parcel contained a portion of skin which had once covered the body of Burke the murderer, who had been dissected in Edinburgh by the naturalist along with other young medicals. Beside that gruesome relic lay a

petrified stone from Mount Sinai. In a corner by itself lay a store of tiny shoes—the wee worn-out things which his little ones had shed. Some of the small feet which had pushed through the leather were lying still enough, after a brief time of restless trotting up and down; and the father hoarded these memorials of feet that were not meant to walk this earth.

Somewhere in the mysterious space in the roof was stored for some years a collection of stuffed animals, the gifts of well-known naturalists. These creatures were periodically put out on the lawn to air; and a queer sensation they produced there. The domestic animals took flight, all except the dogs, which showed fight at first; but soon learned that the fierce, wild beasts had long since ceased to claw. Unfortunately, the small house, crowded with children and other live dependents, had but sorry accommodation for the stuffed beasts, which in course of time began to look mangy to a degree. At last, some wise person suggested that the collection was decidedly 'bad for people,' and a bonfire was made of it. Armadillo, sloth, tiger, bear, and bison, surmounted by a boa-constrictor—whose internal arrangement of arsenical soaped stuffing had been leaking all about the place for months—made a grand pyre, round which the dogs and bairns bounced delightedly.

One especial book over which the children pored until the pictures became as familiar to their eyes as each other's faces, was Bewick's *British Birds*. The dear old volume, 'sair worn,' is now a cherished heirloom.

The naturalist's home was visited by many of our great men. His brother the Laird also opened his door at all times to the stranger; and thus began friendships which were lifelong with many of the lights of the scientific world. It must have been a great pleasure to some of those men to hide, as it were, from the busy world for a short time in that sweet, wild, ocean-girdled bit of land. There they could prosecute the study of Nature without the distracting cares which surround less isolated homes. It must also have surprised them to find an intellect like his 'buried' in such a corner of the earth. Often he was asked why he chose to live there. He might have earned fame and wealth elsewhere, for he was a skilful physician, as well as a naturalist second to few; but fame and wealth were not the objects of his ambition. Far dearer to him the facilities which Shetland offered for the contemplation of Nature and her many marvels. In the home of his choice, which was also the home of his birth, he could exercise a freedom of action such as he could enjoy nowhere else in Britain. He could wrap himself in his black Spanish cloak, or any sort of dress he pleased, and not be called odd. He could shut himself up, and refuse to be disturbed, without offending some powerful neighbour or patron. He could ride his pony everywhere, carry his researches where he pleased without meeting a warning to trespassers stuck up by the way. In short, he preferred a natural happy mode of life to an artificial one, attended by earthly honour, dogged by earthly care; and so he remained in the little paradise he had created for himself.

When a young man, he was a keen sportsman;

but he admitted that even when his love of sport was very great, he always had pangs of conscience after the game was bagged; and when the hunter's zeal was strongest, he never took the life of bird or beast without a good reason for so doing. In later days, he never used a gun. More than once, he had an old fowling-piece repaired, or he bought a new one, and hinted to his boys that he meant to show them he could shoot still; but he never fired a shot. The girl, who was always seeking from him the why and the wherefore for things seen and unseen, wondered, when she heard him tell of his youthful exploits with the gun, why he had lost that love of sport. The wondering at last shaped itself into a question; and she never forgot the look of anguish which swiftly crossed his face as, turning from her, he said: 'You'll learn the reason when you are older, my bairn.' She had often heard the sorrowful tale of a brother lost when she was little more than a baby. He had died through the carelessness of a companion, who had placed a loaded gun across the thwarts of a boat, and some one stepping on the lock, sent the charge through the poor youth's head—a most promising young man, scarcely past his majority. He had all his father's passionate love of natural science, and something more than his father's power of turning his genius to the uses of every-day life. A son to make any parent's heart glad—gentle-tempered, eloquent, persevering, brave, good. An author on Botany at fifteen, a Professor of the same at twenty, who can wonder that from the time he met so hard a fate, and was buried far from his home and kindred, that his father's sensitive nature shrank from the use of that weapon which had wrought such woe! The girl wondered no more; and her surmise was correct.

It must not be supposed that though the naturalist spent much time in the calm contemplation of Nature, that therefore his life was one of pleasure and ease. The work of a country doctor made his life no idle dream. Night and day he was at the service of the fisher population, who loved him for the skill he bestowed upon them, and yet more for the sympathy he showed in all their doings. Many a rare trophy drawn from the depths of ocean, and preserved by the men, not because they saw any value in a bit of coral or a queer shell, but because they knew that 'the Doctor will be glad o' the like'—many a splendid dish of fish, many a well-knitted pair of socks or gloves, showed that his kindness was fully appreciated by his poor patients.

Yet, with all his manifold duties, he found time to study many books. He delighted in works of travel; and affirmed that Gordon Cumming's adventures would be found to be nearer truth than the world generally supposed. Later travellers have confirmed what poor Gordon Cumming said.

The first thing he did when coming down in the morning was to read and meditate over a chapter in the Bible. After that, he read a Dictionary! His children used to wonder how he could possibly find interest in so dry a book. No doubt it was the study of the Bible and Dictionary which made him speak and write such pure, true, and elegant English. At breakfast, the four-footed pets came in with the children, and all received a morsel of some dainty from the naturalist's plate. Breakfast was a meal over which he delighted

to linger, and only the apparition of some factotum whose patience was short-lived, saying, 'If ye please, sir, I'm waiting for,' &c. brought the meal to an end.

Although his manner was always grave, almost to severity, he loved to see others happy; and his children have no brighter recollections than of the long winter evenings, when he made his sweet-toned violin breathe such melody as only a master's hand can evoke from any instrument. Often he merely played dance-music, that the young people might enjoy what he called healthful recreation; but oftener they sat spell-bound while he played plaintive Scotch airs, stirring pibrochs, grand marches, soul-melting melodies, sacred music. Weber's Last Waltz was one of his favourite airs.

His domestic life had been deeply tinged by sorrow; but the great intellect, and yet greater heart, bore him through all, so that he retained in old age all the fresh feelings of younger days. His interest in the progress of science was as keen after he had seen fourscore as it had ever been; and although the number of his pets had decreased, they were not the less cherished when life became a vague dream of the past.

I went not long ago to the Naturalist's Home, to look again upon the place where he had lived and laboured, the spot of all others indissolubly associated with him, where he has left a never-dying memory. There were many changes about the old place, though rock and hill and northern sea change not, nor does the heaven above them; nor indeed did it seem as if the naturalist himself were dead, for wherever I went, I seemed to see and hear him. The skylark was singing over his fields, and the cornrake uttered its quaint complaining among the grass, just as they did years ago when he lay and listened to them. But there were no interesting pets about the house—if we omit his grandchildren—only the necessary sheep-dog, cat, horse, fowl—characterless on the whole, because the wonderful tact of one who understood the nature of bird and beast, was not there to evoke their reason, as it had done that of their predecessors. Some of the trees which he had fostered had grown a good deal, and had thrust their branches across the paths he had trodden smooth when wandering up and down, with bowed head, pondering over the mysteries of creation. I knew my way by those paths to the graves of his household; and I found his resting-place, quiet and solemn, under the shadow of his own trees, with birds he had loved piping on every spray, with no sound of the busy world within reach. He rests there as he wished, beside the Love of fifty years.

As I thought of the long life which had found refuge from care, and comfort for sorrow, in that creation which was given by its Maker for the use of man, I recalled some lines by Longfellow, which seemed most appropriate to such reflections:

He wandered away and away
With Nature, the dear old nurse,
Who sang to him night and day
The rhymes of the universe.

'Come wander with me,' she said,
'Unto regions yet untrod;
And read what is still unread
In the manuscripts of God.'

And whenever the way seemed long,
Or his heart began to fail,
She would sing a more wonderful song,
Or tell a more marvellous tale.

Then bending over that grave, I remembered his words: 'God's book of Nature is the best book I know, and the most perfect revelation of His Fatherhood that can be desired. The man who can study Nature and not see a Father's love, care, wisdom, and direction in it, must be a man with intellect undeveloped.'

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

CHAPTER IV. CONTINUED.—A FURNISHED ROOM FOR A SINGLE GENTLEMAN.

BEHOLD Hiram, two days later, after an interview favourably conducted, and after all due formalities achieved, invested with badge and satchel, and in fullness of time assuming his place as conductor. On his first journey, he was content to repeat the hoarse cries of the driver. On the second journey, he was familiar with his duties. Before the day was done, he had merged his own notions of the English language in the waters of oblivion, and cried 'Benk! Benk! Benk!' or 'Whitecheppel!' like an omnibus conductor to the manner born. He appeared by-and-by in a tall white hat and a scarf of vivid blue and scarlet, and became a man of mark. The regular travellers upon his route began to know him, and he thrived and grew immensely popular. It was noticed at the office at which he paid in his money that the receipts of the vehicle he superintended had amazingly increased, and the authorities put their own construction upon that fact. Mr Search was incorruptibly honest and scrupulously careful. Mr Search was neat and smart in personal appearance, and had indeed become something of a dandy. Mr Search shunned the intoxicating cup, was always up to his work, always good-humoured, yet never without his quaint repartee when needed—could indeed sting upon occasion—in short, he became a most respected member of a not too respected or respectable body. That eminent patter vocalist, The Great Blower, advertised as the author, composer, and only singer of *The Leary Cove*, heard of Hiram, travelled many stages by omnibus in order to study him, and appeared at the Megatherium Concert Hall as the author, composer, and only singer of *The Yankee Toff*, with an imitation of Hiram, which raised him to a very pinnacle of fame amongst the conductors of his day. The ditty of the Great Blower became popular, and Hiram heard it from many barrel-organs. Street youths whistled it and shouted it; nightly choruses with applausive accompaniment of hand and foot, were sung to it at the Megatherium Concert Hall, and Hiram became a celebrity.

'I reckon,' Hiram would say to himself, in contemplation of this and other matters, as he

swung on his strap behind the omnibus, 'that you British people air *the* feather-headedest on the face o' the globe. It don't take much to set you goin'—that's a fact. An' yet, you're that o-pinonated about the national solidity of character, you make me laff. You air allays flyin' off the handle about things that a civilised infant wouldn't cry or smile at, and then you say: "We air a solid people—we air John Bull—we air—in all our doin's." If ever I fall real low in life, I'll take to lecturin', an' tell you what I think about you.'

The incense of Fame had no effect upon Hiram; and in the course of a few weeks the 'star comique' of the Megatherium had found a new theme, and the raucous ditty of *The Yankee Toff* was forgotten. The conductor's only grievance was that the post he held gave so little time for the pursuit of inquiry into wider and shorter avenues to fortune. His duties began at eight in the morning, and continued until half-past eleven at night. Holidays were few and far between; and Hiram was gradually growing readier and more ready to emancipate himself, when an event happened which influenced his whole career—an event the like of which has influenced more careers than any mathematician now alive would care to count. All sorts of assaults of Fate had Hiram submitted to, and he was beginning to think himself invulnerable, when this stroke came upon him, and he succumbed almost without an effort to avert it, or to recover from it.

Hiram, it must be said, had rather a gallant and insinuating way with the ladies. His manner towards the fair sex was marked by a polish and a finish to which few gentlemen of his profession have aspired. Did Hiram behold a lady on the kerb, the imperious cry of 'Benk! Benk! Benk!' which bade the travelling world be seated and no longer keep him waiting, was instantly modulated to a tone of gentleness, almost of confidence—'Benk, ma'am!' The tone had even a touch of slyness in it, as though it were a secret that the lady chose to go that way, and only she and Hiram knew it. There was something in the manner of his opening the omnibus door to a lady—a *je ne sais quoi*—an artistic tone of mind was somehow impressed upon the action. It soothed old women—it flattered plain women—young and pretty women were not unimpressed by it.

It was his particular hobby to keep time like a ship's chronometer, and to arrive at every pausing-place and to leave it to the nearest possible fraction of a minute. This business-like peculiarity being noticed by people who had regular appointments at settled hours, he secured a constant *clientèle* for both journeys, and, amongst other passengers, he every day took up a young girl within a hundred yards of his own lodgings, and set her down at a certain corner in Cheapside, reversing the process in the evening. She was pale and thin; but had that delicate and fragile prettiness which is noticeable in many girls of city breeding. She was scrupulously neat; but her garments indicated no great prosperity. Her mantle was threadbare, her gloves were mended; there was a look of waiting in the pale and patient face.

Hiram regarding these things, felt almost a pang of pity when the morning or evening twopence dropped from the gloved thumb and finger into his own palm. It was hard to take it; and if the vehicle had not been an omnibus, but a carriage, and Hiram's own, he would have set it at her service. The keen winds of autumn mornings were blowing clouds of dust about the streets, and she came no better clad. The threadbare mantle was more threadbare; the neat little linen collar and the neat white cuffs showed woful signs of wear; when closely looked at, the gentle face grew paler and more sad. One morning, Hiram missed the figure at the accustomed corner, and was amazed to find how much he missed it. Without a signal from him, the driver stopped at the corner at which the little milliner or shop-girl was accustomed to alight, and Hiram, in the act of ringing the 'bus-bell to set him going again, saw her walking down the by-street, and knew that the morning twopence had grown too precious to be missed.

'Poor pretty creetur,' said the gentle-hearted Hiram. 'The ile's dried up, an' the barrel o' meal's pretty clean scraped, I reckon. Wonder now, if I could get her to drive gratis. Most likely she'd feel insulted if I asked her.' Hiram watching for the little figure at morning and evening in the gusty streets, saw it sometimes beneath a shabby umbrella, and sometimes so fluttered by the wind that it almost seemed she might be blown away bodily like a leaf.

It so befell that Hiram on one of his rare holidays found himself sauntering down Cheapside at the hour at which the little girl began her journey home. There was the fragile figure, with its hurried yet graceful step, before him. Hiram's long legs kept him within easy distance, though he seemed to do no more than lounge. She went on, looking neither to right nor left; and Hiram followed. He had ample time to study the thin garb, the worn shoes, unfit for the greasy pavement over which the little feet tripped so quickly; and his sharp eyes took note of every sign of poverty, and every struggle to be neat and to hide poverty away. She turned at the accustomed corner, and Hiram, with a shame-faced reluctance to play the spy upon her, could not refrain from following. Right and left, and right and left again. Then she paused before a dingy door in a street of excessive shabbiness, and admitted herself with a latch-key. Hiram sauntered past the house, and saw a card above the door inscribed, 'A Furnished Room for a Single Gentleman.'

'That's near enough,' said Hiram. 'I do not lay out to be a gentleman; but I'll bet I'm single; an' mebbe I'm as near the gentlemanly mark as they are to be found in this locality.' He sauntered past the house again. 'Why not?' he asked himself. 'It's near my starting-point. I'll have a look at it anyway.' He advanced to the door and knocked. The girl herself appeared, and looked at him with a glance of no recognition. 'You have lodgings for a single man, to let?' he said.

'Yes,' she responded. 'Do you wish to see them?' Her voice was gentle like her face, and had a tired tone in it, as the face had a tired look.

Hiram answered 'Yes.' It was dusk within the house; and she left him for a moment, and returned with a candle. Going towards him with the light upon her face, she looked more worn and fragile than before. She led the way up-stairs into a small room, neat and clean, but sparsely furnished:

'What's the rent?' asked Hiram.

'Four shillings a week,' the girl answered. Her glance said so plainly: 'Take it; oh, pray, do take it!' that Hiram's voice was quite husky when he answered:

'That's a very small rent for such a nice little room. When could I come in?'

'Oh,' she said, 'at any time.'

'To-night?' suggested Hiram.

'Yes,' she answered; and Hiram, producing a purse which was by this time fairly stocked, paid a week's rent in advance. The girl's face brightened at the sight of the money, as no face so young and tender ought to have brightened at so trivial a windfall, Hiram thought. 'Poor,' he said inwardly: 'Deadly poor!' There seemed nothing more to linger for. She held the candle aloft, to show him the way down-stairs; and when he looked at her, a sort of halo rested on her hair. The weary expression of her face had changed to one that had a gleam of hope in it. 'Poor,' said Hiram, inwardly, again—'deadly poor!'

'Are you the landlady?' he asked, turning at the first step.

'My mother rents the house,' she answered. 'She is not very well. But you can see her, if you think it necessary.'

'Not at all,' he said, and descended, but turned again in the hall. 'I forgot to ask the name and address,' he explained.

She set down the candle, and entered a room the door of which opened on the hall, returning in a moment with an addressed envelope.

'Martial is the name?' said Hiram looking at it. 'Air you Miss Martial?' She inclined her head gravely. 'Good-night, miss,' said Hiram; 'though I shall be here in an hour.' She inclined her head again, and the door closed behind him. The lodgings he had hitherto used were not more than a quarter of a mile away, and Hiram's whole belongings were easily packed in a second-hand carpet-bag and a second-hand hat-box. The landlady claimed a week's rent in lieu of a week's notice; and he paid it and emerged upon the street.

'You will not die a millionaire, young man,' he said, admonishing himself. 'You are not so encumbered with the pieces that you can afford to chuck 'em blindfold. But Hiram, do you know what that little creature's face said when you counted them four shillin's down? "Here," it said as plain as a book—"here is an unexpected-meal." He paused before the last word, and breathed it half aloud. 'Hiram,' he went on, 'how many ordinary-lookin' females have you drove sence you adopted the pro-fesh you live by? How many of 'em's been that poor it's been a pity to look at 'em? An' how many of 'em have you yearned over, Hiram? Come now, how many? Don't you be ridiculous. It's no kind-heartedness in you. It's a pretty face and a nice manner that's fetched you so, sir. Have the murder out, Hiram, have it out!

You've fell in love, you have, an' you don't know no more about the young woman you've fell in love with than a yeller dog in Constantinople knows about *Pilgrim's Progress*.'

THE RELIEF OF THE POOR AT HOME AND ABROAD.

THOSE of our readers who have a house of their own—may their number ever increase!—are only too well acquainted with the fact that one of the privileges of their proud position is that they have to pay rates and taxes. And sometimes their minds are sadly perplexed with the multitude of these claims. 'Road-rate, water-rate, sanitary-rate, school-rate, county-rate, poor-rate; dear me, what a number of rates we have to pay now,' cries the householder. 'I wonder whether, in any country besides our own, people have so many calls made upon them?'

Now, this is a very reasonable inquiry. But, as we all know, we must not ask too many questions at once, if we would have answers. Let us think of one thing at a time.

Well, what about the 'rate for the necessary relief of the poor?' It is one of the heaviest of our burdens—many millions annually. Is it all necessary? Do other nations pay such rates as we do? We all agree that some relief must be provided for very poor persons. The poor have never ceased out of the land; nor is there any probability that they ever will in our time. There are poor widows, with children whom they cannot maintain without assistance. There are orphan children whose friends are too indigent to support them, or who have neglected to train them to some industrial occupation. There are men enfeebled by disease or injury; and aged people incapacitated by their very age from doing anything to earn a livelihood. These must more or less fall to be provided for at the public charge. But there are many others whose claim for support is of a much more doubtful character. It has been well observed that 'there never was time or place in which there were not to be found men anxious to avoid labour, and if possible to live at ease; nor any community so poor as not to suffer in some degree from the existence of idle and worthless persons subsisting on the benevolence, or folly, or fears of its members.' The industrious part of the community has always felt it to be a grievance that it should be called upon to maintain the idle.

Poverty and misery are the main conditions on which relief is to be obtained. But the industrious and provident labourer will never consider himself equitably treated until a wide distinction is made between him and his drunken improvident neighbour, when, from differing causes, both come to apply for parochial relief. No doubt, Boards of guardians do attempt to discriminate, but as yet ineffectually. They inquire whether the applicant is a member of a Benefit Club; but they do so with the knowledge that many Clubs are rotten, and that the poor man may have had Hobson's choice—a bad Club or none at all. He may have joined his Friendly Society in sheer ignorance of its insolvency, and have relied upon it till it broke. And it is hard to say that a man is improvident because he has not become a

member of an improvident Society. Our parish guardian feels this difficulty, but cannot see his way out of it; and he ends his speculations by saying: 'Well now, what do they do abroad?' No one, he says, has ever answered that question to his satisfaction.

Rightly or wrongly, there is, however, a pretty general impression that other nations are more thrifty than the English—notably that the French are, even though their average earnings are smaller than ours. How, then, are their poor relieved when in want? and has the method of relief anything to do with thrifty habits? It greatly surprises the average Englishman to be told that there are many countries in Europe in which the destitute have no claim to relief as their legal right. Denmark is the only one which, like England, provides for the relief of pauperism by a special tax. The Danish poor-law closely resembles that of England. The older Danish legislation indicates three classes, to each of which a specific kind of relief is assigned: (1) Old and infirm persons, who are to receive aid in kind, or money, clothing, lodging, and medical attendance; (2) Orphans, or children whose parents cannot maintain them, are to be boarded with suitable persons, or otherwise properly brought up; and (3) Persons or families who are in need of partial help are to be assisted to find work, and if this cannot be obtained, are to receive the necessary assistance. There are only three countries, Denmark, Sweden, and Prussia, in which there is a legislative declaration of the right of every destitute person to be supported by the state—though Denmark is the only state of the three that taxes the community for that purpose. France and Belgium shrink from admitting any such 'right,' fearing lest, by a compulsory poor-law, they should open the door to communism and socialism. Except in the cases of lunatics and of deserted children, there is no compulsory relief in France. All relief that is given professes to be given 'in charity.' Russia and Turkey, agreeing in little else, are alike in having no poor-law. Italy, Spain, and Portugal leave the poor to public charity. Austria, several of the German states, and Norway assist voluntary contributions by grants from local administration or the state. From this it follows that there must be sufficient *uncertainty* as to provision in sickness and old age in European states generally, to induce people to be provident, whether they are so or not.

Great praise is given both by French and English writers to the French system, which throws the relief of the poor, first on their own families, and then on public honour and public charity. It has its *bureaux de bienfaisance*, which have invested property as a foundation, and its *bureaux de charité*, deriving their funds exclusively from voluntary offerings and collections (ten per cent. on theatre tickets, one-third of the price of graves, certain fines and confiscations, poor-boxes, collections in churches). The subsidies only amount to about one-fifth of the whole. All persons out of work, or burdened with an over-large family, as well as the sick and the aged, are considered fit subjects for relief; but the relief is by no means obligatory.

But if we inquire: 'Does this system of relief provide for all cases of necessity throughout France?' we soon find it does not. There are

thirty-seven thousand communes in France, but only between thirteen and fourteen thousand which have *bureaux de bienfaisance*. And of those unfortunate creatures whom they relieve, the majority get no more than one shilling per month; the extreme meagreness of which dole points, however, to the presumption that the recipients must have some other sources of income. It is, however, a curious fact, that when we pass from France to Belgium, we find a country in which pauperism is treated in the same fashion, but with this result: the proportion of paupers is nearly twelve per cent. of the population; while in England it is a little over four and a half per cent. The causes assigned for this fearful state of Belgian pauperism are: (1) The excessive density of the population; (2) The excessive amount of assistance and alms provided by public and private charity; and (3) Intemperance.

The methods of poor-relief in the United States differ in the different States; but generally, their workhouses are to be regarded as penal institutions, rather than as places for the relief of the destitute poor; and perhaps for that reason, as well as for others, outdoor relief is the prevailing practice. In New York, when an able-bodied person applies for relief, he is required, as a condition of obtaining it, to indorse an order for admission to the workhouse. The following is the form:

'The Superintendent of the workhouse will receive C. D., native of E., who stands committed to the workhouse for (3) months. Aged —. By occupation —. Residence in city or county — years. Cause *destitute*.

(Signed) A. B.
Commissioner of Public Charities }
and Correction.

Department of Public Charities }
and Correction, New York. }

(Indorsement.)

I hereby consent to the within commitment.
(Signed) C. D.'

The cost of maintaining each destitute person in the New York workhouse is one dollar twenty cents per week.

It does not seem possible to learn from the States how to reduce our own poor-rates. The relief of tramps there is a greater burden than it is with us. The New York State Board of Charities stated in 1876 that the greater portion of these tramps were unmarried able-bodied labourers. They judged that two hundred thousand acts of relief, at an expenditure of nearly forty thousand pounds, were annually bestowed on such persons by the public officials of that State.

Another Report gives a curious account of the working of one of their rules. The overseers are paid in proportion to the number of cases they relieve, obviously to make it their interest to overlook none. Apparently, some of these men made a lucrative business of their employment; even keeping 'runners on the road to pick up the members of this wretched class, for the profit there was in keeping them.' The allowance to the officer for lodging and feeding a tramp varied from twenty-five cents to a dollar. In several towns, tramps were arrested and sent to jail; but this turned out to be an expensive method of proceeding.

as the committing justice was entitled to a fee of two dollars, and in some cases the officer was paid five dollars for conveying the vagrant to prison. One justice, we are told, sent a bill to the Board of Supervisors for five thousand pounds for the commitment and transportation of tramps for a single year!

We cannot, therefore, hope to derive much instruction or guidance from our neighbours as to the best way of improving our system of relief. Intemperance, improvidence, wastefulness will always produce and aggravate pauperism. But these are no new discoveries; and the fact remains that notwithstanding improved administration and Temperance Societies, we expend nearly eight millions a year in poor-relief. We cannot diminish the allowance to the pauper; it is small enough already. We can do little more in the way of repression. But a proposal has been made which in the main indicates a way by which our burden might be diminished with advantage to all. Broadly stated, it is this: That every man ought by law to be compelled in his youth to commence to provide against destitution in sickness and old age, by paying, into an Insurance Office possessing a national guarantee, a certain weekly instalment of his wages. Any such scheme, to be successful, must be on the ground that a distinct advantage should accrue to himself when no longer able to work, and with the promise of a fixed and specified payment to his widow in the event of his death, be it sooner or later.

Were the scheme adjusted in this direction, and were the government to back it up by its invaluable security, it would be of great advantage, not only to the improvident, but to those also who endeavour to be provident. Though there is much to be said in favour of Friendly Societies, these are not in every case to be relied on. Nothing short of a National Club, or a Thrift Society such as we lately noticed in our columns, would meet the case. A man would find it wherever his work carried him. And having made up the required sum in regular payments, he could never afterwards lose its advantages.

Next, it would compel the improvident to become provident. Without compulsion, the thriftless will never be made provident. There are thousands of young labourers who spend their five or ten shillings a week in drink and tobacco, and never lay by a penny. They contaminate others by their example, and make them grudge the money they have been induced to pay into their Clubs. Some persons are startled at the sound of 'compulsion,' and say: 'Oh, but you can't *compel* men to be provident.' But consider a little. There is compulsory vaccination for infancy, compulsory education for childhood, compulsory destruction of unwholesome food, compulsory slaughtering of cattle; why should there not also be compulsory thrift? But, indeed, the compulsory principle is in operation even now, and will continue to be in operation so long as we must provide for others. We are compelled to pay for the necessary relief of the poor. But why should we be compelled, as we are now, to pay for *unnecessary* relief? And *that* relief is unnecessary the need for which might have been provided against. 'Given A, the provident, thrifty, frugal Englishman; and B, the improvident, wasteful, pauper Englishman. Which is

the greater interference with the liberty of the subject, to make B provide for himself by compulsion if need be, or to make A, besides providing for himself, provide for B as well, and by compulsion, as he has to do at present?'

It is obvious that the adoption of a scheme founded upon the foregoing principle, would promote thrift in the most practical way. The nest-egg would always be in the nest, and the habit of putting by be systematically taught; while the habit of waste would be beneficently checked, and the advantage to the ratepayer obvious.

We need not anticipate, with some sanguine persons, a total abolition of the poor-rate; but its diminution would in due time follow the application of the principle, that every one *when he is able* shall provide against the time when he may become unable to maintain himself.

THE DROPPED TELEGRAM.

A TALE IN TWO CHAPTERS.

CHAPTER II.

AFTER referring to certain matters of business in which we had been formerly connected, I said to Loter: 'You know everybody in Manchester, I suppose; do you know a Mrs Le Ferrier?'

'Of course I do,' he replied. 'What about her?'

'I want to know *all* about her.'

Loter here got up, and looked round to see there were no listeners; and then gave me the following history of my friend.

'Mrs Le Ferrier was married about eight years ago. Her husband was much older than she, but very rich, and was a staid formal man, a banker by profession. Shortly after his marriage, he found that his wife could not exist without the admiration of every man who for the time being happened to be nearest to her. At first, he felt flattered by this notice; but after a time he objected to his wife being always out at dances or picnics, and being spooned upon by any one, from a banker's clerk to the member for the county. He objected; and a great domestic scene, I heard, occurred. During the last year or so, matters were nearly coming to a climax, for a certain Mr A—— seemed the especial favourite, although some half-dozen other men appeared also to share her notice. Mr Le Ferrier, however, obtained certain information relative to this Mr A——, and forbade his wife seeing him or speaking to him. She, from what I hear, gave her husband a solemn promise that she would not again meet him. Whether this promise was or was not broken, I don't know; but Mr Le Ferrier a short time ago made arrangements for his wife's leaving Manchester for some seaside place, so as to get her out of the way of Mr A——; and I have heard nothing of her for some weeks. She is a very handsome woman, and fascinating in her manner; but a most dangerous woman to any but the most experienced men. That's my report. Now, tell me why you want to know.'

'She is staying at the boarding-house where I am,' I replied.

'Wh-e-w!' whistled my companion. 'And has she cast a spell over you?'

'Not a bit; but I knew she must be a

woman with a history, and I was curious to hear it.'

'Avoid her, my boy, if you want to keep out of a scrape, for she is unscrupulous, and has made much mischief already.'

On the following morning at breakfast, a telegram was brought to Mrs Le Ferrier, which she opened and read, turning first red, then white. Her evident excitement caused my little cousin to say: 'No bad news, I hope?'

'No; it's only from my husband,' she replied, 'and he wants an answer at once.'

Mrs Le Ferrier left the room, and shortly walked out towards the telegraph office. During the whole day, she seemed excited and nervous, starting when she heard a knock at the door; a condition which caused my little cousin to express an opinion that she feared Mr Le Ferrier must be a cross old man, as his telegram had so worried dear Mrs Le Ferrier.

My instincts told me that the telegram was not from Mr Le Ferrier. I had no proof that my impression was correct, but still I felt convinced that it was.

At about eight o'clock that evening, a servant came to Mrs Le Ferrier, and told her a gentleman had called to see her. She instantly started up, and putting on a waterproof, which greatly concealed her figure, and a hat and thick veil, went to the door, and then walked off with the gentleman. It was past eleven o'clock when she returned. I was sitting in the smoking-room when she passed the door and ran up to her room, which was on the same landing as mine. She seemed hurried and excited, and anxious to escape observation. I sat for some time meditating on the peculiarities of human nature; for among the curious things I saw was, that Mrs Le Ferrier would have given much to have Charley once more under her spell; her pride seemed hurt that she could not bring him to her feet again, her manner to him being a strange mixture of spite and conciliation. Having finished my pipe, I went up to my room, and was met on the top of the stairs by a servant, who said he had just picked up a telegram, which was without address. I took it in my hand and looked at it. A portion was torn off the paper, and with this the name of the recipient. The telegram was as follows:

From A—— To Mrs ——, Sandmouth.—Yours received. So glad we can meet. Will be with you about eight to-night. Shall be very cautious.

I could not resist a smile, as I read the sentence about 'caution,' and compared this with the fact of the telegram being dropped on the stairs. The name A—— was given in full, and it was the name of the person whom, Loter told me, Mrs Le Ferrier had promised not to see. One thing was certain: the telegram was evidently for this woman, who had slandered my dearest friend. But she was now in my power; and what was more, she did not know it. The contents of the telegram were known to me only, and as long as they remained so, she was safe. I placed it again in the servant's hand, and asked him to go to Mrs Le Ferrier's room, and deliver the telegram to her, but to say nothing as to any one having seen it.

At the breakfast-table, Mrs Le Ferrier was calm, elegant, and deeply sympathetic with my little cousin, who hoped she had got over the worry of the telegram.

Mrs Le Ferrier said: 'Oh, it's all right. My husband sent one of his clerks here last evening about money matters, and I had a lot to do; but it's all right now.'

I dared not look up, lest Mrs Le Ferrier should see my face; for I could not repress a smile as I listened to this woman stating such falsehoods with a silvery, innocent, gushing voice, as though no guile had ever passed her lips.

These remarks decided my course of conduct. I would bring this woman to her knees, and make her confess that she had slandered my dear old friend out of spite and malice.

Retreating to the solitude of my bedroom, I matured my plan, and then entered the drawing-room, where I found Annie and Mrs Le Ferrier sitting with their arms round each other's waists in close conversation. I proposed a walk on the beach, to which the two ladies consented, though Annie said she must bathe. This suited my plan, for then I might secure a *tête-à-tête* with Mrs Le Ferrier. We went out of our house and walked down towards the bathing-machines; on nearing which, my cousin said: 'Now, I will leave you two together, and will go and bathe.'

I proposed to Mrs Le Ferrier that we should stroll on to a ledge of rocks about half a mile along the beach, a locality quite retired. As we walked on, I spoke of various indifferent subjects, for my plot must burst upon her suddenly and without interruption. We reached the rocks, and sat down, the sun shining brightly on the dancing waves.

'What a lovely view this is!' exclaimed Mrs Le Ferrier. 'I shall always think of it with pleasure, now that I have seen it with you.' As she made this remark, she turned her face towards me, and looked at me as though she were the soul of truth.

I gazed straight before me, and did not reply to this gushing remark. I had made up my mind to commence the fight at once, lest this woman should, like the serpent, fascinate me by her gaze, and cause me to relent.

'A penny for your thoughts!' said my companion, as she smiled at me, and gazed as though I were the one man in all the world.

'I was thinking,' I replied, 'what a pity it was that you had been so unjust to my old friend, Charley Steinmay.'

'Unjust!' exclaimed Mrs Le Ferrier. 'Why, it is he who has been most insulting to me. Why, one morning he was more than rude to me, and accused me of being a flirt, and I don't know what besides.'

'And you believe that what he said was quite unjustified?'

'Of course it was. I can't help it if men take a fancy to me, and so on.'

'Still, admitting that Charley was not justified in saying you—well—liked admiration, was that an excuse for you to accuse him of making undue advances to you?'

'I think it was a great liberty for him to say I was a flirt.'

'But pardon me, Mrs Le Ferrier; that is not

what I mean. You said Charley was not the sort of person to be trusted with a lady.'

'I have not said anything but what he deserves, for he was horribly rude to me.—But don't let us talk any more about this.'

'It is just this I do want to talk about; and I want you to do me a favour, and to perform an act of justice. I want you to write me a note saying that you made these charges because you were angry with Major Steinmay for telling you that you were a flirt; and that you regret having so spoken.'

Mrs Le Ferrier gave one of her little silvery laughs, and said: 'How ridiculous! as if I should be such a fool as to write such a thing. No. Your friend insulted me, and so it is war to the knife between us.'

'But you admit that the insult, as you now term it, was limited to his telling you that you were a flirt; and perhaps you had made him think you liked him very much, when you were merely trifling with him.'

'Well, to call me a flirt was bad enough. But I won't hear any more about him. If you can't make yourself more agreeable, I think we had better return.' She jumped up, and shaking the few grains of sand from her dress prepared to walk off.

I did not move, but looking at her, said: 'I'm so sorry it is war to the knife between you and Charley; because, if it is so between you and him, it is also war between you and me; for he is too dear and tried a friend for me to see him slandered and remain quiet; and believe me, Mrs Le Ferrier, I possess the knowledge of that which, were I to declare it, would be your ruin.'

She looked at me with a wild resentful look, her face becoming almost crimson. As I met her gaze, I wondered how I could ever have thought her beautiful; she seemed the embodiment of some of the lowest attributes that belong to our nature. If she had possessed a dagger, I should not have felt safe in lounging as I did calmly on the sandy beach.

'What do you mean?' she almost hissed.

'Sit down, Mrs Le Ferrier,' I said, 'and I will tell you; but please, don't interrupt me until I have finished my little tale. All that has occurred between you and Charley is known to me. He was foolish and impressionable, I admit; and when he overheard you tell young Finch that you could not think of him when Finch was present, you did him a great kindness, for you opened his eyes to his folly. When, however, you slandered him to my cousin, you were committing a wicked act of revenge.'

'How much more of this nonsense am I to listen to?' she exclaimed.

'Well, by a singular combination of circumstances I am acquainted with the promise you made your husband relative to neither seeing nor meeting Mr A—— again; and I know what the result would be, if your husband knew that you had written to Mr A—— asking him to meet you here. The banker's clerk, as you told us, with whom you had business to transact from eight till eleven p.m., I know to have been Mr A——. The telegram which you received at breakfast, and which you told us was from your husband, was from Mr A——, and was arranging the meeting

which you had with him last night. You had torn your name off the telegram, and had afterwards, by accident doubtless, dropped it, and it was shown to me by a servant. It was I who directed him last night to take the telegram to you. Now, Mrs Le Ferrier, if it is to be war to the knife between you and Charley, the contents of that telegram will be communicated to your husband. I need not remind you of the consequences.'

I had kept my eyes fixed on her as I deliberately revealed the cards in my hand. Her face was a study—first rage, then consternation, then despair. In the conflict of passion, her beauty had quite vanished.

She sat for fully a minute, her face covered with her hands. She then turned to me, and said: 'I think you are the greatest bear I ever met!'

'I accept that opinion as a compliment,' I replied. 'But you must admit, that in our war to the knife I have gained the victory. Now, Mrs Le Ferrier, I do not wish to be a bear; but I have a horror of that malicious slander in which I am sorry to say some women delight. No person besides myself knows that Mr A—— came here by appointment to meet you. No one knows except myself what was the purport of the telegram. I am strong enough to dictate terms, and I will come to terms with you. Write me that letter I asked for, and I give you my word of honour the matter will never escape my lips.'

'But what use do you propose to make of that letter?'

'I intend to show it to my cousin, and so prove to her that your accusation against Charley was untrue.'

'I could not endure that she should know it was, for she loves me very much.'

'It is for you to decide,' I replied. 'I will meet you here to-morrow at the same hour. If you bring a satisfactory letter, the thing will be at an end. If not, you must be prepared for the consequences. I cannot have my friend's name longer traduced. Shall we return now?'

'You might have the politeness to help me up,' she said; and as she took my hand, she gave it a squeeze and said: 'How can you be so unkind to me?'

We walked in silence towards the groups assembled near the bathing-machines, and found my cousin ready to return. I left her and Mrs Le Ferrier to walk home together, and took a brisk turn, to think over the success of my plot.

True to her appointment, Mrs Le Ferrier came to our rendezvous on the following morning. Her letter was almost word for word what I had verbally dictated. After reading it, I placed it in my pocket-book, and I made her a definite promise to observe her secret. I hoped she would not think too severely of me for what I had done to save my friend's reputation.

'I shall hate you all my life!' she exclaimed.

'Perhaps that will be a safer condition than if you pretended you loved me, as you did to Charley, and (but never mind) the other!'

She jumped up, and said: 'Good-morning, Mr Homely. I hope we shall never meet again.'

I made her the most polite bow, and smiled as pleasantly as though she had paid me the greatest compliment, and resumed my seat on the sand.

When I returned to the boarding-house, I found every one surprised at the sudden departure of Mrs Le Ferrier. She had left Sandmouth suddenly, no one knew why. Poor young Finch seemed distracted. My little cousin actually cried, and declared that Mrs Le Ferrier was the nicest, most beautiful, truthful, and unaffected woman she had ever met.

I allowed two days to elapse before I spoke to Annie. An opportunity then occurring, I said: 'Do you really believe what Mrs Le Ferrier said about Charley?'

'Of course I do; for I don't believe she would tell an untruth, or even misrepresent things, for the world.'

I smiled at the self-confidence of my dear, little, simple-minded cousin, and said: 'Supposing Mrs Le Ferrier herself admitted that she had slandered Charley out of spite, what would you think then?'

'I don't know what I should think, because it is impossible that she could say such a thing.'

I took Mrs Le Ferrier's note out of my pocket-book, and gave it to Annie, saying: 'Read this.'

She read the letter slowly, and then looking at me, said: 'Good gracious! what does this mean?'

'A confession from Mrs Le Ferrier that she told you what was not true.'

'But what object could she have in saying such things?'

'It is always somewhat difficult to give a reason for a woman's acts; but you may have heard that "there is no fury like a woman scorned." Perhaps you had better not inquire more, as regards details. But you now see how unjustly you have been prejudiced against Charley, who is the best fellow that ever lived.'

'Yes; I have indeed,' she replied. 'But who could believe Mrs Le Ferrier was so false?'

The ice was now broken; and though I felt bound in honour not to tell Charley one word about the letters or telegram, or my knowledge of Mrs Le Ferrier's proceedings, I yet hinted that I knew my cousin had changed her opinion of him. She, dear little girl, with a high sense of justice, now tried to make up for her former half-rudeness, and she and Charley became great friends. Before a month had elapsed, they were engaged; and in six months were married. Charley's Indian appointment was not filled by him, for he exchanged, and shortly filled an important staff appointment in England. We have been closer friends than ever since his marriage; for he knows I had some hand in clearing away the aspersions cast on his character; but he never suspects the course I adopted.

Of Mrs Le Ferrier, I have heard much since, but nothing that I care to relate in these pages. She was that most fearful deformity, a beautiful, unprincipled woman, who lived only on admiration obtained at any cost. Such characters fortunately are not common, though they exist, and are too often the causes of more mischief in this world than a hundred good and true women can undo. Had it not been for the dropped telegram,

she might have been the cruel cause of preventing two congenial persons from travelling the path of life hand in hand.

THE ART OF EPIGRAM.

THE art of epigram is a lost art. 'When we have written this, it occurs to us that it would perhaps be nearer the truth to say that it is an unpractised and neglected art. There is probably enough of poetry and wit still remaining in the world for the production of good epigrams; but this species of composition may be said to have fallen into desuetude and gone out of fashion. Yet no form of poetical composition has at different periods been more popular, and few are more fitted to be popular.'

The epigram has an ancient and honourable history, having been much practised among the early Greeks, with whom it undoubtedly reached its highest stage of perfection. It is not an uncommon thing now to suppose that an epigram only merits the name when it possesses some humorous, biting, or sarcastic quality—when it as nearly as possible answers to the description given in the quatrain:

The qualities rare in a bee that we meet,
In an epigram never should fail:
The body should always be little and sweet,
And a sting should be left in its tail.

The above quatrain indicates a very limited idea of the scope of the epigram, and but a low estimate of its character. The Greeks indeed desiderated *point* in their epigrams, but not necessarily humorous or ironical point. What they aimed at was simply brevity in expression and completeness of thought, and this they achieved in their epigrams in an eminent degree. An epitaph written on the tomb of Plato by Speusippus, is an admirable specimen of an early Greek epigram:

Plato's dead form this earthly shroud invests;
His soul among the godlike heroes rests.

Anacreon wrote some very graceful epigrams. The following, addressed to his lady-love, is happily rendered by Ambrose Philips:

Why so coy, my lovely maid?
Why of age so much afraid?
Your cheeks, like roses to the sight,
And my hair, as lilies white;
In love's garland, we'll suppose
Me the lily, you the rose.

The following beautiful epitaph on Sophocles is generally accredited to Simmias of Thebes, who was an intimate friend of Socrates. The translation will be found in the five hundred and fifty-first number of the *Spectator*:

Wind, gentle evergreen, to form a shade
Around the tomb where Sophocles is laid;
Sweet ivy, wind thy boughs, and intertwine
With blushing roses and the clustering vine.
Thus will thy lasting leaves, with beauties hung,
Prove grateful emblems of the lays he sung,
Whose soul, exalted like a god of wit,
Among the Muses and the Graces writ.

This, on a maiden in love, is by Sappho, translated by Moore:

O my sweetest mother, 'tis in vain—
I cannot weave as once I wove—
All wildered is my heart and brain,
With thinking of the youth I love.

Plato wrote several very fine epigrams. The following, designed to express how the light of beauty remains unextinguished in death, is translated by Shelley :

Thou wert the morning star among the living,
Ere thy fair light had fled ;
Now, having died, thou art, as Hesperus, giving
New splendour to the dead.

In the early Latin epigram, we mark a distinct falling away from the high Greek standard. Latin epigrams rarely have the same refinement, chaste simplicity, and lofty thought. It was not so much that the Romans were intellectually incapable of vying with the Greeks in this species of literary exercise, as that they chose to follow inferior models, and to degrade the epigram to ignoble uses. For flattery of emperors, for abusive political satire, for humouring the depraved popular tastes, rather than striving to elevate them—these were among the objects which Martial and his contemporaries employed their powers as epigrammatists. Some of Martial's verses indicate that he might have rivalled the Greek poets, had he made them his models more frequently than he did. But the bulk of his epigrams are characterised, to a more or less degree, by scurrility, triviality, or servile flattery. He wrote some fifteen hundred of these short poems ; but few among this large number can now be read with either pleasure or edification. We give two specimens of his better works—the first of his serious, the second of his lighter manner :

ON ANTONIUS.

Antonius is arrived at seventy-five,
With all the ease and comfort life can give ;
Safe from the voyage of a length of years,
Looks back with joy ; nor death approaching
fears.

Not one of all his days can irksome find,
Not one but he with pleasure calls to mind.
Thus a good man prolongs his mortal date ;
Lives twice enjoying thus his former state.

TO AUCTUS.

My works, the reader and the hearer praise.
They're not exact, a brother-poet says.
I heed him not ; for when I give a feast,
To please the cook I care not, but the guest.

With the Romans, the epigram was employed as a vehicle for badinage and satire, to a much greater extent than among the Greeks. The following, by Lucilius, a writer of the second century—translated by Dr Jortin—is a favourable specimen of a Latin humorous epigram :

'Thou little rogue, what brings thee to my house ?'
Said a starved miser to a straggling mouse.
'Friend,' quoth the mouse, 'thou hast no cause to
fear ;
I only lodge with thee ; I eat elsewhere.

The Arabians practised the art of epigram-writing with marked success. We have a large number of Arabian epigrams rendered into English by Mr Carlyle, Cambridge Professor of Arabic at the close of last century, who published a volume of translations of Eastern poetry from its earliest times. From the one or two specimens of Arabian epigrams which we give, the reader will see that Eastern poets touched these things very skilfully and gracefully. This is by the Calif Radhi Billah, who was the twentieth Calif of the Abbas dynasty, and who died 951 A.D.

TO A LADY, ON SEEING HER BLUSH.

Leila ! whene'er I gaze on thee,
My altered cheek turns pale ;
While upon thine, sweet maid, I see
A deep'ning blush prevail.
Leila ! shall I the cause impart,
Why such a change takes place ?
The crimson stream deserts my heart,
To mantle in thy face.

The above has been thought to be 'one of the most elegant epigrams to be found in any language.' The following, addressed to a cupbearer, of the same name as the lady in the verses just quoted, is, we think, almost equally graceful :

Come, Leila ! fill the goblet up ;
Reach round the rosy wine.
Think not that we will take the cup
From any hand but thine.
A draught like this were vain to seek ;
No grape can such supply—
It steals its tint from Leila's cheek,
Its brightness from her eye.

The conceit in the following, by Isaac Ben Khalif, 'On a Little Man with a very Large Beard,' is quaint and original :

A man like thee scarce e'er appeared—
A beard like thine—where shall we find it ?
Surely, thou cherishest thy beard,
In hopes to hide thyself behind it.

Bonnefonius, a Latin poet of the sixteenth century, has a pretty epigram, which we have endeavoured to render thus :

In this tiny wreath are wed
Roses white and roses red.
Take it, maiden fair, and seek
In the white my love-pale cheek ;
But in the red, a token see
Of my fond heart fired by thee.

The epigram lent itself readily to short love-poems, and it will be seen, from the selections already quoted, that this was a favourite use of it among early writers.

With the space at our disposal, our survey of the subject must necessarily be very rapid, and it now falls to notice the epigrammatists of our own country. Among these, Ben Jonson and Herrick take a high place. The former especially excelled in two forms of epigram—in monumental inscriptions and in humorous epigrams. One of the best examples of his humorous manner is the quatrain which he addressed to a vintner :

God is best pleased when men forsake their sin ;
The devil's best pleased when they persist therein ;
The world's best pleased when you do sell good
wine ;
And you're best pleased when I do pay for mine.

The best of Herrick's epigrammatic verses are characterised by a brevity and simplicity of expression, and a grace and purity of thought, which entitle them to rank with the best examples contained in the Greek anthology. Every one must admit the following epitaph on a child to be of extreme grace and beauty :

Here she lies, a pretty bud,
Lately made of flesh and blood,
Who, as soon, fell fast asleep,
As her little eyes did peep.
Give her strewings ; but not stir
The earth that lightly covers her.

Matthew Prior wrote a large number of epigrams of varying merit. A smart one was that on Dr Radcliffe, who, besides being a physician, was a wit and brilliant conversationalist :

I sent for Radcliffe ; was so ill,
That other doctors gave me over.
He felt my pulse, prescribed his pill,
Said I was likely to recover.
But when the wit began to wheeze,
And wine had warmed the politician,
Cured yesterday of my disease,
I died last night of my physician.

Dr Abel Evans, a man of much talent, the friend of Pope, wrote, among many epigrams, one on Dr Tadlow, remarkable for its humorous terseness. Dr Tadlow was an exceedingly stout man :

When Tadlow walks the streets, the paviers
cry :
' God bless you, sir ! ' and lay their rammers by.

That Pope should have written good epigrams, was to be expected ; the quality of his intellect exactly fitted him to excel in this direction. The style of no English poet is so marked by brilliant antithesis, so that in a score of lines by Pope you may have half as many epigrams. The epitaph which he penned on Sir Isaac Newton, but which was not placed on Newton's monument in Westminster Abbey, a prose Latin inscription of inferior merit being chosen in preference, is regarded as one of the finest in the language. A ' peerless epitaph,' it is styled by the Rev. H. P. Dodd, an authority on these matters, to whose labours and scholarly research we are indebted in this article :

Nature and Nature's laws lay hid in night ;
God said : ' Let Newton be ! ' and all was light.

The following lines, ' On two Millers of Manchester, named Bone and Skin, who wanted to monopolise corn,' is by John Byrom, the author of the pastoral *Colin and Phoebe* :

Two millers thin,
Called Bone and Skin,
Would starve us all, or near it ;
But be it known
To Skin and Bone,
That flesh and blood can't bear it.

The next is by Robert Dodsley :

MARRIAGE IN HEAVEN.

Cries Sylvia to a reverend Dean :
' What reasons can be given,
Since marriage is a holy thing,
That there is none in heaven ? '
' There are no women,' he replied.
She quick returns the jest :
' Women there are ; but I'm afraid
They cannot find a priest.'

The epigrams of Lord Lyttelton and Horace Walpole are among the best of their kind which we possess. Very pithy and neatly turned is one by the former, on a ' Bust of Lady Suffolk in a Wood at Stowe :

Her wit and beauty for a court were made ;
But truth and goodness fit her for the shade.

And it would be difficult to surpass the following by Walpole, in the way of elegant compliment :

TO MADAME DE DAMAS LEARNING ENGLISH.

Though British accents your attention fire,
You cannot learn so fast as we admire.
Scholars like you but seldom can improve,
For who would teach you but the verb, *I love* ?

A prolific writer of epigrams was Dr Wolcot, the well-known Peter Pindar ; yet few of his productions are models of epigrammatic composition. He possessed undoubted humorous and poetical powers ; but his epigrams are for the most part disfigured by coarse satire and personality. He may be regarded as the English Martial. It would be difficult to imagine anything more offensive than the following quatrain, ' To Lady Mount Edgcombe, on the Death of her Pig Cupid : '

Oh, dry that tear, so round and big ;
Nor waste in sighs your precious wind !
Death only takes a *single* pig :
Your *lord* and *son* are still behind.

But Wolcot occasionally wrote epigrams of a more agreeable style. He was once on a visit to Lord Nelson, and while lying awake in bed, reading, set fire to his nightcap, which belonged to his host ; whereupon, he returned the half-burned cap to its owner with the following lines :

Take your nightcap again, my good lord, I
desire,
For I wish not to keep it a minute ;
What belongs to a Nelson, wherever there's *fire*,
Is sure to be instantly in *it*.

Our space permits of but one more example of the modern epigram. It is by Thomas Hood, and is both neat and characteristic of that fine humorist's quaint paradoxical vein :

ON THE DEATH OF A GIRAFFE.

They say, God wot !
She died upon the spot :
But then in spots she is so rich—
I wonder which ?

CURIOUS PROPOSITIONS.

If everything in this world is not quite so perfect as it should be, it is not from any lack of advisers ; for there are always plenty of people wise enough in their own conceit to believe that there is nothing which they are not able to amend, and that more thoroughly than anybody else. And yet, in spite of our would-be benefactors, we are much in the plight of the poor fellow who complained that the doctors prescribed him many a medicine, but never a remedy. Not so very long since, it was gravely proposed to put ailing and aged folk out of their misery by a summary process making killing no murder, by giving it a pretty name. Now, we are informed that there is no necessity for such cruel kindness, for by transferring fresh blood into the veins, when the powers of nature begin to fail, the decay of the tissues will be arrested, the system rejuvenated, and life indefinitely prolonged ; the only difficulty being to obtain a sufficient supply of vitalising fluid. Luckily for those who would never say die, a medical practitioner professes his ability to produce any quantity of an artificial article, chemically and physiologically identical with the natural production ; an announcement calculated

to scare the pessimists who hold that the world is already over-populated.

A German reformer has discovered that the chief impediment to the progress of the race is personal ambition, which can only be got rid of by a general renunciation of names all the world over. Men, however, must have some distinctive designation; so, taking a hint from the practice in vogue at big hotels, he proposes that numbers should take the place of names; every individual being numbered and registered in the district in which he or she lives. He would have a re-numbering every twelve months, by which the acquiring of undue pre-dominance by any one number would be effectually prevented, and the reformation of bad characters much facilitated; since, as no stigma could attach to a number which might this year be borne by a thief, and next year by a philosopher, no one need despair of regaining the esteem of his fellow-men.

A Cabinet minister lately assured us that when all Englishmen were educated, war, so far as England was concerned, would become an impossibility; but Mr Ruskin, as we upon a former occasion remarked, will have it that peace or war depends upon the ladies, and the ladies only; not scrupling to tell the sex, that the real, final reason for all the poverty, misery, and rage of battle was simply that women were too selfish and too thoughtless to take pains for any creature out of their own immediate circles; that if the usual course of war, instead of unroofing peasants' houses and ravaging peasants' fields, merely broke the china upon their drawing-room tables, no war in civilised countries would last a week. 'Let but every Christian lady who has conscience toward God vow that she will mourn, at least outwardly, for His killed creatures. Let every lady in the upper classes of Europe simply vow that while any cruel war proceeds, she will wear black—a mute's black—with no jewel, no ornament, no excuse for an evasion into prettiness; I tell you again, no war would last a week.'

According to some of her advocates, it is the duty of woman to insist upon the sexes being put on an equal footing as regards courtship. To that end, they propose that marriageable youths and maidens should assemble in public meeting, and each write upon a slip of paper the name of the object of his or her affections; the slips to be delivered to two discreet persons, who, upon finding that any youth and maiden had declared a mutual regard, should announce the fact; the announcement to be followed by a wedding in due course. Popping the question by ballot would not meet the views of certain memorialists of the New York State legislature, who beseech that body to abolish 'the present unscientific and vicious system, by which any two of the opposite sex, however ignorant, however diseased, however incapacitated for the responsibilities of parentage, may obtain the sanction of priest or squire to consummate what should be the most holy and delicate of all relations known to human nature.' They desire the appointment of a Board of Commissioners, consisting of an equal number of ethically and medically educated men and women,

with power to investigate the antecedents of candidates for matrimony, and ascertain their physical and mental condition, before granting a matrimonial certificate, without which no person should be permitted to take a partner.

Does it much matter how murderers are despatched? Mr Bain thinks it does, and anxious to mitigate the sufferings of those condemned to give a life for a life, suggests the propriety of substituting the electric battery for the gallows, the garrotte, and the guillotine, and thus 'shock' assassins out of existence. He would even employ the same agent for the punishment of minor criminals. 'By using Faraday's magno-electrical machine, any required amount of torture might be inflicted, and the graduation made with scientific precision, while the mysterious nature of the punishment would add to its horrors; the terrific power exercised by the lightest finger-touch of the operator making the criminal feel his humiliating prostration.' After this, there is something very refreshing in Mark Twain's suggestion: 'I would seriously recommend to the government of the United States, that when a man commits a crime so heinous that the law provides no adequate punishment for it, they make him Consul-general at Tangier. The present Consul-general has been here five years, and has got enough of it to do him for a century. His family seize upon their letters and papers when the mail arrives, read them over and over again for two days or three, talk them over and over again for two or three more, till they wear them out; and after that, for days together they eat and drink and sleep, and ride out over the same old road, and see the same old tiresome things that decades of centuries have scarcely changed, and say never a single word!' And the poor man's offence was the venial one of office-seeking.

Somebody once wrote to the *Athenæum*: 'Permit me to suggest that an edition of Dickens's Works should be brought out in classical English. The words used in the author's text are extremely disagreeable to read. I think that the language of the lower orders ought never to appear in print.' A son of Crispin dared to improve upon *Paradise Lost*; and literary cobblers are ready enough to undertake the mending of the handiwork of mighty craftsmen. Shakspeare's fame has provoked so many extraordinary propositions, that we can readily accept as seriously meant somebody's suggestion that Stratford-on-Avon being difficult to reach, the poet's birth-place should be removed to some town on a main line, more easy of access to his worshippers.

Intent upon doing smokers a good turn, Professor Manlesel would abolish the tobacconist, by supplying every householder with tobacco-smoke free of nicotine and all injurious elements. The tobacco is to be burned in retorts, the smoke produced passing into a large bell-shaped receptacle, to be cooled, purified, and perfumed; and then conducted into the houses by pipes connected with meters, to register the amount consumed. Smaller pipes, carrying the smoke into the various rooms, are furnished with amber-tipped flexible tubes; and all the smoker has to do is to turn a small screw and let the scented smoke glide into his mouth. For those who smoke abroad as well as at home, the Professor

has devised an india-rubber bag, fitting to the chest, vastly improving the wearer's appearance when inflated with tobacco-smoke, to be inhaled through a lute ending in an amber mouthpiece, which when not in use will lie conveniently in the waistcoat-pocket.

AWARDS TO WORKMEN.

AN EXAMPLE.

IN August 1880, Messrs William Denny and Brothers, shipbuilders, Dumbarton, instituted a scheme of awards among their workmen, to recompense them for any improvements they might introduce upon machines or methods of working, in their shipbuilding yard. The scheme, if not quite unique, was at all events a novel one. It conferred a new and valuable boon upon the workmen, and it was believed it would operate in a manner calculated to inspire them with self-application and self-aid. It has been too long the practice to treat workmen as mere 'hands,' and their skill, inventive ability, and suggestions for better modes of working, have sometimes been discouraged rather than recognised. Among perhaps a large section of workmen an opinion also at one time existed, though not to any extent now, that the introduction and wide application of machinery is antagonistic and detrimental to their interests; but this opinion, as experience has shown, is erroneous. For a time, indeed, a new invention or machine may inconvenience a class, by deranging the old conditions of production; but in the end such improvements benefit all.

In submitting their proposals, which was done by circular handed to every one in their employ, Messrs Denny made a statement to the effect that they had noticed many improvements in methods of work and appliances introduced by the workmen into the yard; that they very readily recognised the advantage accruing to their business from these efforts of skill, and were desirous that these efforts should not pass unrewarded; that, therefore, they had decided that the authors of such improvements introduced after that date should have a claim upon the Firm for reward; and, to enable these claims to be readily and easily adjusted, they had appointed a Committee of Awards. This Committee was empowered to decide on all claims made by the workmen, and to reward successful claims according to certain rules laid down.

The first of these rules bore that any workman in the employ of the Messrs Denny and Brothers might claim an award from the Committee on the ground that he had either invented or introduced a new machine or hand-tool into the yard; or that he had improved any existing machine or hand-tool; or that he had applied any existing machine or hand-tool to a new class of work; or that he had discovered or introduced any new method of carrying on or arranging work; or, generally, that he had made any change by which the work of the yard is rendered either superior in quality or more economical in cost. The second rule—a most valuable one for the inventive workman—was, that in the case of a workman being unable to test the merits of his supposed invention or improvement, either through inability

on his part to make the necessary experiments or to pay for the same, the Firm, on the recommendation of the Committee, might agree to bear the whole, or part, of the necessary expense; and if the invention should afterwards prove a practical success, an award would be granted accordingly. A third rule bore that awards were not to be less than two pounds, nor more than ten pounds; and there were various other rules bearing upon the minor details of the scheme.

The Committee appointed for adjudicating upon the claims was composed of three gentlemen skilled in mechanical science, and of undoubted integrity; it being important that thorough fairness and competent intelligence should guide the Committee in all its proceedings and decisions.

The scheme has now had upwards of a year's trial, and during that period the Committee has had some thirty claims submitted for its consideration, out of which number eight only were not judged to merit an award. As regards the importance of those claims decided to be valid, whilst a few of them were of comparatively little consequence, some were of very great importance, and indeed one claim—that which received the highest award of any granted by the Committee—referred to the invention of a very useful wood-working machine.

These results are amply gratifying and encouraging both to the Firm and to the workmen; and afford full realisation of the hope expressed at the outset by Messrs Denny, that the number of valid and important claims established would be such as to induce a continuation of the practice thus begun.

It was not to have been expected that any improvements of a very radical character would be accomplished as the result of this scheme; for competition in trade is now so keen, and so many are endeavouring to find means of lessening the cost of production, that but a comparatively small section of workmen can be looked to for any very signal achievement. Yet an incalculable advantage would be gained if the bulk of employers of mechanics were induced to encourage improvements on the part of their workmen, by adopting some such scheme as that here referred to.

MEAT FROM THE ANTIPODES.

It must be an aggravating reflection to the careful housewife that while articles of dress, ornament, household appliances, furniture, and many of those things which add to the comfort of home, are remarkably cheap, the necessities of life should be proportionately dear. The thought must often cross her mind how many little long-wanted things for house or for children could be procured with that golden tribute which each week is claimed by the butcher as a return for finding those joints which so quickly disappear. But she rightly reflects that health is the first consideration, and that it cannot be insured in the absence of plenty of nourishing food. So the butcher's bill is paid with as good a grace as possible. In short, all old housekeepers find, to their dismay, that while the price of manufactured goods, which in a great measure can be dispensed with, has been greatly reduced, the price of meat

has gradually risen, until at the present time its expense is almost prohibitive to those whose circumstances are, from the fixity of their incomes or from other causes, at all straitened.

Any relief from such a state of matters would be regarded as an intense boon; and when it first became known that the countless flocks of Australia were to contribute to the home market, it was thought that the price of meat must speedily sink to a lower figure. The meat duly arrived in tins, and many people tried what they could do with it.

Although it was easy to see that it had been originally of good quality, the cooking process which was essential to its preservation, had certainly knocked it to pieces, so to speak. In other words, it had assumed a stringy, unpleasant form, that was very different from the far-famed Roast Beef of Old England. It soon became evident, therefore, that if the old-fashioned juicy sirloin were to meet with a rival from abroad, that rival must approach in some other guise than tin armour. Inventors were soon busy upon various schemes for solving this important problem. Knowing that putrefaction is altogether suspended in a temperature which is kept below the freezing-point of water, their efforts were directed towards a means of freezing and keeping in a frozen state the meat during its transit from one country to another. This has now been satisfactorily accomplished, and one firm—the Bell-Coleman Refrigerating Company of Glasgow—have at present at work, upon land and sea, machinery capable of freezing one hundred thousand tons of meat per annum. It is the purpose of this paper briefly to describe the means adopted for producing this important result.

Chemistry teaches us that there are various means available for producing an intense degree of cold. The admixture of different salts—to which the name of freezing mixtures has been given—will readily accomplish this on a small scale. The evaporation of liquids will do the same; and the surgeon takes advantage of this property in ether, to direct a spray of the liquid on to any part of the body, so as to freeze, and therefore render it insensible to the touch of his knife. Ammonia is another agent which will also, by its rapid evaporation, produce intense cold. But all these methods of bringing the thermometer down to the point—useful enough for special purposes, where small results only are looked for—would be quite inapplicable to the freezing of even a single carcase of meat. The expense alone would at once shut them out from consideration.

The plan first adopted was to make use of an ice-house, the cold air from which was—by means of a revolving fan—sent continually into the meat-chamber. The disadvantages of this system were many. In the first place, a stock of ice was necessary; and in the second place, the cold air from such a source naturally contained a quantity of aqueous vapour, which had a prejudicial effect upon the stored meat. It is also obvious that the supply of cold air was limited, and must cease when the ice turned into water.

The apparatus by which success has now been attained depends for its action on the well-known physical law that a gas in expanding

from a compressed state produces cold. An interesting example of the cold produced by expansion was afforded many years ago by Professor Brande, in his description of the machinery attached to some mines at Chemnitz, Hungary. A column of water two hundred and sixty feet high pressed upon a quantity of air contained in a closed reservoir. When a stop-cock in connection with this compressed air was opened, its sudden release was accompanied by a shower of snow, due to the freezing of the aqueous vapour contained in the outside atmosphere.

To the uninitiated, the new freezing apparatus, as it stands on shipboard, would seem to be only a complex form of steam-engine; for cylinders and heavy fly-wheels are the most noticeable objects. But only two of these cylinders give motion to the machine; the third is one in which the air is compressed. It is expanded in another part of the apparatus, after being cooled and robbed of its moisture. The cold-dry air thus produced is then passed to the meat-room in which the carcasses are stored. These carcasses are by the action of the cold rendered as hard as iron; indeed their average temperature is many degrees below zero; and before they are ready for the cook, they must be very gradually thawed from their frozen condition.

By the apparatus described, not only can meat, vegetables, and nearly every kind of perishable food, be preserved on board ship during transit from one country to another; but similar machines on land will insure like preservation for any length of time. The meat is not in any way injured by the treatment, and is, in the opinion of competent judges, as succulent and tender as if the beasts which furnish it had come direct from our home pastures. It is said that meat from Australia and America preserved in this manner can be sold at a good profit in London at less than sixpence per pound. Looking upon cheap meat as a matter of great national importance, we shall anxiously await the result of this attempt to meet the necessity. If the public are satisfied with the quality of this refrigerated foreign meat, and the supplies are kept abreast of the demand, and at a reasonably moderate rate per pound-weight, the butcher's bill of the future will be a very considerably modified item in the house-keeper's weekly disbursement.

CHRYSANTHEMUMS.

Not in the fairy freshness of the Spring,
Nor when bright Summer smiles upon the land,
Not when rich Autumn with a lavish hand
Wreathes Earth with golden corn and purple ling:
But then, when passage-birds have taken wing
For sunnier climes; when the sere leaves lie dead,
And moaning through bare branches overhead,
The mournful wind their requiem seems to sing—
Yes, then, sweet flowers, when all around is drear,
Ye come, the heart to gladden with your smile—
A gleam of brightness ere the Winter near,
Chasing our sadness with your magic wile.
Happy their lot, like you, who soothe and cheer,
And Life's November brighten and beguile!

PRICE 1½d.

HOW FISHER-FOLK MIGHT PROVIDE FOR A RAINY-DAY.

It has frequently been suggested in the newspapers, as well as by many benevolently-inclined persons, that our fishermen should be shown how to provide for the proverbial rainy-day, or at all events be advised to do so, either on some plan of their own, or by some scheme devised in their interest. In times of calamity, the public have always been ready to lend a helping hand to the fisher-folk, and especially to alleviate as much as possible such disasters as those of which we have had experience in Shetland and at Eyemouth. The thousands of pounds which have been subscribed by the public in aid of the widows and orphans during the last twelve months, bear eloquent testimony to the charitable feeling which these calamities call forth. Such collections, however, cannot, we fear, be so frequent in the future as they have been in the past. We have no desire to dam up the streams of benevolence; but there are persons who think the present an opportune time for impressing on our fisher-folk, that instead of depending in their hour of misfortune on outside aid, they would act a nobler part if they were to combine for the inauguration of a fund not only to replace their occasional losses of fishing-gear, but to provide also, by an Insurance Company of their own, in the event of death, for the widows and the fatherless. Occasional calamities—considering the hazardous nature of the occupation—must be looked for in the daily round of fisher-life; the total or partial loss of fishing-gear is frequent; the loss of life on a large scale happily occurs less often, although a season seldom passes that we do not read of the wreck of one or more fishing-boats with the loss of their crews, adding, as a matter of course, to the already long list of storm-made widows and fatherless children.

At the present time, the fisher-people as a body seem badly prepared to cope with such misfortunes, although many of them are, as the saying

goes, 'well-to-do people. In each little community of fisher-folk, there is usually a small fund available in times of necessity—it is 'the box' of the Friendly Society, which, when necessary, provides a sum for funeral expenses, and the requisite mourning clothes for wife and children; and though there are even certain local societies for insuring fishing gear, there is, so far as we know, no adequate organisation which is wealthy enough to replace lost boats, or to yield an annuity to women whose husbands have been drowned, or to provide for the upbringing and education of orphan children. When calamities of a serious nature occur in the ranks of the fisher-folk, there is at once an overflow of kindness, and many a small family has been divided among the community, so that their mother may be left free to win her daily bread by some kind of labour, such as the gathering of bait, the mending of nets, or the hawking of fish.

It is quite time, however, that a body of industrious people earning on occasions large sums of money, and always able to obtain a fair 'living' for themselves and families, should arrange some more systematic mode of relief in their times of pecuniary trouble, than what can be afforded by the funds of a Friendly Society. While we would not recommend the abolition of 'the box' for local aid in times of sickness and of death from natural causes, we desire to point out that to cover the distress arising out of great calamities like those of Shetland and Eyemouth, a general plan of aid or insurance, to be participated in by the whole fishery population of Scotland, would be necessary; no single fisher community, indeed, would be able to provide for such a calamity as would be implied by the wreck of a dozen of its boats, and the destruction of the valuable fishing-gear with which such vessels would be furnished. But what one community is quite unable to accomplish, the united funds of twenty or thirty could accomplish—would be ample enough, in fact, to replace the wreckage, and assuage the woes of the mourners so far as

that can be done by money. In other words, any scheme of fishing-boat insurance should be general, so that when a heavy calamity occurred, the assessment, divided, as it would be, over the whole population, might be so light as scarcely to be felt.

But how, it will be asked, is this to be done? It is of course the work of an actuary to devise plans of assurance; but there are certain data available to all who take an interest in the question, that are worth examining in connection with the inception of any scheme that may be proposed. A glance, for instance, at one of the official fishery Reports—say that for 1878—shows us that there were in that year fourteen thousand four hundred and thirty-one fishing-boats in use in Scotland, and that these were manned by forty-six thousand five hundred and twenty-nine fishermen and boys. We have no particular reason for taking the year 1878, except that it may be held as being a fairly representative year; but no matter what year may be selected, the principle to be advocated will be the same; all we desire is, to have a few reliable statistics to build upon. Taking it for granted that there are at least forty-eight thousand persons who have a direct interest in providing for a rainy-day in connection with the Scottish fisheries, it is desirable to show, by way of an introduction to our financial exposition, 'the power of littles.' A penny from each person engaged in the fishery business, paid every week—in other words, forty-eight thousand pence—would amount to two hundred pounds; or in the year, to ten thousand four hundred pounds—a sum which would be sufficiently ample to provide twenty-five or twenty-eight fishing-boats suitable for 'the herring,' with a full complement of netting and other gear. As the loss of these boats, on the average, is not nearly so great as has been indicated, it becomes at once apparent that by means of such a subscription as has been suggested, a fund of the most ample kind would speedily be accumulated, so that no appeals of a charitable order would be necessary in time to come. There would, of course, be the expenses of collection and administration to be provided for; but these need not be heavy; some member of each fishing community could make the weekly collection, and send it to a central office. Many fishing-boats and suites of nets are more valuable than others; but such might be provided for by a slight increase of the assessment. Taking the boats all over, however, they might probably be valued, along with their netting, at three hundred pounds each. They could, if needful, easily be divided into classes, as we daresay some of them will not probably be of more than half the value we have indicated, whilst some of the decked vessels will have cost more than double the money. In course of time, the small sum indicated would swell to a large amount, and afford a good allowance to widows and children, because not more, on the average, than perhaps six boats would be lost in the course of the year.

There is another way of solving the question of how the fisher-folk might provide for a rainy-day. Taking the herring-fishery as the typical fishery of Scotland, an industry at which, during some portion of the year, every unit of the fishery

population assists, we may state that the value to the fishermen of the herrings which they capture can scarcely be less than two millions of pounds sterling per annum.* A million barrels at least are cured, and large quantities of herring are caught in addition, and sold fresh. Accepting the value of the fish to their captors as being two millions sterling—a barrel, it may be stated, contains about seven hundred and fifty fish, and these, at the price of a half-penny each, come to a sum of thirty-one shillings and threepence; so that the figure we have given is by no means an exaggeration—is it too much to ask of the fishermen that they should devote a sixpence of the price obtained for each barrel to insurance of boats and lives? How much do a million sixpences come to? A million sixpences amount to the very handsome total of twenty-five thousand pounds; a far larger sum than would, one year with another, be required; so that, to all appearance, an assessment of threepence, or at the most fourpence, per barrel on the cured fish alone would yield all that is necessary to replace boats and fishing-gear in times of adversity. The Scottish Fishery Board—the usefulness of which is sometimes called in question both in parliament and elsewhere—might be intrusted with the collection of the money. The Board has already in active work an organisation for collecting the fees on every barrel of herrings that is branded; it would not be difficult, therefore, for the officers of the Board to collect whatever sum may be agreed upon from the fishermen.

We will, of course, be met, in making such a suggestion, by the usual official answer, that the Board has not the power to do so, and so forth; but we presume the power could be easily obtained, or in any case, suitable machinery be called into requisition. In Ireland, the fishery inspectors carry on similar work; they have administered with great success, for some years past, a Loan Fund authorised by government for the benefit of the Irish fisher-people; and the kind of work which an Irish inspector can do, should not be difficult for a Scottish Fishery officer to accomplish.

Other ways of teaching the fisher-folk to be provident, and in particular to provide for that day of calamity which is sure, sooner or later, to come upon all fishing communities, might easily be suggested, as, for instance, a tax in the shape of a license to fish; a payment of five shillings per annum could be easily met by all engaged in the fisheries; and such a sum, collected from forty thousand persons, would produce ten thousand a year, which, as has already been remarked, would be ample enough to meet all probable demands. There can be no doubt, despite of the oft-quoted remark, 'the fishery is just a lottery,' that the fisher-people year by year earn very fair incomes. It has been recorded in the newspapers, for instance, just as we are writing, that the Fife herring-boats have returned from the annual fishery at Yarmouth with an average profit, for their seven weeks' labour, of three hundred pounds! As has been stated, the Scottish herring-fishery, lasting for

* The Scottish fisheries, all told, are worth close upon three millions sterling.

several months, yields two millions sterling; and it is not fair that persons who are earning so much money, should periodically become a burden on the general community whenever they are overtaken by disaster to their boats, or calamity to their men. As we have endeavoured to show in the foregoing remarks, the fishermen are not destitute of means whereby to provide for a rainy-day, and we would strongly urge them at once to do so.

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

CHAPTER V.—‘YOU WERE TIRED OF ME, AND WISHED ME DEAD.’

It was a settled creed with the employés of the firm that the house of Lumby and Lumby was to go on for ever. The younger hands and heads whose owners discharged subordinate duties, figured and thought in lines of routine so fixed and settled—in office hours—by the inexorable Garling, that all chances of mutation seemed far away. And Mr Garling himself had so long been a part of the house, that to him the house might well seem fixed and solid as the hills. Mr Garling, though under fifty, was an old-world man to look at. He wore high collars of the fashion of a score of years ago, and a black satin stock of equal date; and he carried his watch in a fob, with a bunch of seals dangling from it, as gentlemen in the City had done in his boyhood, if ever Garling had been a boy—which seemed doubtful. For thirty years and more, his respectable, square-toed boots had worn the stones between his rooms in Fleet Street and the Gresham Street threshold of the house of Lumby and Lumby.

Mr Garling's father had practised the hair-dresser's art in Fleet Street. There was still a hair-dresser in the old house, and Garling went on living there. For thirty years he had been a familiar figure at Lumby and Lumby's, and yet a figure with whose inner personality no man had ever been familiar. We all go shrouded more or less, and nobody knows much about the most communicative of us. But Garling had been self-contained in his school-days; and in manhood his self-containment grew to look like secrecy; and with approaching age, his secrecy grew more profound. He never spoke to anybody when he could help it; and when compelled to speak, he said as little as possible. No one ever fancied that Garling had more than other people to conceal. ‘It was Garling's way’ to be close; it was Garling's way to take snuff secretly, as though he hoped to find in it some ground for an indictment against his tobacconist; it was his way to hang above his ledger secretly, as though it contained mysteries; it was his way to secrete himself within himself as he walked the very streets, as though he were a suspicious circumstance, and his being there a thing unauthorised; it was his way to dine in a secret corner in a secret chop-house in a secret court, as though his meals were conspiracies in imminent danger of detection. All these were Garling's ways, and were openly canvassed and laughed at as eccentric—in Garling's absence—by the most junior of the junior clerks.

If Garling had relatives, he kept them secret, like himself. There was a general impression that he was rich; and that indeed seemed like enough, he earned so much and spent so little. The house was wealthy, and disposed to be generous where it trusted; and it had trusted Garling now for nearly twenty years implicitly, and had had its trust rewarded. How many nights had he sat at his desk poring above vast ledgers when the offices were silent? How many hours of voluntary time had he thrown into Time's gulf at home in his own rooms, sitting immersed in figures, with shaggy black brows drawn downwards, making secrets of his eyes, as great schemes for the benefit of the house simmered behind his bulbous, wrinkled forehead? No man could tell, and Garling never told. He was a very jewel of a servant. Under his fostering care, the great house grew greater, and its solid foundations stretched out farther and farther, and its wide arms, like those of Briareus, reached forth a hundred ways at once, and drew in money. People who were unfitted to understand Garling's character, set it down as a thing not to be doubted that he himself profited directly by the extension of the firm's business—that he had a fixed share in the profits, or a commission on the increase of sound business done; and these commonplace men pooh-poohed the idea of such engrossing and unselfish enthusiasm as other men believed in. But Mr Lumby himself was wont to say that Garling's financial genius was wasted on the petty concerns of a mere business firm, and that he ought to have been perpetual Chancellor of the Imperial Exchequer. He said often that Garling's genius for figures was just as lofty as Mozart's genius for music, or Shakespeare's for play-writing, and that it *would* be satisfied, even if he took to logarithms for pastime.

And so under Garling's management the house of Lumby and Lumby solidly thrived and grew, and Garling kept himself a secret.

Living as he did at a total outlay of not more than two hundred pounds per annum, it was not a thing to be surprised at that Garling had a solid balance at his bankers'. Nor was it in the least a thing to wonder at that he should invest his money on his own account, or that, when he had drawn a large cheque, he should invariably pay in a larger a short time afterwards. The balance in this way grew more than respectable, and Garling bought shares and sold, and always profited. His bankers had a high respect for him. Everybody respected him. A man who does his duty in a fashion so exemplary, and who makes money also on his own account, is bound to be respected.

On a certain evening in late summer Mr Garling sat at his own office-room with a ponderous tome before him containing many columns of straight-ruled figures. The house was quiet, the street was quiet, the gas made a little singing noise which in the stillness was clearly audible. There was yet a tranquil light outside; but the chief cashier's office was always dull, and he burned gas there nearly all day long. Everybody else had gone home an hour ago, save the night-watchman, who slept on the premises, and he had but newly arrived. In a distant part of London, a lanky, dusty, wayworn figure was at that moment

walking from street to street on the lookout for lodgings. The lanky figure was on its way to take part in that little story to which the cashier belonged; but neither Mr Garling nor Hiram Search was likely to guess as much. Can you, reader, guess 'who is coming to you out of to-morrow—out of next year—out of any cranny in the vast gulf of Time and Circumstance, to blend a life with yours?

Hiram strolled on three miles away, and the cashier meditated. The bushy black brows, down-drawn and making secrets of his eyes, were for once unburdened with arithmetic. As he sat with arms folded, head bent, back bowed, and feet depending straight downwards from his knees, he looked, taken in profile, like a human note of interrogation. Set after what secret question?

Coming slowly out of the maze of his own thoughts, he drew a letter from his pocket and read it through. It was addressed to 'E. Martial, Esq.,' under the care of that hair-dresser above whose shop Mr Garling had residential chambers; and it was written in a woman's hand.

'I will not approach you,' so the letter ran, 'with any attempt to remind you of the affection which you professed so many years ago. That I relied upon it, and that you played me false, is all I care for you to remember now. But I *will* have justice done to Mary. I have besought you long enough, and I do not wish to threaten even now. But I am not the less resolved, and what I can do for my daughter shall be done.'

This epistle bore no date or name of place, no preface of any sort, and had no signature; but Mr Garling had no doubt about the writer or the place of her abode. He read the letter once or twice, frowning more and more heavily, and then having folded it and restored it to his pocket, he closed the ponderous tome before him, took down his hat from a peg above his head, turned out the gas, and left the room, locking the door behind him—all in a slow, deliberate customary way. Lumby and Lumby's central offices were not without a suspicion of dry-rot in their musty atmosphere; but the cashier drew in the air in the corridor, as though it refreshed him after the close heat of his own room; and making his way with the sure step of custom down the dusky stairs, he nodded gravely, in answer to the watchman's parting salutation, and came upon the street. Quitting Gresham Street he reached Cheapside, turned his back upon St Paul's, and walked towards the Exchange, and voicelessly hailing a passing omnibus, rode on to Whitechapel, and alighted at a street corner. He walked slowly down the by-street, and then turned right and left, and right and left again. He paused before a dingy door in a street of excessive shabbiness, and knocked. Looking upwards through the dusk whilst he waited a response, he could just read the inscription on a card in the fanlight, 'Furnished Room for a Single Gentleman.' The door was opened by a girl with a face of fragile beauty. She was poorly but neatly dressed, and had a pretty figure, too slender and delicate for health. He stood so long regarding her in silence, that after asking his business and receiving no answer, she shrank back to close the door; but he raised a hand as if to forbid her and asked drily: 'Your mother is in?'

'Yes, sir,' answered the girl.

'Show me to her,' he said quietly, and entered.

'What name shall I say?' she asked timidly, as if afraid of him.

'Never mind the name,' he responded. 'Show me to her.'

She stood irresolute; but he stepped beyond her and tapped with his knuckles at a door leading from the narrow hall, and a thin voice crying, 'Come in,' he entered. The girl followed him, and stood in the doorway. Seated in an armchair beyond the fireplace was a woman, whose likeness to the girl was so strong as to betray their relationship at once. The room was bare and shabby, and was littered with odds and ends of cloth. A pile of loose folds of cloth lay upon the central table, and a piece of cloth trailed from the woman's lap upon the hearthrug. She had been busy sewing, and the needle was arrested at the thread's length, and stayed there when the cashier entered.

'You did not expect that I should be so punctual,' he said. His voice was stiff and measured, and his manner cold.

'No,' she answered him, speaking with evident effort.

He removed his hat, and took a chair; and turning his face slowly towards the girl, he signed to her to leave the room. She obeyed with a look of some bewilderment. When she had gone, he drew the chair a little nearer to the empty fireplace, and throwing one leg over the other, sat in silence. The woman looked at him helplessly, as if expecting him to speak first; but he surveyed her quietly from beneath bent brows of habitual calculation, and said nothing. But for the wrinkles which many hours of business-plotting had left upon it, his face was almost expressionless, and he sat so still that he might have been a statue. The woman, confronting him with uncertain glances, never long continued, still held the needle at the thread's length, and when her eyes had sought his half-a-dozen times, and each time had drooped again, the shadow of a smile flitted across his face and died away.

'You received my letter?' she said at length when the silence had grown unbearable. He nodded in quiet affirmation. 'Why are you here?' she asked after a long pause.

'To answer it,' he returned.

She looked at him again, and could read neither threat nor promise in his impassive face. 'How?' she asked.

'In this way,' responded the cashier, uncrossing his legs and leaning forward. 'By saying briefly and once for all, that I will take my way, and that you may take yours, as you chose to take it long ago.'

'As I chose to take it?' she asked in a voice of amazement.

'By telling you once for all that I will listen to no entreaties; that I will not be moved by any threats; that I am neither to be cajoled nor shaken.' He fell back into his chair, crossed his legs again, and regarded her fixedly once more. She made no answer; but sitting with her hands lying loosely in her lap, she looked the picture of helplessness and despair. After a long pause, he arose, took his hat, and

made a movement to the door. With a suddenness that made him start backward, she swept across the room and stood before him.

'You shall not go!' she cried, wringing her hands, as though they wrestled with each other, and each had much ado to keep the other down. He looked at her darkly and coldly, and after that one backward movement, stood stock still, without a word. 'I *will* have justice,' she said wildly and rapidly. 'You shall not leave your wife and child to starve and drudge year after year, whilst you heap up money for no reason.' He kept his eyes upon her face, and made no answer. 'Are you made of stone?' she cried. 'How long have I suffered? How long am I to suffer? Are we to live here till we die?'

'Live where you please,' he answered, and made a movement to the door; but she confronted him still.

'What wrong did I ever do you, that you treat me so?' she moaned.

'Still playing at innocence!' he sneered drily.

'Playing at innocence?' Something of his own look darkened on her face. 'I have never needed to play at innocence; but you have played at suspicion for your own wicked purposes. You were tired of me, and wished me dead.'

'Devoutly,' he interjected, with no touch of anger or of satire in his tone. There might have been a cruel humour in the word, but neither face nor voice bore sign of it.

'And so,' she went on, 'you pretended to suspect me, and forged a chain of lies about my steps, and hemmed me in, and bound me down with them.'

'Why did you leave me?' he demanded in the same dry tones.

'There is no one here, Edward,' she answered with a weary bitterness. 'You cannot justify yourself to yourself, or to me, and there is no listener here to play a part to.'

'Why did you leave me?' he asked again, in tones a ghost might have used, they were so passionless beside her anger, her weariness, and her despair.

'You drove me from your house with threats.'

'Of what? Of exposure, shall we say?' She moved her head from side to side in a very rage of helplessness. 'You left me, under what circumstances you remember. I offered to support your child, even then. I made you such provision as my means allowed.' She did not know that his salary at that time had been eight hundred pounds a year; but she remembered that the allowance thus recalled to mind had been one of ten shillings a week. 'Why did I withdraw that allowance?'

'Because,' she cried, 'you knew I had lived apart from you long enough to compromise myself if I should endeavour to make good a legal claim against you. Because you knew I loved my own fair fame too well to have it smeared by my husband's public perjuries. Because I was altogether helpless and in your power.'

'We have lived apart still longer now,' he answered coldly. 'I trust you love your fair fame as well as ever.' The taunt so wrung her that she moaned aloud. 'Are you less helpless now?' She made no reply, and he

repeated his question: 'Are you less helpless now?'

'I am as helpless,' she responded then, weaving her thin fingers together and dragging them apart, 'as any creature in the world.'

'So I believe,' he said—'so I believe.' Saying this, he took snuff, turning a little apart from her in his secret way, but keeping his hard eyes upon her sideways. In spite of the customary mask of no expression which he had made it the business of his life to wear, there was a look of cruel triumph in his face as he regarded her. The business-like acquiescence of his tone so cut the woman to the quick, that she cast her hands wildly upwards, as if appealing to Heaven against him, and burst into a tempest of tears. 'And so,' he said, taking snuff again, 'our interview closes as all our interviews used to close.'

There is a cement which is hardened by contact with water. Garling might have been made of it, so little effect had tears upon him. He brushed his hat upon his sleeve, and cast an uninterested look about the room. Then with a calm 'Good-evening,' he left the apartment, closing the door behind him, and having reached the street, walked back to the main road, hailed a passing omnibus, and sat secretly in one corner of it until within thirty yards of his own door, at which time a disaster, already recorded, befell the conductor. It has been mentioned that one or two of the passengers chose to profit by the opportunity thus afforded for the exercise of the virtue called economy. Garling was one of them. Twopence saved was twopence gained, to Garling. He saw the injured man driven away—for, secret as he was, he felt an interest in the events of the day, like other people—and then let himself in by his latchkey, and went up-stairs to his own chambers.

Arrived there, he lit his lamp, placed it on a large circular table in the middle of the room, and unlocking a safe, drew from it a ledger, certain pages of which he studied with deep interest. It was after midnight when he locked the ledger up again, and paced once or twice along the room with his hands behind him.

'It is almost time,' he thought, 'that the decisive step should be taken. Almost time! But I have not had patience for so many years, to be precipitate now.' He took up his lamp, and retired to his bedroom, where he began to undress. Suddenly he drew himself bolt upright, and sounded his chest with his knuckles, bending his head to listen at each tap. 'Why, you are sound enough,' he said aloud, 'to live till ninety.' Then he drew the lamp to the side of a looking-glass, and steadfastly regarded his features. He was not a handsome man, and never had been, and from the strange contortions he made before the mirror, he did not seem to be engaged in any search for facial beauties now. 'You look hardy and robust, my friend,' he said, speaking aloud again; 'but you may be unsound somewhere for all that. Consult a doctor, my friend—consult a doctor.' He sat for a minute or two, nodding absently at his own reflection in the mirror, and inwardly repeating this fragment of advice. Then, he arose, finished his disrobing, turned down the lamp, and went to bed. No compunction for the widowed wife disturbed his dreams. It was natural, perhaps,

that Garling, who lived so much among it, should dream of money. Natural or not, he dreamed of it; dreamed of it in orderly piles of glittering rouleaux, in stacks of crisp bank-notes, in shelving heaps of wonderful broad pieces, looking as if—as in Chaucer's story—a cart of gold had overturned its load. No man is responsible for his dreams, and if Garling in his visions knew that all this money was not his, and yet counted it over and hugged it and rolled in it and meant to keep it, that fact surely left no tarnish on the bright honesty of his waking hours. Garling had had millions through his hands, and his books had never once been out by so much as a halfpenny.

His dreams caused him no uneasiness when he awoke and remembered them; but before dressing, he went through the singular pantomime of the evening with some extensions, tapping and sounding himself all over the body, and listening with great intentness. 'You are sound enough,' he said at the close of this examination, 'to live to be a hundred!' He dressed, as he always dressed, with scrupulous neatness, breakfasted at his customary coffee-house, and walked solemnly to business. At mid-day he took a cab—to the complete amazement of the messenger seated in the hall. The messenger had known him for a score of years, and had never seen him do such a thing before. The cab bore Garling to the residence of a well-known physician, who—the stream of morning patients having run dry—was in the act of buttoning his gloves in the hall, preparatory to a drive to such patients as could not visit him.

'I can give you five minutes,' said the man of science. Mr Garling nodded, to signify that that would serve his turn, and followed into the consulting-room.

'I want to know,' said the cashier, 'how long I may reasonably hope to live.' The physician opened his eyes gently, and raised his eyebrows with something of an air of protest. 'I am a lonely man,' said Mr Garling. 'If I sink all I have in an annuity calculated for twenty years, am I likely to see the limit of the time, or ought I to make the calculation briefer?'

The physician went to work. He pressed Garling here. Did that hurt him?—Not a bit.—He pressed him there. Did that hurt him?—Not at all.—He listened to his breathing—he listened to the beating of his heart—he asked half-a-dozen direct and simple questions.

'You are as sound as a roach,' said the physician. 'There is nothing less certain than the duration of life; but there is every chance that old age may square accounts with you.'

'My life,' said Garling questioningly, 'is worth more than twenty years?'

'In all probability—yes,' said the physician. 'There is a long chapter of accidents, and no man can be sure.'

'Of course not,' responded Garling; and paying his fee, he buttoned up his coat and went by cab to his chop-house, returning to business afoot at the usual hour.

He sat late at the offices that night, with the big ledger before him. His elbows rested on its leaves, and his hands made blinkers for his eyes, and kept his face a secret. And his dreams of last night were with him, and waking

dreams of power and luxury that went beyond them.

'Twenty years to live it out in,' said Garling, in an almost voiceless whisper—'twenty years!'

NEWGATE PAST AND PRESENT.

IN TWO PARTS.—PART I.

AMONG the many landmarks of the City of London which the tide of improvement is slowly but surely sweeping away, will shortly be numbered the ancient prison of Newgate. In the course of a few months, or even weeks, we may expect to see the machinery of destruction set in motion; a new site will be chosen, a new jail, replete with the most modern contrivances for the safeguard and the welfare of its inmates, will be erected; and nothing will survive but the name, and the associations inseparable from the name, of the dread City prison.

Antiquaries differ as to the period at which Newgate was first used as a place of confinement for malefactors. The Gate itself was probably built in the reign either of Henry I. or Stephen, when the rebuilding of St Paul's Cathedral, during the episcopate of Mauritiu the first Norman Bishop of London, and the consequent stoppage of traffic through the adjacent Ludgate, rendered it necessary to open a new outlet through the City walls in that neighbourhood. But it is further suggested that the New Gate so built was no more than the successor of a still more ancient portal; since traces of a Roman road have been found, leading apparently directly beneath the site; and some authorities claim the position as the site of the original Chamberlain's Gate, no vestiges of which have been discovered elsewhere.

The New Gate spanned the western end of what is now Newgate Street, and was flanked by stone towers, the dungeons beneath which are known to have been used for the detention of prisoners as early as the reign of John, an order having been issued to the City authorities, in the third year of the reign of his successor Henry III., instructing them to put 'the Prison of Newgate' in proper repair, the king undertaking to reimburse the City Treasury for the necessary expenditure. The use of Newgate as the State prison in those days is evidenced by the record of the imprisonment and death in its dungeons of Robert de Baldock, High Chancellor to Edward III.

Curious notes in the City Records show that the spiritual and bodily needs of the inmates were objects of care both to the authorities and to private benefactors. In 1382, for instance, the chaplain of the prison, dying, left his Service-book to the jail of Newgate, 'in order that Priests and Clerks there imprisoned might say their Service from the same: there to remain so long as it might last.' Again, in 1316, the halfpenny loaf of light bread of Agnes Foting of Strafford being found wanting in weight, it was therefore adjudged that her bread should be forfeited, and given to the prisoners of Newgate. Other offences of a similar kind on the part of bakers and dealers in bread were visited by similar forfeiture of the bread, for behoof of the Newgate prisoners.

The cordial reception given by the citizens of London to Henry of Lancaster, on his arrival in

England in 1399, led him, in the following year, when he had established himself on the throne, to reward their loyalty by making a present of Newgate to the City; and from that time it has always been the common jail of the City of London and county of Middlesex. But it still continued to be used as a place of confinement for State prisoners for upwards of half a century; and in 1457, Lord Egremont and Sir Richard Percy, being in custody there for taking part in a disturbance in the North, made their escape in the night, and went to petition the king for a remission of their sentences. Their fellow-prisoners meanwhile took possession of the walls of the jail, and defended themselves so stoutly, that the sheriffs were forced to call for the aid of the citizens, before order could be restored and their rebellious charges put in irons. This was, however, no longer the original Newgate, that structure having been destroyed by the followers of Wat Tyler in 1381, and its successor pulled down and rebuilt in 1412, by the executors of the famous Lord Mayor, Sir Richard Whittington.

Until 1783, Tyburn—a few miles to the west of Newgate, and nowadays a fashionable quarter of London—was the scene of the execution of such prisoners as were convicted of any of the numerous crimes for which capital punishment was awarded; and the unhappy wretch who was sentenced to death had to endure the horrible ordeal of a journey, either on a hurdle or in an open cart, from the jail to the place of his death, amid the jeers, or the still more disgusting plaudits of the mob, who made such spectacles an occasion for a holiday. Tyburn was in early days a remote village, taking its name from the Ty-bourn, a stream of great repute among followers of the 'gentle craft,' and had been the scene of public execution as early as the twelfth century, when the celebrated 'Longbeard' suffered the penalty of his insurrection against the exactions of Richard I. Here, too, Roger Mortimer, Perkin Warbeck, and the unfortunate 'Holy Maid of Kent,' underwent the last sentence of the law; and, in more modern times, the triangular gibbet of Tyburn was decorated with the disinterred bodies of Cromwell, Ireton, and Bradshaw, whose headless remains were afterwards buried at its foot. The journey of the condemned felon was rendered the more hideous by the presence at his side of the public executioner, attired in the horrible costume of his office; while on his other side the chaplain of the jail made, or was supposed to make, a last effort to direct the thoughts of the doomed man to religion.

In order to impress the necessity for repentance more deeply on the convict's mind, and to induce the spectators to unite their prayers with his, a pious citizen, named Robert Dow, bequeathed, in 1612, the annual sum of twenty-six shillings and eightpence for ever, that a bellman should deliver from the wall of St Sepulchre's Church, opposite the jail, a Pious Admonition as the criminal passed on his way to Tyburn, and another on the previous night within the prison walls. The latter ran as follows:

'You prisoners that are within,
Who, for wickedness and sin,

'after many mercies shown you, are appointed

to die to-morrow in the forenoon, give ear and understand, that to-morrow morning the greatest bell of St Sepulchre's Church shall toll for you, in form and manner of a passing-bell, as used to be tolled for those that are at the point of death; to the end that all godly people, hearing that bell, and knowing that it is for you going to your deaths, may be stirred up to pray to God heartily to bestow His grace and mercy on you whilst you live,' &c. Many other legacies left from time to time by the charitable, for the benefit of the inmates of Newgate, are described in the interesting Report on the condition of the prison, written in 1784 by John Howard the philanthropist.

After undergoing repairs on one or two occasions, the old Gate House suffered considerable damage in the Great Fire of 1666; and the restoration, which almost amounted to the entire rebuilding of the jail, was intrusted to Wren, whose erection was at once so elaborate and so plain as to excite the ire of the antiquary Ralph, who writes of it: 'Newgate, considered as a prison, is a structure of more cost and beauty than was necessary; because the sumptuousness of the outside but aggravates the misery of the wretches within; but as a gate to such a city as London, it might have received considerable additions both of design and execution, and abundantly answer the cost in the reputation of the building.'

Its ornamentations are thus described in Stow's *Survey of London*: 'The ornaments on this gate are, on the west side, three ranges of pilasters, and their entablatures of the Tuscan order; over the lowest is a circular pediment, and above that the King's Arms. The other inter-columns are four niches, replenished with as many stone figures, well carved, in full proportion; one of which, representing Liberty, has carved on her hat the word *Libertas*; and the figure of a cat lying at her feet, alluding to a noted story of the former founder of this gate, Sir Richard Whittington, who is said to have made the first step to his good fortune by the assistance of a cat. The east side is adorned likewise with a range of pilasters; and in three niches are the figures of Justice, Mercy, and Truth, with this inscription under them: "The repairing of this part of Newgate was begun in the Mayoralty of Sir James Campbell, in 1630, and finished in that of Sir Robert Drury, in 1631; but having been damaged by the Fire of London, was again repaired during the Mayoralty of Sir George Waterman, in 1672." The companion-figures to the somewhat incongruous 'Liberty' on the western face were Peace, Plenty, and Concord; and four of these figures still adorn the front of the present jail.

'Old Newgate,' as the jail of 1672 is usually called, consisted of three distinct prisons—the Master's Side, Common Side, and Press Yard. The first was occupied by debtors whose means enabled them to pay fixed rents for their accommodation, in addition to the fees, which, under the names of 'footing,' 'garnish,' and 'chummage,' were demanded by the turnkeys or by their fellow-prisoners. On the arrival of a new-comer, his companions intimated their willingness to 'drink his health;' a process for which two 'taps,' one on the Common Side, the other in the Lodge,

offered ample facility. Should the new arrival be either unable or unwilling to pay the 'footing' thus demanded, he was required to sacrifice a part of his scanty wardrobe for the purpose; and his fellow-prisoners were not slow to enforce the rule, if their victim hesitated to comply. 'Garnish' was a payment openly extorted by the keepers of the jail as a species of entrance-fee, under the pretence of supplying extra comforts for the prisoner; while 'chummage' is a term the meaning of which seems to have differed in different jails. On the authority of the *Slang Dictionary*, we learn that 'chumming-up' was 'an old custom among prisoners, before the present regulations were in vogue; when a fresh man was admitted to their number, rough music was made with pokers, tongs, sticks, and saucepans; and for this ovation the initiated prisoner had to pay half a crown.'

The Common Side was, as its name implies, occupied in common by the poorer debtors and all classes of evil-doers, the mischief arising from this indiscriminate herding together of innocent and guilty being almost incalculable. The Press Yard was set apart for political offenders, and a few of the wealthier debtors whose purses would permit of their paying extortionate fees, as well as a heavy premium, for the comparative privacy it afforded. These were the three principal divisions of the jail, each of which was again subdivided into wards and holds; while the Gate House itself contained a separate place of confinement, known as the Stone Ward, appropriated to master-debtors, and the Stone Hall in which the prisoners took exercise, and where the irons were struck off the condemned before proceeding to Tyburn. Within the Stone Hall was a chamber called the Iron Hold, used as a repository of fetters, handcuffs, &c., and placed in charge of four of the prisoners, who were known as the Partners, and were invested with some degree of authority over their fellows.

North of the Hall lay one of the most horrible apartments in the prison, known as Jack Ketch's Kitchen, fitted with furnaces and boilers, for the purpose of boiling the heads and limbs of executed criminals in a preparation of oil and pitch, previous to their exhibition on Temple Bar and other public places of the City. Female felons occupied separate wards, named Waterman's Hall and My Lady's Hold; and debtors of the fair sex were accommodated in a room above the Kitchen. Two Condemned Holds, one for each sex, which were also used by the turnkeys for the temporary correction of such of their charges as grew refractory under their exactions; the Press Room, an apartment in which torture was inflicted in order to compel the accused to plead; the Chapel; and the houses of the governor and keepers, may be roughly said to have completed the interior arrangements of the prison.

The hero of Ainsworth's novel *Jack Sheppard*, to which we are indebted for some of the above details, was an occupant of Newgate on four or five occasions, and thrice succeeded in eluding the vigilance of the warders, and making good his escape, the third exploit being of a marvelously daring and ingenious character. His ingenuity, however, availed him but little, for he was speedily recaptured, and paid the penalty

of his numerous crimes at Tyburn in 1724. In addition to Mr Ainsworth's romance, the career of his notorious hero formed the subject of a farce, and even of an opera; while, in a very different class of literature, Jack Sheppard once figured as the text, or at least the subject, of a memorable sermon, in which the preacher, after giving a vivid narrative of the last of his escapes, exhorted his hearers to emulate, in their efforts to cast off the trammels of sin, the determined energy and perseverance shown by Mr Sheppard in defying the fetters and locks of Newgate.

Another familiar name in the annals of Old Newgate is that of Dr Dodd, the once popular London preacher, who, failing to obtain a sufficient income to gratify his extravagant tastes, either in that capacity or as a royal chaplain, or as tutor and chaplain to the Earl of Chesterfield, finally forged his patron's name upon a bill for a large amount; and was detected, tried, condemned, and executed at Tyburn 1777, leaving behind him a work called *Thoughts in Prison*, as a memorial of his residence in Newgate, and a contribution to the curious prison literature which owes its origin to the jail. The Doctor's last piece of pulpit oratory was his own funeral sermon, which he was permitted to preach in the prison chapel before his execution.

THE RUINED GRAVE.

A STORY OF THE AFGHAN FRONTIER.*

FROM the little town of Attock, on the river Indus, the grand trunk road runs in a westerly direction till it reaches Peshawur, the entire distance being about forty miles. Midway between these two is the small military cantonment of Nowshera, where the principal scene of this story was enacted.

Approaching Nowshera from the eastward, it was to be observed that the station was built for the most part on the south or left side of the road; fronting which, were the bungalows of the officers and the various mess-houses. Beyond these, and still on the left, were the lines of two native regiments—one infantry, the other cavalry—and the barracks of a British battalion of foot. Beyond these, again, stretched the parade-grounds of the different corps; while in the far distance rose the Cherât Hills, which had lately been pressed into service as a sanatorium for the Peshawur Valley.

It was a bright December morning at Nowshera; the air was crisp and exhilarating; for the sun had not as yet risen far above the horizon, and his level beams fell with pleasant and picturesque effect on the quaint-looking, white-washed bungalows, and upon the tall trees that stood beside them. On the right of the main road, the houses were comparatively few; for the ground on this side was a good deal lower than on the other. It was, however, much more thickly sprinkled with clusters of well-grown trees, probably because the Caubul River flowed not many hundred yards away, looking like a broad dull stream of quicksilver, save occasionally when

* The main incidents of this tale are true. The story has appeared elsewhere in outline, but imperfect as to certain important features.

the sunbeams caught its eddying ripples, when it seemed as if a myriad of glittering fireflies had suddenly been born on its lustreless bosom.

Over the lower ground just described, three officers were passing. They were young, and belonged to the native cavalry regiment which had but lately arrived at Nowshera on relief. At the present moment they were in search of a site for a bungalow which they intended building; for, as has already been stated, the station was a small one, and no suitable house was available. As with this object they sauntered onwards, casting their glances hither and thither, a tall ascetic-looking Afghan crossed obliquely, but a little behind them, the path they were traversing, and in the act of passing, his long, lean shadow fell darkly and ominously over each of the three in succession. But they heeded not, and strolled on conversing gaily.

'We must have our house up before the hot weather commences,' said Robert Strong, the squadron subaltern. 'Imagine passing a June in tents in the Peshawur Valley, where the heat of the sun is enough to broil every living thing!'

'All the more reason,' replied Captain Henderson, 'that you should be grateful to a beneficent government for supplying the wherewithal to put a roof over your head.'

'But how about the monthly instalments which the said government will carefully deduct from my pay till the loan is covered?' answered the sub. 'Besides, what with clippings for mess-bill, funds, &c., the miserably attenuated balance I shall receive will be positively insulting.'

'Since the insult is likely to be so very small, I'd overlook it altogether, and take it calmly, if I were you,' said Henderson, laughing.—'But, Farmer,' he continued, turning to the surgeon of the regiment, who was on the other side of him, 'I understood it was your opinion that the ground about here was too low and unhealthy for our purpose?'

'So it is,' replied Dr Farmer; 'and unless we can find a hillock or mound above the ordinary level of its surface, I fear we shall have to choose a site on the south side, which, as you are aware, will be inconveniently far from our lines and mess-house.—But hullo! look there;' pointing with his finger; 'that knoll to our left front seems the very thing.'

The spot referred to was a hillock a short distance ahead, that rose somewhat abruptly out of the ground on the side from which they were approaching, but which in the opposite direction sloped away very gradually.

Strong, who had managed to get somewhat in advance of the other two, climbed the ascent first; and had no sooner gained the crest than he uttered a loud 'By Jove! What have we here?'

His companions quickly joined him. Before them lay a rude-looking dilapidated grave, surrounded by a low wall of loose stones; a few paces from it grew a sturdy tree, on the branches of which hung some dirty discoloured rags. It was an Afghan *ziyarat* or shrine; but it had such a desolate and uncared-for appearance, that it seemed as though the place had lost its sanctity, and fallen into disrepute.

'Probably the tomb of some Mohammedan fakir or devotee,' said Farmer inquiringly.

'I rather doubt the ability of the Afghan race to produce such a crop of holy men,' returned Strong scornfully. 'I believe nearly every eminence in the country is disfigured by an eyesore of this description.'

'Very likely you are right,' said Henderson; 'for these *ziyārats* are often arbitrarily erected by priests and fakirs for purposes of gain; and it is an even chance that no one lies buried here.—In any case, Farmer, I shall not let it interfere with our plans, if you consider the site a suitable one.'

'It will do capitally,' answered the surgeon. 'There will be just room enough on the crest for our bungalow; and the garden and out-houses can be terraced a little lower down along the slope.'

The matter being thus definitely settled, the officers turned their steps in the direction of their mess-house, not a little gratified at having been so successful in their search.

The following day, accompanied by a couple of natives—a contractor and his assistant—Henderson and Strong proceeded to the spot they had selected, and were busy discussing in detail the plan of the house they proposed erecting, when the Afghan already spoken of came swiftly up the ascent, and without a pause or the slightest attempt at salutation, rudely addressed them: 'Sirs [*Sāhiban*],' he exclaimed, 'is what I hear true, that you intend building on this mound?' His voice shook; his whole manner was tremulous with excitement.

For a second or two, the officers stared in surprise at the man who had so abruptly interrupted their conversation; and indeed he was a remarkable-looking individual. Quite six feet in height he was, as gaunt as a skeleton; his face was long, with almost fleshless cheeks and jaws; the nose large and hawk-like; the eyes were small, deep-sunken, and fiery, their brightness being fed by an inward flame, that at times only flickered, but at others burned fiercely enough.

Captain Henderson answered the question in a quiet but stern tone: 'Yes; it is perfectly true.—But what do you mean by this uncalled-for intrusion? Who are you?'

'I am Mobārak Shah, priest [*mollah*] and fakir,' was the reply. 'This *ziyarat* is one of the most venerated in the country; it is the tomb of a celebrated saint, and in my charge. Are you going to desecrate it?'

'May I ask why you keep "the most venerated shrine in the country" in this vilely neglected condition?' said Strong, pointing contemptuously to the ruined grave. 'It looks as if it had been abandoned for years.'

'Understand clearly, fakir,' said Henderson, 'what we have determined to do, we shall certainly carry out; but the bones of your saint shall rest in peace; there will be no digging round this little patch; it will merely be levelled and made neat. Now, you'd better go.'

But the Mohammedan was both urgent and importunate. 'Choose some other site, sirs. Don't outrage the holy place, I beseech you, or evil will come of it—evil to you all.' He spoke earnestly, warringly, and hung about in their vicinity till they quitted the knoll.

A week and more went by, and preparations for building the house were being rapidly pushed

forward. Meanwhile, their rencontre with the fakir had been well nigh forgotten by the young cavalymen, and they expected no further annoyance from him; but in truth, had they been aware of the intense and superstitious reverence in which the Afghans hold their *ziārats*, they would scarcely have been so easy in their minds. A well-known authority on this subject says: 'The fear, love, and veneration with which these shrines are regarded by the mass of the people, is really astonishing, and much greater, I believe, than anything of the kind among other Mohammedan nations; here the *ziārat* holds a higher place even than the leading precepts inculcated by the Koran.' It will not, therefore, be a matter for surprise that the Afghan should have resolved to make a second and still more forcible appeal to the Englishmen's sense of justice; and if that failed, then to pour out on the impious unbelievers—as he considered them—the bitter phials of his wrath. He had not to wait long for his opportunity. One afternoon, the three friends met on the mound, and were inspecting the progress of the work. The foundations of the bungalow had been dug; but as yet the grave remained untouched, when the fakir was seen approaching with a train of followers behind him. He wore the usual loose Afghan dress of an ash-gray colour, and a Pathan skull-cap; but there was a cleaner, more wholesome look about him, as if he had prepared himself specially for a great occasion. With long uneven steps he stalked up the hillock, and at once addressed himself to Dr Farmer, who happened to be nearest. 'Sir, persuade your friends to stop this sacrilegious work; it is horrible thus to desecrate the tomb of a holy man.' His tone was loud and harsh, and naturally it vexed the surgeon.

'Be off with you!' he exclaimed, motioning him away with his hand.

'It is my right to be here,' cried the Afghan passionately; 'this place is even as my home to me. You are the interlopers; it is *your* footsteps that defile and dishonour this sacred shrine. Sirs, build your house elsewhere, or your punishment will be sure and speedy.'

'Now, fakir,' said Henderson angrily, 'I'll give you half a minute to take yourself off in; if you are not gone then, my servants shall forcibly remove you.'

At this threat, the man's whole face became convulsed, his eyes gleamed, and his sharp tones cut the air like a sword, as he replied: 'I will go; but first, in the name of my saint, I curse you three! Age shall never whiten your beards; in the full prime of your manhood, you will perish violently, suddenly. Within five years'—here his voice rose to a shriek, and he held aloft with the fingers outspread a hand like the talons of an eagle—'within five years it is written your names shall be numbered with the dead.' Then there was a slight movement in the crowd, and he was gone.

The fakir's manner had been strangely impressive—full, apparently, of a profound conviction that every syllable he uttered was inspired, and would assuredly come to pass. For the moment, its effect on all was palpable, and no one spoke.

'Bah!' said Strong, at length breaking the silence; 'such maledictions are enough to dum-

found anybody. There's something uncanny about that old man. Do you think he is demented?'

'He may be,' answered Henderson; 'but I shouldn't care for that, if there be no "method in his madness," and if he do not employ the Afghan knife as an active ally for the fulfilment of his ghastly predictions.'

From which it was clear that at least a grain of anxiety lurked in the hearts of the speakers.

Ten months had passed since the above scene was enacted. A pretty little bungalow now stood on the summit of the hillock; and the same sturdy tree—no longer, however, disfigured by unsightly rags—threw a pleasant shade in front of the building. But did the murmur of its leaves carry no echo of the terrible malediction that had so startled them, to the ears of the Englishmen? It was difficult to say. The three friends had now been in residence for some months, and were well satisfied, apparently, with the place. From the crazy old fakir they had received no further molestation; indeed, a hundred other objects had since engaged their attention. At the present moment, Nowshera was all agog on account of a great polo-match that was to take place the next day at Peshawur. The sides were Infantry versus Cavalry; and the little station's champion player, Captain Henderson, was one of the chosen few who were to do battle against the linesmen.

The eventful morrow arrived; the ground and goals were duly marked out; and all the beauty and fashion of Peshawur and, of course, of Nowshera turned out to witness the match. A gay crowd in carriages, on foot and horseback, thronged the boundary-lines. Meanwhile, the game proceeded with varying fortune; though it was clear to the experienced eye that it was as much as the horse-soldiers could do to hold their own against their antagonists. Suddenly, some one struck the ball with great vigour, and away it went spinning along the turf. Two men, opponents, singled themselves out from the players, and galloped full speed after it. Somehow—it is impossible to say exactly how—they came into violent collision, and riders and ponies were thrown headlong to the ground. The linesman, with an exclamation of disgust at his discomfiture, freed himself from his animal, and stood up, seemingly unhurt. The other player lay still. Soon two or three of the by-standers rushed forward and raised the fallen man; but he was dead—he had broken his neck. It was Captain Henderson.

Was the anathema working? Had the next few years as terrible a fate in store for the two young fellows that still survived? Possibly, thoughts like these may have thrilled the hearts of the occupants of the bungalow on the hillock, when they came to realise fully the catastrophe that had taken place.

A year later, a party of officers were out deer-hawking in the neighbourhood of Nowshera. [The sport of deer-hawking is a unique one, and pursued, so far as I know, nowhere out of Afghanistan and the Peshawur Valley. Of

course the hawks only act as auxiliaries to the hounds; still, without them the latter would never be able to run into their game; for the *chikara* or ravine-deer is exceedingly swift of foot and wary; and even though harassed by the falcons, it often gives its pursuers the go-by.] The hunt was in full swing; in the distance was a beautiful little antelope, bounding onwards, flying for dear life; above his head hovered a couple of magnificent hawks; suddenly, with a swift swoop, one of them descended and struck the animal hard on the side of the head with its wings, but did not otherwise injure him. The antelope slackened his pace for an instant at this unexpected assault, but recovering himself, went on faster than ever; when the second hawk stooped and dealt him a similar cuff on the other side. Manœuvring thus alternately and skilfully, they continued buffeting the poor animal, and impeded him very materially in his flight. Some two hundred yards in rear were the hounds, straining every muscle in the endeavour to reach their quarry; while last of all came the hunters, eager and impetuous, thrilling with the excitement of the chase, and urging on their horses till the pace was fast and furious. All at once, the horse of the foremost rider—a big powerful chestnut—put its foot into a treacherous rat-hole, and shot forward with terrific force on to its head, then rolled heavily over, with its luckless rider crumpled up underneath. The other men pulled up, for the fall seemed a serious one; and the white face, just visible clear of the saddle, had the pallor of death stamped on it. The ill-fated hunter was extricated and carried home. Three of his ribs were broken, and he had sustained other grievous internal injuries. A few days afterwards he died in great suffering. The name of this second victim was Robert Strong.

Not long after the above tragical occurrence, Dr Farmer fell ill, and was ordered to England by a Medical Board. From Nowshera he came to Attock, intending to rest a few days before continuing his journey; but here, notwithstanding that he was kindly and skilfully treated by the Civil surgeon of the station, he rapidly became worse. At one time, his life even was despaired of; but the poor man was not destined to die in his bed. He rallied; and by easy stages at last reached Bombay, and thence shipped for England.

In a couple of years he returned to India completely restored to health. In the meantime his regiment had moved down country to Allahabad, and it was there he joined it. One afternoon he was out boating on the river Ganges with a friend, when, by some untoward accident, the boat upset; both the men, however, were good swimmers, and struck out vigorously for the shore. As they were nearing the bank, his companion cast a glance in Farmer's direction, and saw he was swimming strongly and well. Presently, the former touched the bottom within his depth, and looked round again for his friend; but, to his utter amazement, Farmer had vanished! It would appear that the unfortunate surgeon had been seized with cramp, and sinking suddenly, had been caught in the race of some treacherous under-current, and swept down stream. His body, I believe, was never recovered.

Thus was the curse literally fulfilled. The three officers had perished in the prime of manhood, in the fullness of their strength, with appalling suddenness, and all within the short space of five years. But the narrative is not yet complete; its finale is as startling as the portion that has preceded it, and for this we must once again go back to Nowshera.

Shortly after Dr Farmer lost his life, the stream of the Caubul River became very much swollen, owing to heavy rains in the highlands of Afghanistan—in fact it was in a state of flood. Just then, strange to say, the Indus came down a vast raging torrent from the mountains, and in such stupendous volume that it speedily rose forty feet and more above its ordinary level. Now, the Caubul River flows into the latter very nearly at right angles opposite the fort at Attock; but with such amazing velocity did the stream of the Indus run, that it dammed up, so to speak, the waters of its tributary, which in its turn rose higher and higher, and soon overflowed its banks. The lower parts of Nowshera were inundated; but the flood still grew till it became the greatest within the memory of the oldest inhabitant. The waters crept up the fakir's knoll, and whirled and eddied round the obnoxious bungalow, undermining its foundations; the roof fell in; the walls tumbled down; the house became a total wreck; and it remains a tenantless ruin to this day.

EARTHQUAKES.

THE phenomena of earthquakes have for many centuries been a subject of special observation by the students of natural science; yet it must be admitted that, after all, little that is definite and indisputable has been ascertained regarding what has ever been the dark side of the question, namely, the cause or causes of these phenomena. Humboldt, in the course of his extensive and valuable observations, made earthquakes the subject of special study; and in more recent times Mr Poulet Scrope, Mr Judd, and others, have been equally observant and painstaking in this mysterious department of natural phenomena. The theories that have been suggested to account for these extraordinary and frequently destructive manifestations of natural power, are as various as they have often been contradictory; but it is open for us to hope that the ever-widening knowledge of natural laws due to the increased and more systematic study of geology and its cognate sciences, may in course of time lay bare to us the causes of some of those phenomena that are still so much involved in obscurity. In the present article it is not intended to enter into the various speculations that have been current as to the nature and causes of these phenomena, but rather to take a survey of certain of their manifestations as exhibited in some of the more remarkable of recent earthquakes.

The British Islands enjoy an almost complete immunity from this terrible scourge; and but for the existence of a few hot springs here and there, we should have no reminder of the 'central heat' which has long been associated—though now there is reason to think, erroneously—with the interior of the globe. A few faint tremblings, the last dying thrill of some distant convulsion, have

occasionally been experienced in Britain, more especially in Scotland. The neighbourhood of Comrie in Perthshire has frequently been visited by slight shocks, generally very trifling, and lasting but a few seconds. In the month of November 1879, a smart shock was felt at Inveraray; and the Duke of Argyll sent a short account of it to the public prints, stating the fact, perhaps not universally known, that solid buildings are more seriously affected by earthquakes than those of slighter construction; the reason being obvious, that the slight edifice *gives* under the pressure of the shock, while the strongly built one resists with a force that too often insures its destruction. In the interior of Inveraray Castle, a peculiarly massive building, the effect was as if the windows were being crashed in, though the shock was not at all severe, and did not last above ten or twelve seconds. The unsteady movement of the floor was sufficient to produce a sensation of sickness; and a little dog in one room showed evident signs of fear, and whined piteously. Animals undoubtedly share largely in the dread invariably inspired by the presence of this mysterious force of Nature; horses tremble in every limb, and show signs of the most abject fear; cattle and sheep tear wildly about, lowing and bleating continuously; the crocodiles of the Orinoco have been known to leave the river during the shocks of an earthquake, and make for the nearest woods.

The sensation of feeling the ground unsteady beneath the feet, is described by all who have experienced it as the most appalling thing in Nature, calculated to produce an extreme of panic even in those least liable to nervous excitement. Sometimes little else is felt than a tremor or slight motion of the surface, without producing any injury; while in severe earthquakes the almost invariable sequence of phenomena is first a series of tremulous vibrations of the earth, then a severe shock or a succession of shocks, followed by a recurrence of the tremulous vibrations, which gradually decline in intensity till they become inapparent. The violent shocks are instantaneous, and very few in number; sometimes only one, usually not more than three or four. In the intervals between these, smaller shocks or tremblings take place. The severe shocks do the mischief. Earthquakes occur, even of the greatest violence, which are unaccompanied by any sound whatever; but subterranean noise of some kind or other almost invariably accompanies a severe shock. Sometimes the sound is like the rumbling of carriages, growing gradually louder, until it equals the loudest artillery; or like heavy wagons rumbling along a road; or distant thunder; or the rushing of wind underground; and sometimes the sound is a combination of all these, with others added still more appalling and indescribable. As nobody can tell how long the convulsion may last, or how severe it may be, people are generally in too terrified a condition to give discriminating attention to the various abnormal features of the disturbance. But a very graphic and interesting account of the worst of the almost incessant shocks that befell the city of Agram in Croatia a year or two ago, was published in one of the Viennese journals, and reproduced in one of the *Viennese journals*, and reproduced in one of the *Daily Telegraph*, from which we copy some highly descriptive passages. The writer says:

'It was about midnight, and everything was profoundly still. Suddenly my ears were greeted with an outburst of dismal barks and piteous howls, emanating at first from dogs in the neighbouring courtyards, and then taken up by others some distance off. At the same moment, it seemed to me as if a giant foot stamped twice upon the flooring of my room, hard behind me, with such tremendous force that the whole apartment groaned, and its four walls wavered, giving forth a sharp, crackling sound. It was a thrilling moment; but ere I drew in my head to cast a terrified glance round my room, I noticed that the long street seemed to undulate with a wave-like convulsion, and observed a thin cloud of dust rising from the roofs and glimmering in the moonlight. Sparrows twittered in a fright; and pigeons, loudly flapping their wings, flew straight upwards in great numbers. One could hear inside the wrecked houses the frightful yells of cats, and loud cock-crowings resounded from every yard in the neighbourhood. The air became filled with an evil stench. The whole house in which I was lodging shook. In a very few minutes, I began to hear the creaking of door-keys hastily turned in the locks of the adjacent house-portals, which were soon flying open one after another to give egress to panic-stricken throngs of shrieking men, women, and children in their night-clothes. These ghostly-looking crowds poured out of all the houses, and hurried along the streets towards the chief squares and open places. In a few seconds the Illica was filled with white spectral figures. It was a ghastly, weird spectacle. I went out, in order to see what was taking place in the town. The earth continued to tremble slightly. Suddenly, a second shock took place, not so violent as the first, but strong enough to aggravate the terrible panic of the population. In every direction, I could see people wildly running along, dimly visible through the black shadows of the narrow streets; but conspicuous, owing to the whiteness of their night-dresses. Everybody kept to the middle of the roadway, and crouched as they ran. On the Zring Platz, which is laid out as an ornamental garden, children were lying huddled together on the damp sward as close as herrings in a barrel, pitifully whimpering; whilst their mothers stood near, not knowing what to do for their little ones, and sobbing aloud from sheer despair. Meanwhile, the ground continued trembling without cessation; slates and rubbish streamed down unintermittently from the house-roofs. Ever and anon, a fresh shock caused us to stagger like drunken men; and after each successive shock, all the cocks crowed lustily in endless varieties of pitch. At about four o'clock A.M. was heard a terrible sound, like a long-drawn subterranean growl, followed by frightful thumps, quiverings, and oscillations, which lasted for seven seconds. Nothing more awful could be imagined. Women uttered unearthly screeches, and fell flat down on the ground in convulsions. The men rushed frantically into the midst of the roadways. Chimney-pots crashed down, tiles rattled off the roofs, dust-clouds filled the air, sparrows innumerable flew piping about, dogs howled. In the profound silence that succeeded the throes of this last shock, all the terrified cocks suddenly set up their crowing again. Then the moon sank in darkness, and all was over until day-break of that fearsome morning.'

Such a description as this enables the reader in some degree to realise the horrors of those appalling visitations, a succession of which, continuing with short intervals for more than a year, have reduced a handsome and flourishing city to a condition little short of ruin. Fortunately, those very destructive earthquakes are of rare occurrence, in Europe at least; tropical countries are at all times liable to them; although, with the exception of the terrible calamity which befell the city of Manilla in July 1880, there has been no earthquake of great magnitude for a considerable period, and not one during this century that can be named beside the awful convulsions of Nature that destroyed so many thousands of human beings in the latter half of last century. In the great earthquake of Lisbon, in the year 1755, it was calculated that sixty thousand people perished; and about the same number were destroyed by a terrible earthquake in Calabria in 1793. In the year 1797, at Riobamba in Ecuador, a similar catastrophe proved fatal to about forty thousand persons in a very short space of time; and this earthquake was notable as being one of the few that have been unaccompanied by any noise or subterranean warning whatever. Its motion was rotatory as well as vertical—a peculiarly dangerous form; and numerous great fissures opened in every direction, swallowing vast numbers of people; these fissures in some places opened and closed so rapidly, that various persons saved themselves by extending their arms, some being actually buried all but their heads. Parts of a mule-train were swallowed up, while the remainder escaped; and many houses sank so gently into the ground, that neither their inhabitants nor their contents were injured; and after being thus buried for a day or two, the people were rescued from their imprisonment without having suffered any injury beyond natural alarm. It is computed that earthquakes have proved fatal to above thirteen millions of the human race; while the amount of property destroyed is beyond all calculation.

On the night of the 28th October 1746, a shock of earthquake lasting nearly four minutes, reduced the fine city of Lima, containing upwards of seventy churches, besides many other magnificent public buildings, to a condition of deplorable ruin; though, fortunately, the loss of life was moderate, considering the magnitude of the disaster, only from twelve to fifteen hundred people having perished. The first severe shock was rapidly succeeded by others, which continued during the whole night, reducing the inhabitants to an extremity of terror, that was raised to the highest pitch by the mournful tidings that Callao, the port of Lima, had also been destroyed by the earthquake. The unfortunate port had, however, suffered still more fatally; for the violence of the convulsion had no sooner abated, than the sea began to swell, and rose to an enormous height, dashing fiercely onwards, and carrying all before it, till it had completely overwhelmed the town and its inhabitants, of whom more than five thousand were instantly drowned. Some few were saved by clinging to planks and other floating objects; but the great mass of the population perished, and the fine port itself was utterly wrecked, with all the vessels in the harbour, many of which were carried far inland by the

impetuosity of the cataract of waters, and left there high and dry.

A quaint and graphic account of an earthquake that occurred in Jamaica in June 1692, by which the town of Port Royal was severely injured, and which indeed devastated the whole island, was given by a clergyman then resident in the place, an eye-witness of the scenes he describes. In it he says:

‘On Wednesday the 7th of June, I had been at church reading prayers, which I did every day since I was Rector of Port Royal, to keep up some show of religion among a most ungodly debauched people; and was gone to a place hard by the church, where the merchants used to meet, and where the President of the Council was, who acts now in chief till we have a new governor. This gentleman came into my company, and engaged me to take a glass of wormwood wine with him, as a whet before dinner. He being my very great friend, I staid with him. Hereupon he lighted a pipe of tobacco, which he was pretty long a-taking; and not being willing to leave him before it was out, this detained me from going to dinner to one Captain Rudeni, where I was to dine; whose house upon the first concussion sunk into the earth, and then into the sea, with his wife and family, and some who were come to dine with him. Had I been there, I had been lost. But to return to the President and his pipe of tobacco. Before that was out, I found the ground rowling and moving under my feet, upon which I said: “Lord, sir, what’s this?” He replied very composedly, being a very grave man: “It is an earthquake. Be not afraid—it will soon be over.” But it increased, and we heard the church and tower fall; upon which, we ran to save ourselves. I quickly lost him, and made towards Morgan’s Fort, which being a wide open place, I thought to be there securest from the falling houses. But, as I made toward it, I saw the earth open and swallow up a multitude of people, and the sea mounting high in upon us over the fortifications. I then laid aside all thoughts of escaping, and resolved to make toward my own lodging, there to meet death in as good a posture as I could. The houses and walls fell on each side of me; but when I came to my lodging, I found there all things in the same order I left them; not a picture, of which there were several fair ones in my chamber, being out of its place. I went to the balcony to view the street in which our house stood; and the people seeing me, cried out to me to come and pray with them. I prayed with them near an hour, when I was almost spent with the heat of the sun and the exercise. They then brought me a chair; the earth working all the while with new motions and tremblings, like the rowlings of the sea; insomuch that sometimes when I was at prayer, I could hardly keep myself upon my knees.

‘Some merchants of the place then came and desired me to go aboard some ship in the harbour, and refresh myself, telling me they had gotten a boat to carry me off. I found the sea had entirely swallowed up the wharf, with all the good houses upon it—most of them as fine as those in Cheap-side—and two entire streets beyond that. I got first into a canoe, and then into a long-boat, which put me on board a ship called the *Siam Merchant*, where I found the President safe, who was over-

joyed to see me. I continued there that night ; but could not sleep for the returns of the earthquake almost every hour, which made all the guns in the ship to jar and rattle. As soon as night came on, a company of lewd rogues, whom they call privateers, fell to breaking open warehouses and houses deserted, to rob and rifle their neighbours, whilst the earth trembled under them, and the houses fell on some of them in the act. Ever since that fatal day, the most terrible that ever I saw in my life, I have lived on board a ship, for the shakings of the earth return every now and then. Yesterday, we had a very great one, but it seems less terrible on shipboard than on shore. It is a sad sight to see all this harbour, one of the fairest and goodliest I ever saw, covered with the dead bodies of people of all conditions, floating up and down without burial ; for our great and famous burial-place, called the Palisadoes, was destroyed by the earthquake ; which dashing to pieces the tombs, whereof there were hundreds in that place, the sea washed the carcasses of those who had been buried, out of their graves. Multitudes of rich men are utterly ruined ; whilst many, who were poor, by watching opportunities, and searching the wrecked and sunk houses (even almost while the earthquake lasted, and terror was upon all the considerable people), have gotten great riches. Whole streets, with inhabitants, were swallowed up by the opening earth, which then shutting upon them, squeezed the people to death. And in this manner several are left buried with their heads above ground ; only some heads the dogs have eaten. Others are covered with dust and earth. The day when all this befell us was very clear, and afforded not the suspicion of the least evil ; but in the space of three minutes, Port Royal, the fairest town of all the English Plantations, the best emporium and mart of this part of the world, was shaken and shattered to pieces, sunk into and covered, for the greater part, by the sea ; and we guess that there are lost fifteen hundred persons, and many of them of good note.

'I came on board this ship to return home ; but the people are so importunate with me to stay, that I know not what to say to them. I must undergo great hardships if I continue here, the country being broken all to pieces, and dissettled. I must live now in a hut, eat yams and plantains for bread, which I could never endure ; drink rum-punch and water, which were never pleasing to me. But if I should leave them now, it would look very unnatural to do it in their distress ; so that I am resolved to continue with them a year longer. They are going all in haste to build a new town.'

CURIOUS INSTANCES OF MENTAL PRESCIENCE.

THERE are many instances, more or less authenticated, of that peculiar mental prescience which seems to foretell events yet in the future, or as then happening, but unknown to be so to the person who is affected by such impressions. As illustrations of this peculiarity of mind and its impressions on the nervous system, the following incidents are related, as happening in the family of the narrator ; and there are doubtless many

of a similar character, and possibly much more singular, to be found, were those who happen to be cognisant of them to give them publicity.

Many years ago, there was a lady who had a most intense dislike to cats, so much so, that were there one in the room when she entered, she would be obliged to leave immediately, such an effect had it upon her nervous system. On one occasion, she was invited to dine with the narrator's family in the country ; but she declined, because she knew that there were cats on the premises ; but on the promise that the cats should be strictly incarcerated, she consented to come ; and the three cats belonging to the house were duly shut up. During the dinner, she was seen to be very uncomfortable, and to look very pale ; and on being asked the matter, she said that she was sure there was a cat in the room. Assurances that this could not possibly be the case, were of no avail ; and on search being made, a cat was found actually sitting under her chair. She rose immediately, and left the table ; and passing down the dining-room towards the door, she also passed across a small cupboard door opening in the wall, through which the dinner was served directly from the kitchen. As she passed this, the second cat of the establishment jumped through it into the dining-room. A scream of horror burst from the poor lady, and she was led away fainting into the drawing-room. The time of year was such that the window of the drawing-room was open, and it was so made that it reached nearly down to the floor, and not much above the lawn outside the house. While the poor lady was being attended to by aid of scent-bottles and such-like restoratives, the third of the cat establishment jumped in at the window ! This was too much to be borne by such a peculiarly constituted nervous system, and she begged to leave the house immediately.

In 1851, as I was walking down the centre of the Great Exhibition, carelessly looking about me, I was struck with a sudden thought as to whether I should meet a clergyman there with whom I had lived some ten years before, and had not seen for many years, and so far as I remember, had hardly thought of since. Pondering on so strange a turn to my thoughts, I suddenly turned round and retraced my steps ; and before I had gone thirty yards, I met face to face the very gentleman whom I had but just contemplated the possibility of meeting.

Another and a different sort of mental prescience occurred a few years since. I was dressing one morning, when I suddenly thought : What became of my brother's old signet-ring that I used to wear ? (This brother had died some thirty years before.) I began to think over it ; but found I had lost all recollection of its fate, and it passed from my mind. About five or six days afterwards, my niece came to stay with me. She had come from my old home, some twenty miles distant, where I had been born, and she said she had brought over

a ring for me, as my sisters thought it must belong to me, and that it had been found by one of the gardeners in the mould in the garden. And by inquiry I found that it had been picked up *on the very morning* that I had thought of it when I was dressing. Here, then, was the long-lost ring, and these various circumstances connecting themselves together; and I then remembered that I had lost the ring in that very spot in the garden belonging to my old home where it had been found; and being a signet-ring, and useful for sealing letters with, I had bought another to supply its place. On referring to my old accounts, I further found that this newer signet-ring had been purchased nearly twenty years before, so that the lost ring had been lying in the garden mould some twenty years before it was recovered in the vicinity of the spot where I had lost it.

Another prescience of what was occurring at a distant place occurred also to me a few years since. In early life I had become acquainted with the daughter of a merchant of a good old Scotch family—an acquaintance which ripened into an attachment. In course of time great losses were sustained by the merchant, and he was ruined; but this alteration of worldly position only drew the bonds of our affection closer together. Many trying circumstances occurred subsequently; the young lady formed undesirable companionships in the musical profession which she had chosen for a livelihood, which led a naturally romantic mind far astray from her former sober-minded decorum and ladylike propriety; and after continuous but vain attempts to arrest her heedless course, until as a faithful monitor I became perhaps even irksome to her, all further intercourse and friendship were broken off, though not before she was led to act towards me with a cruel ingratitude, caused by that which was her greatest snare—the love of admiration. Nothing more was heard about her, and I quite lost sight of her.

About eighteen years had passed away, and though I had now been married for a considerable period, and was settled in the country, I became impressed with a feeling that I should again hear from my old and once loved friend of former years. This impression continued on my mind for a period of some six months; and though no intelligence of the kind had ever reached me, I was further impressed with the sense that she was now married, and that too beneath her own proper station in life, and that she was in great want from pecuniary trouble, so much so in fact, that although I should be the very last person for her to apply to in the world for assistance, yet she would be obliged to do so.

One morning I received a letter in a handwriting that I thought I recognised but had not seen for many years, but the name attached to the letter was quite unknown to me. It ran as follows:

September, 186—.

DEAR SIR—So many years have passed away

since I wrote to you, and so painful are the circumstances under which I now write, that I scarcely know how to address you. Is it not strange that in the darkest hour of my life I turn to you for aid? but not for myself—it is for my children's sake that I am about to ask for assistance. Will you believe that only a frightful necessity has forced this upon me, that I am penniless, and my children almost wanting bread, and I am still weak from recent illness, requiring nourishment I cannot procure? My husband, after a series of misfortunes, has been made bankrupt, and since that time we have undergone much misery. . . . You will say that either yourself, or any member of your family, are the last persons that I should hope would help me, even from the horrors of utter ruin. I know this is true, but I recall your mother's grand and noble charity which knew no difference when sorrow claimed her aid, and thus I have dared to hope that even I may receive help for my children. . . . I must beg you to believe that I am conscious of deserving *nothing* at your hands; but I hope that my conduct to yourself—cruel, and ungrateful as it was, still worse, false and treacherous as it seemed—will be forgiven, for I have been punished by 'Him' who can punish severely; and perhaps this discipline was necessary to root out the miserable vanity and self-sufficient spirit, that were my besetting sins in youth, &c.

Such were the tone and admissions in the letter. Her marriage was the cause of my not recognising her signature, it bearing her husband's name. On inquiry, however, I ascertained that the writer was none other than the unfortunate friend of my youth; and a subsequent visit to her home revealed to me the wreck that misery and misfortune had wrought. A saddening, melancholy sight, of one highly gifted by nature with intellectual power. I need hardly add that the required aid was granted.

What could have thus led my mind to picture facts that I had no cognisance of and yet that were perfectly true in every respect? Is there not a *rapport* of spirit difficult to account for in these cases?

BARTOLOZZI.

IN 1727, a goldsmith and worker in filigree in Florence had a son born to him whom he called Francesco Bartolozzi. The father naturally intended his son for his own business; but as the boy grew up, he evinced a great delight in copying any prints that might come in his way, and his father observing this, wisely resolved to encourage the lad's inclinations. At the early age of nine the boy was already using the graver, and in his tenth year he produced two engravings of heads—impressions of which, although very scarce, still exist—showing in a remarkable degree his wonderfully precocious, though as yet undeveloped powers. In his fifteenth year, the lad was sent to the Florentine Academy, where he remained for three years, after which time he was apprenticed for six years to a well-known histor-

ical engraver, Joseph Wagner, at Venice. Here his genius began to expand and develop, Bartolozzi spending much of his spare time in drawing, sketching, and even oil-painting; but the graver was his most powerful means of giving expression to the art-faculty within him. In 1764, when at the age of thirty-seven, he was induced to come to England, where he was appointed Engraver to the King, being at the same time engaged by Dalton, the king's librarian, to do work for him at a salary of three hundred pounds a year.

Bartolozzi remained in England till his seventy-fifth year, during which period he engraved an enormous number of plates, and gradually rose to a leading position among the artists of his time. In 1802, he received an invitation from the Regent of Portugal to settle at Lisbon as superintendent of a school of engravers; and there he died in 1815, aged eighty-eight. His expectations of pecuniary success in Lisbon do not seem to have been realised, and his later years were spent, if not in poverty, yet without those surroundings of comfort and competence which a life of hard work, such as his had been, might naturally be supposed to merit.

The life and works of Bartolozzi have now been prominently brought before the world in two splendid quarto volumes from the pen of Mr Andrew W. Tuer, of the firm of Field and Tuer, the well-known printers and publishers of Leadenhall Street, London. The work is printed in that antique style for which the firm with which the author is connected has long been honourably distinguished, and forms two of the most sumptuous volumes which a book-lover could desire. A number of fine plates are included, affording specimens of the style of stippled engraving so popular in Bartolozzi's time, and which are here printed in the peculiar red or brown ink which was then used in their production. The work likewise contains a very complete list of upwards of two thousand examples of Bartolozzi's engravings, with prices, past and present, &c., such as cannot fail to be of much utility to connoisseurs in this branch of art, and to collectors of prints.

The author has also devoted several chapters to the art of engraving, its various styles, and the mode of their execution. In this connection he gives some useful hints as to the malpractices of some dealers in prints, and the means they take to pass counterfeits of high-class engravings upon the world. There are various ways in which these deceptions are practised. For instance, an 'unlettered India proof,' as it is technically called, is, from being taken off the engraving at an earlier stage, very much superior to what is called a 'lettered India print,' which is obtained after many impressions have been taken off the engraving, and when the plate has consequently become worn, and the picture lost its clearness and sharpness of line. To turn an 'India print,' therefore, into an 'India proof,' the India print is cut down all round close to the engraving. A clean sheet of India paper, of the same tone as the India print, but of a larger size, so as to show a clean blank margin, is then mounted on a piece of still larger plain paper, and the

cut-down India print in turn is mounted in such a position as to show the usual margin all round. Before drying, the manipulated print is subjected to immense pressure, which so forces the mounted print into the India paper, as to entirely hide the difference in the thickness of the material. A true impression taken off a plate leaves the mark of the plate all round the picture; and to add this to the 'doctored' India proof, a plain steel or copper plate of the proper size is laid on the face of the print, which is again subjected to pressure, and the deception is then so complete as almost to baffle detection. The author mentions that he once saw a volume belonging to a collector which was supposed to contain India paper impressions of engravings to the value of three hundred pounds; but on examination they were found to be 'doctored' plates, not worth thirty pounds in all. The various hints given by Mr Tuer in regard to print-restoring, inlaying, splitting, and cleaning prints, ought to place collectors more than ever on their guard against specious deceptions.

MY VALENTINE.

Oh, lovely Earth! awake to welcome her,
And spread a flow'ry path beneath her feet;
Let new-born Spring in beauty re-appear,
And kiss her temples with its odours sweet.
Clothe all thy banks with moss, that she may rest;
Wreath in rich foliage each protecting tree;
Twine rosy garlands o'er her lily breast,
And scatter sunbeams on the verdant lea.
Birds of the sylvan grove, sing sweet and low,
Yet hush to hear her answering voice divine;
Ye balmy Winds, your melody bestow,
In praise of her, my own, my Valentine!

Your brightest rays, ye Stars of evening, shed,
And gild her home with your enchanting beams;
With silv'ry splendour wreath her slumbering head,
And smile, ye Planets, on her peaceful dreams;
Then come, blest Spirits, hold your watch around,
Guard with your presence one of all most dear;
Draw near and shield the consecrated ground
Where lovely innocence is sleeping near.
So earth and sky, with all their glittering host,
In jealous care shall still their powers combine,
While I alone, who fain would offer most,
Have nought but love to give my Valentine!

ALFRED H. POULTNEY.

The Conductors of CHAMBERS'S JOURNAL beg to direct the attention of CONTRIBUTORS to the following notice:

- 1st. All communications should be addressed to the 'Editor, 339 High Street, Edinburgh.'
- 2d. To insure return in case of ineligibility, postage-stamps should accompany every manuscript.
- 3d. MANUSCRIPTS should bear the author's full *Christian* name, surname, and address, legibly written; and should be written on white (not blue) paper, and on one side of the leaf only.
- 4th. Poetical offerings should invariably be accompanied by a stamped and directed envelope.

Unless Contributors comply with the above rules, the Editor cannot undertake to return ineligible papers.

PRICE 1½d.

FISHERY EXHIBITIONS.

HITHERTO, in this country we have been slow to move in the matter of Fishery Exhibitions; but now that more attention is being paid to the improvement of our fisheries, so far as improvement can be promoted by bringing to a focus the varied means and appliances incidental to present modes of securing the harvest of the sea, we are not likely to weary of the work, till all the good which can be derived from such exhibitions has been obtained. The Fishery Exhibition held at Norwich about twelve months ago proved successful; a considerable sum of money remaining in the hands of the treasurer after the expenses connected with it had been defrayed, and an honorarium voted to the Secretary, who worked so hard to insure its being successful. The good fortune—monetary and otherwise—attending the Exhibition at Norwich, seems to have incited to action in other quarters; and it is fixed that important ‘shows’ of a similar character shall be held in Edinburgh and London. It is to be hoped that both will prove successful, and place before us many improvements in fishing-gear and fishery economy.

Successful Fishery Exhibitions have been held in various continental cities and towns during the last twenty years, and many of these attracted a considerable amount of attention, visitors having come from great distances to examine the exhibits, and note such improvements as had been devised in the apparatus of capture and the economic uses of all kinds of fish. The most interesting of these foreign Exhibitions was undoubtedly that held at Arcachon, a place which has long been celebrated as an important centre of oyster culture and fishery enterprise, and where may be seen in operation suites of *viviers* or receptacles for sea-fish, devised by the fishermen of the basin of Arcachon, as a means of supply during stormy weather. All Fishery Exhibitions, it may be said, possess a strong family likeness each to the other; but the Exhibition we are now speaking about was

enhanced by an interesting show of living fish of many kinds displayed in a temporary aquarium; a feature which was very much missed at the excellent Exhibition of fishery material and products held at the Hague two years later, which in most other respects was well worth seeing, the display of many kinds of netting being exceedingly effective. Such Fishery Exhibitions as we have witnessed have each been remarkable for some speciality. A distinguishing feature of that held at Norwich was the encouragement given to Essay writing; a sum of about three hundred pounds was collected by the Committee for a series of Essays embracing various phases of the natural and economic history of the British food fishes, and also of the laws which regulate their capture. The money for this purpose was obtained from a variety of sources, the Worshipful Company of Fishmongers of the City of London, and other Associations, as well as many private individuals, being donors to the Essay fund. But what has become of the prize Essays? So far as we are aware, none of them have been published, which seems a mistake. Such writings can be of no public benefit till they have been given to the world; or, at all events, till a summary of their arguments and conclusions has been circulated among those most interested in the well-being of our fisheries.

Provision is in course of being made by the promoters of the Edinburgh Fishery Exhibition for no less than twenty-six prizes in this department. The Essays proposed are very varied, one of the most important being on ‘Harbour Accommodation for Fishing-boats on the East and North Coasts of Scotland;’ another, ‘On the best Mode of increasing the Supply of Mussels for Bait’—bait in quantity being, in Scotland, the main-spring of the cod-line fisheries, which at some seasons cannot be effectively prosecuted for lack of mussels. It would be well if competitors for this essay were acquainted with the great mussel farm at Esnandes, near La Rochelle, which was some years ago described in *Chambers's Journal* (No. 660, August 19, 1876). The proper utili-

sation of 'fish-offal' is also suggested as a fitting subject for an essay. The fact that in Scotland a million barrels of herring are annually cured, each fish of which has to be gutted—seven hundred millions of individual herrings at least!—is sufficient to prove that the disposal to advantage of so much intestinal matter is a question of some importance. Among others of the suggested Essays, we find mention of the 'Herring Brand;' the Salmon Disease; the Natural History of the Herring, with special reference to its Migrations; the various methods of Oyster Culture and of Fish Culture; Salmon Legislation, and the best means of improving it; the Pollution of Rivers as affecting fish-life; the best method of Preserving Fish alive for markets; the species of Foreign Fish most suitable for introduction into British rivers and waters; the various means of Curing and Preserving Fish at home and abroad; and many other subjects of equal importance, which might well include Fishermen's Insurance, a subject which was treated by us last week in this *Journal*. It is to be hoped the Directors of the Edinburgh Exhibition will adopt some plan of making their prize Essays public either in whole or in part. If the funds should admit of that being done, a volume should be published containing the Essays and the awards made for exhibits.

In addition to the above, a large number of prizes will be offered for various exhibits. The competitions in this department will embrace specimens of tinned fish of all kinds; as also specimens of dried, salted, and smoked fish; likewise models or plans of fishermen's dwellings, of piscicultural establishments and of fish-curing yards. As regards the apparatus for catching fish, prizes will be given for an eel-trap which will not interfere with the other fisheries of any river on which it may be placed; an apparatus for capturing crabs and lobsters will also receive a prize; whilst models of all kinds of improved fishing-boats are solicited, as well as collections of stuffed fish and sea fishing-tackle, as also of improved herring and salmon nets; likewise collections of aquatic birds, and many other things of a practical kind which have connection with the arts of fishing. One important item is a prize for Models and Drawings of a handier and safer rig, for the boats now in use on the East Coast of Scotland, than the lug-sail, which requires to be lowered and turned round the mast at every tack in beating to windward. A rig to supplant the lug-sail has just been designed by a gentleman in the Highlands, as will be found more particularly referred to in our 'Occasional Notes' in this number.

In connection with the conserving of fish-food, a prize is offered for an essay 'On the Fish Supply of Great Cities, with special reference to the best methods of Packing and Distribution, and other means calculated to facilitate the delivery of the fish in good condition for market.' Such an essay, if well thought out in a practical spirit, might be the means of expediting a reform in our fish-marketing system which has been long wanted. So far, the Essay List and the Catalogue of Exhibits for which prizes are to be offered, follow the lines of former Exhibitions. It would have been interesting had a prize been offered for a

well-drawn chart showing the relation, to the extent of netting, of the quantity of herrings caught during, say, the last fifty years, at periods of seven or ten years. Such a device might do much to settle that vexed question which is continually thrusting itself before the public, as to whether or not our herring supplies are diminishing; seeing it to be an undoubted fact that the extent of netting used in the capture of these fish has been about trebled during the last half century. Time was when a fisherman could carry his suite of nets to and from the drying-ground on his back; now, a cart and horse are required to perform the same work; and yet we are assured by the Commissioners on the Herring Fisheries of Scotland that there is no sign of herring-scarcity. The fish, according to the *Report* of the Commissioners, are as plentiful as ever. Another subject in connection with such an Exhibition as that about to be held, might be an essay on the value of 'fish as food.' There are some persons who claim that fish is the most valuable of all the brain-making foods of the period, and who zealously advocate its constant consumption by authors and members of the learned professions. It is somewhat curious, however, if fish have the power of bestowing intellect on those who partake largely of such diet, that our fishermen should themselves lag so far behind. The fisher class are certainly not devoid of poetic sentiment; some of the women can read the clouds, and interpret the moaning of the winds and the voice of the waves; but, as a body, fisher-folk can scarcely be called an intellectual race; and, under such circumstances, it is highly desirable that we should know exactly the grounds on which it is claimed for fish that it helps to produce brain-power.

An exhibit which would probably prove well worthy of a money prize or medal, would be to show at a glance 'the products of a cod-fish,' the uses that can be made of its intestinal matter, its bones, its gelatinous parts, its skin, &c. Other exhibits of a similar character would be interesting; but probably there will not be space to admit of such details being entered into; nor can we hope to see so much of the material used in foreign fisheries as was exhibited at the Berlin Exhibition of 1880. At that excellently managed Exhibition, much was shown which was of great interest; but in such cases it was at the expense of a country, and not of any individual or private Company. The United States of America, for instance, exhibited a coloured cast of every important fish in their country, as well as a model of every important fishing vessel and boat; so full, in fact, was the American exhibit, that it at once conveyed to the spectator an excellent idea of the fishing system of the country. The commonest as well as the rarest of the American fishing implements were to be seen at Berlin. The value of the American State exhibit was fifty thousand dollars. The late Mr F. Buckland tried to do credit to this country by sending a number of interesting articles relating to the British fisheries from his Museum of Economic Fish Culture; but the British government sent no contribution. The pisciculture carried on in the United States was likewise

well represented at Berlin; and it must be admitted that the Americans excel in the arts of fish-culture, which they carry on both on their rivers and in the sea on a truly gigantic scale. 'We beat the world at that,' said an American gentleman to us lately. 'We do in tens of thousands what you do in hundreds. One of our rivers yields as many salmon as all your streams put together.' That statement is so far true; the Americans excel in fish-breeding; and nature, in the Columbia River, has given them a wonderfully prolific salmon stream. But for all that is being done in the States in the way of pisciculture, fish are becoming scarce throughout America, and oysters less plentiful, vast as is the extent of oyster-ground across the Atlantic.

Another feature of the Berlin Exhibition which cannot be looked for in that of Edinburgh, we fear, was the Chinese collection; but that fact is only regrettable because the Chinese collection is 'curious'; it is only worth looking at as an example of the peculiar industry of a distant country. There is not much in the way of Chinese fishing-gear that we could copy in this country with the hope of its being useful to us. We could hardly fish with cormorants with any hope of commercial success, nor would their bamboo-mounted nets suit our purposes. One of the chief fishing industries of the Celestial Empire is the cuttle-fishery; nine thousand vessels and fifty-four thousand men are engaged in this fishery alone. The chief seat of the Chinese fisheries is at Ningpo; and Mr Hart, the Inspector-general of Customs there, thinks there are eighty thousand persons engaged in the fisheries.

Coming back to the colder seas of Great Britain and the Fishery Exhibition about to be held in Edinburgh—the London Fishery-show will not take place till next year—it may be interesting to state that the annual value of the British fisheries, to the men who capture the fish, is over eleven million pounds sterling! The fish are caught by over one hundred and ten thousand fishermen and boys, who require as many as thirty-five thousand boats to carry on their work. These figures relate only to the sea-fisheries; the river fisheries will be worth about a million pounds additional.

To provide such a fleet of fishing-boats, and supply the requisite kind and amount of gear for the capture of the fish, has undoubtedly involved a large expenditure. If some of the fishery apparatus now in use could be shown, at a Fishery Exhibition, as it is used, it would undoubtedly form a fine feature of the show. A herring-boat, for instance, at the present time carries a suite of nets extending fully three thousand yards in length and ten yards in depth, presenting to the fish a catching surface of thirty thousand square yards. An attempt was made to show a suite of nets at the Hague, though the display had to be curtailed, for want of room. Though it would of course be impossible to show an entire suite of nets duly hung, a portion of the Waverley Market of Edinburgh in which the Exhibition is to be held, might be allotted for the display of a portion of netting bladed, weighted, and hung as in the sea. A few dummy herrings might even be thrust into

the meshes, to show how they 'strike' the perpendicular net. The catching power of each herring-boat in Scotland, so far as the nets are a factor in the work, has been largely increased within the last twenty years; and it has been calculated that the total of the herring-nets now in use in the Scottish seas would, if all the nets were joined in a continuous line, extend twelve thousand miles, and cover a superficial area of seventy square miles! Those who, at a Fishery Exhibition, see only a great pile of nets heaped together in a mass, can obtain from the sight no idea whatever of the formidable character of the great perforated wall of filmy cotton that is let down into the sea to interrupt the speeding fish, and capture them in tens of thousands for the use of mankind. Nor does a show-case containing a few score hooks give anything like an idea of the long lines used for the capture of deep-sea fish; and in the same way as we desire to see a display of the herring-nets, we would like also to see a full suite of long lines baited and ready—an artificial bait could be used—for action. It requires to be kept in mind, however, that a Fishery Exhibition can only be made up of what is sent to it; it is in a sense a commercial speculation, the chief exhibits being displayed as a means of attracting customers; and as for the more interesting and out-of-the-way fishery apparatus, they can only be shown if they are received. One of the most curious things of the kind we ever saw was a salmon trap which was exhibited at one of the Boulogne Fishery Exhibitions; it was made to work with the flow of the water; it was entirely self-acting; and each fish that was secured in the chamber gave notice of its capture by ringing a bell which formed part of the machinery! At the *viviers* of Arcachon, already alluded to, M. Boissere has so studied their construction that he is enabled to work them with very little assistance—six persons only to three hundred acres of water. If a plan of these *viviers* could be given at the approaching Exhibition, it would be of great interest; as would also a really good chart of the labyrinths of the extensive eel-farm of Commachio on the Adriatic Sea, and plans of the piscicultural laboratory of Huningue.

It will be a feather in the cap of the Edinburgh Fishery-show if it is able to teach us, by means of either its essays or exhibits, what we most want to know in the work of the fisheries. There are certain data in the natural history of most of our food fishes, of which, notwithstanding all that has been written and spoken on the subject, we are still ignorant. One of the great questions appertaining to the subject may be formulated here: 'At what age do these animals become reproductive, and how long is it ere their eggs come to life?' How best to fish, so as only to capture those fish which have just arrived at the proper size for table use, is still an unsolved question in fishery economy; and if that point could be determined at the forthcoming Exhibition, it would signalise the accomplishment of a bit of useful work. That the most economic ways of fishing have not yet been discovered, is obvious enough to all who have had an opportunity of studying the practical work of our fisheries. In the herring-fishing season, cartloads of the ova of these fish are wasted, it being the rule to

capture herrings, if possible, just as they are about to spawn. On board a cod-smack we have seen countless millions of the eggs of the cod-fish which never could become of use. In fishing day after day, tens of thousands of immature soles and haddocks are captured and brought ashore to be sold; it is surely a subject of regret that these fish cannot be left in the sea for another year, when they would grow to double the value.

The forthcoming Exhibition is sure to prove interesting, especially in the hands of a fishery Commissioner such as Mr Archibald Young, to whom the credit is due of having suggested Edinburgh as a centre for operations, and who, as Honorary Secretary, has had most to do with carrying out the necessary arrangements. The office of the Exhibition Committee is at No. 3 George IV. Bridge, Edinburgh, and the Acting Secretary is Mr Henry Cook, W.S. We may add that all essays intended for competition must be lodged with the Secretary on or before Monday, 3d April.

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

CHAPTER VI.—‘HALF A MILLION OF MONEY IS SOMETHING CONSIDERABLE.’

MR JOLLY senior was not a wealthy man, as times go, and his daughter Constance was a trouble to him. The new resident at the Grange had a great faculty for laying on other people's shoulders the burdens which belonged to his own; but there was no one to whom he could so relegate Constance. Mr Jolly characterised his daughter as ‘a reasonably good-looking sort of girl,’ and expected her to marry some day; and he sighed for that day's arrival as the Arab pilgrim sighs for the desert well. If he committed extravagances, they were condoned by conscience as necessary preparations for Constance's settlement, though he did penance for every one of them in bilious growlings. The Grange itself was a matrimonial fly-trap. Horses, carriages, servants were matrimonial lures. Mr Jolly hated keeping house, and pined for his deserted chambers in the Albany. But Constance must have a basis for her operations, and the Grange served. If she succeeded in hooking nobody during the off-season, a town-house must be taken, and her father groaned to think of the expenses.

Mr Jolly was a proud man too, and in spite of all his growling, would not have things done meanly. His was not the pride of wealth, for he had little. It was not the pride of intellect, for he had less. It was not the pride of birth, for he had no glorious ancestry to boast of, and was merely the eldest son of a country gentleman, and the descendant of many country gentlemen of small note in their own day, and no remembrance after it. Mr Jolly's pride was centred in himself. He was proud of himself for being himself, and might have been puzzled to have found a better reason. Some of his friends had told him that he ought to be proud of his daughter; so he became a little prouder of himself, if that were possible, for having

such a daughter. He was not proud of anything but himself; but if he owned anything that another man would have been proud of, it swelled his own consequence in his own eyes. Yet, it was curious to notice that with all his pride he fawned upon a title as few men in this favoured country and in these republican times can find it in their hearts to do.

The father's condition of mind was not unfavourable to Gerard's chances—if Gerard could have known. The only son of a wealthy British merchant was not to be despised as a possible husband for Constance; and Mr Jolly had booked Gerard in the tablets of his memory with half a score of others more or less eligible. Gerard was unknown to trade—the senior Lumby had almost altogether withdrawn from active participation in it; it was rumoured on the best authority that the firm was wealthy even amongst wealthy London firms. There was nobody in the county—excepting a middle-aged bachelor baronet of very old family, and a young lord whose title had begun with his father—the contemplation of whose possible advances so filled Mr Jolly with pleasant hopes. And Gerard before three months had gone over his head after that memorable chance meeting in the lane, had given ample evidence of his enslaved condition. Sir Fawdry Fawdry made no advances, though he permitted his admiration to declare itself openly. That youthful nobleman Lord Solitair, came and went, seeming uncertain of his own mind, if indeed he could be said to have a mind, and finally retired ‘resigned,’ like Carlyle's Blumine, ‘to wed some richer.’

All the while our stricken Gerard, after the manner of lovers, looked with a desponding eye upon his own chances, and regarded all men as rivals. The summer and the harvest went by, and winter drew on apace. Then came the hunting season; and Constance rode to the meet now and again with her father, and Gerard's opportunities increased. He was shy, the poor Gerard, and would not and could not run after his sweetheart as a bolder man would have done, so that he was compelled to trust much to cunningly devised accidents for occasional meetings. Constance did not follow the hounds; and Gerard, compelled to leave her side when the fox broke cover, was unhappy, and found no great joy even in ‘the chase,’ keenest of pleasures hitherto.

‘My dear,’ said Mr Jolly, staidly riding homewards from the meet at his daughter's side, ‘I am very favourably impressed with young Lumby—very favourably impressed indeed.’

‘Don't you think he's a little *gauche*, papa?’ asked Constance.

Mr Jolly smiled, his brown withered face wrinkling like old parchment. ‘Perhaps so, my dear—perhaps so,’ said he, and jogged on, smiling still. ‘You at least may have a right to think so.’

‘Why should I think so more than another?’ asked Constance.

‘There are conditions,’ said Mr Jolly, his eyes wrinkling in a still broader smile, ‘under which young men invariably appear a little awkward.’

Constance looked round upon him with a glance of some impatience; but she answered smoothly

enough: 'You are quite incorrigible. You are as fanciful as any matchmaking old lady.'

Her father instantaneously became serious. 'Have I ever been mistaken?' he asked. 'Have I been once at fault?'

'You were mistaken,' said Constance, tossing her pretty head disdainfully, 'about Sir Fawdry Fawdry. You were at fault about Lord Solitair.'

'My dear,' returned Mr Jolly, 'I only profess to read symptoms. I do not profess to be a prophet. Sir Fawdry and young Solitair were both deeply smitten—but'—

'Nonsense!' said Constance ungraciously.

'But,' pursued her father, disregarding this interjection, 'people marry nowadays for money. Your face is your fortune, Constance. At least it is the better part of it, and men know it. Your brother Reginald must be provided for. By all law and justice, I am bound to deal well by Reginald. And you, my dear, must do as well as you can. Meantime, I am very favourably impressed with young Lumby—very favourably impressed indeed.'

'Very well, papa,' returned Constance; 'we shall know in time. I am not skilled in the reading of symptoms; but this affair will probably end like the rest.'

'My dear,' cried her father, 'you are ridiculous—positively ridiculous. One would think, to hear you talk, that instead of being in the very freshness of your youth, you were an old woman, and had had a life of disappointments.'

'Papa,' said Constance severely, as one whose mind was made up past altering, 'the days of romance are gone and over. Sir Cræsus Cræsus marries Lady Midas, a fat widow with a lapdog, and admires the poor pretty Phyllis from a safe distance.'

'And what becomes,' asked Mr Jolly, 'of poor pretty Phyllis?'

'That depends,' said Constance. 'Perhaps a Gnome from Staffordshire, or a Cyclops from Wales, runs away with her—that is, if she is lucky; perhaps, if she is silly enough, she marries Corydon, and lives in a cottage, and cultivates the virtues of cottage-life—envy and ill-temper and vicious-headache. Perhaps Corydon jilts her—being wise in time—and marries Lady Cræsus, a second time widowed.'

'And so, Romance is born again,' said Mr Jolly with his wrinkled smile.

'For Lady Cræsus,' said Constance. 'And there is the moral of my song, papa.'

'Which is?'

'That when you have married twice for money, you may, if you have survived that double ordeal, marry once for liking.'

'And so, Romance is born again,' said her father a second time. 'It is impossible,' he quoted, with a dim remembrance of his classic days, 'to expel Nature, even with a pitchfork.'—Constance laughed, and they rode on a little while in silence.—'You don't dislike young Lumby, do you?' he asked at the close of this pause, turning a somewhat anxious face upon her.

'No,' she answered carelessly. 'He is well enough.' Then there was another pause.

'My dear,' said Mr Jolly in a confidential tone, pressing his horse so near to hers, that his knee touched the off-side flap of her saddle, 'young

Lumby cannot have less finally coming to him than half a million. Even in these days of huge fortunes, half a million of money is something considerable.' Mr Jolly, like many men of limited income, had permitted himself to think of colossal fortunes more than was altogether wholesome for him, and his tone in speaking of money was always large and unconcerned. He thought of 'a few odd millions' like a Chancellor of the Exchequer, and would speak of them in the same vein.

'Considerable indeed,' returned Constance, who in monetary matters was severely practical.

'He is richer than Sir Fawdry,' said her father, 'and probably as well to do as young Solitair.'

Mr Jolly's veneration for the aristocracy naturally displayed itself in familiarity. I have no desire to be obscure. Let me explain. Mr Jolly in a lord's presence fawned upon the lord; but in the lord's absence, he used his name in an everyday fashion, to feed his own sense of his own importance. And a lesser reverence than his own for lordship could not have made the title seem important enough to do that. Therefore—so complicated a thing is snobbery—a most genuine reverence and worship bred a sometime seeming irreverence of speech. I am sometimes almost persuaded that if our House of Peers could guess the sum of snobbery which their presence creates among us, they would of their own free act abolish themselves, and spare the country much republican oratory.

'Papa,' said Constance, 'there is a vulgar fable about an old woman who counted her chickens before they were hatched. But,' she added, smiling again, 'the wisdom of our ancestors is wasted upon you—altogether wasted. You were counting already, you stupid dear, what could be done with half a million. I know you were.'

Mr Jolly absolutely blushed. That had been indeed the mental effort of the moment, and he had seen his daughter enthroned in Lumby Hall, and himself freed of all anxieties. 'One counts many unhatched chickens,' said he, recovering himself. 'It is the privilege of mankind to hope. When I see you settled, my dear,' he added almost with pathos, 'I can die in peace.'

'Pray,' said Constance, 'make the settlement less remote.'

The satire of this feminine thrust was too subtle for Mr Jolly; but in the fullness of hope he took a more cheerful tone. 'Cræsus is coming along, my dear—plain Mister Cræsus; but not much the worse for that, after all.'

'Cræsus,' said Constance, 'will marry Lady Midas, as already arranged.'

'And Phyllis?' said her sire, reverting to the former parable.

'And Phyllis will die an old maid.' There was not a creature in sight in all the widespread fields. A hundred yards away, the lane in which they rode dipped suddenly with a curve, and the hedge rose high, thick with prickly holly leaves and red berries. The air was as blithe and soft as that of a spring day. 'A southerly wind and a cloudy sky,' with rifts of soft blue in it, and the fresh gentle breath of the soil, and once or twice across the fields the tongue of the distant pack, proclaimed it a hunting morning. 'Phyllis,' said Constance roguishly, 'will die an

old maid.' And there, in the complete loneliness of the fields, she began to sing :

Ilka lassie has a laddie ;
Nane, they say, hae I ;
But a' the lads they smile at me
When comin' through the rye.

Her voice was just as perfect as her face—a very rich and mellow mezzo-soprano, not of so rare a type as her beauty, but as perfect of its kind. Now, it happened, as if set there as a warning to all young ladies against the practice of singing in the open air, which, though natural to youth and good spirits, is opposed to the dictates of fashionable reserve—it happened that a young man stood at that moment in the hollow beyond the high hedge of holly. He had alighted from his horse, and was anxiously inspecting a hoof, and making himself a little muddy in the process, when the first notes of the sweet voice struck upon his ear. He raised himself, let go the horse's foot, and listened. The little carol was sung with exquisite grace and archness, and the young man smiled.

'If your face matches your voice,' he said to himself, 'you won't have to mourn long, young lady.' When the voice ceased, the sound of hoof-beats on the soft road became audible ; and down the slope and round the bend in the lane came Mr Jolly and his daughter. Now, no man can paint in words a pretty woman ; and even Leigh Hunt's charming apology for failure will not greatly help him :

Let each man fancy, looking down, the brow
He loves the best, and think he sees it now.

For some of us have loved homely women in our time—what a provision of Nature that is to be thankful for !—and have found a beauty beyond beauty, in plain faces. But if no word-painter can show you a reliable, recognisable portrait of a pretty girl, what is to be done when he comes to actual loveliness ? What can he do beyond pleading the inutility of his art—its utter helplessness ? Yet, I would fain give you some semblance to the picture to carry in your mind. Fancy, then, a form—not too Juno-like, but ripe and round—clad in a habit of black broadcloth, with scarcely a single crease or wrinkle from the waist upwards ; a form which swayed with the horse's motion, and yet preserved a sense of firmness—the little gloved hands low down with a look of mastery at rest ; the little hat raking forward slightly, with an air not altogether coquettish, on a head altogether stately, with one superb knot of living gold behind ; a face charming in all its lines, and fresh with hues of health and airs of heaven, and on the face a little touch of fun, of pride, of wonder—a startled look, with hauteur and humour in it, at remembrance of the song and the sudden encountering of this unexpected stranger. And beneath this vision, a steed of price, who bore the lady as though he loved her and were proud of her, with high stately step, free yet mincing, like a cavalier in a minuet. This was the sight which broke on the eyes of Valentine Strange, when Constance and her father—whom, by the way, you may, if you choose, leave out of the picture—came dancing round the holly hedge at the bend of the lane.

Val raised his hat. 'I beg your pardon,' he

said, addressing Mr Jolly, 'but my horse has caught a stone, and gone dead-lame. I see that you have a hoof-picker on your saddle ; and I should be awfully obliged if you would lend it to me for a moment.—I'm sure I'm very sorry to detain you.'

'Not at all,' said Mr Jolly, fumbling at the strap which held the hook, with his gloved fingers.

'Allow me,' said Val ; and possessing himself of the hoof-picker, deftly whipped out the stone from his horse's hoof, and restored the little implement to its place with a cordial 'Thank you.'

'Not at all,' said Mr Jolly once more with great majesty. Constance had ridden on during this pause, and was perhaps two hundred yards ahead, when Mr Jolly, returning Val's salute, rode on again, and in little space overtook her. Mr Strange meantime having inspected all his gearing, remounted, and went rocketing up the lane in pursuit.

'What a beauty !' said Val to himself. 'I must have another look at her.' Reaching the lady and her father, he flourished off his hat once more, and drew in his horse to a walk. Want of self-possession had never been among Val's failings. 'Immensely obliged to you, sir,' he said. 'It was a most fortunate thing for me that you came by just then.'

Mr Jolly bowed, and branched off at a lane which bore to the left. 'Good-morning,' from Mr Jolly.

'Good-morning.—And again, thanks,' from Val.
(To be continued.)

NEWGATE PAST AND PRESENT.

IN TWO PARTS.—PART II.

THE shocking state of the prison, and the consequent frequent outbreaks of the malignant form of typhus known as 'jail-fever,' which in 1750 spread to the Old Bailey Courthouse, and caused the deaths of Baron Clark, Sir Thomas Abney, the Lord Mayor, some of the jury, several barristers, and a number of the spectators, led to an examination of the building in 1770 ; the result being that it was pronounced 'so old and ruinous that it was neither capable of improvement nor tolerable repair.' A government vote of fifty thousand pounds, coupled with the gift by the City of additional ground for the enlargement of the jail, hastened the execution of the sentence of demolition upon Old Newgate. The task of rebuilding the jail was intrusted to Dance, the architect of the Mansion House ; and the first stone of the new erection was laid by Alderman Beckford in 1770.

The work proceeded slowly ; and the new prison was not yet completed, nor 'Old Newgate' entirely removed, when the outbreak of the Gordon Riots in 1780 added a new chapter to its history. The so-called Protestant Association having presented their absurd 'No Popery' petition to the Commons, and having failed to secure more than six votes in its favour, an unruly mob took possession of the streets, and for five days carried on a work of wholesale plunder and destruction. On the 6th of

June, having destroyed several Roman Catholic chapels, and the houses of many of the leading Romanists, they turned their attention to Newgate, whose governor, Mr Akerman, having received warning of the danger, had made hasty preparations for their reception. The *Old Bailey Sessions Paper* graphically describes the scene. The attack commenced on Akerman's house, which was soon broken into and fired, and his furniture dragged into the street, and broken up to supply torches and firewood for further mischief. An organised attack was then made on the various prison gates; but finding them too strong to be forced, the rioters piled the debris of Akerman's furniture against them, and fired the pile. The warders made heroic efforts to protect the gates, which they deluged with water, to prevent the metal-work from melting; but meanwhile the flames from the governor's house spread to the wards; defence became hopeless; the mob entered the burning jail, liberated the prisoners—some of them showing familiar knowledge of the intricate interior of the prison—and finally reduced all that was combustible of the building to ashes. So perished the last remains of 'Old Newgate.'

The new jail, then in course of erection, having suffered severely in the fire, the repairs were rapidly pushed forward; but it was not until three years later that the new prison was ready to receive its inmates, having cost by that time nearly double the original government grant of fifty thousand pounds. Principally owing to the representations of John Howard, who, in the course of his term of office as Sheriff, had made it his business to inquire fully into the condition and working of the jail, and had reported the results of his investigation to parliament, the principles upon which the new building was constructed were a great improvement upon those of 'Old Newgate.' But many of the worst evils remained, no provision being made for the classification of the prisoners; while the sanitary arrangements were so bad that outbreaks of 'jail-fever' were still frequent.

At the commencement of the present century, a more virulent outbreak than usual, at a time when there were no less than eight hundred prisoners within the walls, led to a resolution of the Council to remove the Debtors' prison; and this very necessary step was carried out in 1815, prisoners of that class being removed to the adjacent Compter in Giltspur Street. This building—now no more—had also been erected by Dance, to take the place of the old Wood Street Compter; but, so far as the debtors were concerned, the change was hardly for the better, their new quarters being described as 'one of the worst managed and least secure of the metropolitan prisons.' Newgate was, however, relieved of the evil of over-crowding, which had been an active agent in the spreading of disease, both physical and mental; and the first step was thus taken towards improving the condition both of the prison and of its inmates.

The present jail is a solid, stone-built edifice, designed with a view to security rather than beauty; but the massive style of its architecture entitles it, externally at least, to a foremost place

among the buildings of the City. Its principal front is three hundred feet in length, and the depth is one hundred and ninety-two feet, a portion of the older erection extending a further distance of fifty feet in Newgate Street. Like its predecessor, it consists of three distinct portions; the centre, containing the residence of the governor, with the chapel behind it, being flanked by two wings, consisting of yards, wards, and cells for the confinement of the prisoners. The internal arrangements have been completely remodelled of late years, to provide means for complete separation of the prisoners.

On the opening of the new jail, the scene of execution was transferred from Tyburn to the exterior of Newgate, the drop being erected outside the Debtors' Door. This continued to be the customary place of execution until the passing of the Act of 1864 abolishing public executions, since which, the sentence of death has always been carried out within the walls. This salutary change must have caused a considerable reduction in the incomes of householders whose windows overlooked the fatal Debtors' Door, as the interest shown by the public in the horrible spectacle of an execution, enabled occupants of houses in the Old Bailey to reap a golden harvest on those occasions. It is said that no less than twelve pounds was on one occasion paid for the privilege of witnessing an execution from the first-floor windows of one of these houses; and even the roofs used to be crowded, for hours beforehand, with eager spectators; while the street itself was blocked with carts and carriages, the occupants of which beguiled the time of waiting with cards and refreshment.

Though the building itself was an improvement upon its predecessor, the Reports of the Inspectors of Prisons, in the early days of the present jail, show that, so far as the management of the inmates was concerned, Howard's efforts had been of little or no avail. As we have mentioned, no classification of the prisoners was yet attempted. Robberies continued to be planned, and the uninitiated were bullied, as before. The Parliamentary Report of 1814, speaking of the chaplain, Dr Forde, says: 'He knows nothing of the state of morals in the prison; never sees any of the prisoners in private; never knows that any have been sick till he gets warning to attend their funeral; and does not go to the infirmary, for it is not in his instructions.' Attendance at the chapel was entirely voluntary; gambling, drinking, and the like, were the only occupations; and the old prisoners instructed the younger ones in the dearest feats of robbery.

The cause of the female prisoners was taken up in 1817 by Mrs Fry, 'the female Howard,' under whose auspices a Society, known as the 'Ladies Prison-Visiting Association,' was formed, the unremitting and unselfish efforts of whose members met with almost incredible success. Not only was the moral welfare of the unfortunate women promoted, but they were also encouraged to spend their time in various sorts of useful work, the proceeds of the sale of which were employed, partly in bettering their condition while in jail, and partly in securing for them honest employment on the expiration of their terms of imprisonment.

On the male side, however, there was no change for the better; and in 1836 the Inspectors of

Prisons spoke of Newgate as 'a fruitful source of demoralisation;' but no notice was apparently taken of the Report; for again in 1843, we find them describing the condition of the prison as such that 'the prisoners must quit the prison much worse than they entered it.' This state of affairs was rendered even worse by the fact that no employment of any kind was provided for the prisoners, and that even untried prisoners, innocent and guilty alike, were compelled to herd together with the most hardened of the convicts. It is hardly necessary to remark that a great change has been effected of late years in all these respects. Newgate is no longer a convict establishment, being now devoted only to the detention of prisoners awaiting trial at the Old Bailey, and to those who, after sentence is passed, return thither until arrangements are completed for their removal to a convict prison.

A School, to which boy-prisoners up to the age of sixteen were admitted, was started in 1814; but attendance was quite optional, and it is hardly wonderful that the boys preferred the conversation and tales of crime of the elder prisoners, to the instruction of the schoolmaster. But the Report of 1875 speaks encouragingly of the provision for the education both of boys and of their illiterate elders, though the Inspectors remarked that the duties of the schoolmaster were somewhat interfered with by his also holding the post of photographer to the prison. The chaplain's duties are also performed in a manner strongly contrasting with the laxity of Dr Forde's rule; while the bodily wants of the inmates are attended to on a scale which, though not precisely luxurious, is doubtless superior to what many of them are accustomed to in private life. For breakfast and supper, each prisoner is provided with a pint of oatmeal gruel or 'skilley,' each male receiving eight ounces, and each female six ounces, of bread in addition. Dinner, on four days of the week, consists of three ounces of cooked meat without bone, and half a pound of potatoes, with the same quantity of bread as at breakfast; while on the remaining three days, a pint of soup takes the place of the allowance of meat.

Many well-known and well-remembered names appear in the roll of inmates of the present jail. Among those who have suffered the penalty of death outside the Debtors' Door, perhaps the most notorious were the Cato Street Conspirators, five of whom were executed in 1820 for conspiring to murder the entire Cabinet on the occasion of a dinner-party at Lord Harrowby's, and for the actual murder of one of the constables employed to effect their arrest. Four years later, the sentence of death for forgery was executed upon the celebrated banker Fautleroy, who is supposed to have defrauded the Bank of England of no less than four hundred thousand pounds by means of forged powers of attorney. A curious circumstance connected with his crime was that he had kept an accurate list of those whose names he had forged, with an account of the result of each transaction, and that he had planned the whole as an elaborate scheme of revenge against the Bank, which had caused him heavy business losses by refusing to discount his acceptances. Another remarkable criminal who suffered for his crime at Newgate was Courvoisier a Swiss valet, executed in 1840 for the murder

of his master, Lord William Russell. The crime was committed in the hope of saving its perpetrator from detection for thefts of which he had been guilty while in the service of his employer. Among other inmates of the present jail, occurs the name of Lord George Gordon, whose followers destroyed 'Old Newgate.' Having been convicted in 1788 of libelling the Queen of France and the French ambassador, he fled to Holland; but was arrested, and consigned to Newgate, where he died of jail-fever five years later.

A sketch of the history of Newgate would be imperfect without some mention of the curious literature which owes its existence to the gloomy jail and its surroundings. Some specimens we have already mentioned; nor need we do more than refer to the numerous published accounts of casual visits to the prison, or to such vivid pictures of life within its walls as that in *Barnaby Rudge*; but among the less familiar Newgate literature are such rare works as *The Discovery of a London Monster called the 'Blacke Dogg of Newgate'*, a quaint tract, published in 1638, purporting to contain a revelation, in the form of a dialogue between the author and a prisoner, of the doings of some of the inmates of the jail. The author tells us that 'the Blacke Dogg is a black Conscience, haunting none but black-conditioned people, such as Newgate may challenge to be guests.' Next in point of time, we come, in 1677, to '*News from Newgate: or a True Relation of the Manner of taking Seven Persons, very notorious for Highwaymen, in the Strand, upon Monday the 13 of this instant November, 1677; and of another apprehended on Friday the 16th: all now prisoners in Newgate; with an Account of several Grand Robberies committed lately in Divers Places; and particularly, how Fifteen Countrymen returning from a Fair were set upon by Seven Highwaymen, who took from them several Hundreds of Pounds; as likewise the Robbing of a Stage-coach, and strange Discovery of some of the Thieves now in Custody, by means of two of the Passengers supposed to be Confederates with them.*'

In 1717, Newgate made two curious contributions to English literature, one bearing the title of '*The History of the Press Yard: a brief Account of the Customs and Occurrences that are put in Practice in that ancient Repository of Human Bodies called Newgate;*' from which the curious reader may gain a vivid insight into the horrors of prison-life a century and a half ago. The other is '*The Secret History of the Rebels in Newgate,* giving an Account of their daily Behaviour from their Commitment to their Jail Delivery; taken from a Diary kept by a Gentleman in the same Prison.' Here we have what professes to be the report of an eye-witness, of the profligacy and license permitted, or at least winked at, by the authorities, with some queer notes respecting the extortions practised by the jailers upon their charges. The Diary extends from April 14, 1716, to July 18, 1717, the rebels of whom it treats being some of the less notable movers in the Jacobite rising of 1715.

Passing over the *Newgate Calendar* and the *Annals of Newgate*, a series of biographies and details of trials, &c., by the Rev. Mr Vilette, then Ordinary of the jail, we come, a century later, to

a work by one of the philanthropists who took up the cause of the prisoners in 1817, entitled *A Twelvemonth's Visit to Newgate*, said by its author to contain 'a faithful account of the character and conduct of twenty-three persons, out of twenty-seven, who suffered the awful sentence of the law, in the City of London, during the year 1817.' Of more recent years, we find an interesting account of life in the City jail and of its internal economy, in '*Five Years' Penal Servitude*, by One who has endured it.' The graphic pictures which this writer has given us are too familiar to our readers to need recapitulation. His narrative of the daily routine of the jail, the strict and careful supervision to which prisoners are subject, and the ingenious mechanical contrivances which enable the warders, themselves unseen and unheard, to keep a watch upon the prisoner's every movement, presents a sufficiently clear idea of existence within the 'Stone Jug,' to satisfy the most curious, without any necessity for personal acquaintance with the interior of the prison. Many of his suggestions for bettering the lot of the criminal classes, and of obviating the risk, not only of further injury to the guilty, but, what is more important still, of irremediable wrong to the innocent, are so excellent, and apparently so feasible, that we shall hope to see them carried into effect in the new City prison, when Newgate itself exists only as a memory of the past.

THE CONJURER OUTWITTED.

THE following incident was narrated to the writer in Lisbon by the victim himself, a celebrated Austrian sleight-of-hand performer.

It has long been a stock 'dodge' of professional conjurers, and one which must be tolerably familiar to the public by this time, to excite notoriety in some way or other, immediately on their arrival in a provincial town; and one of those dodges is to hire a cab, drive to the leading hotel, and then refuse to pay the cabman. A violent altercation of course ensues; a policeman is summoned; the Professor gives his card freely—very freely—but declines to tender more solid satisfaction, on the ground that he has paid already; but that, in a momentary absence of mind, he has 'passed' the fare into the cabman's boot, or underneath the lining of his hat. Jehu for a long while indignantly refuses to remove the article of clothing indicated; but at length complies with reluctance. There, sure enough, is the required sum, or perhaps double its equivalent; and the fame of the conjurer being thus early noised abroad, he gets a good house in the evening. Should he be giving two performances on consecutive evenings in the same place, he may go to the market on the morning which intervenes between them; then, selecting an egg from some old woman's basket, he breaks it, and finds therein a gold ring, a live canary, or a sovereign. Another, and another, and yet another, are purchased and cracked with a like result; until, the cupidity of the owner being aroused, she hastily announces her determination not to sell any more, and forthwith proceeds to demolish the whole of her stock-in-trade on her own account. Naturally, she is rewarded with the discovery of nothing more

than the legitimate yolk and albumen; and loud will be her lamentations and bitter her invectives against the sorcerer who has thus beguiled her into making herself the laughing-stock of the entire market. Her denunciation, however, will rather rebound to his credit than otherwise, and manifest itself in overflowing benches at the Town Hall, Assembly Rooms, or Institute, the same night.

The true explanation is a very simple one, both being matters of pre-arrangement, for which the confederates, namely the cabman and egg-vendor, are well paid. No doubt, if a conjurer sees an opportunity of improvising a trick, and making a *bond fide* impromptu hit, off the stage, he will not be slow to avail himself of it; but such chances of creating a public sensation are rare. The same end is far more easily attained through the intermediate agency of a few moments' private conversation between his servant and the 'subject' to be operated upon. No earthly power could insinuate a coin into an ordinary boot without the wearer's knowledge and consent; nor would any ordinary woman be such a fool as to go on breaking eggs by the dozen in the hope of realising results which have obviously been effected by a *tour de force*. But it is an extraordinary circumstance that the public will never accept a commonplace, common-sense explanation of a conjuring trick. The popular idea runs on springs and traps and invisible wires; and a simple solution of a mystery is petulantly rejected, as an insult to the understanding. People like to be deceived, but they do not like to be told how easily this may be done; and sleight-of-hand performers take advantage of this human weakness to clothe some of the most ordinary feats of legerdemain with an environment of mysticism, and by so doing, render them more telling than any which are executed by all sorts of mechanical or electric apparatus.

'Suppose,' I once suggested, interrogatively, to Delisle, 'the cabman, who might be well known in a quiet country town, should tell?'

'He will—he does, the first time he gets drunk; but it doesn't matter. Nobody believes him!'

My Austrian friend was lately making a provincial tour through the south of France, and in the course of it came to a certain town which was of so little geographical or commercial importance that he had hesitated to include it in his 'fixtures.' It formed a convenient resting-place, however, between two larger and more promising places, and he resolved to halt there for a single night. Notification of the coming entertainment had, of course, been duly billed some days in advance. As soon as he had arrived on the scene, the old programme was carried out. The cabman, a dull, stupid-visaged Gascon, having got the scheme with difficulty fixed in his brain, and a five-franc piece with less difficulty fixed in his boot, was instructed to drive the conjurer round the town, and exhibit to him the principal public buildings and objects of interest—in other words, to give his fare an opportunity of exhibiting himself as the coming man—who had come; and constituting in his own person the leading object of interest to the dwellers in that monotonous little French town. Then back to the Railway Hotel, where the regulation

business began. Jean stolidly refused to accept the assurance that he had been paid; could not be induced to believe that it was 'all right'; didn't want tickets for the performance instead, and held out his hand doggedly for the money—so doggedly and with such heavy incapability of being roused to irate animation, that the disputant had himself to suggest that a gendarme should be fetched. This was quickly done by one of the by-standers; and with well-feigned protestations and remonstrance, the supposed defaulter was hauled before the local judge. And here, having strenuously asserted his injured innocence with profuse circumlocution, he wound up by stating that he had offered the driver five francs, being the amount of his fare and something in addition; but that he was so slow in taking it, that he, the donor, had caused it to pass into his boot, in a fit of impatience. Such things, he assured the avowedly incredulous magistrate and spectators assembled in the court-house, were not only possible, but easy of performance, by virtue of the magic art which he possessed; that he was sorry he had done it, since it had caused all this bother, and rendered it necessary to intrude on the valuable time and attention of justice; but that he could not afford to pay twice, and was, moreover, desirous of clearing his character from the imputation of dishonesty which had been cast upon it, and which would materially injure his financial prospects for the evening. In short, would the judge be good enough to order the cabman to take off his left boot, and he would pledge his word of honour that the five-franc piece should be found in it, before all witnesses.

The old programme, as I have said; but here a certain unrehearsed incident occurred to vary it. The simple Gascon did not deny that there might be a five-franc piece in his boot—in fact, he admitted that such was the case—but he utterly negatived the proposition that the late occupant of his vehicle had anything to do with its being there. He always kept his money in his left boot for safety, he said. And indeed, when the great cow-hide foot-covering was removed, out dropped not only the five-franc piece, but several other coins!

The magician was beaten with his own weapons. His case was looked upon as an impudent attempt at fraud on a poor untutored cabman, whose peculiar receptacle for money he had noted, and sought to take advantage of; and he had to pay a second time, and look pleasant. He returned to the hotel on foot, attended by an inconveniently demonstrative rabble, and found, furthermore, that mine host declined to furnish him with bed or board unless he were paid for everything beforehand. Indeed, the worthy landlord plainly hinted that he would not be sorry to be relieved of his custom altogether; and was only persuaded to grant him a dinner and a night's lodging by the earnest solicitations, coupled with the display of a well-filled purse, which his guest was induced to make, owing to the fact of the town boasting no other hotels.

Nevertheless, he had a fairly good house in the evening; and like a sensible man, who had seen many vicissitudes, and was prepared to turn

everything to the best account, he made what he could out of his misfortune—since there was no possibility of hiding his defeat—by frankly confessing to it, and relating the whole adventure to his audience, as a capital joke against himself. He had been fairly nonplussed, he owned, by the stupid-looking cabman—he, who had already given them some specimens of his skill, and was about to exhibit more; but he did not regret it. Such a lesson in tactics was worth double the money it had cost him. He then described the proceedings from beginning to end; the man's apparent tardiness of comprehension; his receiving the coin from the conjurer, and getting inside the *voiture*, that he might slip it, according to orders, into his boot unobserved; and the dull unintelligent demeanour he had maintained all through the little drama in which cabby had played his part to such perfection. In conclusion, he addressed himself to the back seats, and invited his Boeotian friend, if he were present in the hall, to come forward, and show himself as the man who had cheated the conjurer at his own game; when he would be very happy to hand him another five francs wherewith to drink the health of the company.

The ingenious peasant did not 'come forward,' but he was most likely present, and listening with all his ears; for next morning he called on the entertainer, as the latter was seated at an early breakfast, and introduced a lawyer, who threatened an action for defamation of character, on behalf of his client, in that the speech laudatory of his acuteness, made last night, amounted to a public accusation of obtaining money under false pretences! His client was a poor and illiterate man, but honest as the day, with a good name, and a wife, and all the rest of it, that all such people seem to have when any legal question crops up. How much it cost my friend to soothe that poor but honest man's breast, I do not know; but he assures me he will never pay another visit professionally to the town thus underlined in his reminiscences; and that for the future he shall invest spare five-franc pieces in better securities than cabmen's boots, especially those worn by fatuous-looking Gascons.

THE MONTH.

SCIENCE AND ARTS.

RECENT contributions to geographical knowledge have been both numerous and important. The publication of the English translation of Baron Nordenskiöld's *Voyage of the Vega round Asia and Europe*, once more arouses interest in the ice-bound Polar regions. Not only does this book give an account of the recent *Voyage*, with copious notes of observations taken during the time, but it contains a full account of what has been done on the same ground by earlier explorers. It forms perhaps the most comprehensive account of the Arctic regions which has ever appeared.

For a long time past, Mr E. G. Ravenstein has been occupied, under the auspices of the Royal Geographical Society, in producing a map,

on an unusually large scale, of Eastern Equatorial Africa. This map will comprise twenty-five sheets, the first seven of which have just been published. Here we find the routes marked which have been traversed by different explorers, together with much useful information concerning them. Numerous blank spaces show that, in spite of the great efforts already made, there are many parts of the continent about which absolutely nothing is known. This map makes its appearance very opportunely; for, at a late meeting of the Geographical Society, two papers were read on recent travels in Central Africa. It is obvious that the interest attaching to such works is greatly enhanced by the help of such aids as this new map affords.

We learn that two Companies have been formed for the development of the coal-fields in Cape Colony. It has long been the opinion of geologists that certain parts of South Africa would yield vast quantities of coal; and for some time past, coal-mines at Molteno and Paardekzaal have been worked with very successful results. One of these mines, the Molteno, is of an unusual type. It consists of a hill which has been pierced with a shaft from its summit, with another horizontal heading driven into it from its base. This mine is estimated to contain at least half a million tons of rich coal. A line of railway is being laid between Molteno and East London; and as the district is rich in ironstone as well as coal, it has probably a prosperous future before it.—In this connection may be mentioned a projected railway in West Africa from the Gold Coast to the interior, which will open up a district rich in palm-oil, india-rubber, and other products of this fertile land.

Mr Rassam, the well-known discoverer of Assyrian relics, lately gave, at a public meeting, a brief account of his recent doings. At about twelve miles from Bagdad, a ruin was pointed out to him by an Arab; and he at once commenced some excavations there. After several days' work, the diggers came upon an enormous building, containing several chambers. Most of these were paved with brick or stones; but one had a floor of asphalt! Numerous inscriptions were found on this building; but the most important discovery was made by the workmen after Mr Rassam had been obliged to come home. In one of the rooms there were found records inscribed on nearly ten thousand tablets. These tablets are on their way to England; and until they reach the hands of experts, it is impossible to say what story they may unfold. Suffice it to add that we may be on the verge of a discovery that may prove more important than anything yet achieved in the history of Eastern research.

While on the one hand archaeological students have been busy unearthing treasures such as these, others have been doing a no less important work in solving the meaning of those inscriptions which without their labours would have had no meaning for us. Among these last may be mentioned M. Revillout, who, during the past few years, has devoted his time to the translation of certain papyri written in the demotic, or later handwriting of the Egyptians. A vast number of legal documents, dating, some of them, five centuries prior to the Christian era, have for many

years been lying at the Louvre. Of these documents, M. Revillout has made careful translations. They principally consist of marriage contracts and settlements, conveyances, mortgages, and other monetary transactions, and are full of interest, when we bear in mind the lapse of time since they were inscribed.

The wonderfully rapid progress of electric illumination has induced the Committee of the Franklin Institute to issue a Report specifying a number of precautions which should be observed in fixing wires and apparatus, so as to prevent accidents to life or property. Some fatal accidents have already occurred in this country through ignorance in handling cables through which a current was passing; and it is perhaps a matter of surprise that these accidents should have been so few, seeing that experience has been so limited in dealing with electric apparatus. The Committee recommend that all wires should be of sufficient size to carry the most powerful current used, without dangerous heating; and to avoid danger to life from discharge through the body, the wires should, whenever convenient, be placed out of reach, or deprived of danger by sufficient insulation. These are the two most important cautions conveyed in the Report; but other details of management are suggested which are well worthy the attention of all electric engineers, some of whom must necessarily be inexperienced in what must yet be considered a new industry.

A recent lecture at South Kensington, by Mr W. J. Bover of Leeds, on 'Smoke Abatement in Connection with Glass and Pottery Burning,' contained an account of Thompson's Gas Kiln. This kiln would seem to present many advantages in the way of absence of dirt, smoke, and fumes, and also in economy, over the methods of burning pottery generally adopted. By the system of gas-firing, glass and porcelain can be more perfectly fired than by the older process, for the heat is far more uniformly distributed; while there is a complete absence of those sulphur-fumes which are inseparable from the use of coke. At one factory, the cost of gas consumed and labour was one shilling, as compared with four shillings per firing in the old coke-consuming kiln. Moreover, whereas the former kiln could be fired six times daily, the latter could only be used once. There is no doubt that the same system could be applied to bakers' ovens and other uses; and when manufacturers are taught to believe that such a saving as we have indicated can be insured by the adoption of the new system, they will no longer care to decorate their tall chimneys with those vast black banners of smoke which work such havoc on the atmosphere of our large towns.

Some further experiments with the new Fire-proof Asbestos Paint were lately conducted in the grounds of the Crystal Palace, Sydenham. Two large structures made of timber, and representing theatrical stages, with drapery, curtains, and ropes, were prepared for the occasion; the one being treated with the Asbestos composition, and the other being left unprotected. A pile of shavings and other combustible materials was placed on the stage of each erection, and both were ignited at the same instant. The unpro-

tested structure was soon destroyed in the fierce heat; while that which had received a coating of the paint, resisted the fire most successfully. At the end of half an hour, some portions of the latter began to smoulder away; but there was no actual outbreak of flame. The form which these experiments took was, of course, suggested by the recent calamities at Nice and Vienna; and the results obtained clearly prove that builders and decorators have now at their disposal the means of averting the most dreaded form of disaster.

From the French scientific journal *La Nature*, we cull the following recipe for making a pretty and cheap room ornament. Procure a cheap sponge, the larger the better; place in warm water, and squeeze out all the moisture. Plant in the holes, seeds of millet, barley, purslain, red clover, grasses, &c., and in general any seeds which will germinate easily, and which will afford a variety of colour. Hang the sponge so prepared in a window, or place it in a vase where the sun will reach it, sprinkling it with water every morning for a week. It will soon be covered with vegetation—to remind those whose lives are unfortunately spent amid bricks and mortar, of the brighter world outside.

The late fatal explosion on board H.M.S. *Triumph* reveals the curious fact that our navy has for some time been provided by government with kegs of material representing 'infernal machines' of a most deadly kind. *Xerotine siccativa* is a compound of boiled linseed-oil and certain metallic oxides or salts. Under the name of 'driers,' such compounds are continually used for mixing with oil colours, so that they may readily dry; and hitherto, such harmless materials as litharge, red-lead, plaster of Paris, &c., have been enlisted into this service. Latterly, however, salts forming very unstable compounds when mixed with the oil, seem to have come into use; and for some incomprehensible reason, their dangerous nature has been unknown to the authorities. The mystery attaching to the awful *Doterel* explosion, when an entire crew were sacrificed, is now explained. We may feel certain that a calamity such as this will never again be allowed to occur from the same cause.

The want of a standard light for photometric purposes has long been felt; and since the introduction of electric illumination, some better means of measuring the light given by various systems than that hitherto adopted has become imperatively necessary. The old standard, the spermacandle, becomes, through unavoidable variations in manufacture, a very uncertain unit of light; and the Carcel burner adopted by the French is also unsatisfactory. In order that some definite agreement should be arrived at respecting this important subject, a Photometric Committee was appointed by the Board of Trade to inquire into, and report upon, the matter. This Committee has now finished its labours, and recommends the adoption of an air-gas flame—first suggested by Mr Vernon Harcourt—as the most reliable for the purpose. This contrivance consists of a brass burner with a quarter-inch aperture, giving a flame two and a half inches high. It is fed with a definite mixture of the vapour of light petroleum and atmospheric air. The flame produced is constant and trustworthy, and is in every respect suited for the purpose indicated.

The Channel Tunnel scheme, which some years ago was derided as an impossibility, seems to be in fair way of successful realisation. A meeting of the Submarine Continental Railway Company has just been held to take over from the South-Eastern Company those experimental borings which have convinced engineers that the enterprise is merely one of time and money. Sir E. W. Watkin, who presided, claimed that as there already existed in Great Britain fifty-eight thousand miles of underground tramway and roadway in our mines, we need not be frightened at the proposal to add another twenty-one miles of subway, which represents the length of the proposed tunnel. The cost is estimated to be far under the four million pounds prophesied by previous engineers—a great saving being represented by the dry nature of the workings through the gray chalk. The progress made by Colonel Beaumont's Compressed Air-borers is at the rate of twelve yards per day of seventeen hours; but a machine will presently be at work which will cut its way at the rate of one yard per hour. Thorough ventilation is maintained in the workings by the exhaust-air from the machine, and no trace of carbonic acid from the chalk can be detected by the most rigid test.

It has long been known that the Davy Safety Mining Lamp, under certain conditions, is not by any means a safeguard against explosion. With an explosive atmosphere moving through the passages of a mine with a velocity above a certain standard, the wire-gauze of the lamp no longer forms an effective barrier to the flame, and explosion then becomes possible. To meet this difficulty, a kind of cover to the lamp has been devised under the title of 'The New Tin Can Safety Lamp.' It consists—as its name implies—of a tin case for the reception of the lamp, which acts not only as a guard from the draught, but is also a great protection to the lamp itself. There is a lock on the case; and a glass front, through which its light can pass. This lamp was exhibited at the last meeting of the Manchester Geological Society, held at Wigan; and it was stated that its invention was claimed by two or three different miners, but that it was impossible to say to whom the credit of it rightly belonged.

A Report has been published which shows that during the year 1881 the managers of collieries received forty-two warnings from private persons. Twenty-six of these warnings were followed by explosions, thirteen of which proved fatal, and involved the loss of nearly one hundred lives. Most of these explosions were accompanied by high barometrical pressures, and may be traced not only to the effect of this pressure upon the coal, but also to the accumulation of fire-damp in the workings, owing to decreased ventilation from stagnation of the atmosphere above, a condition which it almost invariably assumes when the barometer is high. It may be assumed that these warnings have not been in vain; for the loss of life, as stated above, is less than half the average of preceding years.

It is well known that in the case of coal-pit explosions from gas, a great many deaths are due to the after-damp. To provide a remedy for this, it has been suggested that strong-rooms for refuge might be made at different places on each level

in a pit; but this suggestion, owing to the expense and difficulties of construction, did not find favour with the government inspectors. A correspondent writes to us, however, stating that the thing is by no means impracticable; and that if these strong-rooms, or places of refuge, were connected with the surface by a tube through which a supply of oxygen gas might be forced into these rooms, and if a small store of food, such as ship-biscuits, and water were always kept in them in case of emergency, many lives that are otherwise sacrificed, might be saved. The idea deserves to be thought out.

The French scientists are keenly alive to the importance of weather telegraphy. For the past seven years they have established an Observatory upon a shoulder of the Pic du Midi, in the Pyrenees; but not content with this, the staff employed have quite recently shifted their quarters to the summit of the mountain, nine thousand five hundred and forty-four feet above the level of the sea. Here is established a comfortable dwelling, which forms a great contrast to the meagre accommodation provided for Mr Wragge during his daily ascents of Ben Nevis. A house, with a covered-way leading to the instrument platform, workshops, and a laboratory, complete the arrangements. More important still, a telegraphic wire to the base of the mountain records daily the progress of the work above. The staff, it may be added, numbers four; and they have hitherto found the cold—under the conditions named—to be quite supportable.

Sir Joseph Hooker's Report on Kew Gardens, lately issued, contains an interesting account of the Cola Nut—the seed of the *Cola acuminata*, a tree which has been very successfully propagated in the Gardens. The Cola Nut is said to enhance the flavour of anything eaten after it, and is also said to possess extraordinary power in allaying the pangs of hunger. It is, however, chiefly used as a luxury, and is in great demand among the natives of the Gambia. The trade in this nut has much increased of late years, and in 1879 reached seven hundred and forty-three thousand pounds. The plant—a native of the Sierra Leone district—has been introduced into the West Indies, and has been distributed from Kew among the Botanic Gardens in various parts of the world.

We elsewhere allude to the useful work which has been patiently accomplished by Miss Ormerod in collecting, from various parts of the United Kingdom, evidence of the destruction wrought upon farm-crops by different insect pests, and of the means adopted as remedies. She has just completed a new series of returns that are shortly to be published. These are full of interesting matter not only to the agriculturist but also to the entomologist, and even to the amateur in search of new specimens for his microscope; for not only are our old friends—or rather enemies—the fly of various kinds, the daddy-long-legs, the wireworm, aphides, &c., fully represented, but there is here recorded the first appearance—it may be the first observation—of some kinds of destructive creatures never before enumerated in the list. The observations for the past year are thus remarkable for these new acquaintances, and, unfortunately,

for unusually severe attacks by better-known delinquents.

It will surprise some readers to learn how many more things than tinned meats are produced in Australia. The Australians, for instance, possess eight million head of cattle, seventy million sheep, and a million horses, besides pigs and goats. Much of the wool which grows on their sheep is imported into this country; and of the total of four million pounds-weight of wool which we annually receive from all sources of supply, three million pounds, or three-fourths of the whole, come to us from Australia. As some portion of this wool must go back again when manufactured, it has been fairly asked, Why not transfer some of the home manufactories to the colonies, where the operatives can be fed as well as here, and cheaper?

We learn from *Nature* that the Danish Society for the Protection of Animals—under the patronage of His Majesty the King of Denmark—offers two prizes, of two thousand and one thousand francs respectively, for the best and second-best scientific essay on that part of the Vivisection question which concerns the possibility of substituting recently killed animals for living ones, for the sake of physiological investigations. The essay should sufficiently indicate previously unknown cases, in which such a substitution of dead material may be applicable. In these essays, the possibility and desirability of replacing painful experiments on animals by some other methods of research, may also be a subject of inquiry. The essays may be written in the Danish, Swedish, English, French, or German languages, and forwarded before September 1, 1882, to His Excellency Mr A. de Haxthausen, President of the Danish Society for the Protection of Animals, at the office of the Society, Copenhagen. 'Our Society is only too well aware that the claims of humanity are not to be satisfied by these means, as extensively as it could wish. It will, however, feel itself richly rewarded, if its efforts result in diminishing the number of experiments in which animals are subjected to great and lingering agony. In this earnest hope, we respectfully request all humanely disposed scientific men of every country in the world, kindly to comply with our invitation.'

BOOK GOSSIP.

IN spring-time the forces of Nature are not wholly on the side of the husbandman and gardener. Its soft winds and dewy rains—its 'ethereal mildness' generally—while they revive the heart of the vegetable world, and waken the plants and flowers from their long winter sleep, infuse at the same time renewed vitality into various forms of animal life that have also been dormant throughout the colder season. Countless insects, many of them of destructive character, now burst their pupa encasement, showing that their period of suspended animation has ceased; and an army of maggots, slugs, and caterpillars are let loose upon the farmer and the horticulturist. If the winter has been mild and open, and marked by an absence of long or intense frosts, then the inroad of these crawling pests is aggravated, because more of the eggs, larvæ, and chrysalids have

managed to retain life throughout the winter than would have been the case if they had been subjected to very severe cold.

For both farmer and florist at such a season, we do not know a more useful book than that by Miss Ormerod, being *A Manual of Injurious Insects* (London: W. Swan Sonnenschein and Allen), with methods of prevention and remedy for their attacks on food-crops, forest trees, and fruit. It begins with a short chapter on entomology, in which an outline of this branch of science is given, along with woodcuts of the chief insect pests in their various life-stages—egg, larva, pupa, and imago or perfect insect—which cannot fail to enable the farmer at once to identify his insidious foes, and to take means for their destruction. The different kinds of vegetables, fruits, trees, crops, &c., are arranged alphabetically, and under each heading the special enemies of the plant are noticed and described under their common names, and means suggested for the prevention or remedy of their attacks. The work is the result of many years' observation and experiments, made with the assistance and co-operation of men of wide practical experience, and cannot fail to prove of signal advantage to all engaged in agricultural and horticultural pursuits.

Another new book that may appropriately be referred to at this season of the year, is Mr Heath's latest volume, *My Garden Wild* (London: Chatto and Windus). The title at first sight appears to be somewhat fantastic; but becomes less so as the purpose of the book is developed. Mr Heath, who has already written many excellent books on forestry, ferns, heaths, &c., undertakes in this volume to tell how he proposed to himself to have a garden filled, not with 'florists' flowers,' as the highly artificial productions of our flower-gardens have been sarcastically called, but with Nature's flowers—the flowers that bloom by the wayside and in the hedgerows, by the mountain streamlet and the silent lake—primroses and daisies, the wild-rose and the bindweed, foxgloves in their purple pride, and brackens in their livery of luxuriant green. The proposal thus made, Mr Heath succeeded in carrying out into practice, and those who would wish to follow so pleasant an example may find guidance and instruction in his book. The task of transferring to a four-walled inclosure in a back court the freshness and beauty of country flora, was no light one, and involved the study of Nature in her minutest phases, so that the flowers thus transported might continue to live as nearly as possible in their native condition and amid their native surroundings. All, this, however, Mr Heath did; and how he did it he tells for himself; and all who have read his *Fern Paradise* or *Burnham Beeches*, must know how well Mr Heath can tell such a story. The book is full of charming little bits of nature-drawing, which bring back to the reader the scents and sounds of forest life, till he almost thinks himself once again sitting among the ferns by the woodland spring, or wandering through meads 'with daisies pled.'

A very pleasant book for little folks is Mrs Saxby's *Snow Dreams* (Edinburgh: Johnstone,

Hunter, & Co.) The North Wind, King Christmas, Johnnie Frost—all favourite characters by the nursery fire—are here found doing and saying odd things, and playing many parts. For a group of boisterous youngsters, unthinkingly forgetful of the oft-repeated injunction to be quiet, we do not know a more amusingly warning story than that of 'The Giant's Pie,' and what it was made of. Then there is 'Tommy Kitten,' the 'round, plump, soft boy, with no corners anywhere about him;' and a host of other characters, big and little, whose adventures and sayings and doings will brighten the heart of many little ones. The book adds to its other graces that of being elegantly printed and illustrated.

**

From the time of Argus, the wise old dog that after many years recognised and welcomed his much-wandering master, down to that of 'Rab and his Friends,' and later, our dogs have been much written about, and still more talked about. Their sagacity, their docility, their cleverness, their bravery, their kindness, and above all, their loving and more than human fidelity to their masters and friends, have been the theme of countless anecdotes and of unwearied interest. The number of books on our four-footed friends is always being added to, and the additions are almost always welcome. To this roll must now be added another pleasant contribution, namely, *Dogs of other Days*, by Miss Eve Blantyre Simpson (Edinburgh: Wm. Blackwood and Sons). A portrait of the author's father, the late Sir James Simpson, known over the world as the discoverer of chloroform, forms the frontispiece of the little volume, in which are recorded the lives of no fewer than nine dogs—from the great sagacious 'Nelson,' down to the tiny 'Mona,' with its long, erect, hare-like ears, and its little round bullet-head. The stories are pleasantly told, interfused with bits of quaint description and gleams of quiet humour.

**

Village life in Scotland in the olden time was the true nurse of much of that individuality of character which has always been distinctive of Scotchmen as a class. The people were fairly educated, as education went in those days, yet not so much so as to be educated out of themselves. The 'levelling' process, which is one of the tendencies of our modern culture, both in society and in schools, did not then operate so extensively as now, and in villages and small towns, its influence may be said to have been scarcely felt at all. The oddities and eccentricities of character that might be natural to the individual, were therefore left to develop themselves—were not snipped off in early youth, and the child made to grow up as nearly as possible the same as everybody else. It was out of such material as these simple communities supplied, that Sir Walter Scott constructed his Dandie Dinmonts, Cuddie Headriggs, Ritchie Moniplies, and others of the same order.

And the material is not exhausted yet; for here is a book entitled *Bits from Blinkbonny* (Edinburgh: Oliphant, Anderson, and Ferrier), which consists entirely of a kind of character-

sketches woven into the fabric of a slight plot, many of which sketches are most admirable for the touches of homely humour and snatches of village wit which creep into them everywhere. The parish minister and his manse form the centre, as it were, of the group; but the principal figure in that group is not the minister, nor his wife, nor even the 'minister's man'—the butt of so many stories—but the minister's 'maid.' 'Bell o' the Manse' is the heroine of the book, and a well-drawn character she is, with her quaint ways, her happy expedients, her clever but never shrewish tongue, her simple yet strong fidelity to the family she served, and her wise and droll and pithy sayings. Dan Corbett, the one-eyed smuggler, poacher, mole-catcher, and a dozen other things besides, is a typical representative of a class which no Scotch village was ever without; and ranks next to Bell, perhaps, as a finished portraiture. The author, who screens his personality under the pen-name of 'John Strathesk,' has succeeded in giving us a graphic picture of what village life in Scotland was thirty or forty years ago.

OCCASIONAL NOTES.

THE TOWER OF LONDON.

It cannot fail to interest many readers to know that the government are about to take steps to restore this fine old Norman strength to its ancient dignity as 'the Fortress of London.' The White Tower, which forms the central keep or donjon, was built in the time of William the Conqueror, and since then has had a part in every historic movement of the English people, and been the prison and death-place of many a noble personage whose names shall never fall out of English history. For long it has been degraded to a kind of storehouse for military arms; but this, it is announced, is now to cease. The arms are to be removed to some more central position, and an increased garrison is to be placed in the Tower.

CRITICS OF SCULPTURE.

Sculptors who execute busts often hear droll things said. Here are two anecdotes, taken from a French newspaper. A sculptor had produced the likeness of a celebrated personage, in whose biography it is mentioned that he regarded architecture as a very secondary art. The son of this personage visited the artist's studio for the purpose of examining the bust, when, after considering it with the air of a connoisseur, he said: 'Could you not express more clearly his contempt for architecture?'

Another time it was the husband of a beloved deceased wife who came to see her bust. 'Pray, study it well,' said the artist; 'it is only in the clay, and I can still alter it.' The widower looked at it with the most tender interest. 'It is her very self!' he exclaimed; 'her large nose—the sign of goodness!' Then bursting into tears, he added: 'She was so good! Make the nose a little larger!'

The above seems capped by the personal recollection of a correspondent, who writes as follows: 'Quite fifty years ago—for it was at the time that the Exhibition of the Royal Academy was held in Somerset House—I was paying a visit to the room devoted to sculpture. There were but three or four persons in the room, and the silence was complete, until it was broken by the exclamation of a girl of about fourteen, who was evidently under the care of a motherly sort of woman of about fifty years of age. "Oh, there's Lord B——!" cried the young girl—"how like!" pointing to a bust which was in truth an excellent representation of a well-known statesman.—"Like!" retorted the elder personage in a tone of ineffable scorn—"like! Why, don't I know his face as well as I know yours, and isn't his nose always twitching!"'

LAND-SUBSIDENCES IN CHESHIRE.

In this *Journal*, for January 22, last year, we gave an account of the operations of brine-pumping in connection with the production of salt in Cheshire, and the dangerous subsidences of the land in many localities owing to these pumping operations. The water which percolates into the salt-beds, eats away the rock, and when the liquid brine thus produced is withdrawn by the pumps, great cavities are necessarily left, into which the superincumbent rocks and soil have a tendency to sink. The danger thus arising to the villages and other buildings on the surface has recently been greatly increased, and the frequent and vast subsidences are exciting considerable alarm in the affected districts. The Dunkirk district, the scene of the great subsidence of December 1880, described in the article above referred to, has since shown itself to be thoroughly shaken. The subsidences going on there are visible from day to day; while at intervals sudden sinkings of great depth appear, and let in the fresh water to the brine-pits. This extraordinary access of water adds, of course, to the danger, as the salt-rock is thereby the more rapidly dissolved and eaten away. The amount of damage done to Ashton's works alone (which are situated close to the sinking centre) is estimated at over two thousand pounds. In Marston, the sinking called 'Neumann's Flash' extends and deepens continuously. At Leftwich, the subsidence has developed so rapidly that every few days a portion of the main highway has been drawn into the sinking. Since September last, the Local Board have filled in a series of holes forming on the same spot, which in the aggregate have amounted to fifty feet in depth.

So long as the making of salt is carried on in the district, necessitating, as above explained, the withdrawal of so much brine from underground, these dangerous subsidences may be expected to continue in an increasing ratio as the ground below is being more and more undermined.

SPLIT-LUG RIG FOR FISHING-BOATS.

We have received a lithographed sheet from Messrs W. & A. K. Johnston, Edinburgh, showing

a boat mounted with the Split Lug as a rig, instead of the Dipping Lug now generally in use amongst the more northerly of the British fishing communities. The former is believed to be superior both in respect of handiness and safety to that presently in use, and is designed by R. B. Æ. Macleod, Esq. of Cadboll. Admiral Rutherford, an officer of great experience in everything connected with the East Coast Fishings, has, in a letter to Mr Macleod, expressed himself as follows with regard to the Split-Lug Rig: 'I have observed that you are strongly advocating the Split Lug as a rig for fishing-boats, and sincerely hope that you will succeed in getting it a fair trial, because, in my humble opinion, it is the safest and handiest in all respects, and infinitely superior to the huge Dipping Lug and enormous mast now in vogue. In working to windward, the Split Lug insures the boat coming round—no dipping required. The mast is shorter, stepped further aft, and got down with more ease. When taken aback by a sudden shift, all that is required is to haul aft the opposite sheets, the sail is at once full, and the boat under perfect command. With the Dipping Lug under similar circumstances, the sail comes down with great difficulty, often with some danger, and has to be dipped and rehoisted, involving a deal of lost ground. In a gale, your mizzen set on the mainmast would make an admirable storm-sail for lying to, and if the fishermen would, when caught in a bad gale, put their boat's head off the land instead of running in, they would be in a much safer position. Fishermen, like most of us, are wedded to old opinions. Some object to the rig in question because on one tack the yard must be on the weather-side of the mast. My answer is to point to the French luggers, who keep the sea in all weathers.'

It is believed that the adoption of this change of rig—a model of which will, we hope, be shown at the forthcoming Fishery Exhibition at Edinburgh—would have the effect of saving much life and property to the fishing communities.

COLOUR-BLINDNESS.

From advanced sheets of the 'Imperial Maritime Medical Reports' for 1881, by Dr Macgowan, issued for obtaining information from Japan and Indo-China, we are enabled to give the following interesting notes on the absence of colour-blindness among the Chinese:

'In various parts of the Empire and for several years, I have sought information on colour-blindness, interrogating painters, dyers, and others likely to become acquainted with that visual defect, without finding evidence of its existence. Lately, through the courtesy of Mr Douthwaite, I obtained the services of his hospital native assistant in subjecting to examination above one thousand applicants for relief at that institution. The result of the examination, and that which I myself made among the crews of gunboats, failed to afford evidence of the existence of Daltonism. The irides of those examined were generally dark hazel, the others black, colours prevalent in China. The rarity, if not absence, in China of that defect of vision, or rather of the sensorium, and the absence of evidence of its existence except among Europeans and Americans, is suggestive of inquiry if this colour-blindness is not an ethnic char-

acteristic. The examinations instituted in India among candidates for employment on railways were probably restricted to Eurasians, and the cases there discovered may not have been those of natives. Nubians, it has been lately ascertained, are free of the defect.

'It having been demonstrated that from five to seven per cent. of Americans and Europeans are at fault in distinguishing between colours—red and green, for example (railway signal colours), it is presumable that among the hundred or more pilots of the China coast there are several who are thus disqualified from following that vocation, and it would only be in accordance with recent legislation in the West if that most useful class of our fellow-residents were subjected to the usual tests for colour-blindness.'

[In connection with the foregoing statements regarding the inability of some persons to distinguish one colour from another, we may mention that the late Professor George Wilson of Edinburgh experimented upon many hundreds of individuals, nearly eighteen per cent. of whom were more or less colour-blind! With such proof as this, it behoves railway Companies to appoint their servants only after special examination as to their ability to clearly distinguish one colour from another.—ED.]

L I N E S

SUGGESTED BY A BIRD SINGING, A WOOD-PRIMROSE
IN FLOWER, A CHILD PLAYING, AND AN
EARLY BUTTERFLY, Jan. 18, 1882.

SWEET Bird, whose carol on the winter thorn
Tells of glad Hope within thy pretty breast,
Wait ere thou singest! Winter may be born,
And all these sunny fields with snow be drest.
Yet who can blame thy song? Would I might know
The Faith and Hope that in thy joy-notes flow!

Dear Flow'ret! To *thy* thinking, Spring has come;
Thou hastenest all thy beauties to unfold,
And in a nook of thy soft woodland home,
Dost shine amid the moss like star of gold.
How can we chide thee? Oh, for strength to meet
The coming Storm—so bloom in fragrance sweet!

Fair Child, who sees no Future, knows no Past,
Sing on, and fear not! But the Storm will come:
Thy thoughtless joyance may not always last.
Yet smile within the shelter of thy Home!
Care comes with years—but thine the glad To-day.
Strength will be given, and patience for the Way!

Poor Butterfly, which flutterest in the sun,
With white wings spread, to catch its transient heat,
Thy little life, perchance ere day is done,
Will pass away. A thing so frail and fleet
Is scarce worth being born—yet flutter free:
An emblem of our day is seen in thee.

DOMESTIC WAYS AND MEANS.

BY A FAMILY MAN.

To most, if not to all, households there comes, at some period of their several histories, a time when it becomes desirable to cut down expenses to the lowest possible figure. Pater-familias has perhaps been unsuccessful in his business; or his speculations have turned out badly; or some source of income, hitherto implicitly depended upon, has suddenly dried up. Or perhaps heavier trouble even than this has come upon the family, and he who has hitherto been its stay and support, and whose busy brain and industrious hands have supplied its wants, fills his place no longer; so that where there was a happy wife, who shared her husband's delight in the children gathered round their board, there is now an anxious widow, who has to cater for the hungry young mouths, and to provide for the wearing and tearing capacities of the active young limbs.

Indeed, time would fail us in the task of enumerating the causes which are constantly occurring to make people wish to retrench. The majority of people are seriously affected by these and similar causes—such as a long period of depression in trade, or in some cases a change in the fashions; and those who can regard these things with equanimity and absence of anxiety, are the few, and not the many. Taking the middle classes of Great Britain, we think we may fairly say that the great bulk of them, while they may possess incomes which are adequate to their ordinary expenses, are quite unable to meet any extraordinary charges. Lord Chesterfield told his son to spend no more than two-thirds of his income on ordinary expenses, as extraordinary ones would be sure to absorb the remaining third. But the majority of people do not follow the advice of that worldly-wise peer, and as a consequence, when misfortune comes, it makes them very gloomy, and the

avenues of the future seem entirely closed against them.

It is invariably the case, that when the heads of the household are put together with a view to devising a way of reducing the weekly expenditure, one of the first things to occur to them is the possibility of cutting down the cost of eating and drinking. We are of course not speaking of the people who have hunters or carriage-horses whose numbers they can decrease, carriages which they can sell, or butlers or French lady's-maids whose services they can for a time dispense with; but rather of those whose houses are comparatively small; who keep perhaps a 'general' servant, or at most a cook and a housemaid, or a general servant and a nurse-girl; and who, up to the time of the necessity for retrenchment, have not been leading luxurious or extravagant lives. As a rule, we think the necessity for retrenchment usually comes to those who have apparently not much scope for the cutting-down process; and in these cases, the anxious housewife invariably begins to think of her butcher's bill and of her groceries; and tries to find some method of supplying her family with due nourishment, at somewhat less cost than has hitherto been the case.

Books have been written on the art of economising, and from the ready sale which they have found, we may judge of the widespread desire there is to economise. Occasionally, we see correspondence in the newspapers detailing isolated experiments in living on little. Everybody apparently is interested in learning 'how to live on sixpence a day,' or as much less as possible. We once met with the case of a medical man who held the office of coroner of a large midland town, who lived for a fortnight on a four-pound loaf of bread, and who was very proud of the experiment. During the severe frost of 1880-1, a correspondent of one of the most influential provincial newspapers explained with much preciseness how he had managed to exist with great comfort and gratification to himself on the small sum of one-and-

ninepence per week. And many years ago, during the potato famine in Ireland, a medical man, who is still living and well known in the east of Scotland, set himself for several months to live on three or four pence per diem, and succeeded! His fare was bread, meal, and water.

But there is, we imagine, a prevalent feeling that instances of this kind are not valuable or practically useful to the general run of people. A domesticated housewife is apt to shake her head at the tabulated items, and to ask how she and her family would look after the experience of a month of such meagre regimen. Her husband perhaps tries the method for six days, and at the end thereof, feeling slightly unwell, gladly indulges on the seventh in a Sunday dinner of old-fashioned proportions, and feels decidedly the better for it. But we are quite convinced that there are methods of economy, and items of experience in thrift, which are worthy of the attention of all who wish to reduce their expenses, and which even the most practical need not regard with incredulity. In the instances of frugality we have alluded to, one has a sort of undefined consciousness that they have been chiefly practised by exceptional people, who, by some happy constitutional peculiarities, have been able to live and thrive on fare which would be to others the extreme of hardship. It is rather with the view of rendering some help to ordinary people, that the present writer proposes to give the results of some of his and his wife's experiences in the art of cutting down expenses.

At the outset of these details, he may explain that he and his wife are of the age of forty or thereabout; that their family consists of five strapping boys, the eldest of whom is eleven, and the youngest two years old; and that their domestic retinue is composed of an active 'general' servant-girl of twenty-five, and a useful nurse-girl aged fourteen. He may also intimate that every member of the household is possessed of fair health and appetite; the latter characteristic being perhaps shared in the largest degree by the two servants and the eldest boy; but of no member of it can it be said that he or she is an exceptionally small eater. It is the habit of the family to breakfast soon after eight o'clock; after which the two elder boys go off to a school two miles distant; number three departs to a lady's school close at hand; and the father to his business. Boys numbers one and two take with them a hearty lunch of bread-and-cheese or bread-and-butter, which they eat in the middle of the day, at which time the rest of the family assemble to dinner. At about five o'clock, the two boys return from the distant school, and have their dinner, while the other members of the family partake of tea. The scholars, after a little play, get to their lessons till eight o'clock, when they have a slight repast, and then to bed; the infants—namely, the two-year-old and his next brother, who is four—having meanwhile gone quietly to sleep. At nine o'clock, the heads of the household sit down to a simple supper, and are able to indulge in their first opportunity for the day of talking over current events and domestic affairs.

We kept an accurate account of our expenditure for eating and drinking for the first seven weeks of the year 1880, which will be of interest

chiefly because it is a genuine record of the doings of average people. It is not pretended that it displays a household economy arranged on the most artistic principles. It simply claims that it details what we nine people consumed in seven weeks, during which period we enjoyed capital health, and did a fair amount of work. The account is as follows:

Items of expenditure for eating and drinking by a family of nine persons during seven weeks:

	L.	s.	d.
Meat (average price 10d. per lb.).....	4	3	2½
Bread (6d. per 4lb. loaf).....	1	16	0
Milk (4d. per quart).....	1	14	9
Tea (3s. 6d. per lb.).....	0	19	3
Sugar (3½d. per lb.).....	0	16	4
Butter (1s. 6d. per lb.).....	0	15	4
Potatoes (6s. per cwt.).....	0	13	1½
Beer (11d. per gallon).....	0	12	9
Oatmeal (3d. per lb.).....	0	12	3
Haricot beans, lentils, and peas (2½d. per lb.)	0	5	10
Flour.....	0	4	8
Eggs.....	0	2	0
Treacle.....	0	1	9
Rice.....	0	1	9
Green vegetables.....	0	1	7½
Spirits.....	0	1	6
Fish.....	0	1	4
Mustard, pepper, &c.....	0	0	7
Vinegar.....	0	0	6
Salt.....	0	0	2
Total.....	L.13	4	8½

On perusing the above account, some items of which might of course be omitted, if necessary, we are of opinion that the item 'Meat' might with advantage be reduced, and the item 'Fish' augmented, which last is small in amount in consequence of the difficulty of procuring fish in our neighbourhood. Farther on in the year, too, the item 'Green vegetables' will be considerably increased; and we may also say that exceptional circumstances cause us to pay a higher price for tea and oatmeal than we otherwise should.

Taking the amount as it stands, L.13, 4s. 8½d. for seven weeks gives a weekly expenditure of L.1, 17s. 9½d., or 4s. 2½d. per head; or a daily expenditure per head of about 7½d. Thus, although we have not quite reached the minimum of 'sixpence a day,' we have come somewhat near it, and have enjoyed a much more diversified diet than the advocates of a 'sixpence-a-day' system generally allow.

It will be of interest to the domesticated reader to know some details of this example of living. For breakfast we take oatmeal porridge, bread-and-butter and tea, with an occasional slice of bacon, which is included under the heading 'Meat.' For dinner we have cold meat, or cold meat cookeries—we never cut our joints hot—potatoes, bread-and-cheese, and beer; diversified by the periodical addition of soups, puddings, or tarts. For tea we have bread-and-butter, toast or bread-and-treacle; and for supper, bread-and-cheese and beer, or haricot beans, lentils, or the like, cooked in various ways.

The housekeeper with a growing family soon discovers that it is necessary narrowly to watch every avenue of expense, if retrenchment is to be effected, and that nothing is more imperative than that she should have all her stores under her own eye and regulated by her absolute control. Servants are too apt, for instance, to throw away any bones which are cut off from the joint in the

process of carving. These should be collected in a suitable vessel for boiling down into soup.

Domestics are also given to using more of any material they may have to deal with than is required. If they make a pudding, they make more paste than is absolutely necessary; and the overplus is converted into an additional cake or tart, the fate of which is either to be eaten between meals by the servant herself, or given to a child; an entirely unnecessary luxury, that does good to nobody. Pieces of bread are wasted; potatoes are denuded of their coverings with too careless a hand, so that out of the parings, a rigid household economist would probably think it possible to concoct a nutritious meal; or he might insist upon the potatoes being served invariably in their 'jackets.' We may say that potato parings mixed with small-coal or slack will keep the afternoon kitchen fire going admirably.

Savoury and wholesome dishes may be made by mixing meat with vegetables or rice, which will be found a far less expensive method of using animal food than that of cooking steaks or chops. The untidiest fragments of cold meat can be made into presentable *pièces de résistance* for the economical family, by this mode. There is no more satisfying dinner than a thoroughly well-made Irish stew; while one of our favourite Saturday repasts, and one which is highly appreciated by our hungry boys, is a substantial potato-pie.

'Dormers'—which are a compound of a small proportion of meat with a goodly proportion of rice—are always a toothsome delicacy, if served up with the good gravy which a skilful house-keeper can always manage to get from her weekly joint; and directions for all these cookeries can be found in the simplest book of recipes.

It is not beneath the attention of any wise and sensible man to take an interest in these apparently small matters; and narrow means are a positive blessing, if they drive people from extravagant ways into finding out how to do well with little. It is possible to live a happy, healthy, and independent life on a comparatively small income, a life that need not be sordid and small, but which may rise to great heights of culture and refinement.

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

BY DAVID CHRISTIE MURRAY.

CHAPTER VII.—'OH,' SAID GERARD, 'THAT'S JOLLY'S SISTER.'

DURING the foregoing brief colloquy, Mr Strange had kept his eyes upon the lady's face, and had confirmed his first impression of her beauty. Constance was not unaware of his glance—what young woman would have been?—and Val's aspect was not unpleasing. He was evidently a gentleman; and then Constance, who was as little vain as most really beautiful women really are, remembered that his horse's head had been turned in the direction from which she herself had come, and she knew perfectly well that he had followed for the express purpose of looking at her once more. Men often did that

sort of thing. And she had no especial resentment for it. Feminine human nature likes to be admired; and, for that matter, even the very ugliest male amongst us is not superior to the feeling.

Mr Jolly had no sooner settled in the county, than he had begun to inform himself of the position and expectations of every eligible *parti* within its limits—as indeed became a father who was anxious that his daughter should be happily settled and out of his way. In the course of his researches, he had lighted on the fact of the existence of one Valentine Strange, who was reputed to be the wealthiest man of those parts, an orphan, whose great estates had been nursed through a long minority by guardians careful of his interests, and who now had undisputed control of his own. Mr Jolly had made inquiries about Valentine Strange, and had learned that he was a bachelor of marriageable age, and not unlikely to marry, and had even discovered at last that the said Valentine was a friend of his own son's. He had especially desired that Valentine Strange should be made free of his house; but that young gentleman having perversely gone away a-yachting, there was no more to be said about the matter, and such matrimonial traps as could fairly be laid must be laid in his absence. Mothers with marriageable daughters, and they only, will be able to sympathise with Mr Jolly. He had no wife to plot and plan for him. He had all a fond father's desire to see his daughter happily established; and apart from that, the girl was an expense and a nuisance. Therefore, he would have been sorely vexed could he have guessed that to-day he had dismissed the wealthy Mr Strange, the marriageable Mr Strange, so cavalierly.

Mr Jolly had his grand manner, and when he assumed it, he was as frosty as Mont Blanc, being of opinion that to be icy was to be majestic. He had assumed his grand manner now, and fancied that the stranger of the morning's ride had gone away in deep reverence of spirit. Perhaps Mr Jolly was less majestic than he thought himself—perhaps Val was an unusually irreverent young man. His mind was occupied with a pleasanter theme than Mr Jolly's manner. The appearance of Constance did not strike him as it had struck Gerard Lumby. The two young men were totally different in nature and manners. Gerard had a knightly tenderness and respect for all women, and had scarcely ever kissed any feminine lips but his mother's. He would have done any hard and dangerous thing rather than have been forced to pay a direct compliment to a young woman. To him, women seemed more than human—even a housemaid had a nimbus about her, a sort of protecting something which overawed him. But Val in any fresh country-house knew

every petticoated soul within it in a week, and made love to all of them in a way—hostess, daughters, guests, maids in service, with a fine merry indifference which won the female heart. And he did not worship—but prided himself on understanding—the sex; showing thereby his own weakness and folly. Here and there—after years of close and tender intercourse, broken by the rubs of life, made sweet by birth, and holy by death of little children—one man learns to understand one woman; but to strive to sum the sex were a vain arithmetic, though a man had the years of Methuselah in which to perform it.

Val rode away admiring, but by no means subdued. The encounter had taken place within a couple of miles of Lumby Hall, and he was on his way thither to surprise Gerard. And it chanced that Gerard was back in time to be surprised; for no sooner had the hounds thrown off, than there came a check; and the young fellow, after sitting disconsolately on horseback for some five minutes, waiting for the hounds to recover scent, felt the 'blind boy's butt-shaft' so rankle in him, that he turned, and rode almost savagely homewards, sorely troubled by the beauty of the incomparable Constance all the way.

'Ahoy!' cried Val, discerning Lumby's figure before him in the road.

'Why, Strange, old man,' said Gerard, reining in as Val came plunging up, 'you look like a Red Indian. Have you circumnavigated the world yet?'

'Not yet,' said Val. 'The fact is that when we got to Calais—we went there first, you know—Gilbert had a plan. Gilbert's a wonderful fellow at a programme, and his notion was that we might send the yacht down to Trieste'—

'Trieste?' cried Gerard.

'And that we might join it there. So we had a fortnight in Paris, and a fortnight in Vienna, and a fortnight in Venice; and then we got aboard again, and went to Naples. Charming place, Naples. Lots of pleasant people there.'

'Stay there long?' asked Gerard.

'Well,' answered Val with a little laugh, 'I've only just got back. Gilbert met a fellow, and wanted to go coasting round everywhere. So I let him go; and they went to Athens and Smyrna and Corfu, and all sorts of places. Then they called for me; and we have just come up, past Gibraltar and across the "Bay of Biscay, O," to Southampton—and here I am.'

'And when are you off again?'

'Don't be in a hurry to get rid of me,' said Val. 'I shall cruise again in the summer, I daresay; but I'm not going to brave the dangers of the wintry deep in a cockle-shell any more.'

'Shall you stay for the hunting?' asked Gerard. He was afraid that Strange would see his idol. He was afraid of everybody, distrustful of himself, despairing of success, and spiritually sore all over.

'Now, did you ever know me hunt?' Val asked, in almost an injured tone. 'Am I the man to risk my bones for nothing? I hate to make a toil of a pleasure. I am not ambitious to go about with a crutch. I have no yearning to be trepanned.'

'Then what shall you do?' asked Gerard. 'What's the good of being in the country if you do not hunt?'

'I don't know,' responded Strange. 'It's a bore to have plans.' Then Val began to tell of his adventures; and they reached the house, and sought Gerard's den together. Above the mantel-piece, framed in violet-coloured velvet, was a coloured cabinet portrait of Constance, which Gerard had begged from Milly. Strange stood with his elbows on the marble slab and examined it critically. Gerard, observing him, endured a ridiculous pang of jealousy.

'Who is she?' asked Val, with his head on one side, smiling at the picture through eyes half closed.

'Whom do you mean?' returned the disingenuous Gerard, feigning to be busy in the attempt to open a cigar cabinet.

'The lady here. I met her in the lane this morning on horseback, escorted by an old-Indian sort of man.'

'Oh,' said Gerard, with mighty unconcern, 'that's Jolly's sister.'

Strange, standing a little back, began to spout Bassanio's speech:

What find I here?

Fair Portia's counterfeit? What demi-god
Hath come so near creation? Move these eyes?
Or whether, riding on the balls of mine,
Seem they in motion? Here are severed lips
Parted with sugar breath: so sweet a bar
Should sunder such sweet friends. Here, in her hair
The painter plays the spider, and hath woven
A golden mesh to entrap the hearts of men
Faster than gnats in cobwebs: but her eyes—
How could he see to do them? having made one,
Methinks it should have power to steal both his,
And leave itself unfurnished.

'What's all that rubbish about?' asked Gerard roughly. At these hyperbolic praises, a keen pang of jealousy ran through him. Who had a right to praise her?

'The rubbish was given to the world by the Swan of Avon,' said Strange; 'and Jolly's sister's portrait is worthy the praise.'

'Never mind the Swan of Avon,' said Gerard. 'Do you think of going back to Naples?'

So they drifted into talk again; but Strange could not or would not cease to admire the portrait.

'I say, Lumby,' he said at length—'tell young Jolly I'm back again, when you see him next; and bring him over to my place, and have a day or two with me.' He was standing again before the portrait when he said this; and a sudden resolve passed through Gerard's mind, and made him tingle all over. Late that night, when Strange had gone, and Gerard was in his own room alone, he gave words to this resolve.

'I can't afford to waste a day. I will speak to-morrow.' His heart beat against his side, and he trembled. What a thing is love! It was only a quarter of a year since he had first seen her, and, without her, life seemed not worth the living. Whatever of spiritual loveliness his manly heart and honest nature could conceive, with that he dowered her. He worshipped at her shrine with such sacrifices as such men offer; whilst she sat with dreamy eyes over a book in her little boudoir at the Grange, and looked, as he figured her, an inspiration for painter and

poet. But we know what Portia's golden casket held. Constance was thinking of Gerard, and weighing the chances of his coming, and her pulse beat evenly, and her bosom was unmoved.

MODERN IMPROVEMENTS ON BOARD SHIPS.

WE often hear people talk of 'the ship of the future,' in connection with sundry speculations as to the probabilities of what that ship will be like in various respects. In point of fact, however, we may doubt whether there will ever be a typical ship of the future, any more than there is of the present. Changes and improvements are constantly being effected, and every new thing, as it is perfected, becomes but a step of transition to something else. It seems probable, certainly, that vessels have reached their maximum size; for, in spite of our present huge and splendid Atlantic steamers, a reaction is already setting in in favour of smaller craft, both in the navy and merchant service, as being more easily handled, less expensive to work, of lighter draught of water, and possessing greater capabilities of visiting narrow harbours and ports, and of lying alongside wharfs or quays—the last named being a very important item in considering the cost of taking in or discharging cargo. It is not likely that we shall ever see another *Great Eastern*.

It is not, however, to technical comparisons and details of the build or style of ships that this paper is devoted, but to those alterations which have taken place of late years in smaller but not unimportant appliances connected with their working; and all more or less directed to the economy of life and labour, such as improved mechanism for rescue or avoiding danger, and various forms of apparatus which have diminished the number of hands formerly necessary to man our ocean vessels.

A pitch-dark night; no moon or star; blowing and raining; the inky blackness relieved only by the crests of the nearer waves, which rise almost to the level of the rail as the ship rolls heavily. A cry—'Man overboard!' Bustle, hurry, and excitement, but no confusion. In less time than it takes to write these words, the man who happens to be nearest will have rushed to the stern, even as he gives the alarm, and with his jack-knife will cut adrift the lanyard that holds the life-buoy, always in readiness there, to the taffrail. This, by the very act of falling, fires a rocket, and displays a flag on the staff that surmounts it. But a flag is of as little use as ornament on a night like this; so the officer of the watch on the bridge, while giving the necessary orders for stopping or otherwise manœuvring the ship to the best advantage, prepares and throws into the sea a life-belt, to which is attached a peculiar float by a short line. This float consists of a piece of wood in which a tin canister is firmly fixed; and the preparation to which we have alluded lies simply in perforating the bottom of this canister, and cutting or breaking off its nozzle-like top—an affair of a few seconds only. It contains a mixture of chemicals, in which metallic potassium is the chief ingredient, and this burns by the contact of the water itself! No sooner does it touch the surface, than up shoots a bright

white flame, which flares away for an hour or more, quite inextinguishable by rain, wind, or submersion—burning rather the better, indeed, for all three—shedding a brilliant illumination on all around, as it mounts on the waves, and forming a valuable beacon to the imperilled man, if he have any power to make efforts for his own safety.

But while we have been looking at the buoy, boats have been swung out, manned, and lowered; a comparatively rapid and simple process nowadays, even in a heavy sea-way, by means of patent davits, combined with another apparatus termed disengaging hooks. The latter insure that the boat shall be freed at both ends simultaneously as soon as she reaches the water, so that the danger of capsizing, from the dragging of one 'fall,' as the ropes by which the boat is lowered are called, is in great measure obviated; while the former lessen the risk of its being stove in against the ship's side. To prove how perfectly these hooks act, soon after they were adopted on board a steamer in which the writer sailed at the time, during a fearful storm in the Bay of Biscay, a huge sea broke over the quarter, and swept all the after-part of the deck, a wave so big that it lightly touched the bottom of the captain's gig, though it was swung high on the davits and 'in board'—that is, hanging over the deck, and not, as is usual in fine weather, over the ship's side; and away went the gig with its lower hooks into the seething chaos beneath, while the upper ones remained dangling from the falls; a conclusive though costly tribute to the ingenuity of the inventors Messrs Hill and Latimer Clarke. Every one will agree that these Holmes's buoys and speedy boat-lowering arrangements are not the least admirable of modern improvements in nautical matters.

Heaving the lead and heaving the log are familiar expressions to the ear; but are a little apt to be confounded by landsmen, who derive their ideas of things maritime from nautical dramas and novels, in which the characters roll about and shiver their timbers and splice the main-brace, and otherwise talk and act as no sailor ever did or ever will. The lead is, of course, a weight of that metal attached to a long line, employed for ascertaining the depth of water, and is used in two forms. One, the smaller, is swung backwards and forwards in the hand of a sailor who stands on a ledge over the ship's side—technically, 'in the chains'—until it has acquired sufficient momentum to reach the water as far forward as will compensate for the speed at which the vessel is travelling; so that by the time the lead touches the bottom, the man, though still standing, is over the spot where it lies, and the rope is as nearly as possible perpendicular; certain knots, marks, and pieces of coloured rag on it indicate the depth in fathoms, which he immediately calls; for this takes place only when a ship is in shallow water, such as on entering or leaving a harbour, where, if care be not taken, there might be a danger of getting aground.

The other or heavier lead is used farther out at sea, not so much for the purpose of learning the exact amount of water, as to enable the navigator to judge from the depth, and more

especially from the character of the bottom, as indicated in the sample brought up by the wax or tallow in the concavity underneath the lead, the exact position of his ship, and the propinquity of the land. Thus, a vessel coming from any part of the south or west, often arrives in the English Channel, especially in foggy or other bad weather, without having sighted the Lizard Point, Cape Ushant, or any of the other promontories on the English or French coasts. How is the captain to know where he is? He stops, and heaves the deep-sea lead. A result of seventy or eighty fathoms tells him that he is somewhere in the chops of the Channel; and this will gradually decrease, as he goes farther up, to about fifty fathoms. Then, as to which coast he is approaching. In mid-channel the bottom consists of sand and small broken shells at its western extremity, and of 'ooze'—blue clay-like mud—farther east; towards the Scilly Isles it becomes coarse and gravelly; near Ushant the lead will bring up very fine sand without shells; and a little farther along the French side, the tallow will catch nothing at all, since the bottom is rocky or composed of large smooth pebbles. It is in this deep-sea lead that all the recent improvements have been made, the most notable being Sir William Thomson's patent. Instead of a lump of lead, a brass cylinder is used, which contains in its interior a kind of registering barometer, which in itself indicates the exact depth by recording the superincumbent pressure of water. Thin pianoforte wire is used instead of a hempen rope; and the great advantage of the whole arrangement is, that it can be used while the ship is going at full speed, since the amount of line which runs out is of no consequence, even though it go far astern. Besides registering the depth, this ingenious contrivance brings up specimens of the nature of the bed.

The log, which is hove under ordinary circumstances every two hours, is a little conical bag made of canvas, the mouth of which is kept open by a wooden pin. When thrown over the stern, this float remains practically stationary while the line to which it is attached runs out, the slight tendency to be towed by the motion of the ship being nullified by the resistance of the bag, whose distended mouth lies towards the vessel. A sand-glass of fourteen seconds is turned as the log goes overboard; and when its time has expired, the log is checked, and the nearest mark on it carefully noted. These knots and marks are so arranged that the line is graduated in parts, which bear the same relation to a knot or nautical mile that fourteen seconds do to sixty minutes—hence the name, not a corruption of *nautical*, as some have said—and the speed per hour is thus obtained. A smart tug on the rope disengages the pin, and allows the bag to collapse and be hauled in by the apex, otherwise it would be extremely difficult to bring it home on a ship going at the rate of ten or twelve knots.

Such is the old log, which has been used from time immemorial, and though not yet entirely superseded, is rapidly becoming so by late inventions. Numerous patent logs have now made their appearance, of which we may notice Massey's and Walker's as fair examples, the rest differing from these only in minor details. The first-

named may be roughly described as a small brass tubular box, to which is attached a screw, like the propeller of a steamer in miniature; this revolves more or less rapidly, according to the speed at which it is dragged through the water, and records the number of its revolutions on an index inside the box. Some few elaborations have been added; but this is the primary principle; and as each revolution means a certain distance traversed—measurable exactly by the pitch of the screw—it is easy to see that when the log is hauled on board, the index will show how far the ship has travelled in a given time. Walker's Registering Taffrail Log has a screw only at the end of the line; this twists the cord, and causes it to work certain mechanism behind a little dial which is fixed on the rail, and thus indicates at any time, without the necessity of hauling in, the distance in miles which has been traversed and the actual speed at the moment. It also strikes a bell at the completion of every knot, and is altogether a wonderful and ingenious though simple apparatus. Captain Woolward has devised a windlass for pulling in the old log, which not only effects a great saving of labour, and gives a more correct result, from the impossibility of the line getting fouled, and the action of the mechanical break in stopping it, but does away also with those exceedingly painful 'brush-burns' which the men were liable to get from the rope running swiftly through their hands. The constant heaving of the log, especially in a steamship, will soon cut even the brass plates on the taffrail into deep grooves.

Topsails and even topgallant-sails can now be set, taken in, and stowed from the deck without sending any one aloft, by means of an arrangement of rollers very similar to that by which we pull up or lower our window-blinds. Nearly all the standing rigging is now made of wire; and not only hawsers but 'whips,' or ropes for raising cargo from the holds or lighters alongside, of the same material, are employed; such ropes being not only stronger, but one-third the weight, and one-seventh the bulk only, of hemp or manilla. The flukes of modern anchors are made in one piece, bent at a right angle like an arm, and united to the shaft or shank at the elbow by a hinge, on which it revolves, so that when the anchor is down and one fluke has laid hold of the ground, the other, instead of sticking up uselessly and mischievously, and liable to entangle the cable, is folded down flat on the shank.

By-the-way, it is a curious thing that the little anchors one sees dangling from watch-chains or worn as pins or engraved—invariably foul of a rope—in various ornamental devices, are always incorrectly fashioned, the flukes and the stock or cross-bar at the other end of the shank being represented in the same plane, whereas in the real article they lie at right angles to each other.

A well-glazed chart-room on the bridge not only affords the officers of the watch a constant opportunity of consulting the charts without leaving their posts, but shelters the man at the wheel and those on the look-out in bad weather. This innovation has not obtained ground without great opposition, naturally from the 'old school' of captains and ship-owners, who by their

training are firmly, though erroneously, of opinion that no man can keep watch properly out of an oilskin coat, sea-boots, and a sou'-wester, as they had to do from their youth upwards; and that a sailor is likely to keep a better look-out when buffeted by wind and rain for four hours, half-blinded with the spray, which obliges him to continually shut his eyes, and it may be, muffled up to the ears to keep off frost-bite, than when 'pampered' under a roof and behind a screening window. Companion-ladders are very different things from what they used to be; no scrambling up the side by a trembling, swaying lattice of ropes, known as a Jacob's-ladder, now, when every well-appointed ship has two or more commodious staircases, with landings and handrail, let down for the accommodation of boats when in harbour, and folded up longitudinally against the rail at sea.

The commissariat arrangements, also, are greatly altered for the better. Higher speed and shorter voyages have diminished the intervals between different ports, so that fresh meat and vegetables can be obtained oftener; while the introduction of tinned comestibles—milk especially—has been a grand thing for sailors. Whatever prejudices our workhouse inmates may have, Jack does not object to a good lump of Australian beef or mutton to vary his rations of salt junk from the 'harness-cask.' The ice-trade has done much for comfort on shipboard in this department, by rendering it possible to keep meat, fish, fruit, and vegetables for almost an indefinite period, to say nothing of deliciously cool drinks in the tropics; indeed, the luxurious table and accessories of some of our ocean liners might compare advantageously with any hotel in the world. The writer has conveyed English game, salmon, and Devonshire cream to friends in the West Indies and at the antipodes. It may be remarked in passing, however, that certain delicate tropical fruits, such as mangoes and avogado pears, will not bear transmission; and that fish, though remaining perfectly free from any taint, loses consistence, and becomes soft in ice.

In steamers, so many alterations are being constantly made in the engine-room department, that the limits of this paper would afford no scope even for the mere enumeration of one-tenth part of them. They are, moreover, mostly of a purely technical and scientific character, and would possess no interest for the general reader. The great invention of compound engines, by which the same steam is used twice, has reduced the consumption of coal in big steamships from eighty or a hundred tons a day to thirty or thirty-five—no trifling consideration, when we remember that the cost of that grimy fuel is about two pounds per ton on the average, at home and abroad. Many fine sailing-ships have been fitted with auxiliary steam-power for use during the prevalence of head-winds or calms, working a screw, which can be disconnected when not required; and most of them over a certain size now carry a steam-engine of some sort on board, to assist in the working of cargo. Perhaps the greatest advantage of this is, that it does away with the distressing possibility of the supply of fresh water ever running short, as it can always be condensed from sea-water by the steam apparatus. The application of this power in the internal adminis-

tration of vessels is also increasing daily. Steam winches and cranes hoist up and lower the heavy bales with which they are freighted; steam capstans lift the anchor, or haul taut the immense hawsers that bind the ship to the shore; sails are set and taken in by steam, pumps worked and decks washed, yards and derricks raised to their position, and big guns shifted; ventilation effected by currents of air transmitted through perforated pipes, which in case of fire could discharge water or steam instead, in any direction; punkahs swung in the tropics, and heating appliances supplied in cold regions—all by steam, generated at one common source, which urges an ironclad of ten thousand tons on its destructive battle-rush, and boils coffee in its pantry at the same time. Lastly, there is the appliance for steering by steam—one of the most important of all. One man with a little wheel—a mere toy in comparison with the huge double arrangement required for hand-steering—now holds the biggest ship on her course; whereas on the old principle rarely less than two under the best circumstances, and in bad weather four, six, or eight men were necessary to keep her steady or put the helm over quickly. When steam steering-gear was first introduced, it was simply applied to the wheel mechanism; and the connecting rods, chains, and levers remained as before; now, however, the steam acts directly on the rudder itself, and a great saving of force is effected. Noiseless hydraulic cranes are coming into vogue, and will prove a relief to those whose ears have been dinned by the rattle of winches overhead.

Swinging saloons, supposed to obviate seasickness, have been tried; but have not proved a success as yet. Gas is more suitable for boats in the North Atlantic trade than for those which run to the tropics, as it causes the cabins, corridors, and saloons to become insufferably hot. Electric bells are now common in all passenger vessels; and the electric light is used in some for illumination below; more frequently it is employed for side, mast-head, and other signal lights; and the French mail-boats carry a sort of lighthouse on the fore-castle head, fitted with powerful radiators and reflectors, in which the electric light can be displayed at any moment by pressure of a spring on the bridge. This throws a powerful glare on the water all around and far ahead, and facilitates entrance into harbour on dark nights, recovery in case of people overboard, and avoidance of collision in thick weather. In certain war-ships, the guns are fired by electricity.

The greatly improved commercial code of signals which has taken the place of Marryat's older system—though to some extent founded on it; the perfect telegraphic communication between the bridge and the engine-room; and the various automatic tell-tales and indicators in different parts of the ship, which not only give the direction of her course, her speed, the position of her helm, and her deflections from the upright or level attitudes in any direction, but enable an officer to see at once whether the order he gives to the helmsman or engineers is obeyed—all these must be noted as excellent alterations or additions in a ship's economy; and not less so, the regulations of the Board of Trade, that sweet little

cherub who sits up aloft to watch over the life of poor Jack, by making his employers keep him decently warmed and fed; allowing him a certain amount of space to sleep in; giving him lime-juice to keep off the scurvy which his salt provisions might induce; ruling the mode and manner of his payment, that he may suffer no injustice; providing certain boats and buoys, in case he falls into the sea, or gets wrecked; painting a mark on the ship's side as the limit beyond which his floating home may not be submerged by overloading; supplying him with drugs, lest he fall sick; and, when he musters in sufficient number, sending a surgeon with him to look after his health. All these tend in a measure to ameliorate what we have, on former occasions, taken leave to speak of as a hard and often thankless occupation.

A STRANGE STORY.

TOLD BY A LINCOLNSHIRE CLERGYMAN.

CHAPTER I.

It was a dark, gloomy evening towards the end of November. The rain, as it beat in gusts against my study window, was heard plainly enough, in spite of closed shutters and drawn curtains. It even came pattering down the chimney, hissing in the clear fire, and bespattering the brightness of the fender, upon which I rested my slipped feet, as in loose coat I leaned luxuriously over its genial warmth. I was enjoying a good cup of coffee, and congratulating myself at not being obliged to face again that night the inclement weather, from which I had just entered almost wet through, in spite of overcoat and waterproof.

I had been out many hours, and had ridden over many miles of open unprotected unsheltered roads; for it was one of my days for parochial visitation. I was vicar of a large scattered district in Lincolnshire, in which was combined a good share of the Fen country, and I had very many outlying parishioners. I had just returned from a long and tiresome journey to attend a dying person in an abode of poverty; and the bright contrast of my comfortable little study, with its crimson curtains, the blazing fire shining so cheerily on the book-shelves, not to speak of the pleasure of a change of dry clothes, made me indeed inexpressibly thankful for the temporal blessings I enjoyed. My little vicarage had never appeared happier or warmer to me than it did that evening. No wonder I congratulated myself at not being again obliged to face the soul-chilling rain.

Even while I thus thought, I distinctly heard above the gusts of wind and dropping rain, the noise of wheels on the gravel of the drive, and immediately after, a loud pull at the door-bell. Susan, the housemaid, evidently lost no time in running to the door, judging by the rush of cold air that penetrated into my snug quarters; and from the sound of voices, there seemed to be some amount of parleying in the outer hall. I got up in consternation, sincerely hoping that this might not be another summons to leave home.

Susan put her round rosy face in at the door. 'Oh, if you please, sir, here's a gentleman as wants

to see you on business—Mr Pullingtoft, of the Marsh End Farm, sir, near Grantham; and he's that wet as won't let him wait or send the trap to the stable; and he's a-standing dripping on the door-mat.'

Of course, I instantly hastened to him; and found a tall, stout, burly man, in a shining black waterproof, and a broad-brimmed hat, unwinding a few yards of woollen comforter from around his neck. He was so big he made the hall look small, and so wet that a fog seemed to surround him like a halo, settling like early frost on the polished mahogany table. I was aware that there was a Mr Pullingtoft in existence, a wealthy farmer and cattle-feeder, whom I had never seen, as he lived beyond my borders, but whom I rightly judged this man to be.

'Sorry to intrude on your valuable time, sir,' said Mr Pullingtoft, uncoiling, and disclosing a large face, with double-chin, a large mouth, large white teeth, and small gray eyes of particular shrewdness, a red complexion, and most good-humoured expression. 'And more sorry still to bring such a wet mess into your nice house; it's a night not fit for a dog to be out in.'

'Pray, come into a room with a fire, Mr Pullingtoft,' I said; 'and let us put the horse in the stable and give him a rub down. You are not in such haste but you can stay while that is being done.'

'I haven't a moment to lose,' said Mr Pullingtoft hastily. 'I'm behind time now for an appointment I have at Boston; but I've most particularly wanted to see you, sir, for some time past, but haven't been a-nigh your parts; and now I've come ten mile out of my road a purpose to, and such a ten mile! If I hadn't my carriage-lamps alight, I'd have been drowned in the fen over and over again; and coming on so slow, picking one's way in a strange road, has thrown me back and made me late. Thank ye kindly for asking me in; but I can't do it. So now to business.—How many year, sir, have you a been parson here now—ten?'

'Twelve,' I replied.

'Ha! Well, I thought it must have been in the old un's time it was done.' [It was thus he referred to my reverend predecessor.] 'Now, sir, mayhap you remember Phœbe Meadows as was in the school here? She knows you.'

'To be sure I do. Little Phœbe—a nice good girl. She went to service, I remember, out your way, Grantham, two or three years ago.'

'She did. But she left there; and now she's with us; and my wife sets such store by her—and, to tell you the truth, so do I—that I've come to you on her account. Do you happen to know Phœbe's story, sir?'

'Yes—upon a little consideration, I did. I was aware that both her parents were dead, and that she had been brought up by Mrs Kirby, a poor old woman in the village, and sent to service when strong enough—the old woman very poor, and now receiving parish relief.'

'Right so far, sir. Now, do you happen to know who Phœbe's uncle is, sir?'

'No.'

'None other than Mr Seth Scruby.'

'Seth Scruby!' I was greatly astonished.

Mr Scruby was the richest farmer in the parish, and owner of much land in it, as well as of

another estate, north of Lincoln. Well might I be surprised, and rather incredulous regarding what I heard.

'It is true,' continued Mr Pullingtoft, as if reading the doubt my face expressed. 'Though it only came to my knowledge a few months ago, by chance-like, when I asked what her surname might be. "Meadows?" said I. "I know that name; it's a Spalding name. There was a miserly old farmer there that wouldn't insure, and he was burnt out and ruined."—"That was my grandfather, sir," said Phœbe. "I often heard my poor father speak of it, when I was a very little girl."—So this led me on to make inquiries; for I knew Ned Meadows made a runaway match with Jane Scruby—and Jane's father never forgave them. Now, do you see it?'

'But surely, Mr Pullingtoft, in common humanity, had Mr Scruby known his niece to be left in poverty, he would have provided for her. Here she has lived in his own parish until two years ago; and how is it that old Mrs Kirby never told me of this fact?'

'Can't tell,' rejoined the burly farmer, shaking his comforter, preparatory to putting it on again. 'There are some things one can't understand. Anyway, it seems that this precious uncle has never in all his life so much as acknowledged the existence of his niece. The poor little thing tells me that both her dead father and old Mrs Kirby told her always to run out of his way when she saw him coming; and so she always did, and she still looks with fear and trembling when his name is mentioned. It seems that, old Scruby having turned his back on his daughter, his son Seth dutifully keeps up his father's intentions.—But now, sir, as time flies, I'll come to the gist of the matter, and cut a long story short. Old Scruby died without leaving a will.'

'How did you learn this?' I asked.

'Lord bless you, it's a fact, known to all the country round, that a will never was found; and Seth Scruby being the only son, came in for everything. Now, sir, what I ask is this: Could old Scruby's daughter Jane be deprived of her legal share in her father's movables, simply by her brother taking possession of everything? If there was no will, and if she was entitled to her portion of her father's movable estate, why, then, isn't Phœbe, this child of hers, provided for? Tell me that!'

A new light now dawned upon me. Certainly there was some reason in the question. Mr Pullingtoft went on:

'This child has never been acknowledged, as far as I see; for what reason, I should like to know. Old Scruby didn't like a poor son-in-law, no more than I should myself; but then, Jane was an only daughter; and she wasn't the first girl that has married a handsome lad with no brains; and what business is it of Seth Scruby's to carry on the grudge against his dead sister? I tell you, sir, it goes sore against my grain and my wife's to see a girl as good as my own children, as far as family goes, wheeling the perambulator and waiting on us. So I am now determined to have a bit of a fight for it at law; and I've come to ask you to be so good as to copy me out the certificate of Jane Scruby's marriage with Edward Meadows; for it was at your church they were married by

the old vicar, and I'll take it to my solicitor at Grantham.'

'I'll get it you with great pleasure, and send it by post.'

'Ah! but you see, sir, I want to take it back with me. Now, could you get it at once? I stay to-night at Boston; and will call for it to-morrow morning at six, on my road home, if you would have it ready, and just leave it out. You see, sir, I want to set about it at once.'

Yes, certainly, I would do it.

It was not a pleasant prospect to get up at five in the morning to go over to the cold church; but after the inconvenience and trouble Mr Pullingtoft was taking in so good a cause, I was ashamed to hesitate, and therefore fairly promised. The worthy farmer hereupon laid down two wet half-crowns on the hall-table, as a fee for searching the register, but which I insisted he should take up again, to go towards the cause of the orphan. Once more I begged him to take some refreshment; but this he declined. We shook hands heartily at parting.

When I opened the hall-door, a gust of wind brought in a torrent of rain and sleet, the draught almost extinguishing the lamp suspended over our heads. The darkness was so intense, that it was some little time before I could dimly distinguish the outline of the horse, covered by a rug, and holding its head low down. The oil-lamps in the wagonette burned but dimly; the black oilskin cover which the farmer had thrown over his trap, made it assume the form of a gigantic coffin, a blacker spot on the black background. Mr Pullingtoft climbed into his vehicle; and it was with great admiration of the worthy man's devotion to the cause of the orphan, that I saw him drive away into the rain and darkness.

I returned to my comfortable seat by the fire, my mind occupied by the tale I had heard, and tried to recall the people he had spoken of as I found them on first coming to the neighbourhood. Old Mrs Kirby lived in a small cottage a mile or so from the village. She had at that time a poor young man, who was slowly dying of consumption, living with her—some sort of relation, I always thought. He would come to church on fine Sunday afternoons, leading his little girl Phœbe by the hand—a pretty little gentle thing, who afterwards came to the school, and was a favourite with every one. As the woman grew older, times had become harder. The few chickens she reared, and the honey from her hive, were insufficient for their support. The little girl at an early age went to service at some distance, and the old woman had to fall back upon parish relief. I had often been to see her; but she was a remarkably reticent and somewhat surly old woman; and she had never told me that little Phœbe had gone to live at Mr Pullingtoft's, nor that a relationship existed between the girl and the rich farmer Mr Scruby.

Then, again, Mr Scruby. He was never, although a churchwarden, a particular favourite of mine. He was a hard man, with a hard face, that did not change its expression when he spoke; a clever man, and a mean one. He drove hard bargains, and prospered, and seldom gave to charities. Although he farmed much land and fattened his cattle at Coryton, in my neigh-

bourhood, he lived there only occasionally, his favourite house being on higher ground, near Lincoln. The old father I had never known; he died before my time; but I passed his tomb every time I went across to the church. A marble tablet recording his virtues and sound judgment, was on the wall behind the reading-desk; while immediately below it, in front, was the square pew belonging to Coryton Farm, and occupied by Mr and Mrs Scruby; she in rustling silk fit for a dinner-party, that crackled every time I said 'Let us pray'; and waving feathers in her bonnet, that always caught my eye over the edge of the Bible, in reading the lessons. Yes; Mr Scruby certainly seemed exactly the kind of man to keep up the resentment of his father towards the unfortunate sister and her no less unfortunate child, Phœbe, especially as he had three sons of his own, for whom he was saving fortunes, scraping, and making the hard bargains already mentioned.

I fully entered into Mr Pullingtoft's view of the case. Surely Jane Meadows had been entitled to something from her father, even though he had died without a will; and if such was the case, then it stood to reason that her only child Phœbe ought in the ordinary course of things to have inherited that something. Pondering thus, I could not but contrast the interest shown in her by a stranger, and the unnatural conduct of the rich uncle, who must often have ridden past the poor child going to school, or wending her forlorn way along the muddy roads. I would get up early in the morning, and go over to the church, and copy out the certificate of her parents' marriage; and afterwards I would call on old Kirby, and see what she had to say.

The thought of getting up from my warm bed to go out in the dark of a raw November morning, here selfishly occurred to me, and I thought, Why not go to-night? Better to get it done with, and have it ready to be put into Mr Pullingtoft's hand the first thing in the morning.

An extra violent gust of rain beat against the window, as if to put my resolution to the test; but I had determined; so, springing up, I hastened to provide myself with a candle and a box of matches, and taking from their nail the keys of the church, I rang for my boots, re-donned my still wet gaiters and waterproof, and again sallied forth. It was with some difficulty I held up an umbrella, as it nearly turned inside out at the corner of the house. The church was only on the other side of the road; but there was a short avenue leading to the churchyard entrance, and a long winding path through it to the church-door, graves and tombstones on each side. The clock struck the half-hour from ten as I went through the turnstile, to which I had found my way by habit, for I could see nothing but the tops of the rows of poplars as they oscillated to and fro against the stormy sky. Before or since, I never was out in such a dismal night, nor had I ever visited the church at so late an hour. I was rather startled, as I passed old Scruby's tomb—a clumsy sarcophagus, respectably inclosed within iron railings—by something moving stealthily away as if retreating from my presence. A startling coincidence, certainly.

With a little groping, I reached the church-

door, but had great trouble in opening it. Firstly, the key would not turn, as the lock was rusty. Then I had to push the door with all my strength, when I had turned the key; and although I knew it was only a counter-draught, yet it seemed for all the world like some one pushing against me at the other side. I do not think I am a particularly nervous man. I knew my church well, and was proud of the old Norman doorways and windows, its scraps of ancient glass, and its remains of dingy old carvings, and hoped to get it restored some day. But that night it was with an extremely unpleasant sensation that I pushed open the heavy door and entered the silent church.

I lighted my candle, which burned dimly, and had a perceptible halo around it, and the darkness was thereby deepened and intensified. My footsteps sounded unnaturally loud as I walked to the vestry. When there, I placed my candle in an old iron sconce that branched from the wall, and proceeded to unlock the iron safe where the registers were kept. Scarcely, however, had I placed the key in the lock, when I was unexpectedly startled by a noise in the body of the church through which I had just walked, that sounded like the violent banging-to of a door. Thinking I might have left the church-door ajar, I took up the candle, and retraced my steps to secure it. But I found it quite fast. As I walked slowly back up the middle aisle, I looked at the pew-doors on each side, which were open more or less, just as the congregation had left them on the previous Sunday. Yes; all were open save one—that one the last in the aisle, the square pew of the Scrubys, immediately in front of the reading-desk, and it was fast closed. But there was nothing strange in this, as the family had not paid one of their visits to Coryton latterly, and the pew had been many Sundays unoccupied.

I next went round the side-aisles, where some pews had been converted into open sittings; but the doors of all these pews were likewise open. That of the Scrubys was the one exception. I was rather puzzled as to what had produced the noise, unless perhaps it had been the door of Scruby's pew that had so suddenly closed. I must also add that my nerves were somewhat unstrung by the coincidence.

Taking out the old heavy thick volume of the marriage register, I laid it before me open on the table; and after some little time, found the entry I sought. Yes; there it was, plainly enough—EDWARD MEADOWS, aged twenty-three, son of JOHN MEADOWS, farmer, of Spalding; and JANE SCRUBY, twenty-one, of this parish, &c. Two witnesses—THOMAS and MARY KIRBY, and signed by JAMES WILLOCK, Vicar—my predecessor.

Procuring pen and ink, I carefully copied out the entry; then, replacing the volume, I relocked the safe, put the key in my pocket, and was preparing to quit the vestry, when, suddenly, without the slightest warning or preparatory noise of any description whatever, once more a door was sharply banged-to with a great noise. This time, I was certain, from the direction, that it was the church-door. I at once hurried thither, and observed in passing Scruby's pew, that the door which was before shut was now open! I was therefore now certain that some one had been in the church.

Hurrying to the church-door as fast as I could, I shaded the candle with my hand and looked out, but could see nothing, and the night was too stormy for one to hear footsteps outside.

I cannot describe the weird, agitated feeling that took possession of me as I re-entered the church. If some one had really been in the church, as I was inclined to believe, what had been his object? Could it have been robbery or some other form of sacrilege? or had my own life been in danger? I felt nervous and faint, and for a few minutes was obliged to sit down in the nearest pew.

But I would not allow such weakness to affect me; so, shaking off this unpleasant feeling, which I may say was altogether new to me, I boldly walked to Scruby's pew once more and entered it. It had a damp, mouldy smell, and the old chintz-covered cushions and drapery looked faded and musty. There were an old Bible and two old Hymn-books in a corner, where the rich farmer was wont to sit, a little beyond his proud help-mate. But I could see nothing to account for the presence of any one there that night; and while certain that some one must have opened that pew-door after I had seen it shut, I gave up puzzling over it for the time, determining to return and examine the church again by daylight. Anyhow, it was with a feeling of great relief that I got outside, locked the door, and sped as fast as I could through the churchyard. In a few minutes, I was once more in my study, leaning over the blazing coals, and feeling as if just awakened from some unpleasant dream.

PAVEMENT PORTRAITS.

'DOT.'

'SHE is a beauty; ain't she, sir? You may go a long day's journey afore you meets wi' the likes o' 'er, I can tell you. Now, give me your candid opinion, sir; what do you think she is?'

The speaker, who stood under the grim shadow of Newgate Prison, was a blind man, with a quaint, chestless, backboneless sort of body, propped insecurely on a pair of the weakest-looking legs I ever saw; a man who was most assuredly 'limp' in his construction. But above his body there was a very intelligent face, albeit the complexion was a half-and-half mixture of freckles and dirt. The features were pinched and hungry-looking; but the mouth was sympathetic, the lips seeming ready to express any emotion of pleasure or of pain; but the eyes, alas! useless to their owner. Lanky red hair hung on each side of the face in the same slovenly way as lanky, very shabby clothes hung on his poor shrunken form. In front of this man was a small wooden tray, supported by a narrow strap, which passed round his neck. His right hand rested on this tray, from which it occasionally picked a watch-key, or shirt-stud or pencil, which it then held for a minute or two, pitifully appealing for custom to the passers-by; while round his left was tied one end of a very stout string, to the other end of which was attached 'the beauty.'

Attracted by the appearance of the blind man, I

had stopped to have a chat with him; and it was during the course of our quiet colloquy that the foregoing interrogatories were made. Strange to say, the questions were both of them difficult to answer; and as I looked at the subject of them, I felt like a matriculating student longing for a 'crib'; for I wished to pass a creditable examination, in order to ingratiate myself with the master of the model of this 'portrait,' and I really hardly knew how to do so while adhering strictly to the truth.

'She is a beauty; ain't she?' was the first question; but when I looked down and saw lying in the right angle made by the wall and the pavement something which looked like a yard of good-sized drain-pipe, covered with dirty sacking, from one end of which protruded a black-and-white head—not unlike that chalk-wagging head which is the chief attraction in a diabolical animal sold as a toy rabbit in poor neighbourhoods—while a very long black-and-white tail protruded from the other end, and lay along the ground like a curious piece of piebald rope, I found a difficulty in giving the desired affirmative answer. And then question number two came tripping up the heels of query number one, and it was fortunate it did so, for I was thereby considerably helped.

'What do you think she is?'

Of course I was bound to believe that 'she' was a dog. Here was the blind man, here the string, and what else could the remainder be *but* a dog? But as to the kind of dog it was, I am sure that the whole committee of the Kennel Club would have failed to decide *that*; and how could I be expected to know more than those learned ones?

I made a rush, and passed my 'Little-go exam.' in blind men's dogs triumphantly, as I answered, fearlessly and clearly, 'A very fine creature indeed; no *particular* breed; but, I should say, good all round; a capital companion, and evidently knows a thing or two.'

'Knows a thing or two; you're right, sir; she knows everything. There ain't nothin' as I sez to my missus, there ain't nothin' as she sez to me, as that "Dot" down there don't know. Wherever I goes, she knows why it is as I goes there. When I stops at 'ome, she guesses rheumatics! as properly as I feels 'em. There never was a more cleverer dog; an' in all things she's as good as a 'uman; better, I think, than most 'umans, for she knows 'ow to 'old 'er tongue, an' you can't say that quite truly o' most o' the women an' men as I know.'

'Dot,' hearing herself thus ranked above human beings in point of intelligence, roused herself, and four long lean legs emerged from the sacking, stretched themselves to their full length both 'fore and aft,' and then, with great display of leverage, slowly raised up the whole of the canvas cover some fifteen inches from the ground. The drab drapery did not cling in classic folds to the figure of the fair 'Dot,' and there she stood, revealed in the open day, as strange a canine combination as ever mortal eyes lighted upon.

'There she is,' continued the blind man, as he felt the agitation of the string caused by the

animal moving—"there she is. Look at 'er now! What do you think of that? Ain't that artful? An' so like a 'ooman! She 'ears a little praise, an' at once she wants to show you 'ow well she deserves it."

"How old is she?" I asked.

"Well, sir, we mustn't talk about *that*; she doesn't like it." And as the master answered thus, the dog stuck one of her fore-legs straight out, and prodded me on the knee, as much as to say: "You rude man, don't ask such questions;" and she waved her tail about—I can't say she wagged it, for it was too long for wagging—as if asking: "Aren't you going to give us a copper? What's the use of your stopping here, if you're not?"

But I was not going just then, even to please the impatient 'Dot;' and I asked the blind man to tell me how she had been trained to lead him about. And he told me.

It seems that the poor fellow has a friend, who must be an original in his way. This friend carpenters all day, and spends his evenings in training dogs for blind clients. As far as I could make out, the plan pursued is this: Blind men, however poor they may be, have a certain number of places to which in the course of their daily life they desire to go for business, begging, or pleasure purposes; and those who, possessing the advantage of the acquaintance of the carpenter referred to, wish for a dog to pilot them safely to these places, give the trainer a list of them. The carpenter having found a likely four-legged pupil, arranges that a nice little feed shall be prepared at one of these places on a given occasion, or several given occasions; and then, having put the poor animal on short allowance, he sets off with it for that place, first informing it where it is going, and continuing to remind it all the way of the name of the place. Arrived at their journey's end, the dog is well fed; and it connects the meal with the name; and under proper conditions will, if it is an apt pupil, always go to the same place again when told to do so.

This, or something like this, was at anyrate the way in which Dot had been trained; and that she would have passed very high in any London Local Examination for dogs, I can safely affirm.

Dogs have, however, as we all know, dispositions as well as talents; and although the latter are easy to discover, the former are often somewhat inscrutable. And so it was with Dot, as the following incident will exemplify.

"You must know, sir," said my friend the blind man, on another occasion to that already referred to, and when I had become quite well acquainted with him and Dot—"you must know, I've got a brother who, though 'e is my brother, I must say is a most out-an'-out scamp. 'E's got a good trade, bricklayin'; but 'e won't work steady at it. One day on an' two days off, that's 'is line; an' it ain't a line as pays, of course. But 'e's got a wife, as nice a little 'ooman as ever stept; an' it was more along of 'er that I 'ad Kensin'ton, where they both lives, drummed into Dot's 'ead, so that I might go an' see 'em from time to time. An' I used to go pretty reglar; but the visits were by no means nice to make, for there was always somethin' uncomfor'ble 'appened; sometimes a row between 'im and 'er, sometimes between 'im an' me, an' at last there was words between all

three on us at once; so I made up my mind as I would scratch Kensin'ton off my list, an' leave them as lives there to shift for themselves.

"One o' the pleasantest places as I go to, I must tell you, is at Kennin'ton, close to the Hoval; an' what takes me over there is to see an old lady who is very good to all blind folks, me in particular; an' whenever I goes, I gets a good blow-out, an' somethin' in my pocket to "pay my fare 'ome," as the old lady calls it—only she knows quite well as it goes to the 'ousekeepin' expenses. Well, I'd been 'avin' rather a bad time of it a little while ago—since I see you last—an' I thought I'd go over an' see my good Kennin'ton friend; an' last Tuesday fortnight, I puts on my best coat, an' after breakfast I tells my missus where I was a-goin', an' I gets Dot well in 'and for a start, an' I sez to 'er, sez I, "Kennin'ton!" At least I was goin' to say "Kennin'ton;" but when I got as far as "Ken," I catches a great sneeze, an' the rest o' the word was lost.

"Dot an' I sets out; an' we goes all right from Somers Town, where I lives, across the Euston Road, down Gower Street, across New Oxford Street, down Endell Street as far as Long Acre. But when we come to the corner o' Long Acre, Dot, instead o' goin' across the street, an' so down Bow Street for Waterloo Bridge, turns sharp to the right, an' lugs me some yards up Long Acre afore I knew what she was up to. I tries to pull 'er back; but she gets quite obstinate, an' wont listen to a word I've got to say, but drags me on at a killin' pace, all along Cranbourne Street, right as far as Regent Circus, Piccadilly. 'Ere she 'ad to stop a minute because o' the difficulty in crossin', an' I takes the hoppportunity to speak to 'er quiet like; that is to say, as well as I could in the noise there always is about that part. She wouldn't let me pull 'er in to talk to 'er proper an' close, for she's stronger nor me, an' she kep' the string quite taut. I told 'er most solemnly as I wanted to go to Kennin'ton; but she wouldn't 'ear of it. Now, what was I to do? I knew by this time what she was up to. She was off to that brother o' mine at Kensin'ton; an' I, who 'ad vowed never to go near the place any more, was bein' conveyed there entirely against my will! It was 'orrid! an' the pace she went too; a 'Ammer-smith 'bus, in which I went once, is nothin' to it! All along Piccadilly, all through Knightsbridge, was I dragged by that there Dot, an' we never stops until she pulls up at the greengrocer's shop where Bill—that's my brother—lives. No sooner did we stop, than I 'eard a voice which cut me to the 'art. It was Nancy, my sister-in-law, who comes runnin' out an' flings 'erself on me, a-cryin', "O Tom, 'ow good o' you to come. 'Ere's Bill got 'is leg broke, an' took to 'orspital, an' a man's in possession o' our room for the rent!"—"Well, I am blessed," sez I; "'ere's a rum go. An' what are you a-goin' to do?"—"I don't know," sez she. "Can't you 'elp us?"—Well, I turns the matter over in my mind presently, an' I tells Dot to go 'ome. She went 'ome; an' the nex' day we goes right enough to Kennin'ton, an' the day after to Kensin'ton once more, an' the man was paid out, an' Nancy was free."

At the end of this curious recital, Dot, who looked at this epoch like one of Pharaoh's lean kine, reared herself on her hind-legs, nearly dragging her master down, as she tried to see

what a harmless City waiter had on a lunch tray which he was carrying to a neighbouring office; and as I said 'Good-bye' to the master, I quite fell in love with the dog.

THE ADVENTURES OF AN AMERICAN 'SPECIAL.'

BY ONE OF THEM.

FIRST PAPER.

THE profession of journalism in the United States partakes of a character of individuality unknown in England. If we except George Augustus Sala, James Greenwood, and one or two others—war correspondents not counting—we can find no English journalist who fully answers the requirements of an American 'special.' He must be able to undergo excessive fatigue and hunger, and assume as many characters as Proteus, if need be, at a moment's notice. When his work is done, he must rush back to his office, no matter how long he has been out, and dash off his 'copy' ere he retires to rest.

Politics, the drama, vigorous description, and even religion, must in turn be the subjects of his pen. When 'on the war-path,' his ingenuity must stand a severe strain, in order to devise the means of ferreting out news and stealing a march on his contemporaries. The *New York Herald*, for example, pays immense sums for exclusive news, and should its 'special' prove himself worthy, never grudges him the sinews of war. Some ten years ago, the writer received from it five hundred dollars and expenses for exclusive facts relative to the Newfoundland fisheries, the collection of which took him barely a month. The *Herald* was threatened at the time with no less than twelve lawsuits by enraged 'bulls,' who found the market suddenly going dead against them. The *Herald*, however, stood by 'the chatterings of an irresponsible bohemian,' and invited them to test their grievances, if they were so disposed. Needless to add they did not pick up the gauntlet, and the new commercial treaty—the fish-treaty, as it was called—was indirectly the result.

The American special enjoys numerous privileges. He may travel 'dead head,' or without paying his fare, from Golden Gate to Nantucket Shoals in common with those other bohemians the Pinte and Blackfoot; but I believe these latter only enjoy this luxury on the Central Pacific. Hotels are glad of him at a reduced price; and in most cases he is made a present of his bill, mine host being aware that he may get more than its value back in some cunningly worded description. He marches into the theatres on the free-list; and stalks through a crowd of policemen at a fire, as a ship rushes through the unopposing waters. Indeed, the writer remembers one case in which a special was arrested amongst some hundreds of other citizens at a gambling resort, and was immediately released by the police court judge with an apology, while he censured the sergeant in charge of the raid. 'The mere fact of Mr So-and-so's having been there, ought to have been sufficient evidence to you that he was there in the execution of his duty,' said the judge to the crest-fallen executive.

There was some ground of excuse for this, sad as it may appear to the English reader, from the fact, that in all criminal cases the specials run the police hard in ferreting out the truth; and in some instances the case is 'worked up' in a daily journal before they know the full details at headquarters. Often and often the writer has seen a baffled detective accost an enterprising special, and in a mournful tone ask him if he knew anything. Instances have been known, notably in the Nathan murder case—which is still a mystery—in which it was freely alleged that the police themselves set to work to baffle newspaper-men.

The remarkable coolness of the special in time of peril is also worthy of note. Witness a case in point. On the ever-to-be-remembered twelfth of July, when the Fenians of New York turned out some thirty thousand strong, resolved that three hundred Orangemen should not parade the streets, as they had done on the previous St Patrick's Day, the Empire City witnessed a scene of carnage which is never likely to be seen again. Protected by the ninth, seventh, sixty-ninth—an Irish regiment—and one or two other militia regiments, these three hundred men marched past the grand Opera-house surrounded by a yelling multitude, who fired revolvers and darkened the air with brickbats. At last, patience ceased to be a virtue. Several soldiers had already fallen desperately wounded. The Colonel halted his men, and gave them orders to fire at the mob.

The writer was one of a numerous band of specials—specially sworn in as constables—amongst the mob. A friend in the ranks shouted 'Look out—we are going to fire!' a warning which was sufficient to cause him to throw himself flat on his face. The mob vanished, leaving the space clear; and while he was wondering how to get out of the dilemma, what was his surprise at seeing Pember of the *New York Times*, in the midst of the fire, calmly roll himself over on his side, produce his note-book, and go from one wounded man to another, jotting down his name, his age, where he lived, and the nature of his hurt. This, while bullets were flying, and unfortunate specials were menaced by the military on one side and the furious mob on the other. This reckless exposure of life and limb was in order that the journal Pember represented might 'be the first to have 'List of the Killed and Wounded!' on its bulletin boards.

So much for pluck. Now for wit. But the cases are so numerous, that it is difficult to know where to choose. When the Siamese twins died, Philadelphia surgery had the honour of dissecting them; and under the peculiar circumstances—one having died of horror consequent on his brother's death—the public were in a fever-heat of expectation to learn whether they could have existed apart. Various were the artifices resorted to by the specials to gain a knowledge of this fact, the doctors having sternly declared that they would not admit the press, as it looked like pandering to the morbid appetite of the public. Medical students and full-blown doctors with duly 'vised' certificates from other cities increased to an alarming extent. Hospital porters were offered premiums to vacate their positions for one day only.

But all was of no avail; the doctors closed the doors, and the operation began. At its conclusion, it was ascertained that the twins could have undergone a successful severance in life. At that interesting moment, or in the debate which followed, one of the doctors observed an unusually life-like hue upon a subject waiting for dissection. But what was his horror, and indeed the horror of them all, as the remark fell from his lips, to observe the corpse suddenly jump up and make for the door. He opened it in time and fled, followed by the enraged doctors. A cab was waiting outside, and into this popped the supposed corpse, to be driven like mad to the railway station, where the complacent special safely arrived with the knowledge that he had made a big 'beat.'

Another, though not so startling a case was the impudence of 'Joe' H—, who having been thrust with his male companions out of a woman's suffrage meeting, returned half an hour afterwards as a female delegate from New Hampshire, and was requested to take the vice chair! It was not until the meeting was half over, and Joe, in the enthusiasm of the moment, forgot his trick of voice, that the fraud was discovered, and he was forced to fly from the room, pursued by indignant amazons. Joe subsequently distinguished himself by bringing about the memorable 'Blue Monday,' in which New York was for three days in a state of revolution, and the newspaper offices were filled with soldiers, while their editors were under arrest. Joe languished at Fort Lafayette for this; and had it not been for the immense political influence of his friends, would have been shot.

Thus much by way of showing the pluck and wit required by a special; and now for a personal reminiscence or two.

In the summer of 1873, a man appeared at the office of the journal on which the writer was then engaged, and stated that having gone down to Connecticut to assert his claim to some property left him by his father, he had been arrested at the instance of his relatives, and transferred to the Middletown Lunatic Asylum. He had made his escape; and, nothing daunted, was going down again to press his claim. He wished the aid of a powerful journal in case he should a second time be locked up. His statements were so alarming, that it was resolved to send a special to ferret out the system by which a citizen could suddenly be deprived of his liberty. A week after his departure, as nothing more was heard of him, the writer received orders to work up the case.

'But first of all,' said the managing editor, 'we must be able to get you back in New York State on requisition, in case you get locked up; for, if you get entangled in the meshes of the State of Connecticut Blue laws, it would take even a Philadelphia lawyer months to get you clear.'

Accordingly, the writer went up to police headquarters, and while talking to his old friend the Chief of Police, contrived to pick the pocket of Sergeant A—; for which he was promptly arrested, and the proof of his guilt being found on him, conveyed to a cell. A window had been carelessly left unfastened. The special lost no time in getting out of it and making his way to the railway station, whence

he was speedily carried to the State of Connecticut. Stamford was the place in which the alleged lunatic had been last heard of; and accordingly Stamford became the base of operations. Before the evening was out, the special found that the escaped lunatic had been re-apprehended; and that 'the first select man,' with the alleged lunatic's brother, and a lawyer, had been the means of getting him out of the way, and were interested in keeping him out of sight. 'The first select man' answers to an English justice of the peace, and held in his hands an amount of power which was simply alarming. By an old law, he could order the commitment of a vagrant to the State prison for so many weeks; but should a doctor certify that the vagrant was not responsible for his acts, he could be sent to the Middletown Lunatic Asylum, there to be detained until the commission which examined cases quarterly decided that he was not insane. The State paid half his expenses, his relative the other half. Now, it so happened that the first select man in this case was also a duly qualified practitioner. He had merely as a doctor to certify to the man's insanity, and in his magisterial capacity to commit him. The two respectable citizens who were required by the Act to testify to the fact that the person was a fit subject for incarceration were the alleged lunatic's brother and his brother's lawyer. These facts were ascertained by a purely American process known as interviewing, and deadly indeed it is in finding out truth. It must be borne in mind that the various persons interested were interviewed separately on one pretence or other, and their answers taken down on the reportorial note-book as soon as uttered. Patches of conversation taken here and there made in the aggregate very damaging testimony against themselves.

The writer will never forget the sounds of rage which greeted his ears at the old Homestead—the property in dispute—when the virago, who had been pouring forth her account of 'the doings,' under the impression that he was the first select man's clerk, suddenly discovered, by the arrival of her brother, that it was 'a pizen-press feller.' Some two hours previous, he himself had opened his mouth rather too much, believing that he spoke to a land-speculator who had come to him from his lawyer, and had only just been undeceived by him. Indeed, had it not been for the presence of a loaded revolver, a pitchfork which the man picked up might have cut short the writer's career. The next move was to rush down to New Haven and get a lawyer to take out a writ of habeas corpus. While that was pending, Middletown was visited, and the chief of police taken into confidence.

'I'm glad you've come to write up that sink of iniquity,' he said; 'some of the goings-on there are awful.'

'How am I to get in?' demanded the writer. 'I must see the unfortunate man; for I fear that now they know there is some one on the track, they may try to make him mad. I have heard of such things.'

'I'll fix it,' he replied; 'they can't refuse me.'

This proved to be the case; and by pretending that he had a message from the alleged lunatic's sister, the writer was enabled to see him. But

there deception ended; for the unfortunate man fell on his knees in a passion of joy, crying, 'God bless you, sir; I knew you would not let me be buried alive and tortured out of my mind.'

'Tortured out of your mind?'

'Yes, sir. Because I got angry, they pretended I was dangerous, and clapped me in the strait-jacket in a dark cell.'

'It is only due to you, sir,' the writer said, turning to the governor, 'to tell you that far from being a relation of this man, I am a reporter of the —, bent on exposing the nefarious practices which have resulted in this man's imprisonment; and I warn you that any ill treatment of him will be at your peril.'

'This deception is most unfair,' responded the governor, a benevolent-looking man. 'The man is a dangerous lunatic.'

At that moment, the alleged lunatic called the special over, and in an agitated manner gave him a piece of paper, on which a used stamp was pinned. 'Take it,' he said; 'I was going to throw it out of the window.'

Slipping it in his pocket, the special bade him keep his courage up, and took his leave.

To his astonishment and disgust, when he examined the paper, it read as follows:

To the POPE, No. 1 Printing House Square, New York.—I am in Purgatory. Get me out, or the Queen will never forgive you.—A. LINCOLN.

This was a crusher. Clearly, one who could write such nonsense must be mad, after all. There was nothing for it but to go back to New York, and confess that one had been on a wildgoose chase. The chief's dictum put a new face on the matter. 'He may be mad,' said he; 'but there's villainy in it somewhere. Anyhow, I can give you facts enough about the place to make people open their eyes.'

Under the fear that the habeas corpus would be too slow in its operation, and that in the meanwhile the unfortunate prisoner might be driven mad, the special resolved to return to Stamford, and by threats of exposure compel his release. On the following morning, he presented himself at the office and stated his case, accompanying the same with an intimation that it would be as well for the parties to 'knuckle under.'

'Have you any fixed residence in Stamford?' demanded the lawyer.

'No.'

'I should like to know that you are a duly authorised agent of the paper you mention. Will you show me your papers?'

The special explained that he had none; at the same time informing the lawyer that he might ascertain for himself by wiring to the editor of the journal in question.

'I know nothing about the State of New York,' replied the lawyer; 'the State of Connecticut is good enough for me; and by the law, you are a vagrant, and guilty of an attempt at black-mail. You'll wish you'd never entered this State, young fellow.'

Two constables were in waiting, as the special's appearance had been anticipated. He was hauled before 'the first select man,' and by him sent into custody. But ere the week was out, he had the

satisfaction of seeing two detectives come with a requisition for him, on a charge of pocket-picking at New York; and hearty was the laugh at headquarters when he related his adventures.

With the exposures that followed, this article has nothing to do; but the extraordinary part yet remains to be told. Some New York lawyers took up the case; and the alleged lunatic, who had in the meantime made his escape from the asylum, received ten thousand dollars; while his brother and the lawyer were indicted for conspiracy, and convicted. A year after that, the alleged lunatic went really mad in Chicago, after relating his adventures to a reporter of the *Chicago Tribune*.

Whether he was always mad, as his relations declared, or whether the excitement proved too much for him, the reader must judge. The probabilities are that he was one of a numerous not over-strong-brained class of men who get along well enough if they are let alone. There is one thing certain, however—if the writer had been consigned to that horrible asylum, he would not have answered for his own sanity at the end of a month.

THE MAHWA TREE.

THIS is one of the Indian food-trees. The name is spelled in a variety of ways, Mhowa, Malwah, and as above Mahwa, and is applied not only to the *Bassia latifolia*, but to *B. butyracea* and *B. longifolia*, which also bear edible fruits. The singularity of the genus consists in the fact, that not only is the fruit eatable, but the fleshy deciduous corollas are also largely employed by the natives of India for the same purpose, constituting in point of fact a staple, and indeed sometimes the only article of diet available for the very poorest classes during some months of the year. The tree is not unlike our oak in form, size, and the colouring of the foliage; it grows from thirty to forty feet high; flowers in the months of March and April; is found in nearly every part of Central India, and is cultivated in other districts, but not so largely as it might be, considering its valuable properties.

The flowers ripen towards the end of February or beginning of March, the corollas becoming fleshy and tinged with the juices they secrete. They then gradually loosen from the calyx, and falling to the ground, are carefully gathered by the natives—women and children being chiefly employed in this business. They start in the early morning from their villages, carrying baskets and a supply of water for the day's use, to where the Mahwa trees grow.

Just before the blossoms are ready to fall, the grass is burnt away in a circle from beneath the trees, in order that none of the precious blossoms may be hidden by it, and so lost. The gleaners of the Mahwa crop remain in the neighbourhood of the trees all day, collecting and sleeping by turns, and return home at night laden with spoil. When the gleaners have come from a long distance, they often make a temporary encampment of huts, formed of branches of trees, and live on the ground until they have collected all the flowers. They never strip the trees entirely of blossoms; in good seasons, each tree will produce from two to three hundred pounds of flowers;

and a good many are allowed to remain to seed themselves.

The natives clear a piece of ground in front of their huts, and on this spread out the flowers to dry in the sun. When quite dry, they are reddish brown in colour, and have shrunk to about three-fourths of their ordinary size, and lose at least half their weight.

The tree is a hardy one, and even in poor ground flourishes well. It could therefore be cultivated on land which would not yield ordinary crops. The trees are rented, and the rent varies with various circumstances, such as their abundance in the district, and the quality of the previous rice harvest. Mr V. Ball, of the Geological Survey, says that in the Murpa district the prices paid for permission to collect vary from twopence to four shillings; and from one hundred and twenty to four hundred and eighty pounds per rupee—two shillings—is the price paid for the saved crop. Very often the exchange is made in kind, in salt or rice; the merchants then give a small quantity of salt, and six or eight pounds of rice for a *maund*—eighty pounds—of Mahwa. During the time of the famine in Manbhoom, the average price of Mahwa was twenty-four pounds for one rupee.

Two *maunds* of Mahwa are said to be enough for a month's food for a family of five. It is not generally eaten alone, however, but mixed with different seeds, those of the *Shorea robusta*, the *sal* tree; and very often rice is added also. When dried, Mahwa flowers rather resemble inferior figs. When fresh, they have a sweet taste, but a by no means agreeable odour. The fruit succeeds the blossoms. It is about the size of a very small apple; and the kernels contain oil, which is of an inferior colour and rancid taste, but is very generally used by the poorer natives for lighting purposes, as well as for cooking; and it is also applied externally as a remedy for wounds, sores, and cutaneous diseases generally.

The freshly dried flowers yield, on distillation, a very intoxicating spirit, called by the natives *daru*. It is usually diluted with from five to ten times its bulk of water, and is then offered for sale at about a penny per quart. Its smell, which is most offensive, cannot, even by the most careful distillation, be wholly got rid of. The natives, however, do not seem to mind it in the least; and even British soldiers acquire a taste for the liquor in time, though they generally hold their noses while drinking it. One hundred-weight of flowers is said to yield from four to six gallons of proof-spirit. The very carefully distilled and rectified spirit is put into oak-casks, becomes of a yellowish colour with keeping, and is said to be little inferior to the best Irish whisky.

The oil is manufactured from the seeds by bruising, rubbing, and subjecting them to heavy pressure. It is a coarse sort of oil; but in the manufacture of soap is largely used in the country, and also for candles. For that purpose, it would be worth in England from twenty-five to thirty-five pounds per tun. It has been tried by candle-manufacturers, and pronounced very suitable, and a valuable oil for such purposes.

Useful as the Mahwa tree is, and valued as it is by the natives, still, they do not protect

or foster its growth as much as it might be thought they would, considering that the flowers and fruit are alike useful for food, drink, and domestic purposes. The cultivation of the tree is not so great as it well might be. This culture might, with very considerable advantage to the country, be fostered by the government, as the trees would yield a revenue, by the duty on the spirit distilled from them, as well as afford food for the poorer native population at certain seasons of the year. No outlay is necessary, as they are very easily grown from seed, the trees propagating themselves in those parts of India in which the tree is indigenous, the seed being generally self-sown. In the Concans, the Circar Mountains, Bengal, Rajputana, Guzerat, &c., the Mahwa tree grows in considerable numbers, and it might easily be spread from thence over all India. The natives are sufficiently alive to the value of the trees to protect them in those places in which they exist, but do little or nothing towards increasing their numbers; and the increase of cultivated land prevents the seedlings springing up, as they would otherwise do in many places. With a view to securing the preservation of Mahwa trees in village areas, it is not now allowed to cut them down, even when they have ceased blooming, without permission. This is a step in the right direction; and if attention is turned towards the cultivation of seedlings throughout India, one of the best food-trees of the empire will be preserved from extinction.

THE DÆMON.

SPAKE my Dæmon unto me :
'Wherefore discontented be ?
Farest thou Life's jolting ride,
Long as I am at thy side ?
Spurs thou hast and supple heel,
Hangs not there thy trusty steel ?
Lo ! I follow in thy train,
Careless, whether fire or rain.
See ! my bridle-rein is tied
Firmly to thy saddle's side.
Where thou goest, I will go,
All the dangerous pathways show.'

Then I turned, and there beheld
A Rider following in the wild.
Careless of the storm, he moved
Like a traveller tried and proved.
Strange—his steed was like my own ;
Strange—his face I should have known.
'Brother ! ridest thou my way ?'
Cried I in mine ecstasy.

But my Dæmon made reply :
'Thou shalt converse by-and-by.
This day's journey thou must make ;
On the morn, another take ;
Many more perchance thou hast ;
But, when lagging on thy last,
Love shall light the lonely realm,
As a crest upon thy helm ;
And this Rider thou shalt see,
As the better part of Thee.'

PRICE 1½d.

THE QUEEN'S HOUSEHOLD.

THE Throne and all that pertains to it is always a subject of interest to British people, not only from the historical associations attaching thereto, but from the deserved popularity of its present occupant, our gracious sovereign the Queen. We do not at this time propose to make any reference to the higher institutions which are grouped around the Throne, and which combine in its support; but to lay before our readers what we are sure will interest them, namely, a brief sketch of the Queen's Household—the first Household in the land—and the duties of its various members.

The number of officers and attendants of all kinds who form the Queen's Court is not far short of a thousand, many of whom hold hereditary posts, and nearly all of whom receive liberal, and it may be thought in some cases extravagant, salaries. The principal officer is the Lord Steward, who has absolute control over the entire Household, and whose slightest command must be instantly obeyed by every officer and servant belonging to the court, excepting those of the Queen's chamber, stable, and chapel. He has authority to hold courts for administering justice and settling disputes among the domestic servants of the Queen. This part of his duties is, however, rarely performed; and although he possesses very extensive patronage in the appointments of subordinate officials, &c., the more active duties of his position are left to the Master of the Household, an officer who constantly resides within the precincts of the palace. The Lord Steward appears at court on all State occasions; and the salary he receives is two thousand pounds per annum. The office is a political one, and is in the gift of the ministry of the day.

Next in rank to the Lord Steward is the Lord Treasurer, who has no particular duties to perform, but is supposed to act as deputy to the Lord Steward (in his absence) at all State ceremonies; and for this service he receives the respectable salary of nine hundred and four pounds per

annum. The Comptroller of the Household is another office of a similar nature, with nominal duties and a similar salary.

The Master of the Household is an important officer, if we may judge by the amount of his salary, which is eleven hundred and fifty-eight pounds per annum. He, as the real deputy to the Lord Steward, has full control over Her Majesty's domestic establishment, and has, moreover, a large staff of officers to assist him. In addition to his own Secretary, who has three hundred a year, there are attached to the Board of Green Cloth—which consists of the Lord Steward, the Treasurer, Comptroller, and the Master, and has the power of adjudicating upon all offences committed within certain limits of the palace—another Secretary, with three hundred a year; three clerks with good salaries, who keep all the accounts of the department; a Secretary to the Garden accounts, a Paymaster of the Household, an Office-keeper, three Messengers, and a 'necessary woman.' The Master has also the privilege of dining at the Queen's table.

Next in order comes the Clerk of the Kitchen, with a salary of seven hundred a year and his board; and to aid him in his work he has four clerks, who keep all the accounts, check weights and measures, and issue orders to the tradespeople; he has also a messenger, and a 'necessary woman.' Beside these officials of Her Majesty's Kitchen, there is the *chef*, with a salary of seven hundred a year; and four master-cooks, at about three hundred and fifty pounds per annum each—who have the privilege of taking four apprentices, at premiums of from one hundred and fifty pounds to two hundred pounds each—two yeomen of the kitchen, two assistant-cooks, two roasting-cooks, four scourers, three kitchen-maids, a storekeeper, two 'Green Office' men, and two steam-apparatus men. And in the Confectionery department there are a first and a second yeoman, with salaries of three hundred and two hundred and fifty pounds respectively; an apprentice, three female assistants, and an errand-man; and in addition to these there are also a pastry-cook and two female

assistants, a baker and his assistant, and three coffee-room women. The Ewer department, which has charge of all the linen, consists of a yeoman and two female assistants only.

The gentleman of the wine and beer cellars—or, properly speaking, Her Majesty's Chief Butler—has a salary of five hundred pounds a year. He has to select and purchase wines for the royal establishment, to superintend the decanting, and send them up to table. Next to him are the principal Table Deckers, with two hundred pounds a year each; the second Table Decker, with one hundred and fifty; the third, with ninety; and an assistant, with fifty-two pounds—their duties being to superintend the laying out of the Queen's table before dinner is served.

The Plate pantry is under the care of three yeomen—with salaries of one hundred and sixty, one hundred and fifty, and one hundred and twenty pounds respectively, beside lodging-money and board—a groom, and six assistants. These offices are of great trust, and are not overpaid, seeing that at a rough guess the gold and silver plate at Windsor Castle alone is probably worth about *three millions* sterling, and includes some very precious specimens of art workmanship. The getting in of Her Majesty's coals must also be an important and arduous task, as no fewer than thirteen persons are employed all the year round on this duty alone.

There are a great many porters attached to the royal establishment, the list being headed with the Gentlemen Porters—who draw good salaries in addition to board-wages—an assistant-porter, and three groom-porters. The Gentlemen Porters are only required to be on duty in alternate weeks, and therefore have a very easy time of it. Next in rank to them come the ten State Porters, namely, a Sergeant Porter—who is dubbed 'Esq.'—five yeomen porters, and four under-porters. There are also ten night-porters, who receive a guinea each weekly, and a good supper nightly, the remnants of which they are permitted to carry home with them the next morning; a first and second lamplighter, with one hundred pounds a year each, beside lodging-money and board-wages; and seven assistant-lamplighters. This number existed before the introduction of gas, so there has been no benefit derived from the invention—at least not on the side of economy in the Queen's Household. In the Steward's Room, there are a yeoman and five assistants; and in the Servants' Hall, an usher and three assistants.

There is a regular court of justice attached to the Queen's Household with its officers and necessary police-constables. It is called the Court of the Marshalsea; and the expense of keeping it up costs about one thousand nine hundred and twenty-four pounds in salaries alone. This ancient Court dates from the reign of Henry VIII.; and its duty is to administer justice between the Queen's domestic servants, 'that they may not be drawn into other courts, and thereby the king lose their services.' As we have already stated, the Lord Steward is the judge, and his jurisdiction extends to all places within twelve miles of Whitehall.

The Knight-Marshal, or chief of the police of this court within a Court, receives five hundred pounds a year; and there are eight Marshalmen, with one hundred pounds a year each, and fees; their duties being principally to attend at the

entrances to the House of Lords when the peers are sitting; and at levees, drawing-rooms, &c. at St James's Palace.

There is one more office to mention before we have done with the Lord Steward's department, and that is the Almonry, the two principal officers of which are the Hereditary Grand Almoner—held by the Marquis of Exeter—and the Lord High Almoner—held by the Dean of Windsor. These are entirely honorary appointments. The former distributes at coronations the alms collected in a silver dish, retaining the dish as his fee; while the latter superintends the distribution of the royal alms on Maundy-Thursdays, and twice a year at the office in Scotland Yard. There is also a Secretary to the Almonry, whose salary is three hundred and fifty pounds per annum, or about the amount distributed to the poor on Maundy-Thursdays.

Next to the Lord Steward's department comes that of the Lord Chamberlain, whose duties are very numerous and important. They include the superintendence of all the officers and servants belonging to the Queen's chambers excepting those of the Bedchamber, who are under the Groom of the Stole; of the officers of the wardrobe at all Her Majesty's houses; of the removal of beds, wardrobes, and tents; of revels, music, comedians, huntsmen, messengers, artisans, heralds, physicians, apothecaries, and chaplains. He is also supposed to inspect the charges for coronations, royal marriages, public entrées, cavalcades, funerals, and furniture in the Houses of Parliament and rooms for receiving addresses to the Queen.

The Lord Chamberlain's salary is two thousand pounds per annum; and he has a Vice-Chamberlain to assist him, whose salary is nine hundred and twenty-four pounds a year. He has also a Comptroller of Accounts, an Inspector of Accounts, three clerks, a porter, and three messengers, the united salaries of these officials amounting to three thousand one hundred and ten pounds. In this department comes also the Keeper of Her Majesty's Privy Purse, whose duty it is to act as a kind of financial Secretary to the Queen, signing all cheques on the Queen's bankers, and making payments to various people and for various objects, as Her Majesty in the exercise of her benevolence may be pleased to direct. The salary attached to this office is also two thousand pounds per annum, being a percentage of three pounds six shillings and eightpence on Her Majesty's Privy Purse of sixty thousand pounds.

Next in rank in the Lord Chamberlain's department are the Mistress of the Robes, with a salary of five hundred pounds; the Groom of the Robes, with eight hundred pounds (and a clerk, a messenger, and a furrier as assistants); and eight Ladies of the Bedchamber. The duties of the latter consist in waiting on Her Majesty for a fortnight at a time in rotation; thus each lady would be called upon three times a year for this duty.

Following these in rank are the eight Maids of Honour, who represent a very old institution in connection with royalty. In 1625, shortly after his marriage with Henrietta of France, Charles I. issued the following rules for the guidance of the Maids: 'The Queen's Maids of Honour are to come into the Presence Chamber before eleven of the clock, and to go to prayers; and after prayers

to attend until the Queen be set at dinner. Again, at two o'clock to return into the said Chamber, and there to remain until supper-time. And when they shall be retired into their Chamber, they admit of no man to come there; and that they go not at any time out of the court without leave asked of the Lord Chamberlain or Her Majesty; and that the Mother of the Maids see all these orders concerning the Maids duly observed, as she will answer to the contrary.'

Nowadays, the Queen's Maids of Honour do not have such restrictions placed on their liberty, and merely take their turn, two at a time for one month, to attend on Her Majesty. After these in rank stand the eight Bedchamber Women, who serve in rotation in the same manner, and are only expected to figure on state occasions. Henrietta, Duchess of Suffolk, in one of her letters, gives an interesting account of the duties of these 'women' in her time. 'The Bedchamber Women came into waiting before the Queen's prayers, which was before she was dressed. The Queen often shifted in a morning. If Her Majesty shifted at noon, the Bedchamber *Lady* being by, the Bedchamber *Woman* gave the shift to the *Lady* without any ceremony, and the *Lady* put it on. Sometimes likewise, the Bedchamber *Woman* gave the fan to the *Lady* in the same manner; and this was all that the Bedchamber *Lady* did, about the Queen when she was dressing. When the Queen washed her hands, the Page of the Back Stairs brought and set down on the side-table the basin and ewer. Then the Bedchamber *Woman* set it before the Queen, and knelt on the other side of the table over against the Queen; the Bedchamber *Lady* only looking on. The Bedchamber *Woman* poured the water out of the ewer upon the Queen's hands. The Bedchamber *Woman* pulled on the Queen's gloves when she could not do it herself. The Page of the Back Stairs was called in to put on the Queen's shoes,' &c. All this is now obsolete; the situations are quite honorary so far as work is concerned.

The salaries of the Maids of Honour and the Bedchamber Women are three hundred pounds per annum each.

Next come the eight Lords in Waiting, the Grooms in Waiting, the Gentlemen Ushers of the Privy Chamber and Daily Waiters, Grooms of the Privy Chamber, Quarterly Waiters, Grooms of the Great Chamber—with salaries amounting in the aggregate to eleven thousand one hundred and ninety-three pounds per annum—and thirty-two Gentlemen of the Privy Chamber. Of all the court officials, these last-named gentlemen are the rarest specimens, for they are courtiers, and have to attend on royalty without any pay whatever, beyond the 'honour of the thing.'

The Marshal of the Ceremonies is an important post, but, compared with the other salaries, is considerably underpaid, the honorarium being only three hundred a year. His duties are to attend all State ceremonies, and to conduct the foreign ambassadors, &c. to the Queen's presence; a thorough knowledge of all the petty details of etiquette and precedence being a necessary qualification for the post.

There are five Pages of the Back Stairs, with salaries of four hundred pounds each; and their duties are to wait on the sovereign, one of them being always in attendance at the door of the

Queen's apartment from eight in the morning until she retires for the night. Two of them wait at the royal table. There are also two State Pages, and a Page of the Chambers.

There are six Pages of the Presence, with salaries of one hundred and eighty pounds each, whose duties are to attend on the Lords, Ladies, and Maids of Honour at breakfasts and luncheons; to be in communication with the Pages of the Back Stairs; and to wait on Her Majesty's visitors. There are also three pages-men to wait on these six Pages.

Next come the eight Sergeants-at-arms, whose duties were originally to 'capture any traitors about the court or other great offenders; also to hold watch outside the royal tent in complete armour, with bow, arrows, sword, and mace of office.' It is unnecessary to remark that the gentlemen who now hold this office are never called upon to do any such loyal and practical service. The salary of a Sergeant-at-arms is one hundred pounds per annum.

There are, beside the Sergeants-at-arms, three Kings-of-arms and six Heralds, besides messengers, inspectors of palaces, and housekeepers. Of these last there are nine, with salaries ranging from one hundred to three hundred pounds per annum. There are also three Linen-room Women, three 'necessary women,' upwards of sixty housemaids, and two attendants to show the public through the state-rooms at Windsor Castle.

The ecclesiastical staff of the Household is a large one, and costs a large sum in salaries. It consists of the Dean and Sub-dean of the Chapel-Royal, St James's; the Clerk of the Closet; three Deputy Clerks; a resident Chaplain; a Closet Keeper; forty-eight Chaplains in Ordinary, and ten Priests in Ordinary; besides four Chaplains, three Preachers, and three Readers for the Chapels at Whitehall Hall, Hampton, Windsor, and Kensington. There is also a choir of boys who wear gorgeously embroidered coats, four Organists, two Composers, a Violinist, a Sergeant of the Vestry, and a Master of the Boys.

Next comes the Sanitary establishment, including all the doctors, &c., in attendance on the Queen; and this costs no less than two thousand seven hundred pounds per annum. The physicians, however, are paid by fees; Dr Locock, the first physician accoucheur, having been known to receive for his attendance on the Queen at the birth of her children as much as a thousand pounds for one fee.

The State Band of music costs no less a sum than nineteen hundred and sixteen pounds per annum, although their services are seldom brought into use except on very great occasions, such as coronations, marriages, royal concerts, &c. The Band consists of a Master, at a salary of two hundred pounds a year; a Conductor, at one hundred pounds; and twenty-five members, at forty pounds each; besides a Sergeant Trumpeter, at one hundred pounds per annum; and nine Household Trumpeters, at forty pounds each. The Drum-majors of the Foot Guards are also in receipt of an annual allowance, as 'Household drummers,' in addition to their regular pay. Her Majesty also possesses a private band, which, during the lifetime of the Prince Consort, used to play every evening at the Palace during dinner.

Among all this army of officials, we must not forget to mention the Poet Laureate, who is an officer of the Queen's Household, although he receives but one hundred pounds per annum for his services, or only a seventh part of the sum which is allotted to the chief cook. Then there is the Examiner of Plays, with four hundred pounds per annum; besides a fee on the licensing of every play, interlude, farce, or song intended for the stage; all of which it is his duty to examine, to see that they contain nothing immoral, disloyal, or disrespectful to Church or State.

There is also a Master of the Tennis Court; but this is merely a nominal office now, although the holder of it receives the sum of one hundred and thirty-two pounds annually. Next come the Burgomaster and two Watermen, whose united salaries amount to four hundred pounds; a Keeper of the Swans; a Keeper of the Jewels in the Tower; an Exhibitor of the Jewels; a Principal Librarian; a Librarian in Ordinary; a Painter, and a Surveyor of Pictures.

The corps of Gentlemen-at-arms is an ancient as well as an expensive one, and was instituted by Henry VIII. under the name of Gentlemen Pensioners, which title they bore until the accession of William IV. It was composed originally of members of the highest families, chosen by the sovereign himself. This is not, however, the case now, as it consists principally of half-pay officers; but *tradesmen* are not allowed by any means to enter the corps. The appointments in it are regularly bought and sold, and fetch good prices too. The cost of the corps is over five thousand pounds. The Captain and Gold Stick has a salary of one thousand pounds; and the Lieutenant and Silver Stick has five hundred pounds a year, this berth having been known to fetch in the market ten thousand pounds. Each of the forty Gentlemen-at-arms receives a salary of one hundred pounds yearly; and when ordered on country service, three guineas a day extra for travelling expenses.

Next comes the Body-guard of Yeomen, or as they are popularly termed, the Beef-eaters. This corps is more ancient still, having been instituted by Henry VII. in 1485, previous to his coronation. The members still wear the fantastic garb of the Tudor period; and on state occasions they form part of the procession, carrying halberds in their hands. The appointments are worth about ninety pounds a year each, and are now bestowed on retired sergeant-majors from the army. Their Captain, who is invariably a peer, receives a thousand pounds per annum, and the appointment is a political one.

Here we must note that in addition to the Master of the Horse and the different Equerries and Pages of Honour—the latter being sons of noblemen, and usually getting commissions in the Foot Guards when they reach a certain age—there are a Sergeant Footman, fifteen footmen, twelve coachmen, twenty grooms, and upwards of fifty helpers. All these situations are in the gift of the Master of the Horse, and are rewarded with handsome salaries and perquisites, the sum appropriated to this service being twelve thousand five hundred and sixty-three pounds.

This sketch of the first Household in the land would not be complete if we failed to mention an appointment, the holder of which is almost

as popular a personage as the Queen herself. We refer to the office of Her Majesty's Personal Servant, held by Mr John Brown. He is the possessor of a gold medal bestowed upon him by the Queen for faithful and zealous service; and the British Public would look with surprise, and perhaps disappointment, upon any State procession in which the well-known figure of John Brown, clad in Scottish costume, did not play a part.

This, then, is the list and duties of the chief members of the Queen's Household; and although some of the situations may to the uninitiated seem useless, one thing is certain, namely, that this regiment of servants possesses one of the best mistresses—if not *the* best—that ever presided over any Household, British or foreign.

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

CHAPTER VIII.—'MY DEAR,' SAID MR JOLLY, 'I TOLD YOU SO.'

GERARD arose haggard, and looking like a murderer, to his own distempered fancy, as he regarded himself in the glass. All night long he had tossed to and fro, acting over and over again the drama of to-morrow. He was a thousand times rejected in the prophecies of these terrible waking dreams. In sweet tumultuous moments he was accepted. Once or twice came the fancy that he was loved in turn; but there seemed somehow an irreverence in it, almost a desecration. True love is humble, and Gerard's love was true. All night long he tossed, and dreamed his waking dreams; and though sometimes his heart defied Fate, and manly courage reasserted itself, for the most part he trembled at the thought of the ordeal before him, and the augury of his visions was evil. At the breakfast table his looks alarmed his mother; and he was so self-absorbed during the meal and ate so little, that at its close she followed him to his own private room with matronly solicitude.

'It is only your mother,' she said, when Gerard opened the door in answer to her rapping. 'Gerard, my dear, what have you been doing to look so unwell? You have over-exerted yourself, Gerard. You ride too much, I am sure.'

Gerard laughed, and set back his broad shoulders. 'There's nothing amiss with *me*, mother.'

'Let me look at your tongue,' she said.

Gerard laughed again, and answered lightly. 'I am beyond *The Simple Herbal*, mother.' Mrs Lumby, out of that precious volume, dosed the village children.

'I am sure it's furred, Gerard. I can tell it is by your complexion and the look of your eyes. And red at the edges, Gerard.'

He drew her to his side and kissed her. 'You're a good old mother, aren't you? There's nothing the matter with me. I'm as tough as whipcord, and as hard as nails.'

'Then, Gerard,' said the old lady, standing still within his embrace, and looking gravely up to him—'then, Gerard, you are disturbed

in mind.' The big Gerard looked down at her gently and kissed her again. But she would have been no mother if she had not seen the blush upon his cheek. 'In mind or body, Gerard, you *are* disturbed. And it's of no use to kiss me in that hypocritical way, if you won't tell me what's the matter with you.'

'I have had rather a bad night,' Gerard confessed.

'I knew it!' said Mrs Lumby, in a sort of lugubrious triumph. 'You have had many bad nights, lately. There is something on your mind.' And without knowing it, she went to work on what philosophers call the exhaustive method. 'Is it money, Gerard? Because, if it is'—

'No,' he said; 'it isn't money. It's insomnia.'

'Have you quarrelled with any of your friends?'

'My dear old mother,' said Gerard, 'I haven't quarrelled with anybody.' He was hypocritical enough to kiss her again at this juncture.

'Have you been making a book on that dreadful Derby?' inquired Mrs Lumby.

'The dreadful Derby was run six months ago,' said Gerard in reply; 'and I never make books.'

'Then, Gerard,' she said, 'is it what I think it is?'

'How can I tell?' asked guilty Gerard, blushing to the eyes.

'Gerard!' she cried, 'I see it now! I guessed it a long time ago. And, O Gerard, not to tell me! Who is it? Is it Miss Jolly?' And here the young man was fairly trapped, and looked as guilty as any small boy caught in the act of pilfering sweetmeats. The question has been asked before—But why *does* a man who is in love look ridiculous? Young women under kindred circumstances, according to such limited observations as I have been able to make, look super-angelic, and make the men, by very force of contrast, look the foolisher. 'It is Miss Jolly!' said Mrs Lumby, turning from inquiry to asseveration.—'Don't make love to me, Gerard. I am not going to forgive you—yet. And how long has this been going on, without your saying one word to me about it?'

'There hasn't been anything going on at all,' protested Gerard. 'I've—I've scarcely spoken to her.'

'But you are going to,' said Mrs Lumby, with feminine keenness; 'and that is what disturbs you.'—Gerard's face and attitude were sufficient for confession.—'I suppose,' she added, wiping her eyes, 'that I am a silly old woman, and that I ought to have looked for it.'

'Don't say that, mother,' pleaded Gerard.

'And now,' pursued Mrs Lumby, 'somebody else will be snapping Milly up, with such a fortune as your father can afford to give her, and I shall be left alone.—Do you know what sort of an answer you will get?'

'No,' said Gerard with a desperate sigh.—'Don't ask me any more just now, mother; I'll tell you all about it when I have spoken.'

'Are you going to the Grange to-day?' asked his mother anxiously.

'Yes,' answered Gerard; 'I am going this morning.' And at that his mother gave him

her blessing, and a pile of good advice for which he had no ears.

An hour or two later, he rode away, his mother watching the well-set, broad-shouldered figure out of sight, and following him and his suit with hopes that were almost prayers, and yet with a sinking at the heart. Here once more was Time's lever at work, forcing a way into the joints of family masonry, and rending stone asunder from stone. She said nothing to her husband; but she told all to Milly; and Milly soothed her, and having quite succeeded in restoring her to cheerfulness, went away to her own room and cried for an hour. That is woman's way. Heaven remembers those hidden and unselfish tears!

Meantime, the object of all this solicitude rode sadly, unable to pluck up heart of grace at all. 'It's like my cheek,' he said, for he was not used to clothe his thoughts in poetic language—'it's like my cheek to think that she'll look at me twice. But I can't help it; and I couldn't help it if I were a crossing-sweeper, and she were a queen. I think the more the distance between us, the more I should—the worse I should be.' He could not finish the sentence, even to himself, by the simple words 'love her,' because of the presumption it seemed, and the holy thing his passion as yet was to him. Then he suddenly bethought himself—for he had laid no plans as yet, and scarcely knew his way at all—that in the first instance it would be his duty to face not Constance, but her father, and at that thought his fallen courage rose a little. No angelic majesty sat enthroned on Mr Jolly's crinkled forehead, even for Gerard. The stake was no less than it had been; but the young fellow felt more equally matched with the father than with the maiden. So he put in spurs, and galloped on in altered mood; but when he came within sight of the house, flaring courage fell again, and it seemed only a dogged despair that prompted him to go through with his cause and have it over. When he had passed the lodge, his heart came into his throat with a great bound, for there he saw Mr Jolly walking with Constance at his side. He threw himself from his horse and approached on foot.

'My dear,' said Mr Jolly in an undertone, on first beholding Gerard, 'I told you so.'

Constance said nothing just then, but received Gerard with a radiant smile. But her wonderful eyes were always radiant, and there was no gladness at his arrival or tenderness for him within them. Mr Jolly called a gardener who was sweeping one of the paths, and bade him take the horse; and Constance, with another charming smile and an inclination of her head, took a wordless leave and walked into the house. Her beautiful face was framed in the soft white of a woollen cloud, and to Gerard she looked more ravishing than ever. Her father wisely gave the young fellow time to gather mental breath, and talked of anything meanwhile—the weather, the hunting, the terrible price of hay.

'I have come thus early, Mr Jolly,' Gerard began, 'because I wish to speak to you of a matter of the most urgent importance to myself.' His voice was shaky, and there was a pallor beneath the brown upon his face.

'Indeed?' said Mr Jolly, with beautiful inno-

cent simplicity. One can almost fancy him dressed as a shepherd *à la Watteau*, in an Arcady where nobody ever grows old, and where, as a consequence, there are no fathers to consult about love-making, he was so charmingly ignorant of Gerard's motive.

'I will come to the point at once,' said Gerard. He paused, however, long enough to give Mr Jolly time to say 'Yes,' in a manner all suave, half assenting and half inquiring. 'I love your daughter, and I am here to ask your leave to tell her so.' That was Gerard all over. When he had a thing to say, he said it with no verbal beating of bushes.

Mr Jolly knew pretty well what was coming; but this curt announcement almost took his breath away. It was like a cold *douche*. He walked on mechanically for half a minute before he could reply. 'Mr Lumby,' he said then, 'this is a little sudden, and—unexpected. The manner of your avowal bespeaks sincerity, genuine sincerity.' He walked on a little farther, the wooer pacing at his side. 'Our acquaintance, Mr Lumby, has not been a long one; but this sort of affair goes on rapidly whilst we old people are asleep. My daughter knows nothing of your wishes?' His innocence was quite Arcadian.

'Nothing,' answered Gerard.

Mr Jolly, holding the tip of his chin daintily between his finger and thumb, looked meditatively upon the gravel at his feet. 'M-m-m!' said Mr Jolly with an aspect of reflection. 'Your parents, Mr Lumby—are they aware of your intentions?'

'I told my mother this morning,' said Gerard with great simplicity. 'I haven't spoken to my father yet. I shall—on my return.'

'Amongst people in our position,' said Mr Jolly, 'marriage is a serious matter. Everything should be above-board. There should be no reservations. I need not tell you, Mr Lumby, that I know nothing of my daughter's feelings, and that I cannot even pretend to sound them. Only a mother can undertake so delicate an office, and my poor child was deprived early of a mother's care. For myself, I can only promise to throw no opposition in your way, provided that your father's explicit assent is given. Beyond that I cannot go, at present.'

'I can answer for my father,' said Gerard. 'He likes Miss Jolly very much; and in a matter like this he won't cross me.'

'Consult him, Mr Lumby—consult him,' advised the Arcadian, with palms raised in gentle protest against Gerard's headlong wishes.

'Very well,' said the impetuous Gerard. 'I'll ride back now, and be here again in an hour.'

'My dear Mr Lumby,' said the Arcadian, 'I am an older man than you are, and I may perhaps, without too much presumption, venture to advise you.'

'Surely,' said Gerard.

'Thank you. Do not, in a matter of so much importance, act in too great haste.'

'Mr Jolly,' said Gerard, speaking not without dignity, 'I should be much more unworthy than I am, if I could take one step or speak one word about it, without being certain of myself at least, or without having weighed every word and counted every step beforehand.'

'Mr Lumby,' said the Arcadian, quite moved,

'I esteem your candour and your earnestness at their full value. And whatever termination this affair may find, this interview—the manner in which you have conducted a matter of this delicate nature—has added, I will say most highly, to my esteem for you.'

'Thanks, very much,' said Gerard with more placidity than he had hitherto been able to command. He was in love with Constance, not with her father, and he did not care to be patronised even then, and even by him. His tone declared as much, quite plainly.

'Confound him!' said the Arcadian inwardly, feeling a little discomfited. He kept his outer suavity, however, saw the lover remount, and waved him a friendly adieu. Once clear of the drive, away went Gerard like the wind, with the fresh air whistling past his ears, and a thousand sweet hopes stirring at his heart. He never drew rein till he reached home, when he dashed into the house like a messenger of war.

PAWNBROKERS.

WHILE Savings-banks, Building Societies, and Co-operative Associations disclose the steady progress of economical intelligence among the people, there are still many evidences of unthrift and recklessness. One of these is the pawnbroker's establishment. In the humble quarters of our larger towns, the three gilded balls are to be seen, attesting the existence of a class familiar with misery, and ignorant of the very alphabet of finance. In the great thoroughfares of trade, where rents are high, the pawnbroker also takes his place. As in other businesses, there are brokers superior and brokers inferior. The gains of some are inconsiderable; others make good incomes and eventually fortunes. Taking an average, they no doubt make more money, in proportion to the capital invested and the cost of working it, than many other classes of traders. And the capital is unusually safe from the hazards of commerce. Rarely does a pawnbroker appear among bankrupts. In the compact with impetuosity, the broker stands at an immense advantage. On his side is ready-money that can be translated into anything; on the poor man's side is the pledge-article, utterly without circulating value. It is true there are purchasers of worn clothes, of household gear, of the miscellaneous belongings of beggaredom itself. But the money offered for them by second-hand dealers, is generally below the sum that would be advanced by the pawnbroker.

Considering how profitable and how safe the business is, it might be supposed that a greater number of money-seekers would be found pursuing it. According to the latest return, there are only four thousand three hundred and seventy-two pawnbrokers in the United Kingdom—a small number, considering the class of customers with which they deal. There are almost as many bankers and money-brokers dealing with the needy sections in the higher walks of society. But it must be added that many pawnbrokers have branch establishments.

With all its pecuniary gains, pawnbroking is not an attractive pursuit. It is looked at askance by the well-doing and economical. It is of dubi-

ous respectability in the eyes of others. It is grouped with the quasi-dishonourable professions by fastidious persons; and by the absurdly prejudiced, its members are placed among the dangerous classes. Certainly, the members of the trade are treated by government as if they were open to any amount of suspicion. They have to pay a heavy premium for permission to transact business, and are under stringent police supervision. At one time, this was deserved. Before the trade was regulated by parliament, it was largely in the hands of Jews of the Fagin type. Quantities of stolen property came into their possession, and many were little better than wholesale 'fences.' The taint of past times still clings to the brokers, though as a rule they are now as straightforward in their dealings as other business men. They are certainly ranged with the police against the predatory class, both from self-interest and as good citizens; and their trained eyes sharply discriminate stolen from unstolen goods. The average of stolen pledges is only one to fourteen thousand legal pledges! and the purloined property is of low value generally. Honesty is truly the best policy for pawnbrokers, any deviation from it being sternly punished by the law. The broker who permits himself to be deceived by a thief, loses the money lent and the time spent in court; besides, he is tarnished in the opinion of his neighbours, and gives offence to the trade. The latter desires to exalt itself in the public estimation, and every police case brings it into odium.

Another objection to the business is its unhealthiness. For something like twelve hours a day, on Friday and Saturday still longer, the broker and his assistants are confined to the dingy, stuffy, unwholesome atmosphere of the shop and storerooms. In poor localities, the pledges are mostly garments and linen from the person, or items of bedding. Of late years, owing to the deadly diseases communicated by filthy and infected clothing, pawnbrokers have insisted upon linen and bedding being in a newly washed condition. But it is impossible to exercise any scrutiny in the case of outer garments. The magnitude of the pawnbrokers' dealings may be conceived by the fact that upwards of two hundred million pledges pass over their counters annually! By far the greater part of this astounding total consists of wearing apparel, which oscillates continually between the backs of the owners and the shelves of the brokers. No wonder the lungs inhaling the foul gases contained in such masses of clothing become diseased, and that the young broker is often bleached to the hue of a wax-flower, or disfigured by skin eruptions. A member of the trade who reaches old age gives proof of possessing a herculean constitution.

To outsiders, it may seem a simple matter to set up and carry on successfully a pawnshop; but it is really a difficult business to manage, and requires much training and knowledge of human nature. The pledge-value of the ten thousand various articles that 'mine uncle' is asked to advance to his infinitely numerous relatives, is a nice technicality, not to be appraised by a novice. Let us instance a couple of cases in explanation. At the counter stand two clients; one, a poor dissipated-looking woman, who asks for half-a-

crown upon a well-worn black vest, obviously not worth that sum as a vendible article. With a very cursory glance at it, and without demur, her request is complied with. Moreover, she is favoured by the quick attention of the broker, while the other customer is kept waiting. This latter is a gentlemanly-looking youth, evidently ill at ease. In any other sort of shop, he would have taken priority over the squalid woman beside him, owing to his better appearance. Not so here. Further, the woman receives the favour of a smile and some jocular remarks. The young gentleman is treated with comparative coolness, when he presents his new and elegant vest to the broker with the request for the highest possible loan upon it.

'Two shillings,' is the fiat, after a minute examination of it and its pledger. The youth pleads for five shillings. But the broker is inflexible, and pitches the vest back again, turning on his heel. Judging from its material, mode, and newness, the vest is worth ten shillings. Why is it disparaged? Why was the woman's rag so esteemed?

The wretched woman has pledged that waistcoat for the past two years, and has paid a higher interest for the loans upon it than any usurer would dare to ask. The garment belongs to her son, who must have it for Saturday evening and Sunday wear. This the broker knows; and he is as certain of his half-crown and the *month's* interest charged for the loan, though it is repaid in a few days, as he is of his supper. If the vest were redeemed five minutes after pledging, a full month's interest would be exacted, and no more if it remained for the full thirty days. The young gentleman is no pawnier; perhaps is in some money scrape. Yet the chances are that he will leave the vest in his 'uncle's' care for a year, and it may at last go to swell what we shall presently describe as 'unredeemed pledges.'

The woman is a regular customer, well deserving the high consideration and attention due to her excellent cliency. She begins on Monday morning her diurnal visits to her friend the broker. The Sunday clothes of her husband and son are pledged piecemeal to buy food. She purchases just enough for the coming repast, nothing more. This goes on till Friday night, when the wages come in. By that time, all the spare clothes and some of the bed-linen are pledged; and a great proportion of the family income will be appropriated to redeeming them for wearing once more.

This is no exceptional, and certainly no imaginary case, as some good souls, living remote from the *infernus* of self-inflicted poverty, might suppose. Unhappily, it reveals the ordinary mode of existence of thousands of households in the United Kingdom. The people who represent the great majority of the two hundred millions of annually pledged articles, are not the unfortunate poor. They are the wilful, self-made wretched, who by drink, by *gluttony*—mark the word!—and by an abhorrence of common-sense, put on the shackles of financial bondage, and insist upon wearing them till life's end.

Foreigners reading the statistics of our pawnbroking may draw the natural conclusion, that the British poor are the most abject in the world; and that there must be some hideous fault in our

social system, which is creating a class of slaves more harassed and degraded than any existing or historical. But there is no ratio between the actual poverty of the people and the number of pledged articles. On the contrary, it is in the time of good trade, when the wealth of the country makes 'leaps and bounds' forward, that the pawnbroker drives a roaring trade; when improvident, sensual, self-indulging people can go to the fullest lengths in mad recklessness. The writer in his inquiries has not found an exception to the opinion expressed by one of the principal pawnbrokers of the North—'that bad times are perhaps worse for the trade than for any other business.'

The truth of this is apparent, when the essential character of pawnbroking is understood. It is a money-lending business, depending for success upon the quick return of capital, plus interest, to the brokers' coffers, in order to be lent again. For goods intrusted to the hands of the pawnbroker the pledger receives a certain sum and a ticket, upon the presentation of which *within a year* after the transaction, and the repayment of the cash loaned, plus interest, the latter recovers the articles pledged. If a year is allowed to elapse before the articles are recovered, they become what are termed 'unredeemed pledges,' and, being thus forfeited, become the property of the broker. In bad times, capital becomes locked up in pledges, which the owners cannot redeem within the statutory twelvemonth; and when 'forfeited,' they can rarely be sold with advantage. Even in good times the broker makes an indifferent profit by forfeited goods. Small as the sum loaned upon them may have been, it is only enhanced by a trifling margin of gain, if any, when sold peremptorily under the hammer. When the broker becomes the legal owner, and places the goods in his window for sale, he does not always find ready deliverance; months, years may elapse before his sales bring his capital once more into a circulating condition. Meanwhile, deterioration has done its work. Fashions change; garments become grotesque; while watches and jewellery take on the air of 'pawnbroker's tarnish.' Did all pledges go to this dismal bourn, the trade would not be worth following.

This leads us to another phase of the business—the sale *département*. The public suppose that *all* the articles exposed in the broker's window are lapsed pledges. This is by no means the case, for, irrespective of lapsed pledges, pawnbrokers buy goods for sale like ordinary shopkeepers. In this they show a rare comprehension of human nature. They buy such things as find ready sale at fancy prices. Small pictures are among them—little landscapes, groups of fruit, flower-pieces, cottage interiors 'after Teniers.' The writer has known several artists, whose works never reached the walls of any Academy, who nevertheless found name and fame in the patronage of their 'uncles.' One of these, a sadly dissipated fellow, but of real talent, kept half-a-dozen of his Lombardian relatives supplied with the fruits of his brush. Bright little things, they were, chiefly in still-life. Half a guinea was the average he received for them; and I have known some to sell for ten times that sum an hour or two after they were placed in the broker's window. A brewer-

Mæcenæ has made a collection of them, now that the artist has gone to the land of shadows, and he values certain of these 'dashographs,' knocked off in an hour, at fifty pounds!

Watches, jewellery, and nick-nack fripperies are made specially for pawnbrokers, and the profits upon them are higher than the customer's gratitude, when time proves to him that the broker knew how 'to sell.' Slop-clothes are disposed of at remunerative prices, the buyers believing exclusively in their own sagacity, and not in that of the vendor.

But the outward and visible trade is insignificant compared with the inward and occult. The well-dressed, well-pursed man who buys art-bargains from the window, knows nothing of the fetid, sottish, reckless people who are the beloved of their accommodating uncle, and whose place is in the dark stalls of another and concealed counter. Pledgers have a morbid dislike to be seen by any but their financial father-confessor. He appreciates the feeling, and ministers to it by providing a rear-entrance and a crypt-like bureau for their comfort. Out of every ten of these furtive visitants, nine at least are necessitous by their own fault. Intemperance is the bane of most; but gluttony, as observed previously, is a potent cause. There are working-class gastronomes who devour in a Saturday night supper and Sunday dinner the moiety of their earnings. When new potatoes are sixpence a pound, and lamb is one shilling and sixpence, there are many of the hardy sons of toil who revel in these early delicacies, forbidden as impossible luxuries on the tables of the well-to-do. Ten shillings will be spent upon a dinner by those whose earnings do not surpass thirty shillings per week! In such a household, and they are by no means uncommon, the wolf begins his weekly howl over the bare cupboard on Monday morning, to be appeased by the kindly ministrations of the pawnbroker, who doles out shillings on the lien of the shabby clothes of the gourmand. As the week goes on, 'short commons' become attenuated to mere bread and thrice-saturated tea-leaves. Friday, until evening, is observed as a day of scrupulous fasting; not from any profoundly religious motive; not from an ascetic pause in a gluttonous career; not to give a whet to jaded appetite before new indulgences; but from sheer emptiness of larder, pocket, and credit.

Drunkards and others who go headlong to the bad, are not esteemed by the brokers. They are too much addicted to converting their pledges into abiding souvenirs of misplaced confidence. Instead of releasing their property, like honourable men and women, on Friday and Saturday night, they take a mean advantage of the poor man's bunker, and leave him 'loaded' with securities that turn out badly in the process of liquidation. Pecuniary noodles, again, despised by 'an unfeeling world,' are consoled by the respect shown to them by the pawnbroker. They confide their many troubles to him, and by his aid are helped through the perplexities of life in a wonderful manner. There is unhappily always a catastrophe at the end of their companionship; the noodle is picked up stunned or killed outright; the moth flutters round the candle till it gets singed at last.

It might seem as impossible to swindle a pawnbroker as to rob a policeman of his number. Yet among the curiosities of our commercial civilisation are the people who live by 'doing' pawnbrokers. Notwithstanding acids, scales, microscopes, vast practical knowledge of things and men, and boundless suspicion, the pawnbroker is frequently beguiled into the most irritating 'sells,' and has to write against his profits some of the most unbearable losses known to the whole world of trade. All that glitters is *not* gold, says a venerable apothegm, and the pawnbroker's apprentice is impressed with it from his first hour. Yet it not unfrequently fails to protect even the wariest of brokers from the hallucinations of Brummagem!

A STRANGE STORY.

TOLD BY A LINCOLNSHIRE CLERGYMAN.

CHAPTER II.

It was long before daylight on the following morning, when I heard the trap of punctual Mr Pullingtoft rattling over the stones into the yard, and then out again; and I knew that the certificate I had obtained the night before was put into his hand. Upon rising that morning, I found I had a severe cold, yet was determined to carry out my intention of visiting the old woman Kirby. I was received by her in the same manner as I had always been, not uncivilly, certainly, but cold and quiet. She was a tall, stern, dark-complexioned old woman, one who might break, but never bend, and who bore in her face the marks of the tides of trouble that had flowed over her.

I told her I had seen Mr Pullingtoft, and that Phoebe Meadows was well, and a favourite, by the manner she was spoken of by him.—'By-the-by, Mrs Kirby,' I said, 'how is it you never told me she was niece to Mr Scruby?'

The old woman gave me a quick glance from the corner of her dark eyes. 'Why should I tell you?'

'Because, Mr Scruby ought not to have allowed her to be supported by you unaided,' I returned.

'That stone,' she said, pointing to the hearth, 'is not colder than that man's heart, or less unconscious. He has never noticed that poor child all her young life through, nor spoken of his sister since she married. But there; don't speak to me of these Scrubys. There are some things, sir, as my flesh and blood won't stand, and that's one of them.'

The old woman seated herself beside her scant fire, looking at it, and folding her arms in a determined manner, compressing her lips firmly, to signify her intention of not speaking any more on *that* subject.

'I am sorry the topic is unpleasant to you; but one question I must ask—from no impertinent curiosity, I assure you. Who died first—old Mr Scruby, or his unfortunate daughter?'

'He did. Jane was ill at the time; and when she heard that her father died without sending for her, it just broke her heart; and she followed him five months afterwards.'

'And no will?'

'No, sir; no will was known of, I suppose. But no one knows less of them all than me—nor don't want to know.'

There was a frown of displeasure on the old woman's face at my questions; but I had learned what I wished to know—namely, that Jane Scruby was living at the time of her father's death. If no will existed, was she not entitled to some share in her father's property? And would not Phoebe's claims be consequently legal, and her champion Mr Pullingtoft very likely to gain the day? I knew not the law on the subject, but it certainly seemed strange that a daughter could be thus hardly dealt with.

All the morning, I had been thinking of my experience on the previous night in the church, and trying in all ways to account for the shutting and re-opening of Scruby's pew, and the closing afterwards of the church-door. I therefore, in walking home from seeing Mrs Kirby, went round by the church. The woman whose duty it was to sweep it out, was in the porch beating the mats. I questioned her as to whether any windows by which a person might enter the church were ever left open, but she replied with so decided a negative that I gave up this way of solving the difficulty. Some one, I thought, must have watched me entering, and for some purpose or other, possibly out of mere curiosity, had followed me in. Probably, after all, nothing more dreadful had to do with what had so alarmed and disturbed me than simply the prying curiosity of some belated rustic. From that time I almost entirely discharged the matter from my mind, and troubled myself no more about it.

For the rest of the week, I heard nothing more of Mr Pullingtoft; but, to my surprise, the wealthy farmer Mr Scruby, with his wife and eldest son, took their accustomed places in their family pew on Sunday. Mrs Scruby, a hard proud woman, was the farmer's second wife. His family consisted of three sons, the children of his first wife—an amiable and gentle creature, whose heart, it was said, was broken by her husband's tyranny and harshness. The eldest son, Walter, was endowed with all his mother's generosity and kindness of heart. Of the two younger sons I knew less, as they were still at school at a distance, and I had only occasionally seen them.

Before the day was over, I learned that Mr Scruby had come the previous week to Coryton to stay till after Christmas. Hence his unexpected appearance at church.

In the course of the following day, I received a letter from Mr Pullingtoft, informing me that on proceeding to Mr Scruby's house near Lincoln, on the previous Saturday, he had found that the family had gone to Coryton; and as I was in possession of all the facts of the case, asking me to call on Mr Scruby, for the purpose of stating the whole story of his niece Phoebe Meadows; and on the result of his reply, would depend whether or not the case should be placed in a lawyer's hands. This, of course, I was willing to do; indeed, it appeared natural enough that it should be my place to open the subject, on many accounts. Therefore, on the following morning I repaired to Coryton.

A large field with a drive leading from the lodge gates, led to the house. The house itself was square, compact, and comfortable, surrounded by large flower-gardens and greenhouses; while

beyond were the orchard and outbuildings of the farm. Before I gained the hall-door, it was opened for me; and young Walter Scruby came running out to welcome me with bright face and beaming eyes—a fine handsome youth, the personification of health and good-temper. In his open, cordial frankness, he linked his arm in mine, leading me through the handsome entrance-hall into the dining-room.

Mr Scruby was seated in an easy-chair near the fire, with a large book of accounts before him, in which he was casting up long rows of figures. There was a careworn look on his grim face, and I thought an unusual frown on his brow, that was not a propitious augury for the subject I had undertaken. He arose and received me civilly, but with the dignity of a churchwarden and the consciousness of wealth, which gave him a manner unnecessarily condescending—a manner that said: 'You are the parson of the parish, so I must be civil; but I could easily buy you up a dozen times over, any day in the week!'—as no doubt he could.

Although he insisted upon his son placing a chair for me near the fire, I noticed he never put down his pen; a hint that he did not expect my visit to be a long one. In fact, there never had been very much cordiality on one side or the other, ever since my first coming to the parish. We had constantly met, discussed business matters—in which he was particularly clear-headed—never had a wrong word in all these years; and yet did not, I am convinced, possess a single sentiment in common, nor make a single advance to any feeling of friendship.

Our present conversation as usual opened upon the subject of the weather, and then to parish affairs, in which Mr Scruby expressed his extreme dissatisfaction with a rumour that a new school-room was wanted, when the old one would stand for as long again, with a few new tiles on the roof, and a few flagstones substituted for the rotten wood flooring. 'As for your hobby of getting the church restored, as you call it, that will never be—never, sir. Take my word for it; I set my face distinctly against it!'

He looked shrewdly at me, as if inferring he knew that that was at the bottom of my present visit to him. I hereupon informed him that my visit was partly on business, but nothing concerning the church's restoration at present—in fact, relative to some private family affairs of his own; and perhaps he might prefer that his son should not be present. Young Walter rose directly to quit the room, with smiling alacrity, but was peremptorily ordered by his father to remain. Then turning to me, he said, coldly and formally: 'I have no private family affairs to which my son may not be a listener; and I am at a loss to know to what you are about to refer.'

Again, when I mentioned that perhaps he might somewhat regret Walter's presence, he only waved his hand in a magnificent manner, and replied: 'Pray, proceed, for we are losing time.'

Upon this I went over the items of the case as already known to the reader, Mr Scruby sitting expressionless, but looking rather more grim than usual; Walter, with open mouth, eyes, and flushed cheeks, his surprise and interest very visibly excited. When I had quite finished, there was a silence for a short time. Then

Mr Scruby rose, and stood upright and solemn on the hearth-rug, his hands behind him, under his coat-tails, and replied in his usual cold manner: 'The heads of what you have stated are true; but that I have a niece, I deny. Once upon a time I had a sister. Upon her disgraceful marriage, her family discarded her. She has been dead to us all from that moment. I positively deny all knowledge of the persons you speak of; and much regret that a gentleman of your supposed many occupations should lose time in allowing himself to be a cat's-paw to a vulgar man like Pullingtoft, who has long sought opportunities of venting spite and jealousy.'

Young Walter looked from one of us to the other.

'Tell me one thing, Mr Scruby—did your father wish your sister to be left entirely unprovided for? And did he leave any written declaration to that effect?'

'I distinctly deny your right to make any of these impertinent inquiries into my family affairs, and wish you good-morning.'

'One moment, Mr Scruby—did your father make no request—express no wish to see his daughter, while on his deathbed? There is such a thing as deathbed forgiveness.'

'My father was seized with a paralytic stroke a week before he died, and never spoke again.—Good-morning to you.'

'But, father,' cried Walter, springing up with an eager face, 'dear father, Phœbe Meadows is a cousin all the same—she is, indeed. Oh, I am so glad I have a cousin!—and a girl too—an orphan. Send for her here; she will be the sister to us we have all so wished for.'

'Walter,' said his father, frowning on him, 'say those words again, and I shall wish to see you dead at my feet!'

The generous boy shrank back abashed.

I wished Mr Scruby a good-morning after this, determining that it should be business connected with the parish, and that of an urgent nature only, which should ever induce me to seek another interview with him. After all, I had no right to be disappointed with the result; for it was very much what might have been expected from him, judging from the information I had received of his previous conduct, and from my own idea of his hard character. But I was sorry to have nothing encouraging to communicate to Mr Pullingtoft, and said in my letter to him on the subject, that he was quite justified in setting the machinery of the law in motion as speedily as possible.

Two or three days after this, I was rather surprised to receive a visit from young Walter. He appeared to be in great haste, and rather flurried. He told me he had taken an opportunity of coming to me, unknown to his father, to say how sorry he was neither his father nor stepmother would take what he himself considered a proper view of the case regarding his cousin Phœbe. He had heard his father telling Mrs Scruby of my visit; and the latter quite coincided with her husband, moreover binding Walter down to tell nothing concerning this story to either of his younger brothers, who were shortly coming from school for the Christmas holidays. 'And that is hard,' persisted Walter; 'for I know they would think just as I do. But will you do me a favour?—I'm sure you will—that is, to give this money

to my cousin, or to Mr Pullingtoft, for her. Mr Pullingtoft is a kind, good man, and he will take care of it. It is ten pounds, sir,' he continued, putting five sovereigns into my hand, wrapped up in a five-pound bank-note. 'My own, honestly my own, that I have every right to do with as I like, so do not scruple to take it.'

I did not scruple to take it, and shook the brave boy warmly by the hand. His heart was in the right place, at all events.

'And now, I must go,' said Walter, 'in case I should be missed, and found to have come here. Good-bye.' He ran to the door; but made a step or two back again, saying confidentially: 'I mean to get a peep at my cousin, one of these days. I shall soon be obliged to be at Grantham for father, and I shall ride round by Marsh End Farm, and manage to see her somehow.'

Really, it was a good and a brave thing of the boy to bring that money, and I felt even inclined to think a little more leniently of Mr Scruby in consequence. A father who possessed a son with these feelings, surely must have some sort of good in his nature, underlying that thick crust of pride, avarice, and heartlessness, fossilised as it were on the outer surface.

But now comes the strangest part of my story. A day or two after Walter Scruby's visit to me, having no urgent business to detain me at home, I determined to make an excursion to Grantham, to place the ten pounds in Mr Pullingtoft's hands, as well as to learn how the affair stood, and what preliminary steps in law-matters were being taken. But previous to going, I would get Cripps the carpenter to look at the supports of the reading-desk in the church, which I suspected, from its creaking and groaning on Sundays, was in a dilapidated condition in the foundations. I sent, therefore, for the carpenter, and went over to the church, where the sexton and the pew-opener were employed in cleaning the vestry. In crossing the churchyard, I encountered the schoolmaster, who had a long account to give me concerning a refractory pupil; and he entered the church with me. We were in the midst of an argument respecting the best mode of dealing with stubborn children, he advocating severity, and I kindness, when Cripps with his basket of tools arrived.

'The first thing to be done, sir,' said Cripps, after I had told him of my suspicions as to the infirm state of the beams, 'is to get a fair look at it underneath; and to do that, all that fret-work and carving must be taken down. That there bunch of hables and leaves is natural; and them two hoddities is Hadam and Heve; and that there snake a-twisting about like a heel, is meant for wot tempted Heve, I suppose.' Such was Mr Cripps's criticism on a lovely bit of carving worthy of Grinling Gibbons.

Well, yes; it certainly was necessary to remove the front of the reading-desk, and therefore, of course, part of Mr Scruby's pew; and it must be done at once, as I should like to see how much repairing was really required; for if extensive, it would have to be submitted to the churchwardens. This, however, I did not think, from the trifling character of the repairs, would be necessary.

Cripps went forward to the desk for the purpose of removing the front, and stood for a few minutes, as is the habit of this class of workmen, looking at

the structure he was about to attack, as if considering which would be its most vulnerable point. At length he inserted his chisel as if to prise off the front of the desk, when he suddenly stopped, and reaching his hand up to a knot of carved leaves, he drew from behind it a small bit of paper. He looked at it.

'There be writing on this, I see, sir,' he said, handing the scrap to me.

I looked at it, and found from the phraseology that it was evidently part of some kind of legal document, though of what nature I could not tell. But I was curious to know if there were any more of these fragments, and told Cripps to prise off the board carefully. As he shook the front of the desk in his efforts to remove it, a few more pieces of crumpled paper fell out of the same aperture, and lay at my feet.

'Here's a lot of rubbish,' said Cripps, touching the scraps with his hob-nailed boot. In the meantime I had picked up the pieces.

'Perhaps some old manuscript,' said the schoolmaster. 'Do read it, sir, for it may throw some light on the hiding-place of the silver vessels that were said to be hidden from Cromwell, and have never been found.'

'Good heavens!' I exclaimed, as, having unfolded a larger piece of the paper, I glanced over its contents. 'What's this? Why—it is—it is a will!'

I shall never forget the excitement of that moment—the schoolmaster, the sexton, Mrs Dumps, and the carpenter who couldn't read writing, all crowding to look over my shoulder. With hands trembling with excitement, I put the torn pieces of paper together, and ascertained the document to be perfect, dated five-and-twenty years before, signed John Scruby, and duly attested by two witnesses. Old Scruby's will, doubtless!

Our astonishment was intense. How had it come there? It could not have been long in this place of concealment, or the church cleaners would have seen it before now.

'Perhaps it wor rats,' said Cripps, 'as tore it.'

'But how came it all crumpled up and tumbled?' asked the sexton.

'It's my opinion there's been dirty work,' suggested Mrs Dumps, with the natural sweetness of her sex in jumping at charitable conclusions. 'People as shall be unbenamed by me, who lets a pore woman open and clean their pew for nigh twenty year without giving her a single alf-crown at Christmas-time, is capable of anything!'

Indeed, it was my own opinion also. It did look like foul-play. And I thought on the mysterious visitor to the church that evening I was there for the marriage extract, and the shutting and opening of the Scrubys' pew-door. But I kept my thoughts to myself.

'It ain't much consequence whether there's a will or no, now,' said the sexton; 'for Mr Seth has everything, and his pore sister's dead and gone long ago. It was thought a queer thing at the time that there wasn't a will; for old servants as had lived with him many a year and done their duty faithful, were not provided for; and old Jacobs as had been the shepherd forty odd year, died in the Union—he did.'

These items were entirely new to me, and

confirmed my opinion of Mr Scruby being a hard man, if not something worse.

'My friends,' I said, 'finding these papers may or may not be of importance; but I shall take them at once to a well-known lawyer at Grantham for his opinion of their legality and genuineness. In the meantime, let me entreat you to keep the matter quiet until my return. Do not let it get wind that we have made such a discovery, and you shall not go unrewarded for your silence. If this is a genuine will, it is better that the fact be announced from a solicitor to Mr Scruby, than by village gossip. At any rate, you will all be ready to swear to the fact, if called on as witnesses?'

Of course they would, and gladly. They'd be ready at any moment, day or night.

Leaving strict orders to Cripps to finish his carpentering as quickly as possible, I hastened to the stable, ordered the dogcart to be got ready immediately, packed a few necessaries in my carpet-bag, and then spreading out the tumbled sheets of my treasure-trove on the table, made myself master of their contents. As far as I could judge, this was a regular will, drawn up by a solicitor at Boston, unfortunately long since dead. It enumerated much property—in land, farms, and stocks. The upper farm at Lincoln, and some smaller ones in the north of the county, with their stock and product, were left to his only son Seth. Coryton Farm, stock, implements, with the land in this parish, and half the sum in the funds, were left to his dearly beloved and only daughter Jane and her heirs for ever, after having paid legacies to several distant connections and servants, and subject to many annuities to old servants; and I saw mentioned with much sadness, an annuity to be paid quarterly to the poor old shepherd Jacobs, of whom the sexton had so recently spoken.

Another surprise awaited me at the end of the bequests; for after the signature of John Scruby, one of the witnesses' signatures was Thomas Kirby—the same handwriting I had seen in the register as witness to the marriage of the parents of Phoebe Meadows—the old woman Kirby's husband. It must, yes, it must be the genuine will—that which never was found.

My impatience was so great to be gone, that my man, naturally slow, and never having from me any especial cause to hurry in his preparations, thought, I believe, that I had taken leave of my senses. I had to put up my horse and hire another on my way, to enable me to reach the dwelling of Mr Pullingtoft, Marsh End Farm, that evening.

MORE REMARKABLE DREAMS.

IN continuation of this subject, on which articles have from time to time appeared in this *Journal*, we here give three narratives, by separate correspondents, of remarkable dreams.

Superstition is not, I flatter myself, one of my failings; and in placing before the public the following brief narrative, I would desire it to be distinctly understood that I have no wish to impress upon them that I ascribe the circumstances to which I am about to allude to any supernatural agency. I must confess, however, that from the first I have been sorely puzzled with the whole occurrence; and in now relating

the story, I am partly actuated by a wish to place on record what must be admitted to be a remarkable fulfilment of a dream. I may mention that my statements can be attested by many still living, who were fully aware of the events as they happened.

A few years ago, I was on the staff of a newspaper in a town in Yorkshire. One night my slumbers were disturbed by a twice-repeated dream of a very unusual character. I thought that intelligence was brought to the office of the journal with which I was connected, that an explosion of gas had occurred at the W— Colliery, distant about two miles from the town. I further thought that, in my professional capacity of reporter, I proceeded thither, and found that an accident had happened, by which over a score of miners had perished. Means were taken to bring the bodies of the dead to the surface; but, while exploring operations were going on, a second explosion became imminent, in consequence of fire breaking out in the workings; and after a consultation of mining engineers, it was determined that the mouth of the pit and the ventilating shafts should be fastened up, for the purpose of preventing the ingress of air. By these means it was hoped to stifle the conflagration which had been discovered. The plan was carried out, most of the bodies of the unfortunate colliers having to be left in the pit.

At this point, on both occasions of its occurrence, my dream broke off. As may be imagined, these visions of the night considerably impressed me. While at breakfast, I referred to the freaks of my imagination during the night; but those who heard me, though admitting the singularity of the dream, pooh-poohed the idea of the likelihood of its being in any way realised. On going to business, so struck was I with the peculiarity of the matter, that I related the circumstances to the editor of the newspaper, who was also its proprietor. He listened with some interest to my story; but, like myself, he could not but smile at the apparent absurdity of the whole affair.

An hour later, we were astonished to receive intelligence that a terrible explosion of fire-damp had taken place at the W— Colliery, at eight o'clock that morning, and that over twenty persons had been killed. This was the very mine of which I had dreamed. In company with the gentleman of whom I have just spoken, I proceeded to the scene of the accident. Along with an exploring party, I descended into the workings; and it was found that twenty-three persons had lost their lives. Owing to the presence of choke-damp and repeated outbursts of gas, fortunately of small volume, the relief parties experienced great difficulty in recovering the bodies. When some eight or ten had been sent to the surface, and while we were still in the workings, it was ascertained that the explosion had set fire to some props and a portion of the coal in part of a 'benk' into which the explorers had just then, for the first time after the accident, managed to penetrate. Gas was found close by at the same moment; and the alarm being given that a second explosion was to be feared, there was immediately a stampede of nearly all in the pit to the bottom of the shaft, and thence, as

fast as the limited cage accommodation would permit, to the surface.

Very soon all but two or three of the explorers were brought to the bank; and a number of mining engineers, along with the government inspector, commenced to deliberate on the course to be pursued to extinguish the fire which had broken out in the workings. The plan most in favour was the sealing up of the pit. Here, however, the course of events ceased to run parallel with those in my dream; for in a little time the message was brought up from below ground that one of the explorers, who had courageously stayed behind, at the greatest possible personal risk, had succeeded, by means of extraordinary exertion, in putting out the fire which had been so threatening. In a few hours, the bodies remaining in the mine were all recovered.

Among my personal friends, my strange dream and its equally strange fulfilment were for some time the cause of no little comment; but until now, the narrative of the remarkable coincidence has not been given to the public. Before concluding, I may say that I cannot in any way account for the dream; for I had not previously been reading of mining accidents elsewhere, and no catastrophe of the kind had happened in the neighbourhood for a long series of years.

An article on the 'Chiltern Hundreds' in your magazine (No. 891, January 22, 1881) reminded me of a curious dream I had upon the subject some years ago. I had gone to bed rather tired and excited by circumstances which I will by-and-by explain; and presently it seemed that I was walking over a lonely plain just as the sun was setting. A short way in advance was a solitary house, of which the windows were broken, the garden gate off its hinges, and with sloppy pools of water lying where the garden had been. As I looked, a ghostly whisper close to my ear said: 'That is the Chiltern Hundreds.' Turning in a fright, I found that the voice came from Grip, the raven in *Barnaby Rudge*. Some unseen power forced me to enter the house, Grip hopping merrily ahead. In the first room, I found numbers of rats scrambling about; in the second room, more rats and a number of unwholesome pigs, olive coloured and mangy, trotted busily about, snapping up now and again a rat, and crunching it between their teeth.

I ascended the rotten staircase, and entered a bare room, the plaster dropping from the walls, and the wind whistling through the broken window-panes. A slight noise made me look down, and I saw that the floor was covered with ravens, hopping softly about, and whispering earnestly to one another. Gradually they all drew round me in a ring, and I felt the sudden pain of Grip's claws stuck into my shoulder.

'Look here, old fellow!' he said in a hoarse confidential whisper; 'we always claim the eyes of all visitors here; but the fellows have agreed to take only one of yours, as you are a pal of mine.'

'Yes; only one,' said all the ravens in chorus. 'Just one,' said Grip soothingly; and opening his yellow caliper-like beak, blood-stained at the end, he made a determined grab at my eye. I struck at him in horror; and in fighting all

the ravens, who fell on me at once, I woke to find myself in bed in a profuse perspiration with the fright.

Now for the interpretation of the dream. On the morning prior to the night in question, I had been cleaning a model engine, and by accident a spiral spring slipped from my fingers, and passing within an inch of my eye, fell on the table, and gave several elastic jumps before it lay quiet. As I have only one eye, that accounts for the scene with Grip. In the course of the day I had been turning over Hablot Brown's illustrations to *Bleak House* and *Barnaby Rudge*, some of which contain all the elements of the ruinous house I saw in my dream. The pools of water were from *Mariana in the Moated Grange*; I had read the poem in the evening. The Chiltern Hundreds came from a newspaper paragraph on the retirement of some member of parliament. Another newspaper paragraph had drawn attention to a German opinion that pigs eating rats get infected with *Trichina spiralis*. So the whole dream is fully accounted for point by point.

The other evening, a few ladies and gentlemen had a conversation on the subject of dreams, suggested by the phrase from Hood's poem:

And unknown facts of guilty acts
Are seen in dreams from God.

In the course of the talk, one of the party told a story, which he alleged to be founded on fact, and which, as I am not a novelist, I can only tell in the most simple way, leaving my readers to think it out for themselves.

The narrator said that, some years ago, he was 'best-man' at the marriage of a friend, who afterwards proceeded with his bride to a large town in England. The lady possessed great personal charms, and had quite a following of suitors, the most conspicuous of whom was a young chemist, who did not bear the most irreproachable of characters; but shortly before the marriage, this young man disappeared. The married couple were very happy for several months, till an event happened which bears on the story. Returning from a concert one evening, the young wife received a slight chill, which threatened to rest on the lungs, and medical assistance was procured. The doctor came; and after ordering a simple prescription, he retired, remarking that his patient would be all right in a day or two. This anticipation, however, was not fulfilled. To the great grief of the husband, his wife showed symptoms of extreme lassitude; and the most skilful diagnosis of an eminent physician failed to account for the abnormal condition. Medicine was of course prescribed freely, but with no beneficial result. Exhaustion supervened; and at this crisis the husband telegraphed for his friend in Edinburgh to come and perform some little business.

The summons was readily obeyed, as the friend had a sincere admiration for the husband, and the greatest respect for the suffering wife. Seated that night in a Midland carriage, with no companion—but his thoughts, the young man recalled all the circumstances of the marriage, not forgetting the sinister incident of the disappointed apothecary's disappearance. As he thought on all these matters, he fell asleep. He

awoke with a start, and found he was at Carlisle. His sleep had not been refreshing, for it had been disturbed by a dream that troubled him. Unsentimental by nature, he tried to laugh the fancy away; but it refused to be exorcised. Still harping on some of the incidents, he reached his friend's home, and found the young wife in a hopeless condition. The husband was saddened and perplexed; and his friend, realising that action of some kind was necessary to raise the mourner from his stupor, succeeded in getting him to talk about the business he wished transacted. They went through a number of streets conversing familiarly, when all of a sudden the husband found himself grasped by the arm, and looked round to see his friend gazing eagerly into the window of a shop. Recovering himself in an instant, the visitor talked freely, and did not volunteer an explanation of his rather erratic conduct; but on returning to the house, he requested the servant to bring the bottle containing the medicine last given to the suffering woman. The girl brought the bottle, and said she had just washed it, as the doctor had ordered her to go for another dose.

This was disappointing, certainly. But the friend was a born detective, and not to be balked. The girl went for the medicine. When she returned with it, the young man took the bottle, and without acquainting the husband of his intention, left the house with the prescription, returning after a brief interval with the medicine. During the night, the breathing of the patient became easier, and when the doctor called the next day, he was able to report symptoms of recovery.

In the evening, the friend, accompanied by a man of severe demeanour, entered the room where the husband sat, and requested him to come out on a little piece of business. They walked in silence through several streets, and at last reached a police station, which they entered. Behind the desk there was seated a man with his face buried in his hands. The officer on duty, without much circumlocution, told the business which had called them there. Addressing the husband, he said that the man seated in the office was charged with administering noxious drugs. When the accused stood up, the party saw the altered features of the missing chemist. A light seemed to flash over the husband's face; and after he had made all the necessary depositions, he hurried home. At the next assizes, the chemist was sentenced to ten years' penal servitude; and as he pleaded guilty, the public knew nothing of the circumstances more than was contained in the charge. One of the prosecutors, however, had manifested a great interest in the case; and as the husband and his friend were leaving the court, he requested the latter to give him some explanation of the manner in which his suspicions were first called forth against the criminal. The friend at once told his story.

In the railway carriage, he had dreamed that he was walking through a large city which he had never visited. At length he came upon a row of shops, and at a window of one of these he observed the face of a man, debased and vindictive in its expression, and quite familiar to him. The man held a mortar and pestle in

his hand, and while he mixed up some drug, there was a baleful light in the fishy-looking eyes. Then, the sharp whistle of the engine awakened the dreamer. The sequel was plain. Walking with his friend through the labyrinth of streets, could he despise his sleeping fancy when he saw before him the actual row of shops, while at one of the windows stood the figure that haunted his memory like a nightmare? It was a perfect revelation. When he returned, and secured the medicine and prescription, he went to another chemist, and procured the needed restorative, and then called upon an analyst with the first bottle. It was found to contain a deadly narcotic; and the police authorities having been satisfied with the main facts, ordered the arrest of the jealous and wretched man, before the guilt of actual murder lay at his door.

OWLS AND OWLETS.

WHERE a wish exists to make uncomplimentary remarks on the intellectual capacity of an individual, it is not unusual to exclaim that he, or she, is 'stupid as an owl'; and this notwithstanding the recognised fact that the owl has been from time immemorial the emblem of wisdom, and is always pictured as the special attendant of Pallas Athena, goddess of wisdom in heathen mythology. Persons taking the trouble to observe the habits of owls, will also maintain them to be remarkably intelligent and singularly wary birds; having, in their own particular walk of life, really nothing to learn.

Owls are not often seen in a domesticated state, because, although devotedly attached to their immediate belongings, and exemplary members of their own community, they are not, save in a few exceptional cases, inclined to allow the advances of human friendship with common politeness. They have indeed a somewhat unpleasant manner of resenting any approach to undue familiarity, by attacking the hands and face of an intruder; having, it must be confessed, a very awkward preference for the eyes; which tendency, combined with their formidable beak and claws, is naturally not encouraging to those who would otherwise be inclined to make friendly advances. Even very small owlets will bite the fingers of their best friends to the bone; doing without the least compunction their utmost to inflict personal injury. We would therefore seriously advise romantic young lady-students of natural history, who would fain take 'a little downy owl' to their heart, in the spirit in which they would love 'a dear gazelle,' to consider the propriety of adopting some less vindictive favourite.

Where owls are seen in captivity closely associated with other birds, no one can fail to be struck by the eminent respectability of their appearance. In their staid and dignified demeanour—their evident resentment of any approach to 'equality and fraternity'—their calm but shrewdly observant eyes, and acute hearing, added to a suppressed consciousness of power—they always

seem to preside over the assembly, like a Lord Chancellor in an ornithological Upper House, or a feathered Chief Baron in a birds' Court of Law. When roused to anger, however, they instantly evince a determination of character that speedily teaches the offender there is 'that within which passeth show.' A certain degree of mystery which attaches to the movements of owls undoubtedly makes them additionally interesting. The rarity, too, of their public visitations, made only at dusky eve, or 'the witching time of night,' throws a weird halo around them. Consequently, amongst the unsophisticated inhabitants of rural districts, these peculiarities have become the basis of many idle superstitions. The shrill wailing of the bird, heard in retired spots at the dead of night, is so ghostly a sound, that it is not much to be wondered at if these delusions should prevail. The gliding, noiseless flight of the white-robed wanderer, supposed to be of such evil omen, is well calculated to deepen the impression. Where an unoffending owl merely flies across a road, the circumstance is considered to betoken that ill-luck awaits the passer-by; and whatever undertaking may be the object of the journey, will not conduce either to happiness or prosperity. Should disaster ensue, the ominous apparition of the unconscious bird—industriously occupied in the pursuit of its natural avocations—will be duly recorded: if no untoward result takes place, it will be—as in other superstitions—conveniently forgotten.

In writing to the *Graphic*, Mr G. Manville Fenn gives the following curious particulars regarding owls and owlets. He says: 'It is commonly known that owls have two or three sets of young in the course of a season; but as far as I can make out, after sitting upon the first egg or pair of eggs, and hatching the birds, no farther effort in incubation is made. Directly after the owlets are out of the shell, the hen-bird lays one or two more beautiful white eggs, but does not sit, devoting herself to feeding the insatiable little monsters she had started into life, and the warmth of their bodies hatches the next owlet. This one hatched, another egg is laid with the same result, that it is vivified by the young ones' warmth, escapes from the shell, and once more an egg or two occupy the nest, so that in the same corner in a shallow downy spot may be seen an owlet three-parts grown, another half-grown, another a few hours old, and a couple of eggs—four stages in all; and, if inspected by day, the three youngsters will be seen huddled together in very good fellowship, one and all fast asleep, and the eggs in the coldest place outside. The sight is not pleasing, as may be supposed from the above description of the young owls; but if the eye be offended, what is to be said of the nose? Take something in a bad state of putrefaction and arithmetically square it; the result will be an approach to the foul odour of a nest of owls in hot weather. The reason is not far to seek, when it is borne in mind that the owl is a bird of prey; but all the same I have visited the nest earlier in the season, and found the place quite scentless, and that too at a time when ranged in a semicircle about the young were no less than *twenty-two* young rats and full-grown mice, so fresh that they must have been caught during the preceding night, the larder being supplemented by a couple of young rabbits.

If then a pair of owls provide so many specimens of mischievous vermin in a night, they certainly earn the title of friends of man.

'It may be argued that, inhabiting a pigeon-cote, the youngsters were the offspring of two or three pairs; but as far as I can make out, a single pair only occupy the cote from year to year, the young birds seeking a home elsewhere; and I may say for certain that the old birds do not come near their young and eggs by day, generally passing the time in some ivy-shaded tree while the sun is above the horizon, far away from the cote containing their sleeping babes.

'When fully fledged and nearly ready to fly, if the strong scent is risked and a visit paid, the birds start into something approaching to wakefulness, and, huddling up together, will stare and hiss at the intruder, ready to resist handling with beak and claw—and a clutch from a full-grown owl's set of claws is no light matter; for Nature has endowed them with most powerful muscles, and an adaptability for their use that is most striking. When hunting for food, the owl glides along on silent wing beside some barn or stack, and woe betide the cowering mouse or ratling that is busy on the grain! As the owl passes over, down goes one leg, and four sharp claws have snatched the little quadruped from the ground, the four points seeming to slope towards a common centre, so that escape is impossible. Every seizure is performed with the claws; the beak being reserved for dividing the animal when too large, and not degraded into forming an instrument for seizure or carriage of the prey. I have had owls calmly seated upon my hand but for a very short time, and I cannot recommend ladies to try them for pets; for the sooner they are perched elsewhere, the more pleasant it is for the skin, their claws being exquisitely sharp.'

Owlets, taken from the nest, have been successfully reared in a hay-loft or other outhouse. If allowed their liberty when fully fledged, they have regularly returned to their adopted home, quite contented with their new abode. A pair given to a lady remained for some years in her possession. She had a nest made for them in the hollow trunk of a large tree near the house, whence she could personally watch over their welfare. Food suited to their tender years was supplied, and they were perfectly reconciled to their fate, becoming unusually tame; one, especially, would fly down when called by his name. They were a constant source of amusement, and well-known characters in the neighbourhood. When full-grown, they flew away nightly to gradually increasing distances, always returning before daybreak to their hospitable owner's care. On one occasion, however, during the temporary absence of their mistress, both the birds came to an untimely end, in a manner which was not discovered. Never were pets more truly regretted.

Another case of adoption occurred, in which the nest of a pair of Tawny or Wood Owls was watched, without disturbing the lawful proprietors. After a while two eggs appeared; then two little balls of down, eventually developing into fine young owlets, whose large eyes flashed indignantly at any intrusion on their privacy. One day—during the absence, it need scarcely be said, of their natural protectors—after

some desperate scratches, incurred in a prolonged and vigorous struggle, both were secured, borne triumphantly home, and lodged in a large rabbit-hutch, which was duly darkened for the convenience of the nocturnal occupants. Their bill of fare consisted of mice, rats, frogs, &c. With this diet they did not appear to require water, contrary to the usage of other birds, so that portion of the daily commissariat was omitted.

Owls have an extraordinary capacity for swallowing large solid substances. While quite small, the pair in question would, without the slightest hesitation or difficulty, dispose of a large frog or mouse in its entirety. Soon after the capture of the young Wood Owls, on their being visited at dusk, two venerable specimens—doubtless the parent birds—were seen cautiously alighting in front of the hutch; where, after having been received with every demonstration of delight by the inmates, they proceeded to put food through the bars, which the juvenile prisoners eagerly devoured. Thereafter, the reunited family separated; but this touching proof of parental affection was subsequently repeated each evening, at the same hour, with singular punctuality, until the young birds grew large and strong, when the visits were gradually discontinued. The elders having some difficulty in passing the delicacies brought by them through the bars, two of these were removed, which kindly meant act led to a disaster; one of the junior members being shortly thereafter found with a broken wing, probably due either to the attack of some neighbouring cat, or to its own endeavours to make its escape through the enlarged aperture. Both are, however, thriving to the present time. They have safely undertaken a long railway journey, and are now residing in a less isolated part of the world, on the Surrey hills. An extensive wooden edifice has been erected for them, and placed on a stage several feet from the ground, under the shade of a large elm-tree, where, by means of a ladder, all their wants are supplied; and they are thus provided with board and lodging for life. A bath, though an unwonted luxury, seems to be highly popular. Having arrived at years of discretion, they are allowed to have unrestricted liberty, but do not appear inclined to desert their comfortable quarters. One was lately seen, while enjoying a rather too early evening ramble, surrounded by a throng of noisily vociferating sparrows, who drove the stranger homewards in a rapid and most undignified flight. No sooner did the owl enter the precincts of his private residence, and turn upon his pursuers, than they fled in most amusing dismay.

[If all keepers of wild-birds were as thoughtful and kindly disposed towards their charges as the correspondent who has furnished the foregoing particulars, there would be less reason to pity the feathered captives. Still, except in certain cases where the cause of science is to be advanced, we would reprehend the practice of abstracting wild-birds from their parent homes and detaining them in cages or even in large aviaries; and more especially would we protest against the immurement of birds such as falcons or owls, the mission of the latter being of such especial importance to the agriculturist, and therefore to the general community.—Ed.]

CONSOLATION.

Through the village, o'er the river, to the breezes glad-
ness flinging,
With the glory of their music, are the church-bells sweetly
ringing.

Wearied, sad, and disappointed, hope borne down by many
a fear,
I, a stranger, pause and listen, as their glad some sound
I hear.

In my heart sweet memories waken, round me gleams a
glory vast,
Linking all bright thoughts together of the future and
the past.

Holy music, rich in blessing, is the gladness of the song,
That the breezes o'er the river from the church-bells bear
along.

In my heart, hope reawakens, bringing strength and life
and light,
Love to suffer, will to battle and to conquer for the right.

Though cast down, yet not despairing, glorious words I
seem to hear,
Words to make me strong in daring, words to cast out
doubt and fear.

In the belfry stand the ringers, while the silver song still
swells,
But they cannot hear its beauty for the clashing of the
bells—

Only others, not the workers, hear the glory of the strain:
While we bless them, they must labour; theirs the suffering,
ours the gain.

This, perhaps, the noblest lesson that the holy music tells,
While across vale wood and upland, all its silver glad-
ness swells.

Ye, who live, who love, who labour, bearing, daring all
you can,
So you may, by God's good blessing, ease one suffering
heart of man;

Help one brother to grow better; cause one sinful soul to
see
God's great care and love and patience ever waiting, ever
free—

Freer than His holy sunshine, or the blessing of the rain,
And the freest to those sad ones who are worn with
doubt and pain:

Oh, take heart! perhaps no knowledge, no sweet thanks
for help well given,
May be granted for thy cheering in thy life on this side
heaven;

Love thou on in earnest working, and perchance, thou
yet mayst see
That some hearts whom thou hast solaced, have been
blessing God for thee.

PRICE 1½d.

ON THE PLANK.

IN taking up a newspaper, for city or country town, there is one species of paragraph frequent in its occurrence, to this effect, that certain individuals were brought before magistrates for thefts, burglaries, assaults, or some other delinquency, for the second, third, or fourth time; and the charge being undeniable, they were forthwith sent to prison for an assigned period. We learn by these facts that there is a portion of the general population who are off and on criminals, and whose names and characters are inscribed on the books of the police. In reality, we live in the midst of two kinds of population. One of them consists of persons who quietly pursue courses of honest industry, and are never heard of by the police at all. The other are the wild and predatory classes, who from youth to age live for the most part by some kind of mischief or pilfering. They may do a little honest work at a time, when it agreeably comes in the way; but destitute of foresight or any upright principle, they lapse into crime on the slightest temptation.

These plain truths have never been thoroughly realised. Philosophers go on theorising, to the effect, that all human beings are very much alike as regards intellect and emotions; whereas it is clear that a considerable number of people within the bounds of so-called civilisation, and of improving influences, are a kind of half savages, disposed, like monkeys in a menagerie, to steal from the cages of each other. Education is supposed to be the panacea for curing this unfortunate state of things. In time, when education, now happily set on foot on a comprehensive scale, has thoroughly permeated the community, we may expect that the criminal classes will be materially lessened in number, and that the more gross order of crimes will be of rare occurrence. As matters now stand, according to a late Report of the Directors of Convict Prisons, 'it must be considered as established that education does not furnish such a specific preventive of criminal

tendencies as it was once supposed it would. It may, however, be admitted that it has had some effect, and that it may probably have much altered the character of the crimes which come under the correction of the law, and of the immoralities which do not.'

When transportation was given up, imprisonments for long or short periods were substituted, as a cure for crime. After the experience of a number of years, it has to be acknowledged, with a degree of regret, that the number of criminals remains much as it was before. In the midst of the general perplexity on the subject, one thing occurs to us. It is the strange fancy of endeavouring to effect a cure by repeated imprisonments, which, taken singly or in accumulation, are little better than a mere off-put of time and wastefulness of expenditure. It does not seem to be properly recognised, that the modern prison, established under the sanction of learned and philanthropic sanitarians, is, physically speaking, a very comfortable place, where bed, board, washing, and medical attendance are to be had for nothing; and which, in comparison with the ordinary habitations of those who require to be so treated, is by no means an unpleasant resort. To be sure, there is a certain social degradation in being sent to prison, but that is only where there is a sense of being degraded. The class of persons we speak of have no more a notion of degradation by being immured within the walls of a prison, than sheep have in being driven into a penfold. It is all a matter of course, and probably comes quite handy, as a change of scene, diet, and occupation.

On lately talking to a gentleman who is medical superintendent of a criminal prison in which there is generally from six hundred to seven hundred inmates of the two sexes, he tells us that there is no condition of society within his knowledge where there is such excellent health as in the cells of which he has the supervision. The prisoners come in dirty, miserable, ragged, half-hungered, and in a condition altogether pitiable. In a little time, by means of regular

diet and work, and regular rest at night, along with a certain amount of open-air exercise within the yards appointed for this recreation, they pick up in a wonderful manner. Within three months, they are different creatures. Unfortunately, when the period of their imprisonment expires, they are turned out into the broad world; and ten to one but they relapse into their previously horrible state of wretchedness. And again, after a short time, they come back under a fresh sentence for a new delinquency. We ask, if this system of repeated short imprisonments is consistent with common-sense?

We have only to walk along the thronged and older part of some cities, to note the wretched condition of the class of persons, men and women, who from time to time are kept at the public cost in the prisons. There they are, lounging, dirty, ragged, and hopeless. Men standing in groups, with clay pipes in their mouths, with their hands in their pockets, staring about in the stupor of idleness. Some of them, perhaps, have a battered eye, covered with a patch of some sort, or they exhibit some other infirmity. As for the women, they are generally poor-looking creatures, who cannot be seen without pity.

Is there, then, no remedy? In the present tentative condition of affairs, we can only offer a few hints. In the first place, the town-resorts of the habitually criminal classes should be eradicated; but that never can be, while narrow lanes and courts, scarcely pervious to the light of day, are suffered to exist. We would lay it down as a primary principle in social organisation, that no means should be afforded for huddling into dingy resorts, like rats and wild beasts. The safety of society requires that all human dwellings should have such a frontage as will bring the inhabitants in a reasonable degree within reach of the public eye. Show us a town or city abounding in structural obscurities, deficient in air and sunlight, and there we will show you hordes of the demoralised and dangerous classes, to say nothing of groups of unhappy beings laid down with typhoid and other deadly diseases. Municipal authorities are slow in recognising the truth of these remarks. The world at large does not give itself the trouble to think upon the subject.

The thorough eradication of these loathsome resorts—the slums of popular slang—would, we think, go far towards a wholesome preventive alike of crime and disease; and we have evidences that such would be the case, from the attempts that have been made in this direction under legislative authority. We are not so sanguine as to expect that while the human heart remains as it is, crime will be got rid of altogether; but we aver that it would be possible to effect very material ameliorations. By letting things take their course, crime is to a certain

extent cultivated or played with. The resorts we speak of are the nests where it is fostered and brought to maturity; and all such nests, as a matter of police, should be extirpated, perhaps not abruptly, but at least within a reasonable length of time.

Next, as regards punishment. The method of awarding repeated imprisonments has evidently proved a failure. The petty offender seems first to get a week, next two weeks, then a month, then two months, then three months, and so on he works his way to eighteen months; beyond that he passes under a higher jurisdiction into penal servitude, first for five years, and afterwards for longer periods—in many instances, incorrigible to the last. That appears to be the routine. As this process of dealing with criminals has not answered, let us try something else. Possibly, it would be advantageous in many cases to return to schemes of flagellation. Whipping, we understand, has proved so effectual a deterrent, as to have put a stop entirely to the crime of garroting. Why not extend its application, particularly as regards youthful male offenders? It is a punishment especially adapted to all crimes that are mean and despicable in their nature, such as assaults on women and wife-beating. For offences of this description, a certain number of lashes on the bare back should be added to the ordinary penalties.

Other forms of personal discomfort without endangering health might likewise be found to be so awkwardly disagreeable, as to terrify habitual depredators, and to force them into the salutary belief, that after all it is better to be honest and trust to regular work, than to continue a course of thieving. The tread-mill is one species of discomfort that has had its day in deterring criminals. The latest discomfort that we have heard of is ordinarily known as being put 'on the plank.' With a considerable degree of satisfaction, we learn, that if properly and persistently administered, it is likely to do the business. It is neither more nor less than causing prisoners to make their bed of a hard deal board, or guard-bed, as it is technically called, from its resemblance to the bed used in guard-houses. When on the plank, prisoners are not altogether unprovided with means for keeping themselves warm at night. They are supplied with two single blankets in summer, and three in winter, a bed-rug, and two sheets. Why the luxury of sheets should be awarded, is beyond our comprehension. But let that pass. The pillow is of wood. This, as far as we can discover from 'Instructions from the Prison Commissioners,' is the destiny of all convicted male prisoners between thirteen and sixty years of age, unless excused by the surgeon, and continues to be so until 'they have earned two hundred and forty marks; after which they shall be allowed a mattress for five nights in each week till they have earned four hundred and eighty marks; when they shall be allowed a

mattress for six nights in each week till they have earned seven hundred and twenty marks; after which they shall be allowed a mattress every night. But they are liable at any time to be deprived of the mattress for idleness or misconduct, till they have earned such a number of marks as the Governor may deem advisable, in addition to any other punishment he may award.'

From this statement, it would appear that all convicted male prisoners begin with a plank-bed, and that a modification only takes place by a certain course of good behaviour; and it is likely enough that the suffering experienced induces the prisoner so to conduct himself as to secure a mattress and soft pillow at the earliest opportunity. It would be interesting to know, however, how far the deterrent so modified has a permanent effect. From their repeated imprisonments, after short intervals, the modification of the plank seems to lead to no effectual eradication of crime. It may produce decent behaviour while in prison; but in the long-run, that is of minor importance. We should like to see the plank administered with such persistency as to greatly lessen the number of offenders. We feel confident that, properly applied, the plank is the best thing yet thought of to diminish criminal practices.

We are not unprepared for hearing that any proposal to introduce a more frequent application of the whip, as also an unmitigated use of the plank-bed, should be stigmatised as cruel, barbarous, and so forth. A plain answer to objections of this kind is, that misdemeanants have a free choice. If they prefer all the usual comforts of civilised life, liberty, and a good bed included, let them remain honest and peaceable subjects. If they prefer the reverse, let them take the consequence. Nobody counsels severity as a matter of taste, but as a sad necessity, and with a hope that by such means a distinct impression will by-and-by be made in lessening the number of habitual delinquents. But the severities spoken of would render the majority of prisoners intractable! So will say all who wish the present state of affairs to continue. It is plausible bugbears like this that keep the world from advancing.

Were it generally known that being committed to prison is equivalent to lying on a hard board during the whole period of incarceration, magistrates, we anticipate, would soon find their occupation pretty nearly gone. There might be little diminution in the number of first offences; but second, third, and fourth offences would have a fair chance of being extinguished, or reduced to a minimum. At all events, a reform in this direction is greatly needed. The present system of repeated imprisonments for short periods is a grievous scandal, which cannot be too soon removed. Others may have some schemes for reforming the abuse, worth listening to; our

proposal is simple, and likely to be efficacious. It is, longer imprisonments after the first, and throughout, a stern administration of the Plank.
W. C.

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

CHAPTER IX.—SHE ANSWERED 'YES.'

'HILLO! hillo!' cried Lumby senior, going lamely across the hall. 'What's the matter, Gerard?'

'I'm in a bit of a hurry,' said Gerard, cooling down a little. 'I want to speak to you, that's all.'

'It's worth no man's while to risk his neck to hear *me* talk,' said Lumby senior, with a chuckle.—'Come in, my lad. What is it?' He sat in a big library chair; and Gerard having closed the door, walked up and down for a minute or two, and then planting himself before his sire, he spoke.

'Father, I'm thinking about getting married.'

'Ah!' said Lumby senior, with his features a little twisted by a sudden twinge of gout. 'Is that a general or a particular statement? Is it an abstract sentiment, or is there a lady in the case already?'

'There is a lady in the case already.'

'Who is it?'

'Miss Jolly,' responded the lover, looking and feeling like a defiant criminal.

'Very good taste, my lad,' said the elder man—'very good taste indeed. Don't tell your mother I said so; but if I were younger—A—ah! That isn't conscience, but the gout. Well?'

'I have spoken to her father this morning.'

'The dickens you have!' said Mr Lumby, with another facial distortion.

'He demands,' pursued Gerard, 'that your explicit consent shall be given before he can entertain my proposal.'

'He demands that my explicit consent shall be given before he can entertain your proposal, does he? Gerard, your language is worthy of your university. An Oxford training has not been wasted on you. What do you want to get married for? Why, only the other day you were a legal infant. Gerard, my lad, keep clear of my plaguy foot, and come here and shake hands. You had only to choose a lady to be sure of my consent. And I know she's pretty, and I know she's clever, and I think she's good. Go and win her, my lad, and wear her worthily, and let your old dad nurse his grandchildren before he dies.'

The old man was riper and mellowed than the young one. As they shook hands, Gerard's look was a trifle sulky. He could not show emotion gracefully, and he was deeply moved. But the grip of the young giant's fingers made his father's hand ache for five minutes afterwards, and a good deal more love went into that handshaking, from both sides, than some very fluent people ever know in all their lives. So, bearing the paternal as well as the maternal blessing, the wooer rode once more away. He went gallantly this time, riding like a lover. Could he fail to win with such good auguries behind him?

'My dear Constance,' said Mr Jolly, entering the room in which his daughter sat, 'Mr Lumby has honoured me by a formal proposal for your hand.'

'And you,' said Constance, who had watched the interview from her window, 'have sent him about his business?'

'Yes,' said her father, with his wrinkled smile. 'His business is to obtain his father's consent. I have no doubt of his attachment to you; that has been evident from the first; but as I told him, in a matter of this kind everything must be above-board, and I could not dream of allowing my consent or yours to be extorted, until all things were made clear on his side.'

'And when he comes back, I am to say "Yes," papa?' asked Constance.

'My dear,' said Mr Jolly, shrugging his shoulders ever so little, 'I am not an ogre, or a wicked father in a novel in the *Young Ladies' Tea-table Gazette*. You will exercise your judgment. Mr Lumby, armed with his father's consent, will seem to me a most desirable and eligible husband.' He spoke of Gerard as an auctioneer speaks of a family mansion.

Constance sighed faintly. 'I think he is a good man, papa,' she said; 'and I know he is very much attached to me. But' (Mr Jolly shrugged his shoulders again, a little more pronouncedly)—'I like him too,' she said—'but'—

'Once more, my dear,' said Mr Jolly, 'I am not the wicked father of a cheap romance; but if you throw away such a chance as this, I shall think that you deserve never to have another.'

'Very well, papa,' said Constance; 'I will do as you wish.'—He kissed her with unusual warmth and kindness.—'And now,' she said, 'let us say no more about it till the knight-errant comes.'

The knight-errant was not long in coming. Soberly enough he came in sight; but there were evidences on gallant Rupert's sides which told of haste, and Gerard's absence had been marvellously brief.

'I have seen my father,' he said to Mr Jolly, 'and I carry with me not merely his approval, but his warmest wishes.'

'That smooths my way completely,' said Mr Jolly. 'There remain only my daughter's wishes to consult. And there, Mr Lumby—let me be candid with you—I can exercise no influence, no control. You have my cordial good wishes. I can offer you nothing more.' Again the Arcadian rather overdid it.

'Mr Jolly,' said Gerard, somewhat stiffly, 'do me the justice to believe that I would not win by coercion, even if I could.'

'I can't have a row with the fellow now,' said the guileless shepherd inly. 'But when they're married, I shan't see much of them. I can go back to the Albany. It's the only decent place to live in.' He added aloud: 'Our sentiments are happily at one upon that matter.—And now, Mr Lumby, what is the next step? Shall I smooth your way at all by preparing my daughter to receive your proposal, and by telling her that you make it with my sanction? Or would you prefer to wait?'

'I don't think,' said Gerard, 'that there can be any advantage in delay.'

'No?' asked Mr Jolly, smilingly. 'Well, perhaps not—perhaps not.' Within himself, he exulted. Constance had been a great anxiety to him. It was a big thing to book a young man with half a million in perspective—not quite the biggest thing the daughter of such a man as Mr Jolly might have done, he thought, but eminently satisfactory. 'Will you excuse me, then?' Gerard, too much agitated for speech, inclined his head in answer; and Mr Jolly left the room. 'Constance,' he said, himself a little shaken, 'you have quite made up your mind?'—She nodded with a faint smile. She had had no dream of love, but always until now there had been a hope that the dream might come and fulfil itself. And now? Well, Gerard was very nice and manly—she had little fault to find with him; but she did not love him. She would have liked to have loved her husband a little. As her father had said only the day before, Nature returns, even when expelled with a pitchfork. All her training had gone against marrying for love, and she had heard it condemned as silly, and even as sometimes wicked. She sighed a little, smiled a little at the sigh, and so surrendered. She arose, and surveyed her own regal and tender beauty in the mirror, regarding herself critically. Her bosom heaved with a passing sense of triumph, and as she turned, Gerard entered. She surveyed him demurely. A man at least, every inch of him. Not a mere creature of the ballroom and the Park. Now that she looked at him with this new interest, that he was to be her husband, she saw much to admire in him. She waved him to a seat; but he stood before her and pleaded his cause.

'Miss Jolly; your father has already prepared you for my visit?'—Her bowed head bent a little lower in affirmation.—'I am glad of that, for I should not have liked to startle you by my abruptness.'—A little smile flickered across the hidden features at this statement. Poor Gerard thought that this virgin fortress was here for the first time assailed. Constance remembered a score of such scenes, and almost the only difference between them and this was that she had always said 'No,' and was now to say 'Yes.' There was the least possible quiver of earnestness in his voice. 'I suppose,' he said, with unintentional quaintness, 'to tell anybody straight out, "I love you," would be a little hard; and I think the truer it is, the harder it is.'—Constance, who was perfectly self-possessed, smiled again at this. The simplicity was manly: it even touched her a little.—'If I speak clumsily, I will ask you to excuse me. I have only known you for three months, and that is but a little time. I should have laughed three months ago to think that such a love—the word cost him a great and evident effort, and it was plain that it was sacred to him; the listener knew it—'could have grown in a man's heart in such a time. But it *has* grown there, and my life is in your hands. I ask a great thing—I ask a thing of which I know I am unworthy—I ask you to share my life with me. It shall be my continual study to make you happy.' There his very earnestness broke him down.

'Mr Lumby,' said Constance—she could say nothing ungracefully, and though she was as

cool as a cucumber, he thought she looked and spoke like a pitying angel—'you ask a great thing—a great thing on both sides. Let me ask a little one. Give me a day to think of your offer.'

'Give me an answer now!' he pleaded. She was sitting before him looking upwards, and for the first time in this interview he saw her eyes and looked into them. There is no exaggerating the matter—he was head over ears in love—and love, even in a man who means to be self-possessed, will have its way. The glance of the wonderful violet eyes brought him down upon one knee before her. One white hand was stretched a little towards him. He took it in both his. 'Give me an answer now!' he murmured, with pleading eyes fastened on her face—'give me an answer now!' This was a phase of love-making on which Constance had not counted, and it was new to her. The man was kissing one hand, and had possessed himself of the other—a prodigious and unheard-of situation. It was not unpleasant, though at first a little alarming. 'Say Yes,' said this audacious Gerard, murmuring with his breath upon her cheek, and both her hands in his. And it was wonderful and strange—if Nature were ever wonderful and strange—to see how the stronger male nature triumphed; for caught in this unexpected snare, wooed for once like a woman, by a man who loved her, in place of being talked to by an automaton as though she were an elegant waxwork, she answered 'Yes,' and for one bewildered minute her head lay on Gerard's shoulder, and the first kiss that ever love had planted there was warm upon her lips. Then, fairly frightened at his impetuosity, she sprang to her feet, and escaped to think and wonder. And when she saw herself in the glass, she saw a more lovely creature reflected there than ever her mirror had shown her until now; for her eyes were all agleam, and her face was rosy, and there was a marvellous new look, she had never seen before. And as she stood there, she made one utterly feminine remark aloud—a remark so womanly, that it startled her to know that it could have crossed her as a thought: 'I ought to be a happy woman to be loved so much.'

Was the dream to come after all? Was she too, like the spurious heroines of romance, to have a husband whom she could love, and not merely tolerate?

The poor Gerard went home feeling criminal, and yet conscious of a certain sense of satisfaction. And after all, if a woman does not want to be kissed, what right has she to be downright bewitching? An unanswerable query.

BOLOGNA.

'GENOVA *la superba*,' say the Italians when characterising their cities; but '*Bologna la Grassa*;' for it is no less true that if Genoa be proud, and justly so, of her vast and stately palaces, so Bologna reposes lazily upon her laurels, with the comfortable certainty that she is the best fed and the fattest of all her compeers in the bright Italian land. She draws her nourishment and sustenance from the rich Emilian plain;

so fertile that the vine festoons between the mulberry trees droop to the very ground with the luscious clusters of purple grapes—unable to support, even with the friendly aid of assistant trees, the weight of the heavy bunches. The golden heads of the Indian corn, with its tall stature and its waving leaves, are half hidden in the abundant and ever-springing verdure of the level plain, with its frequent ducts of water, carefully planned irrigation, and the garden-like cultivation which meets the eye mile after mile. In this fertile plain, girt within her circling walls, does indolent Bologna repose, with the careless content of the blameless Ethiop of old, scarce raising her eyes to the far-off guardianship of the misty Alps, and the nearer boundary of the faintly blue Euganean Hills, and the distant glitter on the horizon of the Adriatic Sea.

Entering the portals of her lofty walls, the traveller is struck by the somewhat heavy-headed look of the colonnaded town, supported arch after arch on massive piers, which lend a rather gloomy appearance to the streets. The tall and frowning palaces are decked with sculptured marble heads, and have the look, rare in Italy, of being both well kept and lived in. The churches own mostly unfinished façades, which Bologna will doubtless some time, when she awakes, bestir herself to complete. The Seven Churches of St Stephen—one of them an ancient basilica of the early church—contain two richly carved antique sarcophagi, used as the altars of the saints Vitalis and Agricola. One was enriched with peacocks, wondrously sculptured, and the other with lions and a stag. The church is also adorned with costly columns of marble, once forming part of the temple of Isis on this very spot, now hallowed by the bones contained in the lovely pillared shrine of St Petronius. Behind it is an *ambo*, perhaps of the ninth century, beset with beautiful reliefs of the four evangelists. Nor can that ruined cloister of the Celestins ever be forgotten, with its double arcade of lightly springing arches; reminding one in some dim way of the Ducal Palace at Venice, and all inlaid with marble mosaic between the arches, in various hue of peacock wings—purple and red and green and golden and blue: a harmony of suggested colour, which, even to recall, gives inexpressible delight.

A vast and ancient font of long-past Lombard kings stands in the *atrium*; while in the cloister, the curious and picturesque monkish well must not be passed over unnoticed; nor yet the tomb of St Petronius, built, it is said, upon the model of the Holy Sepulchre. This inclosure of the Seven Churches, with its singular assemblage of associations, heathen, Christian, sacred, and profane, is a veritable chapter of history written upon stone, which would well repay many an hour of curious and minute attention: for echoes of old Egypt make themselves heard in this pillared silence, and voices of Rome, whose wealth transported all this marble from Africa's burning plain; the blood of Christian martyrs cries from their tombs, and ruder notes arise of barbaric conquest by Lombard invaders, when Rome itself, like Babylon, had fallen. The careless modern spirit succeeds to this heritage of the ages; and it is chiefly as an object of curiosity and interest to travellers that these half-ruined aisles

still stand, to testify of a faith whose decay is nowhere more manifest than in Italy.

Out again from these cool silent shades we pass into the busy streets, avoiding collision as far as may be with mules and asses driven recklessly fast in tiny chaises along the paved and narrow lanes. The women are all attired in white cambric jackets, and white silk kerchiefs tied gracefully on their heads. An old beggar, in a dark, red gabardine, holds out his hand as we go by; indeed, beside every church-door sits a crowd, holding out countless hands in endless solicitation. In the Piazza, the stately figure of Neptune poises lightly in the air, wielding his trident in his upraised hands, to bear evidence of his maker John of Bologna's happy skill; and the cool plash of the great fountain beneath him falls pleasantly on our ears; for the sun is blazing, and thoughts of a *siesta* suggest themselves obtrusively.

But the Academy must be visited, where Raphael's St Cecilia stands rapt in ecstatic vision of all things lovely, as if to vindicate pure art against the later conceptions of it outspread upon these walls, in all the triumph of bared limbs and lovely faces and luscious colour, and utter irreligion. Guido Reni was the veritable victim of his time, and of the decadent taste which characterised it. His real power lies in the command he exercises over all the resources of his art. But his fine taste in colour is annulled by his evident desire to compose pictures which shall cover the walls of palaces, and be admired by wealthy cardinals and art-loving nobles. His 'Slaughter of the Innocents' is a fearful example of all that religious art should not be; while the matchless and exquisite beauty of his sweet dark-eyed 'St Catharine,' shows what lay in his power to achieve. But his century conquered him. He was not great enough to master and direct it, as his colossal predecessors in Art had done. The Caracci helped on the further decline of art by manufacturing a certain class of picture which forms the staple of, alas, how many galleries! Elizabeth Sirani shows a better aim. Her 'St Anthony of Padua' has a naive grace; and her execution is wonderful, when her youth is considered, as are also her efforts, compared with the gold-medalled students of modern Bologna, whose canvases provoke unkind criticism by their mannered pretension and vulgarity.

Some of Francia's most beautiful work is to be seen at Bologna. His rich colouring atones for the stiffness and rigidity that seem almost inseparable from the most real devotional element. Nevertheless, the tender grace of his little children and his saintly mothers fills us with a strange and secret delight, which greater men sometimes fail to inspire.

But the masterpiece of Bolognese art remains yet to be mentioned, and that is the *Arco* or shrine of St Dominic, within the church which bears his name. Sculptured and wrought by the faithful hands of Nicola Pisano, its bas-reliefs are so deep and rich that three distances may be distinguished in them. It is guarded by four most lovely angels at each corner, one of which is from the hand of Michael Angelo, and is kneeling in mute adoration. One feels, however, in contemplating this ravishing work,

that it is but the culminating stage of pure art, reached from the rude Lombard tombs in the Piazza, aided and developed by the fruitful genius of a mind like that of Pisano, nourished on the finest traditions of antique beauty. The tame and feeble bas-relief on the altar font, the work of the last century, instructively completes the tale, showing, when Art falls, the depth to which she can fall. Hence, in this day of ours, to know what to admire and how to admire it, is counted as an art, and they artistic who though themselves executing nothing, yet know by nature or cultivation how to discern the true from the false, the good from the bad.

The old Dominican friar who acted as escort to the shrine of his patron, spoke with a sigh of evil days, and of thirty 'fathers' dwindled to three; and a bare existence on sufferance in a free country, where the faith he professed is the one most bitterly hated and scorned by the powers that rule. The poor still crowd into the stately churches, and still cast themselves down in utter abandonment of devotion upon the marble floors, before the favourite shrine of Madonna or saint; but the rich, the educated, and the ruling classes, where are they?

The traveller will not be permitted to leave Bologna without seeing the Campo Santo, formerly the Certosa or Cistercian convent, but occupying the actual site of the Etruscan burial-ground. Hundreds of interments were found, each silent one lying, coin in mouth, ready to pay Charon's fee.

Amongst the endless sepulchral monuments which adorn these vast corridors, one statue, a Silence, is well deserving notice. He who lies beneath fell in a duel, in the flower of his youth. And there the figure sits, with finger on her lip, and hand upraised, as if to protect the dead. Let us follow her example, and raise no questions. He at anyrate has passed beyond the reach of our judgments. The same Campo Santo shows us, almost side by side, the tomb of the noble Bevisani, so tranquil, so full of thought and repose, with the statued children in life-sized marble, in frilled garments and laced-up boots, and pinafores and hats, which the modern taste admires, and which are chiefly carved in the city where Pisano worked, and Francia painted, and Da Quercia and the great Michael left their works, to shame their successors in the noble arts. A final mention of the Olivetan Convent, now suppressed, outside the walls, and we have done. It is to-day a royal but uninhabited villa, and is as vast as it once was splendid. Perhaps it was not exactly very strict, for each brother kept a coach-and-pair, and the prior a coach with four white horses, in which the pious friars with great contentment drove abroad, when wearied with the contemplation of their palatial residence, with its many and indifferent works of art, and the lovely view thence obtainable of Bologna with her towers, pinnacles, and palaces lying outstretched beneath their vine-clad verdurous hill!

And so we leave Bologna *la Grassa* to her peaceful existence, her sausages, her excellent provision markets, and her unfeigned appreciation of the good things of this world. No lean and hungry Cassio she; but rather like the Justice, 'with good capon lined;' and perhaps

our next steps may lead us onwards to the Venice of our dreams, or the Florence of our waking imagination; or even to mightiest Rome, mother of nations, wolf-nurtured, sitting augustly upon her Seven Hills.

A STRANGE STORY.

TOLD BY A LINCOLNSHIRE CLERGYMAN.

CHAPTER III.

It was dark when I drove up to Mr Pullingtoft's door; but as I descended from the dogcart and came within the range of light, with which he had hastened out to greet his visitor, it was with the exclamation of 'Bless my heart!' and a hearty grasp of the hand, that he recognised and welcomed me.

Mr Pullingtoft gave me no time for explanations; for as soon as I had removed my hat and greatcoat, he threw open the parlour-door and proudly announced me. Mrs Pullingtoft, who was in exact proportion to her husband, was seated near the lamp, darning little socks. She rose as I entered, and wheeled an easy-chair to the fire, begging me to be seated. Many children surrounded the table, the girls at needlework, the boys colouring prints in the *Illustrated News*; while the farmer, holding up a well-thumbed book, informed me it was *Sandford and Merton*, from which he was reading to the young people the story of the Grateful Turk.

Among the busy heads round the table, there was one fair one that was lifted as I entered the room, and a familiar pair of blue eyes beamed modestly upon me. It was Phœbe Meadows. The young girl was so much improved in appearance, although very fair and delicate, that had I been unprepared for seeing her, I should not have recognised her; and it was evident that the worthy farmer had quite adopted her as his protégée, and treated her like one of his own children. My arrival caused the breaking-up of the juvenile party, who were sent off to bed. Mr Pullingtoft, however, would not hear a word of the business upon which I had come, until we had had supper.

After this hospitable entertainment, Mrs Pullingtoft discreetly withdrew; my host heaped up the fire, and drawing our chairs closer in, I unfolded the tale of my memorable night's adventure to the good man, who listened with open mouth and open eyes; but when I came to the events of a few hours ago, namely, the finding of the will, who can describe his astonishment and delight? I opened and smoothed out the crumpled pages on the table, the farmer reading it attentively word by word; he had been familiar with old Scruby's signature, and firmly declaring the will to be genuine, bestowed an unlimited number of choice epithets on the son. In vain I tried to convince him that a man may not be called bad until he be proven so. Mr Pullingtoft emphatically declared Seth Scruby to be a knave. 'And not only that, sir, but a villain!'—with a slap of his fist on the table that made the glasses dance and jingle.

Of course I stayed all night; and during the

evening I had again to relate my experiences in the church on the night of the farmer's first visit to me, with the slamming-to of what I took to be Scruby's pew-door—the seeing of it shut, and afterwards open—and the banging of the church-door as after some one who had just gone out; and to this narrative my host listened with renewed attention.

'It may have been Scruby himself,' he cried excitedly. 'It was Tuesday se'enight as I visited you on, and it was on that very day Scruby and his family arrived at Coryton Farm. He must have heard that I was thinking of doing something to get back for Phœbe what was her mother's, and taken this means of putting the will out of sight till the storm should blow over.'

I could not, however, agree with this view of the matter. Had Mr Scruby wished to hide the will, he would not have stuck it in at the back of an ornament on the church reading-desk, where the first pew-cleaner who came along to dust the desk could not have failed to see it.

On the following morning, after having carefully pasted together the pieces of the will, we drove over to Grantham to see Mr Shaw the solicitor, and have his opinion of the document that had come so strangely into my possession. He was a well-known, shrewd lawyer, of integrity beyond suspicion, and having many years before succeeded his father in his business, was better acquainted with the affairs of the squires and farmers within a wide circle of miles, than many of them were themselves. I think it would have been impossible to have brought Mr Shaw a greater treat than that soiled document, regarding the finding of which I gave him full particulars. Like the bloodhound scenting blood, or a red Indian finding a trail, he pounced upon the will. He looked at it upside down, held it up to the light, studied it; and finally unlocking a box of deeds, produced a parchment drawn up in the same handwriting, being that of the dead and gone Boston solicitor who had drawn up old Scruby's will. He had no hesitation in pronouncing the document genuine, and thought we ought to see Mr Scruby without loss of time.

It was resolved, therefore, that we should all three start for Coryton early next morning; and as I had a decided objection to entering Mr Scruby's house a second time, it was arranged that Mr Scruby should be summoned to the vicarage, to meet Mr Shaw of Grantham on particular business.

It was about noon next day when, on arriving at Coryton, we despatched a messenger to the Farm. Fortunately, Mr Scruby was at home; and he very promptly made his appearance, actuated, no doubt, by curiosity as to what the business could be, and with a lurking suspicion, probably, that it again concerned Phœbe Meadows. If so, he was right in his forebodings. What awaited him in reality, he little guessed. He entered my study with his face all puckered and pinched into a set hardness; and his shrewd eye glanced inquiringly at our faces, as we politely made our salutations. Mr Shaw plunged into the heart of the business by suddenly laying the will open before him on the table, simply saying: 'Do you recognise this document, Mr Scruby?'

Never shall I forget the expression of the man's face, as his eyes fell on those faded sheets of paper! To our watchful eyes, it was sufficient confirmation of his guilt. We saw that he recognised it. Horror, fear, dismay, succeeded each other over a leaden-coloured countenance. The struggle was dreadful to witness; and yet the man's habitual self-command was so great, that in less time than it takes to relate this, he actually composed his features to their ordinary grimness, and boldly and firmly replied 'No!'

'I must beg of you to examine it with attention and care, Mr Scruby,' said our lawyer, never taking his spectacled eyes from his face, 'and give us your opinion upon it; for we firmly believe it is the will of your late father.'

'My father left no will,' said Mr Scruby fiercely; 'and I refuse to read this forgery, for such it is.'

'Take care what you say, Mr Scruby. I affirm it to be a perfectly legal document, drawn up by my old friend the late Mr Collyer, the well-known solicitor of Boston, with whose handwriting you must be well acquainted, seeing he managed your father's affairs for so many years. I beg you to examine it.'

'I deny the existence of a will altogether,' said Mr Scruby; but as he said the words, I remarked that his hand, which rested on the table, trembled, in spite of his efforts to appear calm.

'See!' continued Mr Shaw; 'here is your father's signature, and those of the witnesses—namely, Thomas Kirby and Mary Greenwood.'

'Thomas Kirby, indeed!' cried Mr Scruby scornfully; 'a paltry farm-bailiff, that I had to turn away for drunkenness; and Mary Greenwood, a half-blind, half-deaf, old housekeeper, who died crazy. Pretty witnesses you have brought forward, truly!'

'Doubtless, they were the only available ones at the time.'

'It is a deep-laid conspiracy,' he cried furiously, as he moved towards the door. 'I see through it all. I deny your statements. Go to law, if you like, and I'll fight you inch by inch.' And seizing his hat, Mr Scruby strode from the room, casting on us a withering look of contempt, expressing that he had unmasked a set of rogues, and fathomed their plot.

'Let him go to law,' exclaimed Mr Shaw, rubbing his hands with satisfaction; 'I desire nothing better.—And now, my dear sir, as time flies, may I ask you to introduce the witnesses one by one, if they are here yet, that I may take down their depositions. I hope you have summoned the old woman Kirby as well; I must have a talk with her, before I go.'

'I have sent for her,' I said; 'she must be here by this time.'

The schoolmaster was the first to enter the room; and he gave a clear account of meeting me accidentally in the churchyard, accompanying me into the church, and the subsequent finding of the will. The sexton, carpenter, and Mrs Dumps followed one by one, and corroborated each other's testimony in every respect. During this time, old Mrs Kirby had been thawing at the kitchen fire. I therefore hoped she would prove more communicative on this occasion than I had previously found her.

Mr Shaw had his own way of opening his

campaigns; and I perceived it was his tactics to come down suddenly on people, to open fire in an unexpected manner, taking them by surprise; by which means he gave no time to invent answers, and very often lighted upon the truth at once. He commenced with the old woman exactly in the same way as with Mr Scruby, by placing the paper bearing the signatures open before her on the table; and laying his finger below that of her husband, asked her if she knew that writing. Mrs Kirby, putting on her spectacles, peered into the writing, and I saw the old withered hand that leant on the table tremble. She gave a quick look over the top of her glasses at the lawyer, and murmured in a low anxious voice: 'Then, it's found at last!'

She and Mr Shaw looked straight at each other in silence—a silence that was significant; for from that moment they arrived at a very clear understanding, without the aid of words. Then the old woman sank back in the arm-chair I placed for her, and the poor wrinkled hands shook perceptibly.

'You recognise your husband's signature then, Mrs Kirby, and unless I am much mistaken, seem to be aware to what document it is attached?'

'I do—I do!' replied the old woman, to the lawyer's question. 'And if you knew—if you only knew what I, and he who's gone, suffered along of that will—for I know it is the lost will—it broke my poor old man's heart; and mine, sir—and mine!'

The icy barrier that had surrounded this woman for so many years, was disappearing. For once, she shed tears. I offered her some wine, which she rejected.

'Wait till I've told my story all through,' said she, 'and then maybe I shall be glad enough of it.—You must know,' she began, addressing Mr Shaw, 'that I was not always the poverty-stricken woman I now am. I was in my younger days as comfortable as I could wish to be. My husband was farm-bailiff to old Mr Scruby, and that nice house at North End was our home. Mr Scruby had been a schoolmate of my husband; and though lifted up, through making money like dirt, yet he wasn't a bad-hearted man, though awful passionate; and having an old friendship for my husband, he sent for him, and offered him the place. And many and many a year we lived on good terms—till his death, I may say. Well, sir, as you know, the old gentleman had only two children—this man Seth, and the daughter—poor Jane. He brought her up quite like a lady—in silk gowns, and a gold chain round her neck. He loved her like the core of his heart; for she was so pretty, so affectionate, but wilful and spoilt-like; and at last he saw he must send her to school; for the poor girl had no mother, sir, and ran rather wild at home; and it was quite time she went, for she was twelve years old. So she was sent to Lincoln; and came home three or four times a year for holidays; and every time she was improved, and was growing prettier and prettier.'

'Soon after she first went, her father had a bad attack of gout, so bad, that he set about making his will. One day, when my husband came home, he told me that he had been over to Boston to bring Mr Collyer, for the old gentleman was making his will. Now, Mr Scruby

thought much of my husband, and was more confidential with him than anybody; and after the will had been signed, he told him he'd left all his property in this parish, and half his bank-money, to Jane, and she'd be one of the richest girls in these parts; and that my old man had been a witness to the will, as was also old Mrs Greenwood, who'd been his housekeeper many a year, ay, ever since the death of poor Jane's mother. Bad luck it was that those two were the only two handy, at that time; for, you see, they're both dead! Well, sir, I didn't only hear this from my husband, but from Mr Scruby himself; for one Sunday afternoon, when the old gentleman was mending, I went to sit with him, while Mrs Greenwood went to church. He was always chatty and friendly to me; and after we'd talked of his illness, and what a mercy it was he hadn't been taken, we talked of his daughter; and then he gave me the key of an old bureau that was in his room, and told me to open it, look in one of the pigeon-holes, and bring him a roll of paper, tied with a red string. And I did; and he read me what he had left Jane, for she was ever uppermost in his mind; then he said: "Collyer said that it was not law to leave witnesses any legacy;" but he hoped he'd done as well; and pointing with his finger, he made me read, that he had set down for his son Seth to keep my husband for his farm-bailiff for life; and to keep Mrs Greenwood also, or provide for her. And I read those words, gentlemen, in that very will!

(It was true—words to that effect were there.)

'Well, sirs,' continued the old dame, 'that made my life seem happier still, for we were provided for life. For other six years all went well, and then troubles began. Jane had a lover, a handsome young fellow she had met and danced with at some parties at Lincoln—the son of a farmer near Spalding, who was a cousin of my own. Mr Scruby did not like the notion of his daughter marrying at all so young; but at that time he hadn't any particular dislike to Edward Meadows, though he would not hear of an engagement. But said to tell, my cousin was burned out one night in winter—his farm, his stock, all burned to the ground; and he wasn't insured; for he was an obstinate man, and old-fashioned in his notions; and when folks had told him he was tempting Providence not to insure his stock at least, would cry: "How can any fire happen here, with all this water and all these ponds close to the house? Why, we should put it out in no time!" But the fire did come—in weather like this, when all the ponds were frozen—and he was ruined. He had some money left in the Boston Bank; and with this he tried to start again in a small way; but the old man had no heart left, so of course he failed, and was soon a bankrupt; and then he broke down altogether, and died.

'Well, sir, after that, Mr Scruby would not allow his daughter to think of young Meadows at all; and indeed he was no match for her; and my husband and I thought so too, although he was a relative of our own; and we would not let him stay long in our house when he came over to see us, and did everything we could not to encourage these two foolish young people; for we were under obligations of much kindness to Mr Scruby, and would not run contrary to him; and it would have

been a shabby return, knowing how his money was left, to make up a match between a rich girl and our penniless relation. But in spite of all, Jane was headstrong. It was generous of her too, poor girl. She declared that she had loved Edward in his prosperous days, and refused to break off with him when he was in adversity. I think, perhaps if these young people had waited, it might have come about in a few years; for her father loved her too well not to have given in at last. But, gentlemen, they did not wait; for as soon as she was twenty-one, when old Mr Scruby had gone to London on business, Edward Meadows got a license, and they came one morning to this church to be married. Mr Willock was the vicar, and though very much put out at having to marry them, he couldn't refuse to perform the ceremony; and yet, when he saw nobody with them, was sure it must be a wrong thing. So he sent post-haste for us, sir—my husband and I—to come immediately to the church; for we were relations of the bridegroom, and so would be respectable witnesses. You might have knocked me down with a feather, when we came to the church and found those two young people standing there, quite thoughtless of the wrong they were doing. We all begged and implored them to think of Mr Scruby; but Jane declared her father would forgive them when it was done and they were once married—and seemed to have no fear; so there was no help for it; and with heavy hearts, my husband and I saw the ceremony, and signed our names as witnesses—signed our own death-warrants, as I may say. We were dreadfully frightened at the part we had played; and my husband thought it best to start directly for London, and tell the bad news to Mr Scruby himself. The rage and sorrow of the old gentleman were awful. He tore down here like a madman, and went on like a madman, and turned Jane out of doors when she came to ask forgiveness, vowing he would never see her again. He never did.

'He blamed us, and blamed Mr Willock, more than he'd a right to; for how could we help ourselves? However, we were all very sorry for him, poor man, but thought he'd soften after a time to his only daughter; and so, I think, he would, only his son was furious against his sister and the match she'd made; and against us, who, he declared, had connived at it, and brought it about. We expected to be turned away; but old Mr Scruby was, you see, a just man at the bottom of his nature, and though never friendly-like with us again, did not take away our livelihood. But it did not last long. In less than two years, Mr Scruby was dead; and we heard that his son came into everything, as his daughter had been disinherited. It was the talk of everybody that no will had been produced. Mr Collyer had died a week before Mr Scruby; and my husband and I had notice to quit North End Cottage, Mr Seth saying my husband was always tipsy, and he would not have an intemperate man for his farm-bailiff, though his father had put up with him so many years. And so—and so, we had to begin the world over again. In vain we told him how we had witnessed a will, in which Jane was left a mint of money, and we were provided for. No; it was no use. No will whatever had been found, he said; he was confident his father had

destroyed it, when his sister so wickedly married. "Much good you and your husband got by it, when you got up that match," said he with a sneer.

'Mr Seth was not married then, yet he turned away old Mrs Greenwood, to make room for a malapert hussy who was hardly thought good enough to milk cows in his father's time. Poor Mrs Greenwood went to live with some relations, where she soon afterwards died. She could not bear to think of her place being filled by Madge Ralston—sister of old Miles who lives in the cottage at the pond. A bad un she always was, that Madge, as we and many others know to our cost. Not long after this, Seth married his first wife, who got a good word from every one who knew her, and would have been kind to us old folk, had Seth allowed her.

'But I must go on with my story. After we were turned out, my husband got work, first in one part of the country, then another; but he never held up his head again, and we sank lower and lower. At last, we came back to this village, as he was best known here, and had a lease of that poor little place of two rooms that I live in now. There he died. And there I received Edward Meadows, when wasting with consumption, and poor dear Phœbe, his helpless child.'

'And what had become of Jane, then?' asked Mr Shaw.

'O sir, she went to her grave five months after her father, broken-hearted. Poor Edward Meadows had worked for her hard; but he got ill, and broke down at last. He had turned his hand to anything that came in his way. First, he broke horses and went to cattle-fairs for the farmers; then he took to keeping accounts for the shopkeepers at Northampton. But Jane's death finished him; and he came to me as his nearest relation, begging me to bring up his poor little child. And there, sirs, that is all—you have the complete history of a ruined family, if ever there was one!'

'And what did you imagine had become of the will that old Mr Scruby showed you?'

'I thought his son destroyed it. Yes, gentlemen, I thought ill enough of Seth for that—heaven forgive me for wronging him! Seeing it is in your hands, convinces me how bad I have been.—But where did this will come from? Who had it all the time?'

'It was found hidden away,' I replied. 'Who hid it, we do not yet pretend to say.'

'It was only natural I should think Seth destroyed it,' said the old woman; 'for oh! he is a hard man, never to inquire how his sister died, or about her little child. You have often asked me why I did not come oftener to church'—turning to me—'but it did me no good—no good! I saw that cruel man prosperous, praying; and the child poor, barely clothed, and only the care a poor old creature like me could give her; and it made me angry instead of humble; and I said to myself, instead of praying: "Why does not a judgment overtake that man? Why does he flourish?" And so my heart would keep on burning within me.'

This was the account given by the old woman. Its truthfulness was apparent, and her version of some of the contents of the will exact; and

Mr Shaw and I were more than ever convinced that there had been foul-play on the part of some one.

SUDDEN DEAFNESS.

WHAT part of the human frame is more exquisitely and mysteriously formed than the ear, with its delicate auditory nerve; with its hundreds of branches, so minute, that they can with difficulty be even microscopically examined; the sound-cells, or arches of Corti, about three thousand in number; its wondrous telephonic system, far more certain and perfect than anything man's ingenuity can ever hope to fashion? Each part is so perfect, yet so frail, that a very slight shock, a trifling accident, may injure some portion; and upon the sound, healthy condition of each part depends the whole power of hearing. Even nowadays, when so many clever men have made the ear their study, we find two of the most clever among them agreeing that, as regards 'the mode in which the ultimate subdivisions of the auditory nerve are distributed upon the lining membrane of the labyrinth, it does not seem possible to give a certain account'—so various are the opinions.

Certainly, our forefathers knew little about this portion of the human frame, or such a punishment as boxing the ears would never have been thought of for a moment; and it seems almost incredible that in these days of severer mental cultivation, when even the mistress of a village school is supposed to be able to teach her pupils about the human form divine, such an action should be possible as that brought last year against a schoolmistress for using this punishment. Nevertheless, that this ignorance exists is plain, from the fact that the tradition of earwigs creeping into people's ears, and laying their eggs there, is still fully believed in by the lower classes; and a curious case came before the writer's notice only a few years ago. A village schoolmistress took her child, which had become deaf, to have its ears syringed. As she was leaving, after the disagreeable little operation was over, she said very anxiously: 'I suppose, Doctor, the water will come out of his head presently.' Evidently she thought that otherwise there would be a certainty of water on the brain.

But the purpose of this paper is to give three or four curious cases of deafness, caused by grief or sudden fright. They are all perfectly true.

A lady who, just before the Peninsular war, had been married, heard suddenly and quite unexpectedly, that her husband had been ordered out to the seat of war. So great was her horror, that she became instantaneously and perfectly deaf, remaining so for many months; and it was feared that her case was incurable. Some months later, she was in church on a Sunday morning. The congregation began to sing a hymn, and quite suddenly her hearing returned, so much to her surprise, that, forgetting where she was, she jumped up and called out: 'Why, bless me, I can hear as well as ever I could in my life.' She retained her powers of hearing to a good old age.

Some years ago, in a country village which lies between Bath and Bridgewater, we used to see an old woman being wheeled along the dusty

roads by a workhouse child, in a primitive carriage formed by putting wheels on one of those heavy, green, wooden tea-garden or bar-room chairs—a most cumbersome and primitive contrivance. By the side of the chair, occasionally helping to push the heavy vehicle, walked an elderly woman, who looked robust and hale enough; but we discovered that she was stone-deaf, and the invalid sister had to shout at her in a most exhausting manner. We made the acquaintance of this worthy couple, and one day the deaf sister told us the cause of her privation. When about twelve years old, she had typhus fever very severely, and at length fell into a trance-like faint, which was taken by all for death. She was laid in her coffin, being unable to give any sign of life, but hearing quite plainly all that was going on. Just as her friends were about to close down the coffin-lid, from sheer horror she revived, but only to find herself stone-deaf, and she never recovered her hearing. Typhus fever so often produces deafness, that some may attribute this loss of hearing to that fearful complaint; but she does not appear to have lost it until the coffin-lid was being closed; and nothing in this world can be more utterly terrifying and shocking to the nerves, than the knowledge that one is being buried alive.

A poor lady, governess in a family, was standing one day in the hall when one of the children of the house, who was sliding on the banisters, fell over them, and was killed at her feet. The poor lady, from horror, became immediately perfectly deaf.

Perhaps one of the most curious cases is that of a child of seven, apparently quite strong and healthy, who seems to have actually become deaf from the effects of nightmare. The story is worth telling here, if only in the hope that it may make some reader less eager to despise childish night-terrors. How often nurses, and even mothers, and those very loving and tender ones, try to scold a child out of these night alarms, 'foolish' as they call them; yet how many are there of their elders who have not experienced such terrors?

There had been great Fifth-of-November riots in one of our south country towns. Men in hideous masks had patrolled the usually quiet streets; two citizens, who had offended their fellow-townsmen, were burned in effigy; and of course there was the regular accompaniment of squibs and crackers, and in the end a tremendous street disturbance, needing the intervention of the police. So alarming and annoying had the disturbance been to quietly minded citizens, that it was resolved never to allow a Fifth of November to be observed again in the town; and great was the rejoicing in quiet households over this decision of the town-council. A few days before the return of the fateful day, some children had been playing happily together, and, as far as can be discovered, nothing had been said or done to alarm any of them. They went to bed as usual, but had not been long in the dark when the youngest, a little girl, ran into her elder brother's room, and exclaimed: 'Oh, I feel so frightened, I can't help thinking of the Fifth of November; and when I shut my eyes, I see those horrid masks, and I can't get to sleep.'

The brother was very gentle and tender with her. He assured her there would be nothing done

in the town on the fifth, and carried her back to bed, telling her she must be good, and remain there, and that no harm would happen to her. A few minutes after, she ran back to his room, again describing her utter terror; she could not help seeing those dreadful masks, and she felt so dreadfully frightened.

Again he took her back to bed, and tried to coax her to sleep, with apparent success; but after a little while, she ran down to her mother, exclaiming: 'O mamma, I feel so dreadfully frightened, I cannot help seeing those horrid masks; and I wish papa would come home and syringe my ears, for I am quite deaf.'

The mother took her on her knee, and coaxed and fondled her till she fell asleep; then she took her to bed, and waited in much anxiety for her husband's return. She told him of the child's dreadfully excited state, and took him up to see her; but she was sleeping so placidly, it seemed a pity to wake her. Sleep was the best medicine.

Next morning, when she woke, they discovered to their horror that the child was stone-deaf; and not only has she remained deaf ever since, but being so young at the time of her affliction, she has also become almost quite dumb. Evidently the sound of her own voice in her head was most painful to her. Sudden, abrupt noises she could still hear. No doubt, she would be able to derive some benefit from one of the new inventions—the audiphone—for enabling the deaf to hear, from the vibration of sounds conducted from the teeth to the ear; but all efforts to restore her hearing have been useless. The injury to this tiny, imperceptible nerve had so affected all the rest, that the idea of being examined by a doctor seemed entirely to unhinge the child. Some of the cleverest aurists of the day were consulted. All advised the same: 'Leave her alone. Any effort to conquer these fears, is only likely to increase the injury to the nerves. Time may cure it; nothing else will.'

MY AUNT'S TALE.

A REMINISCENCE OF THE DAYS OF BYRON.

WELL, young folks, you must know that while your grandfather was in command of a brigade during the Mahratta war of 1816-20, I met my mother in England for the first time since I was a baby; for like most children born in India, I was sent 'home' to be educated, when I was very young. I was then past fourteen, but though *petite*, looked even older. I had one brother, named Willie—your father; but he was several years my junior. My mother was an accomplished lady, and, upon her return from India, resolved that I and my brother should receive a continental education.

Accompanied by my mother and my brother Willie, we left England, and on the 1st October 1818 reached Paris by slow stages, without mishap or adventure. There we halted several days, to see the sights; and thence travelled to Lausanne, and on to Brugg, afterwards visiting the Valley of Martigny. We were a very pleasant party, and did not hurry ourselves. On the day appointed for crossing the

Simplon, although the early morning was very fine and clear, the stars shining brightly in the sky, and not a breath of air stirring, our host at the inn strongly urged us not to proceed, as he was sure there would be a heavy snow-storm. Thinking he was dissuading us from personal motives, we determined to go on; but two other parties who were there at the same time remained behind. We had not proceeded far, when, sure enough, a few flakes of snow began to fall; and very soon afterwards the first storm of the season burst upon us. As the horses attached to our carriage could not drag it along with us inside, we had to dismount, and walk close behind the diligence. As we ascended, not a soul was allowed to speak; even the bells were taken off the horses, for fear of bringing down avalanches. As it was, we saw several both in front and in rear of us, thundering down the mountain-sides, and disappearing in the precipices below. So heavy was the fall of snow, we could not see many yards ahead; and our carriage several times nearly toppled over in turning the sharp curves of the roadway. We reached the chalet or place of refuge about five P.M., and found a party of five or six, who had come from Italy, belated like ourselves. The chalet consisted of only two small rooms; and in addition to twelve or fourteen travellers, there were a man and his wife in charge; hence, how to provide accommodation for so many was a puzzle. The horses were duly placed in an outer shed; and as we had neither beds nor bedding, and but few wraps, some of the straw intended for them was brought in for our use; and bears being numerous, it was necessary to barricade both the stable and our own doors. Our next difficulty was the commissariat. As both parties were confident they could get through the Pass during the day, they had brought no food with them. All we could get from the chalet-keeper were two small chickens, two small loaves of black bread, an onion, and a little cream-cheese.

A German Count, his wife, daughter, and lady's-maid, were among the benighted. He carved the chickens into as many pieces as there were people present. We each got about an inch square of meat. I was ravenously hungry; but I never could eat black bread, onions, or cream-cheese, so mine was almost a Barmecide's feast. We spread the straw in the two rooms—to the smaller of which the gentlemen retired; whilst in the larger, we ladies huddled together for warmth. My mother sat by the fire all night and kept up a blaze, without which, we should have been frozen to death. The Countess had a large feather coverlet, which she desired her maid to offer to any of us who would accept it; but we all declined with thanks. She then told the maid she had better lie down and cover herself with it; to which the maid impertinently replied that she 'was not going to sleep on dirty straw.'

'What will you do, then?' demanded the Countess. 'Surely, if we can lie on straw, you can too.'

The maid, with a toss of her head, replied: 'You are travelling for your pleasure, and can do as you like; but as I am forced to accompany you, whether I like it or not, to gain my livelihood, I shall not do so.'

'What will you do, then?' again asked the Countess.

'I shall sleep in the carriage,' replied the maid.

The chalet-keeper, who had overheard this from the adjoining room, called out in French: 'Pray, do not allow her to do so, as bears are very numerous; and once the doors are bolted, they cannot be opened again till daylight, and the probability, nay, certainty, will be that she will be killed.'

But the maid persisted in her intention. The diligence was dragged up close to the chalet, and she got in. The carriage was fortunately very strong, with double doors and windows, the outer ones being of panel. These were securely fastened inside by the maid, and outside by the chalet-keeper. The doors, then, of our own apartment were barred inside and bolted. We ladies lay down on the dirty straw, using such wraps as we possessed for covering; but the cold was intense, and the fire, straw, and covering were only sufficient to keep us alive. Sleep was impossible. The night was pitchy dark; but the snow ceased soon after dark.

About eleven P.M. we heard sniffing and scratching at the door, and my mother nervously whispered to me: 'Bears!' which indeed they proved to be. In a very short time these unwelcome visitors made a determined effort to get in; but luckily the door was a very strong one, well fastened; and though they tried over and over again, it resisted their attempts. They then tried to get at the horses in the shed; but here again they were foiled, though the horses became much alarmed, and snorted and kicked for the rest of the night. Next we heard piercing shrieks from the maid; but to help her was impossible. None of the gentlemen were armed; nor could the doors be unbarred, as there were so many helpless ladies present. The shrieks became fainter and fainter, and at last ceased; and we knew not what the fate of the maid had been. The bears made violent efforts to get in either into the shed or into our apartments the whole night long, keeping us in a state of terror; but fortunately they were unsuccessful. At last, greatly to our relief, with the daylight the bears disappeared, and upon the doors being unbolted, their tracks were visible, not only at the doors, but all round the chalet. Under and round the carriage, the panels were scratched all over by their claws in their endeavours to get in; and the maid was discovered more dead than alive. Fortunately, unconsciousness had intervened soon after the bears' attack, and relieved her of her miseries and fears; but she declared she could feel the animals rubbing themselves underneath the carriage, climbing up to the roof, and that their very breath came in through the cracks in the doorways. It was a lesson on selfishness and obstinacy, which she probably never forgot.

Soon a large party of men appeared, and cleared the snow off the track. We got safely to the top of the Pass, and down to the village of Simplon, where we breakfasted; and thankful we were too, to get something to eat—the first, we may say, for thirty-six hours. We went down merrily in sledges to the village of Domo d'Ossola, on the Italian side, which in its bright-

ness and regularity more resembled a tropical clime than the icy regions we had passed over. Here we halted a few days, and then visited Turin, Milan, and Florence. In the last city, we resided at a large boarding establishment, kept by a Madame du Planti, in a house which had formerly been Madame de Staël's, in the Via Scala. There were some thirty boarders in this house; and here we remained two years, occupied with our studies.

During a part of this time, the poet Shelley, his wife and infant, were inmates of the same house; and we soon made their acquaintance. They were very kind to us; and Shelley proposed to mamma, that if she would accompany them to Pisa, where Lord Byron was resident, he would himself undertake William's education; but mamma declined, saying she was fearful her husband would be displeased if she allowed an intimacy between her family and Lord Byron's. (Indeed, she was half afraid he would not approve of our friendship with Shelley and his wife.) During my leisure hours, I was always in the Shelleys' apartments. The poet would place his infant in my lap, and bid me amuse myself with a live doll, whilst he continued his writing. Both Shelley and his wife were delightful; and when they left, some months afterwards, we were very sorry. One day, Shelley told me Lord Byron was coming next day to visit him. In vain I implored mamma to let me be with them when the great poet came; but she would not hear of it. I told Shelley this with tears in my eyes; and he said: 'Well, little woman, if mamma won't let you be in the same room with the ogre; if you are very anxious to see him, look through the keyhole, and I will place him so that you shall have a full view of him.' So, next day, Willie and I went on tiptoe to Shelley's door, and peeped through the keyhole. We were so fascinated, alternately watching the great poet, that we remained there some time. At last, Byron began to fidget, and said: 'I say, Shelley, I don't know how it is, but I feel as if some one was watching me.' Shelley smiled; and pointing to the door, told him what we were doing, and who we were, and also that mamma would not allow us to make his acquaintance. 'I had no idea,' said the poet, 'I bore such a very bad name. I should be very glad to know the young people, and their mother too, if she would permit it.' He then got up and came towards the door; but we fled down the passage, whilst he and Shelley stood laughing. That was the first and last I saw of Byron.

From Florence we went to Rome, and stayed there six months. Here I received my first offer of marriage. Viscount B—— was very rich, but rather elderly, and a widower, and asked mamma for my hand. She did not know what to do. I did not care a bit for him; but whilst mamma was in doubt, the English ambassador called on her, and said: 'If not taking too great a liberty, might I ask if it is true that the Viscount B—— is a suitor for your daughter's hand?' Mamma said: 'Yes; but I don't know what to say.' 'Then,' replied the ambassador, 'do not let her have anything to say to him; for though enormously rich, he bears a very bad name; and as he is a dangerous enemy, take my advice, and leave Rome quickly.'

So at an early date we quitted Rome for Naples. Willie had bought a pistol; but the driver of the diligence begged it might be taken away and hidden; for if we came across bandits, and any resistance was made, all our throats would be cut. A short while before, a party of brigands had entered a boys' school, and had carried away some twelve or thirteen of the scholars, for whom they demanded a large ransom. The parents foolishly sent the money by some soldiers; and the ruffians suspecting treachery, beheaded the hapless boys, and stuck their heads on poles; where they still were, when we passed by. Near Portella, on the frontiers of Naples, the driver pointed out some objects, still far distant, which he declared were bandits making for us. He dared not go out of a walk, for fear of being shot at; but he said, as it was dusk, one of us might get away unperceived, and go to an outpost of the Austrians, not more than a mile away. So Willie and I ran on as fast as we could, keeping close to the hedge, and reached the guard more dead than alive, and made them understand we needed their assistance to save our party from capture by brigands. Twenty-five men at once hastened back, and were just in time, for the diligence had been brought to a stand-still by a couple of robbers. The main body, however, was still at some distance, and on seeing the soldiers, decamped. The soldiers fired a few shots, to hasten their movements. We had to pay rather heavily for this assistance, as we had to give each soldier a present; but we were thankful to be out of the scrape.

Our troubles were not at an end yet; for on the police at the frontier demanding our passports, we found only mamma's and Willie's name entered, mine having been omitted by mistake. What to do, we did not know, as the guard would not allow me to pass with the rest; whereupon I boldly declared I was the wife of one of the Austrian officers who had preceded us. I was then permitted to go on, accompanied by gendarmes; and we entered the first large café we came to, where there were numerous Austrian officers lounging about. Austria had just then occupied Naples; and of course the Austrians, especially the soldiery, were supreme. We sat down at the first table. I had tears in my eyes, and both mamma and Willie looked troubled. The gendarme stood outside. At last an officer came up to us, and said: 'Pardon, Madame, but if I am not mistaken, you are strangers and in trouble. I am the Commandant C——, and shall be happy to be of assistance to you in any way.'

Mamma explained our difficulty, and the ruse I had adopted to get beyond the barrier. The Commandant laughed, and said: 'Mon Dieu, Mademoiselle, I am too old to pass myself off as the husband of so charming a young lady; and moreover, everybody knows I have a wife and children, or I should only be too proud of the honour! But I will see what can be done.'

He then went to a table where there were many officers, and we heard much merriment. At last, a young officer came up, and offering me his arm, said: 'Permit me the happiness of being of assistance to Mademoiselle, and to

personate for a few brief but happy moments the rôle of husband ;' and putting my arm into his, he led me up to the gendarme, and said : 'This is Madame. That will do. You can return to your post.'

The man saluted, and went away ; whilst my liberator took me back to our table, and left me with many bows and polite speeches.

We remained two years in Naples, and were the best of friends with the Austrian soldiers, who were a fine and gentlemanly set of men.

The Commandant took an especial fancy to William, and persuaded mamma to let him enter the Austrian service, which he did as a common soldier for six months, and then he got his commission as cadet. He got to like the service very much ; and when papa wrote that we were all to return to India, and that he had got a cadetship for Willie in the East India service, he begged to be allowed to remain where he was. The Austrian government offered him a Lieutenant's commission at once, if he would remain ; but papa would not hear of it, as he was now a general officer, and had sufficient interest in India to push William on. So poor Willie had to throw up his commission, and to return with us to London.

Six months after our return to England, we embarked for India ; but I was so ill, that I could not proceed ; consequently, mamma and I were landed at the first place we touched at, whilst Willie went on alone.

I was married soon afterwards. Papa had got his off- reckonings, and had returned home for good ; so mamma joined him there ; whilst your father followed his career in India. The rest you know.

THE MANUFACTURE OF FABRICATED WINE.

THE increasing use and production of fabricated wines in Switzerland are giving rise, says a Geneva correspondent of the *Times*, to serious apprehensions, if not to actual panic, among the vineyard proprietors of the western districts of the country. The prosperity of several cantons is based either wholly or in part on the success of viticulture, and anything that threatens to hinder the production or curtail the consumption of wine, naturally creates great alarm. The canton of Geneva alone, which possesses only fifty-six thousand acres of cultivable land—vine-lands included—produces wine of an estimated value of four million francs yearly. The present trouble comes neither from phylloxera nor mildew, neither from frost nor hail, but from the competition of *fabricated* wine with the genuine article, and the seeming impossibility of meeting this competition. Adulterated wine can be dealt with. It is easily detected ; it is injurious to health, and immense quantities of deleterious stuff are every year confiscated and destroyed. But the merely fabricated article contains all the constituents of real wine, and the most careful analyst can find nothing in it that he does not find in the fermented juice of the grape. It is composed of ninety per cent. of water, five to six per cent. of alcohol, and four to five per cent. of tannin. The water, which costs the viticulturist as much as any other of the constituents of wine, costs

the fabricator next to nothing ; the tannin and the alcohol he extracts from imported raisins. Thus the liquor he concocts can be sold by the maker at the low price of about one shilling and twopence a gallon, and still make a handsome profit. The retailer sells it at about double the maker's price, his profits thereon being probably five or six times more than he gains by the sale of naturally prepared wine. Nor is this all. Experiments are being made with a view to finding a chemical substitute for the raisins used in the manufacture ; in which event, fabricated wine could be produced at a cost little exceeding that of slightly alcoholised water, and viticulture would be as utterly ruined as madder cultivation has been ruined by the discovery of the alizarine process of Turkey-red dyeing.

The making of wine artificially, dates in the canton of Geneva from the time when the phylloxera began its ravages among the vineyards of France, and it has now become an extensive and profitable trade. The difficulty of putting it down, especially in Switzerland, where the constitution guarantees the fullest liberty of commerce, seems almost insuperable. There is no law whereby a man can be prevented from manufacturing an article which he calls fabricated wine, and selling it to whomsoever will buy. Many customers of the retailers of it are, doubtless, under the impression that the liquor served out to them is wine and nothing but wine. How are they to know that it is not ? If one of them, more suspicious than the rest, takes a sample to the public analyst, he will simply be told that it contains all the constituents of good wine, and no substance that good wine ought not to contain.

In these circumstances, it is not surprising to learn that the proprietors and peasants of the district, almost every one of whom is more or less interested in the culture of the vine, should demand the intervention of the State, and have petitioned the local government to devise means for the suppression of a trade which 'seriously menaces the dearest interests of our agriculture.' As proof of the reality of the evil to which they draw attention, the petitioners mention that, albeit the last vintage was less productive than usual, the price of wine is under the average of previous years. This result they attribute altogether to the competition of the chemical wine manufacturers. 'It is hard,' says the correspondent above quoted, 'to see what the local government can do. Without an amendment of the federal constitution, they have no power to put down either the manufacture in question or any other ; and even if it were put down, the fabricators would only have to cross the border, concoct their compounds in Savoy or the French Jura, and introduce them into Switzerland as, say, a mixture of alcohol and water. This might increase the cost of production, but it would not extinguish the trade. The difficulty might perhaps in some measure be met by imposing on the manufacture a moderate excise duty ; but as this expedient would also involve a breach of the constitution, it is equally out of the question. The problem presented to the Genevan Council of State is assuredly one which it will tax all their ingenuity to solve.'

But Switzerland is not the only vine-growing

country that is suffering from the manufacture and sale of fabricated wines. The French on the Loire have, owing to the ravages of the phylloxera for some seasons past, turned from being growers to being manufacturers of wine; and they have found, says another contemporary, much of their raw material 'in the hasty and wholesale productions of the neighbouring districts of Italy and Spain. A great proportion of this crude wine, hurriedly and carelessly made, is consequently unsound and immature. It is refined to the palate in skilful French hands. And this supply of the juice is supplemented by a supply of the grapes themselves. A vast trade has sprung up in these grapes. The vine-growers of north Italy and of northern Spain are now sending their grapes to France and Germany, and are for the time giving up wine-making. It is even reported that in some of the great Marsala districts—so far away as Sicily—so great and so profitable is the export of grapes to France, that this year there is danger that no marsala will be made.'

The great demand for *light* French wines comes from England; and as the French cannot, by reason of insect ravages, supply those wines pure, they have taken to supplying them in an adulterated or fabricated form. In this way, they make a shift to keep up their trade connections in this country; because they know that if the liquor is so diluted as to be below an alcoholic strength of twenty-six degrees—which is the Customs' standard for light wines—it will have entry into England on the reduced tariff; while the excellent and wholesome wines of Spain and Portugal, because their strength somewhat exceeds this standard, are charged upon a very much higher tariff, and are consequently shut out of the English market. It was long a popular belief that 'natural' wines never contained much alcohol, and that when their alcoholic strength exceeded twenty-six degrees, they might be held as adulterated. This is now found not to be the case, perfectly sound and wholesome wines frequently exceeding this limit.

The production of these fabricated wines is rapidly increasing; and, looked on merely as scientific triumphs, they are wonderful. In Hamburg, we are told, one can nowadays taste, without possibility of detecting any difference, two bottles of Johannisberg, the one genuine grape juice of the Johannisberg vineyards, and the other a liquid guaranteed to contain no grape juice whatever. The same authority states that in the neighbourhood of Marseilles we may purchase 'claret' which has no single ingredient that has any connection with vines, whether of the Bordeaux or any other district. All these concoctions, as already mentioned, are due to the fact that the English must have *cheap* claret; and what they call 'cheap' claret must be below twenty-six degrees of alcoholic strength; and this standard of alcoholic strength, like many other legal nets, captures the small rogues and allows the big ones to escape—that is, it places a restriction on the sale of Spanish and Portuguese wines that are mostly good and wholesome, and encourages the trade in light French wines that are to a very large extent either adulterated or entirely fabricated and artificial. The remedy for the evil, so far as

this country is concerned, would seem to be to raise the standard of alcoholic strength sufficient to admit of the entrance of the higher-class wines from Spain and Portugal into the English market; and as soon as the latter wines came into competition on equal terms with those from France, the market for the adulterator and the fabricator would be gradually closed, and their occupation correspondingly diminished.

PRIMROSES AND OTHER FLOWERS.

A HINT TO TOWNSFOLK FROM A COUNTRY GARDENER.

If we were so unfortunate as to be compelled to cultivate one class of plants only, we would be much inclined to choose primroses. A first-love makes a permanent impression, and primroses—the simple wild ones—were our first horticultural love. Long ago, we had a small plot planted almost wholly with primroses. That was before we were old enough to go to school. By-and-by the hedgeside primroses were gradually displaced, for kind friends collected and presented us with garden kinds. How rich we felt when we became possessed of these! We never will feel so rich again. And what miser ever exulted over his accumulated hoards as we did over these lowly gems! What lover of gold ever so gazed at his treasure, as we at these lovely yet simple flowers!

One day during the past mid-winter, we plucked one single bloom, which had ventured to salute the sun; and as we looked on its loveliness, all the past spring-times of a quarter of a century came rushing back upon us. Again we looked on the crumbling wall, last relic of the home where for generations our forefathers lived, beside which the treasures of our boyhood grew. Again our mother was by our side with her ever-ready instructions. There stood our father, returned from an evening's angling in the quiet river; and there our sister and our brother, as they were before the one grew to womanhood, and the other went to sleep beneath the primroses that were once his own. And as the sight of the grave to which these flowers were transplanted, comes up before us, we drop a tear, which might have been bitter but for the sweetness cast into our lot by the pure love of the simple wayside flower.

Surely every one loves primroses! Most persons whose youth was spent in the country, do; those whose homes are in the town, sigh for such treasures. The days when they gathered primroses are past with them in their brick-and-mortar-bound prisons, and if they ever think at all about them, it is with regret at their not being able to possess them. We shall, however, show that this fancied unavailing regret is a mistake to every one who can command a window-sill, a box, and a little common soil. Skill isn't wanted; but a love for the flower is. True, it does not bloom all the summer; but, unlike nearly every other flower, it doesn't mind sharing its lot with other things that will bloom when it goes to rest. A few crocuses and snow-

drops will enliven your little box almost ere the snow has left the hills, just as effectively as if no primroses were there. These should be placed round the sides. They will not be harmed if a few hyacinths should be placed singly between the clumps; and we all know that these will bloom in early spring. In summer, you may have a few sweet-peas, fastened to a string at one end, trained up one side of your window; and a climbing Indian cress or *Tropaeolum* at the other, framing your window with sweet-scented glowing flowers. When your snowdrops and other bulbs disrobe for their summer's sleep, a pinch of seed of the ever-popular and delightful *mignonette*, scattered along the sides, and lightly covered with soil, will speedily grow and hang over the sides in the most delightful drapery, and scent your room if you only move up the sash a little to allow of the fresh air entering. Talk of hangings and furnishings! what hangings ever surpassed or even matched glorious living blossoms and tender green leaves!

While love of flowers will enable any one to grow them, even under very great difficulties, sometimes a few hints are of service, especially to beginners; and as our life is spent cultivating plants, we are in a position to give reliable advice so far as it goes. We will say nothing about the construction of a window-box, for no doubt you have seen them, and the shape matters nothing. However, we would advise you not to make yours less than six, or more than nine inches in depth.

The next thing is the soil. If you have friends in the country, you can easily procure that. If your friend is, or knows, a gardener, so much the better. What you want is loam, and this is old fibry turf well decayed. A good substitute is decayed twitch-grass, and that can easily be got. Failing that, choose moderately heavy soil from a *field*; and when you have got it, mix it with one-third of decayed manure, or, better, thoroughly decayed leaves—what gardeners call leaf-mould. A tenth of sharp sand or small gravel, and a few pieces of charcoal or potsherds, will make a nice, sweet, rich, porous soil, in which all the plants we have named will grow to perfection.

The placing of the soil in the box properly, is a matter of much importance. To allow the surplus water to escape, you must provide drainage. To secure this, a few holes must be bored in the bottom of the box; and over these holes, one inch of broken cups and saucers, imbricated like the slates on the roof of the house, with the concave sides down, must be laid. From the soil, pick out any fibry matter, and spread it, after shaking out the loose soil, over the corks; this will prevent the soil working in among them, and choking the drainage. Worms must also be removed, or they will work the whole soil into a puddle. Then fill the box with the soil, and press it firmly; for loose soil holds too much water. Don't exactly ram it hard, or the tender roots will fail to penetrate it. Leave half an inch at the top of the box empty, to hold water.

Now you are ready to begin; now you possess a garden. All you want now are a few seeds and plants. If you begin in spring, and that is the best time, you had better procure a few plants

of the kind you love from a friend in the country, or buy them from a nurseryman. Go in for what you love.

We will not add to the list, for it would only bewilder a beginner, and those further advanced don't need instruction—experience has taught them what to grow. Primroses may be planted either in spring or autumn; snowdrops, crocuses, hyacinths, and bulbous plants late in autumn; annuals, such as *mignonette* and Indian cress, in April; sweet-peas and hardy annuals generally, in March. In sowing seeds, always cover them with soil twice the thickness of their own diameters, and take care that the soil never becomes parching dry or puddled with wet. In watering, fill the box to the brim with water, and it will soak all the soil. To allow it to pass freely away, let the box stand on two pieces of wood, so that the water may have free egress. Never water by dribbles, for that sours the surface and starves the bottom; and never water till water is actually wanted.

MUSINGS IN THE TWILIGHT.

In the Twilight alone I am sitting,
And fast through my memory are flitting
The dreams of youth.
The Future is smiling before me,
And Hope's bright visions float o'er me—
Shall I doubt their truth?
I know that my hopes may prove bubbles,
Too frail to endure,
And thick-strown be the cares and the troubles
That Life has in store.

But 'tis best we know not the sorrow
That comes with a longed-for to-morrow,
And the anguish and care:
If the veil from my future were lifted,
Perhaps at the sight I had drifted
Down into despair:
If I knew all the woes that awaited
My hurrying feet,
My pleasures might oftener be freighted
With bitter than sweet.

And yet, though my life has been lonely,
Some flowers I have plucked that could only
From trials have sprung;
Some joys I have known that did borrow
Their brightness from contrast with sorrow
That over me hung.
For the moonbeams are brighter in seeming
When clouds are gone by,
If only a moment their gleaming
Be hid from the eye.

Sad indeed would be Life's dewy morning,
If, all Hope's bright promises scorning,
O'erburdened with fears,
We saw but the woe and the sorrow
That would come to our hearts on the morrow,
The sighs and the tears.
So 'tis best that we may not discover
What Fate hath in store,
Nor lift up the veil that hangs over
What lieth before.

PLATONIC FRIENDSHIPS.

THE subject of Platonic friendships or attachments is a tempting one to an essayist; yet its treatment is difficult and delicate, on account of the dangerous ground over which we must tread. Without going back to the theories of the old Platonists, some of which are exploded, and most of which have been considerably modified, we all know what is meant by the term 'Platonic friendship' in the phraseology of the present day. The words are indeed generally used in rather a sneering tone, and there are many unbelievers in the existence of such a relationship. Most people think it quite an ideal connection, only to be realised in some Utopia, to which we are all obliged to relegate in turn most of our cherished illusions. Still it is a beautiful conception; and as there undoubtedly have been well-authenticated historical instances of such an intercourse, we may be permitted to treat of it as at least possible, if rare. It will, however, first be necessary to define strictly what a *bona-fide* Platonic friendship is, as the name is often degraded, and made to mean very different things by different people.

A pure Platonic friendship, then, is, as we shall speak of it in this paper, a close and constant attachment between two persons of opposite sexes, into which, from beginning to end, nothing of the passion of love has ever entered, and in which neither of the parties has ever contemplated marriage as the result of their friendship. It is, we must confess, a connection so rare, even amongst men and women of exceptional characters, and under exceptional circumstances, as almost to justify the prevailing scepticism as to its possibility. Yet we cannot shut our eyes to the fact that there have been such friendships. We have biographies and letters of well-known literary characters which testify to the existence of what we have called Platonic attachments lasting for years, or even for a lifetime, and which have been beneficial

and comforting to both parties. We also, some of us, know cases in our own experience, or in that of those around us, of friendships which have so closely justified the definition given above, that there would be a difficulty in placing them in any other category.

It is easy to account for the rarity of the connection. We all know, alas! to our cost, and to our sore trouble of heart, how rare a thing a true mutual friendship is, even between persons of the same sex, and how many disappointments we meet with in our way through life. How much more rare a thing, then, must be a true, unselfish, strong attachment between those of opposite sexes, when we consider the snares and pitfalls which lie in its course. If the two parties are perfectly free in heart, they are of course subject to the danger of permitting their friendship to develop into something closer and deeper; and if, on the other hand, they are bound to others either by congenial or uncongenial ties, there is the worse danger of jealousies, and of that interference with 'vested rights' which is always to be deprecated. It is therefore easy to see why the Platonic sentiment has come to be so generally sneered at and distrusted.

It is probably due to the character of our social laws and conventionalities and old prejudices, that such connections are very uncommon in this country. This may result as much from want of the opportunity to bring such friendships to perfection, as from there being anything in nature to forbid them. We may remark, indeed, how very rarely our novelists or poets—who touch on almost every possible relationship of life—have portrayed for us a steady typical Platonic friendship. We can scarcely recall an instance of even one such, in thinking over all the fictions we are familiar with. Even when there has seemed a promising case in the beginning, as Adam and Dinah in *Adam Bede*, Tom Thurnall and Grace in *Two Years Ago*, or Daniel Deronda and Gwendolen, it has always failed in the end, and the destructive element of love—destructive, that is, to the continuance of the Platonic connection

—has obtruded itself, sometimes on one side, sometimes on both. It is not difficult to see why this should be. The most natural termination to a close and tender attachment between the sexes, where both have hearts unoccupied by others, or by 'a memory,' is love, pure and simple, even though the attachment may have begun, and continued for years without any admixture of this passion. On the other hand, in the case of two people who have other ties, the Platonic connection is seldom desired, and is always dangerous.

The chief components of a true Platonic friendship are, on the man's part, affection, respect, and entire confidence; on the woman's, devotion, self-sacrifice, and a constant regard for the well-being of its object. It partakes more, as we have said, of the nature of the relationship of brother and sister, or, if the ages differ much, of that of parent and child, than any other affection. Those among us who have happily realised this ideal friendship, or think they have done so, may be permitted to rejoice in it. It is a relationship which it seems a pity to believe impossible, or even uncommon, and is one which we can conceive of as being fruitful in beneficent results to both men and women, a sweetener of existence to many solitary hearts who, from other adverse circumstances, incompatible ties, or other causes, have failed to find much comfort in the more ordinary relationships of life.

Men who have met with a real and lasting disappointment in love—and there are such cases—either from death, treachery, or an unhappy marriage, are the most likely subjects of all others to form a strong Platonic friendship for any kindly, sympathetic woman with whom they may be brought into contact. Indeed it is almost certain that they will do so, as it is scarcely possible for any one to live without at least one close friend; and the heart may be too dead for a second trial of the closest passion of all, or there may be obstacles in the way of indulging it. On the other hand, those who are called 'disappointed women' are not such promising subjects. Being generally too faithful to a love or a memory to care for any new tie, they solace themselves with their remaining domestic connections, or with the love of children.

There are, however, women free in heart who are specially capable of Platonic attachments. Some women from the tone of their mind, or from the habit of hourly and daily intercourse with the beloved male members of their own family, grow to like the characters, conversation, and companionship of men better than they do those of their own sex; and they therefore form attachments for, or at least are strongly attracted by, men of their acquaintance, whom they know well, and who may chance to be congenial spirits. And this may be so without a thought of love, especially if love is not offered to them. Men who are disappointed in their wives, as far as intellect goes, often seek mental companionship elsewhere, and generally choose a woman for such. This is, however, one of the dangerous cases; and the woman chosen must indeed be so exceptional as to be an almost impossible character.

There are often what may be called spurious Platonic attachments, as there are spurious

loves, which bring discredit on the real article; some in which one or both parties think they are acting *bond fide*; others in which the name of the half-recognised sentiment is made use of for unworthy purposes. There are men, for instance, who are capable of a very good imitation of a Platonic attachment, and who indulge in such in all good faith. We can all recall cases of this kind. They chiefly occur between cousins, or old friends from childhood, who have been thrown much together, and have many interests and thoughts in common; but often between mere casual acquaintances, where the girl is soft, sympathetic, and kind, and above all not exacting. The men in these cases may truly love elsewhere at the same time, and make the secondary love, so to speak, the receptacle of the confidences to which their male companions would not have the patience to listen. These little episodes in a man's life are, however, very far from fulfilling all the conditions of the true or ideal Platonic friendship, which is in its purity and intensity a thing of the life and of the heart, and one of the chief elements of which is constancy.

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

CHAPTER X.—THE GHOST OF GARLING'S PAST.

GARLING, trusted cashier and manager to the great house of Lumby, sat in his own apartments in Fleet Street. The streets outside were filled with fog, and the lamps burned yellow in the haze. Voices of passers-by, footsteps, roll and roar and rumble of traffic by seething Temple Bar, came faintly, as though filtered through wool before reaching Garling's ears. There was a half-extinguished fire upon the hearth, the red glaring with dying anger through gray ashes. At a large circular table, lighted by one shaded lamp, sat the secret man, his hands resting passively in the light, his face in darkness. Outside the circle of the shaded lamp, everything lay in doubled darkness; and shadows lurked behind the meagre chairs, hiding in gloomy corners, as though, like Garling's face, they had drawn back from the tell-tale lamp. Muffled like the outer sounds, the voices of dead youth spoke through the fogs of many years. Unformed and indistinct, like the shadows in the corners of his room, the faces and figures known in that dead youth time moved before him. He had no wish or will to summon back the Past, but it flowed in upon him like a phantom tide. He could no more resist its coming than he could have swept back a real sea upon an actual beach. It rose about him with voices sad and terrible, and, as it were upon the crest of every phantom wave, old faces smiled or frowned again, and in the murmur of that tide of time old voices spoke.

Out of this mood he came into another, to which the first seemed but the natural prelude. Scenes came before him: gray, as in dreams, with no light upon them. And, indistinctly—as he saw the scenes—he heard the voices of those who acted in them, filtered through the fogs of years.

'You are going,' said one phantom, 'to the coast!'

'Yes,' said another; 'down to Devonshire.'

The latter phantom was himself of three-and-twenty years ago; the other, a friend who died.

'I am uncertain where to go,' said the voice of the first phantom, speaking in Memory's ear. 'Shall I join you? Do you mind?'

'Come by all means,' said the ghost of Garling's past; and the scene changed, yet the people were the same.

'I am recalled,' said the shadowy friend, 'and must return at once. I must travel hastily. You had better take my luggage on, and bring it back to town with you.'

The scene changed again. His self that was, had lighted at a village inn alone. He saw the ghost of a coachman, the ghosts of a team of horses, the ghost of a coach, the ghost of an old portmanteau. The portmanteau bore a name—E. MARTIAL—painted in white letters. There was an unsubstantial waiter on the scene, touching a shadowy forelock with vague finger. 'Your luggage, sir?'

'Yes,' said the ghost of Garling's past; 'mine.' And so he was there as 'Mr Martial.' He had not thought of these things for years.

It was moonlight in the summer-time, and the gray waves vaguely seen were crumbling on the cliffs below. Roll and roar and rumble of traffic by seething Temple Bar came through the fog, and helped the picture, with noises as of the sea. His dead youth was here again.

'You love me well enough to trust me?'

'I love you better than any words that I can find will say.'

Is this a careworn woman, in a squalid room, with sewing on her lap, looking up at him as he enters? No. That was only a break in the vision, and the girl's face was fair—fair, with a tender bloom upon it; and in the eyes which turned to look in those of the ghost of Garling's youth, the light of love. Passive, dull-eyed, sate Garling in his own room, pondering on this dream. Was there any touch of pity in him—any stirring of remorse?

A village church—a quiet wedding—a clergyman, quite blurred with the fog of many years, was speaking; but ill-remembered though he may be, his voice was clear enough—'Wilt thou, Edward Martial, take this woman to thy wedded wife?' It was Garling's voice which answered 'I will:' his own hand traced the false name in the ghostly register. Garling's dead youth had kissed the bride, and the picture faded. Was there any touch of pity in him—any stirring of remorse?

* * * * *

Suddenly, in one high corner of the room in which the cashier dreamed these dreams, a bell rang. Moving his hand in a startled way, he tilted the shade upon the lamp, and all the shadows that had lain behind him swept across the room, as the visions fitted from his mind. He threw open the door, wide, so that the lamplight might fall upon the stairs without, and passed down them. 'Who's there?' he cried.

A voice spoke through the letter-slip, and stirred the little cloud of yellow fog that lingered round it. 'I want to see Mr Martial.'

'Who are you? What do you want?' asked Garling ungraciously, as he opened the door.

A tall figure stood in the fog, dimly visible by the light of a street lamp. The cashier peering at him, made out that he was respectably attired. 'What do you want?' he asked again.

'I want to see Mr Martial,' said the man. 'Is that you, mister?'

'Mr Martial has gone away from here long since,' said Garling.

'That's a pity,' said the man. 'His wife's dyin'. She sent me to this address—at least her daughter did.'

'Come in.'

The man entered, closing the door behind him, and followed the cashier up-stairs. Garling turning round upon him there, as he stood full in the lamplight, looked at him for half a minute, and then replaced the shade of the lamp. 'Who are you?' he demanded.

'I'm a lodger in Mrs Martial's house.'

'What's your name?'

'Hiram Search,' replied the messenger.—'What's yourn?'

Garling returned no answer to this query; but from under down-drawn brows regarded his visitor, rather as if he looked beyond him than at him.

'Can you tell me where Mr Martial is to be found?' asked Hiram.

'No,' said Garling; 'I can't.'

'And wouldn't if you could,' said Hiram to himself. The cashier's manner certainly conveyed that inference legitimately enough.

'How long,' asked Garling, 'has his wife been ill?'

'She's been ailin',' Hiram responded, 'for a long time; but she's only been real bad about a week.'

'Who says she is dying?'

'Doctor,' said Hiram laconically. Neither of the two men liked the other. There was an instinctive antagonism between them. 'Says she can't live the night out,' he added.

'Go and call a cab,' said the cashier.

'There's one outside,' responded Hiram.

Mr Garling drew on an overcoat, goloshes and gloves, wound a muffler about his throat, put on his hat, all gravely and deliberately, and then turned down the lamp. Hiram led the way down-stairs, and they entered the cab which waited at the door. 'Drive straight back,' said Hiram, 'an' make haste.'

Roll and roar as though a tide were rising near at hand. Spectral appearances and disappearances of red-eyed monsters, mistily discerned as hansom cabs, growing out of fog-like exhalations, and melting back again. Roll and roar of the unseen tide along noisy Fleet Street and loud Ludgate Hill and by echoing St Paul's, and then a dulled quiet in Cheapside, as though the breakers had fallen into sudden frosty silence. Then from the asphalt to the stones again, with renewed bellowings of the unseen tide. Nothing seeming real to either of the travellers but themselves and the vehicle they sat in. Even the cab, verifying its existence by painful joltings, was drawn, in quite a ghostly and unreal manner, by nothing but the phantom hind-quarters of a horse.

All this time Hiram speculated as to the identity of his companion, resolving now that he was the husband of the dying woman, and

now that he was not. 'If I know anything about human nature,' said Hiram to himself finally, 'he's the sort of man who'd find lying come easy to him. Sooner lie than not, I fancy.' He was most unfavourably impressed with Mr Garling, and judged rashly. The cashier had, in point of fact, no preference either way, but told the truth or not, as it suited him.

The cab began to turn and twist amongst narrow and ill-paved streets, and by-and-by drew up before a mean and dingy door. Even in the fog, Garling knew it, and alighting, laid his hand upon the knocker; when Hiram seized him by the wrist, and whispering, 'Gently does it,' leaned above the area railings and tapped softly with his fingers at the window.—'I've lent my latchkey to the nurse,' he explained. In a moment, the girl who had answered Garling's summons on his former visit, opened the door, and stood aside for them to pass. She carried a candle, and, protecting the flame with her hand, threw its feeble light upon her own face. Garling stood still and looked at her for a second or two; and she returned his gaze with some astonishment, not unmixed with fear.

'You love me well enough to trust me?' It was the phantom voice of an hour ago—the echo of the voice of his own dead past, sounding in Garling's ears.

'I love you better than any words that I can find will say.' Question and answer murmured in his ear as he regarded her. She was the revival of what her mother had been. Was there any touch of pity in him—any stirring of remorse?

'Where is your mother?' he asked.

'She is waiting for you,' the girl responded. 'Come this way.' Holding the candle aloft, she passed up the stairs with the light shining down upon her hair, and making a halo upon it. Garling followed. The girl tapped at a chamber door; and a woman dressed in black opened it, and making a motion with her hand, as if to warn them both to silence, admitted them.

'Is she awake?' said Garling, in a hoarse under-tone.

The woman shook her head, and whispered: 'Sit down.' She motioned to a chair; and Garling obeyed her.

The girl, still shading the candle with her hand, retired. One night-light burned feebly in the room, and the sleeper's face was shaded from it. The fire had died within the grate, and the air was cold, and tinted yellow with the fog. A clock in another room ticked irregularly, with a sort of broken gallop in its sound, as though Time were tired, and hastening with uncertain footsteps to its close. As Garling listened to it, it came suddenly to an end, leaving an ominous pause. Distant breakers on great London's shore rolled from silence into silence. The pale shadows of his waking dreams were back again; the thin voices murmured on his inward ear. 'You love me well enough to trust me?' Again his own question. How had he repaid the trust he once invited?

The sleeper moved uneasily; and, rising, he drew the curtain a little to one side and looked at her. Her face was pale, and held no resemblance to what it had been, or any remembrance

of it. The change was chiefly of his making. He dropped the curtain noiselessly and sat down. The distant breakers on great London's thoroughfare heaved slowly up, rolled over, and died again to silence one by one. Any rustle of the nurse's dress was quite an episode. Any closing of a door in the street without, any passing footstep or voice that said 'Good-night,' any ash that shifted in the dead fire—took a weird importance. And so an hour went by, and the sleeper awoke.

'Has Mr Search come back?' she asked, feebly, with a pause between each word.

'Yes,' said Garling; 'and I am waiting here.'

'Leave us alone,' said the dying woman to the nurse, who bent above her. The nurse lingered, touching things here and there, and then retired, closing the door gently.—'Come here, Edward. Let me see you.'

'I am here,' he responded, 'in answer to your message.'

'Edward, I am dying.'—He made no answer.—'I never wronged you.'—The words 'I know it' were almost on his lips, but he did not speak them.—'I have no reproaches.' She could say no more for very weakness.

'Is there anything,' he asked, in a dry and husky voice, 'that I can do?'

'Yes,' she breathed, looking at him with bright sunken eyes—'Mary.'

'You wish me to take care of her?' The closing eyelids silently indicated 'Yes;,' and he said coldly: 'I will do it.'

'Edward!' she breathed.

'Yes?' he answered in the same dry tone.

The merest motion of her head beckoned him down, and he inclined his ear.

She murmured word by word: 'I have forgiven everything.'—He never moved or made a sign in answer.—'If I did wrong—if I tried you'—the words fell one by one, and were barely audible—'forgive me now.'—Perhaps, if the inward voice had been less loud, he might have spoken.—She raised her wasted hand to his cheek, and he started upright at her touch. It was the first caress from any hand which had been laid upon him for now many years, and it was harder to bear than even the inward voice of accusation.—'Edward,' she whispered, 'kiss me.'—He bent stiffly down, and kissed her icily on the cheek. It was horrible to do it. Any pretence of love from him to her was such a lie, that even he revolted at it.—She closed her eyes, and lay breathing faintly; whilst he stood looking down at her face, and listening to the noises of the streets. By-and-by he could hardly tell that she breathed at all, and creeping stealthily from the room and down the darkened stairs, he knocked at the door of the lower apartment. It was opened by the girl who had admitted him to the house. He entered, and glanced about him. There were few changes. The table was still littered with cloths and the floor with shreds, and there was some unfinished sewing cast over the back of a chair. The nurse sat brooding at a dispirited fire, and looked up as he entered.

'Go to your patient,' he said; and the woman, moving as if she resented the order, or disputed his right to give it, left the room.—He turned upon the girl. 'Do you know who I am?' he asked.

'My mother said, after you came last time'—She was in evident dread of his eyes, and shrank from him.

'Your mother said—what?' he demanded drily.

'She said you were—my father.'

'She has sent to me, upon her deathbed'—the girl clasped her hands with a look of terror—to recommend you to my care. It is too late now to enter into the reasons which caused your mother and myself to part. I have promised that you shall be provided for; and if I find you dutiful and tractable, you shall be well provided for.'

'Her deathbed?' cried the girl, as if all the rest had passed her by unheard.

'I shall be here again to-morrow between one and two o'clock,' he continued. 'You will then tell me what you need, and I shall make it my business to provide it.' He might as well have spoken to the wind. She passed one hand across her eyes in a blind and vacant way, and looked at him with no discerning. He smoothed with his coat-sleeve the hat he held in his hand, and with a curt 'Good-night,' was gone.

The fog was denser than before, and the air had grown so raw, that though he was well wrapped up, and walked hurriedly, it chilled him to the bone. The ghostly and unreal semblance which everything bore in the fog, was in consonance with his mood, and was perhaps answerable for it. 'I did not marry *that* thing,' he muttered to himself, as the drawn face of his wife presented itself. He knew the vileness of that exculpation, and his thoughts goaded and irritated him. Dead Love, asking for some tenderness of pity, and being thus refused, brought fire instead of tears. He walked on, hurrying through the shadowy streets, carrying his own landscape with him, peopled with its shadowy creatures. Admitting himself at length at his own door, he mounted the stairs and entered the half-lighted room. He had never been a nervous man, and never a coward until now; but there was such a chill of terror on him that his hand shook as he turned up the lamp. The shadows fleeing back from the growing light, put him in mind of secret marauders hiding; and in great tremor, which not all his own scorn for it could subdue, he ranged over his two rooms, lamp in hand, examining every crevice, looking beneath the bed, and opening the curtains of the shower-bath which stood in one corner. The noises in the street were more subdued, for the hour was growing late. The fire was dead in the grate, and the air of the rooms was cold and thick with fog. He took two or three bundles of wood from a cupboard, and lit the fire anew, and bending above it, warmed his chilled hands at the smoky blaze. There were shadows lurking at his shoulder—hands raised to strike—hooded forms with hidden eyes afire—he knew how the eyes blazed behind him, though they were shrouded and unseen—came nearer, noiseless, step by step. And though he sat in stern disdain of these unreal horrors, and knew them for what they were, they were still fearful to endure. He scorned to turn and scatter them; and he knew that if scattered, they would come again. 'A vacant mind,' he said aloud, 'can breed these things by the thousand.' His voice sounded

hollow in the silence, and he half expected to be answered. 'I must give myself an hour's hard work,' he said, again aloud, 'or I shall not sleep to-night.' So saying, he crossed the room, unlocked the safe, and drawing forth his ledgers, fixed his lamp, and began to study the long rows of figures. To-night, he seemed endowed with a duplicate mental existence, for though he mastered the figures, and grasped all their conclusions firmly, he was still acutely conscious of the slowly creeping shadows and the threatening hands, and was at once afraid, and spiteful of himself for being so.

He rose at last, and standing with his back to the fire, which now burned brightly, he moved his hands before his breast, casting the palms outward, as if waving off his fears. 'I have planned too long and too well,' he murmured, 'to surrender the prize to any shadows. "Shadows to-night,"' he went on, smiling grimly, "have struck more terror to the soul of Richard, than can the substance of ten thousand"'. The grim smile faded. Whatever the ten thousand were who filled the place of Richmond, they were disagreeable companions. Garling had never been a handsome man, and when he smiled, he was further removed from beauty than even when he frowned. 'Shadows—every one of you!' he said, with the renunciatory wave of the hands renewed. 'Absolute trust. Not a doubt in any mind, after ten years. And the plan perfect.'

As he spoke thus, there was even a sort of triumph in his face; and taking the lamp in his hand, he crossed the room firmly, entered his bedchamber, and undressed. He who defies himself, is bold; and Garling slept with no perturbation of conscience. He slept, and the hours went by him; and every second the warp and woof of Circumstance shot in and out, and he had no knowledge of the web they wove.

(To be continued.)

ABOUT PLOVERS' EGGS.

'ONE shilling and sixpence each, sir, and just now cheap at the money,' was the answer given to a gentleman who inquired the price of some small olive-coloured eggs marked with irregular black spots, contained in an ornamental basket standing on the counter of a West-end London poulterer. They were the eggs of the green-plover, better known as the lapwing or peewit, and the time of inquiry, it is but fair to add, was very early in the spring. Displayed in an adjoining basket might be seen a tempting lot of apparently fresh-laid eggs, of the domestic fowl, which were for sale at one shilling and sixpence per dozen. The contrast in price was certainly striking.

Recently, there went the round of the newspapers a little narrative of the cost of a fashionable London wedding-breakfast, stating that a certain rich man had on one occasion sent a trusty messenger across the German Ocean to Holland to bring him two dozen plovers' eggs for the use of his guests, in consequence of his not being able to procure those delicacies in London, and that the

twenty-one eggs—all that could be found at the time—cost, including travelling expenses, one sovereign each! The price stated may probably be a little exaggerated, and should be taken, perhaps, with a grain of salt; it may nevertheless be ranked in the category of tales occasionally told, of the peas at a penny and strawberries at a shilling each, which are now and again provided for great banquets, in order that wealthy persons may have out-of-the-way viands on their dinner-tables. But however incredulous the general public may be on the subject, plovers' eggs at certain seasons command an inordinate price, and it appears, from investigations we have made, that they have always done so.

Enormous numbers of these eggs are annually disposed of in London and other large cities the inhabitants of which are accustomed to the changing luxuries of the seasons. Many thousand dozens, indeed, are gathered to be sold; and although eighteen shillings a dozen for the eggs may seem an extravagant price, it is not an extraordinary one. When plovers' eggs are scarce and the demand brisk, in consequence of numerous wedding-breakfasts and fashionable luncheon-parties, a pound a dozen has been frequently asked and obtained by the retail dealers. And even when they are more than usually plentiful, plovers' eggs are seldom to be purchased at less than from threepence to sixpence each. The season during which the eggs can be brought to market is, of course, a short one, and the most is made of it by dealers, who, however, are careful, in the event of a glut, not to lower the prices below a given figure, hundreds of eggs having been known to be destroyed in order that a good price might be obtained for what were kept!

The supplies of eggs which reach London, Manchester, and other large cities, are gathered by persons who have trained themselves in the business with great assiduity, and who are familiar with the localities where they are to be found. As novices are apt to be lured from the spot by the well-known artifices of the parent birds, it requires a trained eye to discover the rude but well-placed nests of the lapwing, which seem so much a portion of the surrounding moorland ground as not easily to be discerned except by those who possess a special aptitude in the business. Upon one occasion, an amateur at the work went over about seventy acres of ground where plovers were to be found during the egg season in great plenty; but was only able, after a search extending over seven hours, to bring back with him eight eggs. Next day, a farmer's boy discovered on the same ground, in half the time, thirteen plovers' nests. But young Giles was well accustomed to the work. At one time, persons in the county of Kent, in order to make the most of the business while it lasted, took pains, like the continental truffle-hunters, to train dogs to find the nests. This statement

was denied by one writer on the subject; but a reliable person has lately stated that he succeeded in training a Dandie Dinmont terrier to perform this sort of work. 'I had her out with me when a puppy,' he says; 'and when I found eggs, I showed them to her, walked away, made her find them again, and then rewarded her with a biscuit; and thus she learned to find them of her own accord.' Although, doubtless, a rare accomplishment, it is certain that dogs have been trained to find the nests of various kinds of birds, the plover among others. 'And why not?' said a gamekeeper to us. 'The dog is an animal of rare intelligence, and only requires to have that intelligence developed and utilised, to do any service that is required of him.'

In Holland, whence, during the season, large quantities of plovers' eggs are exported to London, the bird-watchers and egg-gatherers are reputed to be so expert in their calling as to be able to tell by its mode of flight whether a plover is, or is not, about to deposit its egg. The supplies consumed in London used, twenty years ago, to be gathered from the counties of Kent, Essex, Norfolk, Cambridge, and Lincoln; but now they are sought farther afield, and Scotland, with its extensive tracts of moorland, supplies large numbers every year. All parts of the kingdom, indeed, are now laid under contribution for these delicacies of the table, the Emerald Isle yielding its quota of what is required.

When the nests have been discovered, great care has to be exercised in selecting the eggs; those which have been sat upon for a few days being useless. Some egg-seekers are so informed on this point that they know, we may say intuitively, those which must be rejected. The rough-looking eggs may be accepted as new laid; but those which have a smooth and oily feel have been sat upon, and have made some progress towards hatching. Some professional egg-seekers, in order to place the matter beyond dispute, carry with them, in addition to their egg-basket, a small pitcher containing a little water, in which to test whether or not the eggs have been sat upon; a point which they easily determine by watching the pitch or posture which the egg assumes in the water. Some collectors are even able to tell if an egg has been sat upon for the space of twenty-four hours. Careful collectors return such to the nest at once, so that they may be hatched, and thus add to the future stock of laying plovers. Eggs which have been sat upon even for so short a period are found when boiled to have the slightest tinge of a dullish gray or white colour on their round end, and are not so crisp and delicate in flavour as those which have not been sat upon. If they have been under the hen for a longer period than twenty-four hours, they are found when boiled to be quite soft, and almost destitute of the beautiful transparent jelly which the fresh eggs contain, and which is so greatly prized by the

epicure. Much care requires to be exercised in boiling plovers' eggs, because of the brittleness of the shells. They should be boiled in a flat stewpan, no more eggs being put in than will cover the bottom of the vessel. Let the cold water, in which has been dissolved a liberal handful of salt, cover the eggs to the extent of an inch; place the pan with its contents on a dull fire; and as soon as the water boils, lift it off, setting it aside till the water is quite cold, when the eggs may be removed for use at table. Some parcels of eggs, especially those gathered at a great distance from a market, are boiled at once; but most of the eggs used are sold in their natural state, and cooks cannot be too careful in preparing them for table, the shell being apt to break with a very slight pressure. Plovers' eggs when boiled do not keep long; they are apt to turn sour or become otherwise unpalatable.

It has often been asserted that many other kinds of eggs are sold as being those of the lapwing; but it is not so easy as some people seem to think to deceive persons who are in the habit of eating these dainties. 'Rooks' eggs,' we have read, 'are frequently sold as the eggs of the peewit;' but that is not the case, as the difference in size, weight, and configuration would be at once and easily detected. A dozen lapwings' eggs weigh about eleven ounces. That the eggs of several wild-birds other than those of the rook have been and often are sold as plovers' eggs to those who do not know better, is pretty well known. Among such substitutes may be mentioned the eggs of the redshank and another member of the plover family, the flavour of the eggs of these birds being not unlike that of the peewit's egg.

To obtain a shilling for an egg that may have been purchased from its collector for a penny, is an object to some people; artists, in consequence, have arisen in London who, by means of a few touches of their pencils, are able to produce an article capable of being palmed off as the genuine produce of the lapwing, or for the matter of that, any other bird. The eggs to be operated on are first boiled, and then dressed up in the spots and colours of the plover. A London artist of Bohemian tendencies, told us that he was able to imitate most kinds of eggs by dyeing and otherwise manipulating them; his chief employer being a person who dealt in all sorts of natural curiosities, and was constantly employed in assisting young collectors to stock their cabinets. During the season, this person used to purchase hundreds of eggs of all kinds of birds, for the purpose of selling them to customers. The nests and eggs were supplied by men who travelled the country to obtain them, the money paid being trifling; such as, for magpies' eggs, a penny a piece; bullfinches', threepence each; those of the cuckoo, fourpence; those of the jay and rook, twopence. The eggs of commoner birds were disposed of usually

at about two for three-halfpence. Ingenious changes were made on the commoner kinds of eggs; the contents being 'blown' out, and the shells so manipulated, that they might be sold at a handsome profit; the purchasers being of course ignorant of the frauds which had been perpetrated.

No statistics can be obtained of the exact number of plovers' eggs which reach London and other populous places; but the quantity consumed is enormous, and has been more than once stated at tens of thousands of dozens. As many as two hundred and fifty dozens have been gathered in one district in the course of a season; which would represent the robbing of seven hundred and fifty nests, there being generally four eggs in each nest. How comes it, we may ask, when so many thousand eggs are annually used, that the supply can be kept up? The birds are numerous, we know; we have seen thousands in the course of an afternoon's drive. London alone is reputed to use every spring over two hundred and fifty thousand eggs. How then is this enormous supply maintained? On this point, a gentleman who is well versed in the natural history of the bird, says there is no doubt that if lapwings are robbed of their eggs early in the season, they will make a new nest and lay again; and the fact that young plovers unable to fly, are sometimes seen as late as August, affords presumptive evidence of a second hatching having in some instances taken place. A collector also whom we consulted at one time as to whether these birds would go on laying if robbed of their first eggs, assured us that, according to his experience, they did, and at once too. But a more extended inquiry leads us to believe that this replenishing of the despoiled nest can only take place in exceptional cases. The point, however, is worthy of the special attention of naturalists.

A STRANGE STORY.

TOLD BY A LINCOLNSHIRE CLERGYMAN.

CONCLUSION.

It was drawing towards the gloaming of the short winter's day when old Mrs Kirby departed. While the dogcart was preparing to take back my guests, we took a turn up the road, that I might point out Coryton Farm to the lawyer. It was only a dim outline, to be sure, in the waning light; but he could form some idea of its size and importance. As we stood looking through the handsome gates, Mr Scruby's gardener came hurriedly to them and threw them open. We then heard the sound of horses' hoofs on the hard frozen ground, and presently Mr Scruby's carriage came at full speed down the drive. We beheld the rich farmer's wife seated inside; but whether from the cold or the dim light, she appeared ghastly pale. The carriage turned out of the gates, and whirled along the high-road as if it were an engine going to a fire. We all stood still in the middle of the road, gazing after it.

'Whatever can be the matter?' said Mr Pullingtoft.

The gardener came up to us breathless. 'There's dreadful news come to the Missis,' said the man. 'The two young gentlemen who came home from school yesterday, went down to the pond this afternoon to skate; the ice broke, and both went in. Master, who had walked round that way, was there, and plunged in after them; and had not Master Walter come up in time to assist his father, Master would have been drowned as well as the two young gentlemen.'

'They are both drowned, then?' we cried, naturally shocked by the sad calamity.

'Ay, ay,' said the gardener; 'both drowned. And what between grief and the drenching as he gave himself trying to save the two lads, Master has been taken frightful bad. He lies in Miles Ralston's cottage, and is said to be a-raving and a-raving awful. Missis, as you saw drivin' out, is a-going to him.'

'And Master Walter?' said I.

'Master Walter has never left his father since he was carried into the cottage, and keeps every one out of the room except Miles Ralston's old sister, who was once on a time housekeeper to Master, and knows more about him and his affairs than any one cares to say. A strange un is Madge!'

As he spoke, he gave a significant nod of the head, and walked away. I was about to detain him, to ask the nearest way to the cottage he had spoken of, when a man came hurriedly up to me and touched his cap. He had been sent by Mr Walter Scruby, to ask me to come at once and see his father, as the doctor expected he could not live more than a few hours.

With a request that Pullingtoft should await our return at the Rectory, I at once accompanied the messenger to the cottage—leaving Mr Shaw to follow more leisurely. I was met at the door by Walter, who I was glad to see had obtained dry clothes. It was only necessary to look at his face to read the mental anxiety under which he laboured.

'How glad I am to see you,' he said, as he grasped my hand. 'But I fear you will be of but little use to my poor father, for he is now quite unconscious. He has neither spoken nor opened his eyes for some time, and the doctor fears he cannot last long.'

I spoke kindly to the young man, striving as far as I could to mitigate the bitterness of his sorrow; and then entered the room where his father lay. I found him as described. The doctor was present, and explained to me that Mr Scruby had for some time after the accident manifested symptoms of the most violent mental excitement, and from what he gathered from his broken utterances and ravings, there was evidently something lying heavy on his mind—probably something that may have been tormenting him for months, and the occurrences of that morning had brought it to a crisis. But for this, unless the patient may have also sustained some internal injury while among the ice, he did not think the accident would have told so fatally upon him. He was now in the last stage of exhaustion, and could not live many hours.

This was spoken to me at some distance from the bedside, and out of hearing of Mrs Scruby, who was now sitting sunk in grief by the side of her unconscious husband. The doctor added

that he did not think it was necessary for me to address myself to the patient, as he was now beyond the reach of mortal voices, and the lethargy in which he lay would shortly end in death.

I went forward, and spoke a few words with Mrs Scruby; but the patient himself lay still as a statue, and past all comprehension of his surroundings. After reading the prayers for the sick and dying, and shaking hands with Mrs Scruby and Walter, I left the room.

The doctor met me at the door of the apartment, and drew me into a little room that served as kitchen and general sitting-room for the inmates of the cottage. I found Mr Shaw there before me. After closing the door of the apartment, the doctor asked us if we knew of any trouble into which Mr Scruby had got with regard to a missing will, as he had gathered from his incoherent exclamations while in a delirious condition that some such thing was pressing upon his mind. The poor man had further repeatedly called for one Madge Ralston to come at once and confess herself; but if the woman referred to was she who lived in this cottage, she must, the doctor said, have disappeared shortly after his arrival, and had evidently for the time absconded or hid herself. What would Mr Shaw advise doing?

Mr Shaw stood thinking a moment, and was at length about to speak, when the silence was abruptly broken by a suppressed groan, which I at first thought must have proceeded from the chamber of the dying man. But the doctor had sharper ears. Walking forward to a door on the far side of the apartment, and opening it, we there saw, sitting huddled in the corner of a closet, her face buried in her hands, the woman of whom we had just been speaking. She rose up slowly, and coming out of the recess, sat down on a chair by the fire, rocking herself to and fro, and emitting heavy sighs and groans, as if in physical agony.

I had occasionally seen the woman before. The tall spare form, masculine gait, and deeply marked features were such as, once seen, the observer does not readily forget.

'Good woman,' I said, going forward to her and placing my hand upon her shoulder, 'if there is anything that lies heavy on your soul at this moment, confess it, for the love of your Maker, and for the sake of the man that is dying in the next room.'

'Do not call me good!' she said, with an impatient gesture. 'I have never been a good un—never have been. But the man as lies dying in there knows more on't than I do.'

For some time it seemed as if she were determined to say nothing regarding her relations with Mr Scruby; but upon Mr Shaw representing to her that the dying man had said enough to justify them in suspecting her of having at least aided and abetted him in the hiding and keeping secret of his father's will during so many years, it would be necessary, unless she was prepared to speak out frankly, to take her at once before a magistrate. Thus threatened, she began to show symptoms of yielding, and at length, though at first unwillingly, made a confession to us of what she knew.

To follow her through all the ramifications and

wanderings of her wild talk would only weary the reader, and I need only repeat its general import.

At the time of old Mr Scruby's death, Madge Ralston was, and had been for some years, a servant in Coryton farmhouse. While in this position, and being somewhat handsome in her youth, she had succeeded in ingratiating herself with young Scruby, and in gradually supplanting Mrs Greenwood as housekeeper. The latter, however, was not finally turned off till after the old man's death. The latter events, as already mentioned, occurred somewhat suddenly, Mr Scruby having been stricken down by paralysis, after which he lived only one week, but during that time never spoke a word or showed the slightest symptoms of consciousness. During the days immediately preceding Mr Scruby's death, his son had been actively engaged in making a search of the house, for the purpose of ascertaining if the will, which he knew his father had made, had been preserved by him or not. Up to the very hour of the old man's death, Seth had been unsuccessful in his search, and was evidently pleased to think that the will which gave so large a portion of the property to his sister Mrs Meadows, had apparently been destroyed.

After his father's breath was out, Seth could scarcely help indicating to his favourite Madge the delight which he felt at not finding the will, when Madge asked him if he had looked into a little locked recess in the wall at the back of his father's bed, where she knew the old man had sometimes placed money and other valuables for safe custody. Seth had not previously known of this hiding-place, or had overlooked it in his search; but on turning to it now, he found that the will was really there, along with an injunction in his father's handwriting enjoining him as he would hope to have a father's blessing and avoid a father's curse, to see the will faithfully executed, especially as regarded his sister Jane, towards whom the father's heart in these last months of his life had evidently begun to relent.

The finding of the will disturbed Seth greatly, especially as Madge Ralston had been a witness of its recovery. Had he discovered it unobserved, he would at once have destroyed it. Now he was in a measure in his servant's power, and had no alternative but to take her into his confidence. He was determined that neither his sister nor her husband should ever profit by the will, and at once therefore proceeded to engage Madge in a plot for the suppression of the document. At first, she was strongly averse to joining in so dangerous and wicked a scheme; but on being reminded by Seth that Edward Meadows' father had at one time turned her and her parents out of house and home—which in a sense was true—her determination was shaken; for though she had loved her young mistress Jane, she hated Edward Meadows with a bitter hatred. Add to this that Madge was young, handsome, a favourite with her young master, and avowedly ambitious—being likewise not without some hope, which had been encouraged by certain expressions dropped by Seth, that she might herself yet be mistress of Coryton farmhouse—and we have motive enough for a woman of her character engaging in the cruel and heartless scheme to rob poor Mrs Meadows of that which had been

bequeathed to her by her father. Entering, therefore, into the scheme, she represented to Seth, with a cunning view to her ultimate power over him, that the will *must* be kept, for a copy of it might exist somewhere, and that would be awkward for them. Besides, his sister, from her state of health, could not live long, and her husband and child were both weakly persons, and in a few years it might be possible, on pretence of finding the will, to make it known, and thus enjoy the inheritance without danger. Accordingly, it was given out by Seth Scruby that no will could be found, that his father must some time before his death have destroyed it, on account of his sister's undutiful conduct and foolish marriage; and nobody stirring in the matter in behalf of Jane Meadows, her husband, or her child, the gossip that had at first arisen in the district regarding the subject soon died down and was forgot.

For some time after his father's death, Seth Scruby was kind and attentive even beyond his nature to his handsome housekeeper, who on her part lost no opportunity of doing what might advance her interests with him. But after some months, it was obvious to her that Seth was not going to commit himself to the final step of marriage with her, and her suspicions on this head were further awakened by a rumour which reached her, to the effect that the young farmer was shortly to be married to an amiable and wealthy young lady, the daughter of a farmer in a neighbouring parish. Revenge now took the place of affection in her breast, and her first step was to secure, before her master's apprehensions were in any way awakened, possession of that will which she had conspired with him to suppress. This she managed to do; as she had, unknown to Seth, a duplicate key of the desk to which the will had been transferred. The document was contained in an open cover indorsed in the handwriting of old Mr Scruby; Madge therefore withdrew the will from this cover, and inserted in its place a packet of paper similar in appearance to that of the real will. The latter she carried with her to her brother's house, whither she had removed on Seth Scruby's bringing home to Coryton his first wife.

Madge knew that Scruby would not fail to discover in course of time that the will had been removed from the desk in which he had placed it; and she had a fiendish pleasure in anticipating the agonies he would suffer when he found it was gone. That time came; but singular to say, not till after his first wife's death and the birth of his three children. He seems to have been quite assured of the safety of the document, and perhaps, like the guilty wretch he was, did not care to disturb his conscience by dwelling upon an action which had left his sister and her husband to die in poverty, and their little daughter Phoebe to be dependent for her upbringing upon the charity of others.

But previous to the home-coming of a new housekeeper after his wife's death, Mr Scruby, looking over the house, and making an inventory of its furniture and contents, had opened, for the first time for many years, what he supposed was the packet containing his father's will, and to his utter consternation found that the real will had been removed. Madge Ralston was not long in

knowing that he had discovered the theft; for one afternoon he came to the cottage and put certain questions to her as to the condition of various things in the house while she was there. The matters were commonplace enough in themselves; but she could see, notwithstanding his assumed outward complacency, that the fires of self-torture were already lighted within him; and that his future, by day and by night, would be rendered horrible to him by the knowledge that the will, in the concealment of which he had sacrificed both his personal honour and his peace of mind, was in the possession of some one else—he knew not whom—and might at any moment be brought to light, with the effect of placing him in the felon's dock, and branding his name with merited infamy. To a man in his position, the very thought of this was terrible; and Madge Ralston smiled with wicked delight as she saw him walk away from the cottage, bearing with him the unseen millstone of agony which she had thus hung about his neck. She knew he suspected her, though he dared not speak.

Time wore on, and Mr Scruby married again; but Madge could see in his face and his manner—in his restless wanderings hither and thither, and his growing violence and impetuosity of temper—that the burden he had to bear was weighing him down, and would eventually crush him into the grave. Yet she made no sign. She would have destroyed the will altogether, but that its destruction would leave Scruby, the man she hated, in the full and free enjoyment of his unlawful possessions. On the other hand, after keeping the will so long, she was afraid to make its existence known, even though it would benefit Phœbe Meadows; for she had by her long silence concerning it, made herself art and part in the felony of its concealment. Indeed, she in turn began to experience anxiety regarding it; and now that the sense of gratified revenge over Scruby had begun to lose its first freshness, she was almost in as deep a state of perplexity as Scruby himself. Yet she spoke not. She had recourse to the bottle; but the temporary alleviation of misery which this afforded her, only sunk her deeper in her own eyes and those of the world. She at length found herself equally shunned by her neighbours and despised by her friends.

About this time, it began to be bruited abroad that some friends of the girl Phœbe Meadows were, in the absence of the will in question, to make a claim upon Scruby for the share of money and other movables which of right belonged to Phœbe's mother. This news reached Madge Ralston, and she heard them with mingled feelings. For the first time these many years, her harsh cold heart began to relent—but not towards Scruby. It was towards Phœbe Meadows, as the child of her young mistress in days long past, that her feelings softened; and one evening she resolved to come to me at the vicarage, make a full confession, and let the law against her take its course.

It was a wild stormy night, and her resolution more than once failed her on the way. Just as she approached the vicarage, she saw me come out, cross the churchyard and enter the church. All at once the idea flashed upon her, to get rid of the will in a way that would

relieve herself, while it might cast suspicion upon Scruby; whereas, to confess to the parson would only incriminate herself. She therefore, shielded by the darkness, stole into the church after me, and proceeded, while I was in the vestry, towards the Scruby pew, where she had resolved to hide the will, and where it was almost certain before long to be discovered by the church-cleaners. In approaching the pew in the darkness, she had unwittingly come into contact with the door of it, which shut with a bang. This bringing me back into the church, she hid in an adjoining pew till I had again entered the vestry; when she once more reached Scruby's pew, and by quietly tearing the will into several portions, she succeeded in stuffing the whole of it in behind the carved woodwork on the front of the reading-desk. She then crept back to the church-door, trembling in turn lest I should see her, and got safely out; but in her trepidation allowing the door to shut heavily behind her.

What followed on my part, I have already told the reader. As for Madge, she rushed homewards as if a wild beast had been in pursuit of her; and for the time had a kind of satisfaction that the hated deed was now out of her possession. But this did not continue long. On this, the very afternoon of the day when Scruby's two sons were drowned, and himself laid on a bed of death, she had seen Scruby approach her cottage. He was by himself, his three sons being on the ice; and as he opened the door and walked in, there was a fierce light in his eye such as she had never seen there before.

'Madge,' he said, 'I am told a will, which is said to be my father's, has been found. Shall I send for the police, and tell them that you were the thief?'

'Yes, you may, if you please, Seth Scruby,' retorted Madge haughtily; 'and perhaps I shall be able to tell them who it was that suppressed the will, and kept it concealed at the farmhouse for so many years after your father's death.'

The retort sent the blood out of the farmer's face, and he was about to speak, when the terrible cry was raised that the ice had given way. He rushed out of the house like a madman, and in a few minutes the terrible catastrophe we have already described had taken place.

I need not dwell upon the events of that day, or the closing hours of a career such as that of Seth Scruby's. He died in the course of the evening; and his body was, with those of his two sons, removed to Coryton Farm. That same night, Madge Ralston disappeared, and was never again seen in the district. Mrs Scruby, the stepmother of Walter the young heir, did not remain at Coryton many days after her husband and his two sons were buried, and is now, I believe, living with her friends in one of the western counties.

As for the will, it was duly proved and acted upon; Walter, with his natural generosity, rendering every assistance in restoring to Phœbe Meadows the property of which she and her mother had been so unjustly deprived.

This that I have told you happened four years ago. Since that time, Phœbe Meadows has been making up for the education she lost

in her youth, and Walter Scruby has been out-living the years of his minority. And such has been the happy tenor of events during these years, that the two cousins have resolved to live as such no longer, and I am invited by the worthy Pullingtoft, who is to give the bride away, to perform the ceremony that shall make them husband and wife.

OIL AT SEA.

FROM correspondence with captains, and others connected with maritime pursuits, and judging from the notices that are now beginning to appear in the newspaper press, we have reason to believe that our repeated and urgent suggestions regarding the use of oil in allaying broken waves, are at length receiving some measure of attention. The following additional instances, which we have compiled from various sources, speak for themselves, and show that those who go to sea especially in open boats, unprovided with oil, run risks which might otherwise be avoided.

'About thirty years ago,' says a correspondent, 'I happened to be detained for some time on the island of St Helena. Oil-wells were unknown in those days, and whale-fishing was pursued with considerable energy in the south seas by the Americans. St Helena was a point of call for ships employed in this industry, and so it happened that I had many opportunities of observing what kind of vessels were employed as whalers. Instead of finding them new and strong, as I expected, I found that many of them were old vessels, which had for years been employed in the ordinary mercantile service, and that when doubtful for that trade, they were considered good enough for whaling. How could this be? A single instance will explain. One whaler came into Jamestown, transhipped four hundred barrels of oil, took in stores, and left for the fishing-ground. She was very old; but the sailors said she was safe enough—she never had to contend with angry seas. Wherever she went, she carried with her a charm that smoothed the crest of the angriest waves. What with exudation, pumping, and throwing overboard refuse from the coppers in which the blubber is boiled, the old ship effectually insured herself against being either struck by a heavy sea, pooped, or having her deck swept.'

About twenty-eight years ago, in the month of May, there arrived in Hobson's Bay a small fore-and-aft schooner, which may be called the *Jeanette*. She came from New London, United States, was deeply loaded, and carried besides a heavy deck-load of timber. She caused a good deal of speculation, for the following reasons. She was only sixty tons register, was loaded like a barge, had had a very stormy passage of four months, and reached Melbourne without loss of any kind. The captain was a shrewd Yankee, who knew that vessels of this kind were in great demand in Australia for the coasting-trade, there being then but few steamers there. He had brought her out for the purpose of selling her, had

made as much freightage out of her as could be made, and knowing that she was overloaded, he had, before leaving New London, taken on board a barrel of oil, which oil, when necessary, had been sprinkled over the taffrail. The huge waves ran after the *Jeanette*, but not to hurt her. They overtook her, glided gently under her, and left her, to be followed by others in the same gentle manner. After being 'an eight days' wonder' in Melbourne, the *Jeanette* was sold to remain in the country, and one of her crew shipped with the writer to return to England. This man, himself a skilful seaman, used to say that the safe arrival of the *Jeanette* in Hobson's Bay was entirely due to the practice of sprinkling oil upon the waters.

The following letter from Captain Allison, steam-ship *Loch Awe*, has been addressed to Captain Mitchell, Dundee: 'At the time the steam-ship *Loch Awe* was lost (in the first week of January), there being so little prospect of saving our lives in the remaining boat, it occurred to me to try if a small quantity of oil would smooth the breaking sea, and keep our frail craft as long afloat as possible. Accordingly, before the boat was swung out, a three-gallon can of oil was placed in her. After abandoning the vessel, and drifting before wind and sea, on observing a breaking sea approaching, a small portion of the oil was poured out, and always succeeded in smoothing the broken tip of the sea before it reached the boat. Of course, the boat was proceeding at a considerable rate through the water, which allowed the oil to get to the approaching sea before it reached the boat.'

'It is my opinion that if vessels running before a breaking sea were to pour a small quantity of oil over the stern, or have a strong canvas bag, filled with oakum and saturated with oil, suspended over the stern or side of the vessel in such a position that it would occasionally dip in the water, it would in a great measure keep the sea from breaking on board and doing serious damage. I have seen bags of the above description used in small vessels engaged in the fish-trade between Newfoundland and Europe, and the fishermen all spoke greatly in favour of oil being used to keep the sea from breaking. It is also well known that a dead whale or other oily fish floating on the surface of the water will keep it quite smooth for a considerable distance, even while the sea may be breaking heavily where there is no oil on the surface.'

A correspondent writes to us from Marseilles: 'I have just been reading the last article on "The Use of Oil at Sea" in your *Journal*. You mention the use made by Mediterranean divers of oil to procure a still surface, adding that this, with other instances, "were merely hearsay." As I take an interest in this matter, it has struck me to communicate to you the following fact, which might possibly be considered worthy of being embodied in a future article.'

'The sea-urchin, or *oursin*, is considered a delicacy by the Provençaux. Many fishermen are engaged in fishing for this mollusc during the season when it is in best condition; their small flat-bottomed boats may be seen close to the coast and in the numerous inlets, the

humble occupant leaning over the bows holding a pole, which is provided with bent prongs, by which he steadily draws the spiny creatures from the rocks below.

'It can be readily imagined that to be able to see the urchins, the surface of the water must be placid. When the sea is ruffled, he accomplishes his purpose by dropping oil now and again from a little bottle suspended from the bows of the boat. A single drop has an almost instantaneous effect in smoothing the surface for a short distance round him.'

From the *Hobart Mercury* of November 7, 1881, we learn that a Tasmanian ship which had arrived at Hobart from Mauritius, had encountered a terrific storm, and owed her having ridden it out in safety to the use of oil. The gale was so fierce and the seas so heavy, that no food could be cooked for two whole days, every place where water could find ingress having to be closed up. 'The vessel was only saved, so Captain Leslie firmly believes, by his using oil to smooth the water and prevent it breaking on board. The course adopted was saturating swabs in oil every two hours, and casting them over the sides of the ship with weights attached, to keep them in position. The effect was truly marvellous; for mountainous waves would be seen approaching the little barque, and were expected to completely envelop and crush her; but as they met the oil floating round the vessel, they glided on with merely a heavy swell, from which she suffered no harm. Every drop of oil on board was used for the purpose, and it proved of inestimable worth.'

Several interesting experiments were recently made at Peterhead, by the laying of pipes charged with oil, across the bar of the North Harbour. The oil, which exudes from the pipes by force-pumps, rises to the surface and forms a smooth expanse of considerable extent. The invention is due to the sagacity of Mr Shields of Perth, who made the experiments at his own cost, and has now presented, as a free gift, the completed apparatus to the town of Peterhead. This apparatus consists of some hundreds of feet of piping, having three conical valves, seventy-five feet apart from each other, which prevent the oil from escaping, except when the force-pump is in operation. Days most suitable for testing the efficacy of the oil in stilling the troubled waters were selected, the sea coming in and as usual breaking right across the bar. The pipes were charged with oil at high water, and shortly afterwards the oil rose to the surface, covering the sea for a considerable distance, and converting what was previously broken water into a glassy, undulating sheet. The experiments were a complete success; and Mr Shields' invention is one which deserves to be taken into careful consideration by those connected with harbours.

Still another interesting experiment has been made in the harbour of Montrose. On the forenoon of 30th January last, about an hour before high-water, a number of the crew of the lifeboat went out in the *Mincing Lane* to try the experiment of stilling the waters by pouring oil upon them. After crossing the bar, on which there was a pretty heavy sea running, about a gallon

of oil was thrown out, and the effect was instantaneous, and considered very satisfactory. The boat was afterwards pulled round by the Annat Bank, on which a heavy sea was dashing, and another quantity of oil being discharged, a like effect was produced. Other experiments were made further out, in every case the waves being smoothed down around the boat. The fishermen expressed themselves highly pleased with the success of the experiments, and agreed that oil should be carried in their boats when going to sea.

THE MONTH.

SCIENCE AND ARTS.

ALTHOUGH, happily, we have for many years been spared the horrors of war, our military and naval authorities, as in duty bound, are always prepared for what may happen in the near future. The implements of war are always being rendered obsolete by newer patterns or fresh inventions; so that in numberless cases improved arms are approved, made in quantities, and issued to the troops; but before the din of battle overtakes them they are recalled, and new weapons take their place. Huge ships, each representing a rich man's fortune, are devised, launched, and after a butterfly existence, floated to the ship-breaker's yard. The British tax-payer may grumble, but he cannot well point out how this expensive training by experience can be obviated. The history of every important human contrivance, from the electric telegraph and the steam-engine to minor inventions, teaches us that there must be slow and progressive work until anything like perfection can be attained.

These remarks are prompted by the publication of an extremely valuable book by Sir Thomas Brassey, *The British Navy, its Strength, Resources, and Administration*. Here we have an exhaustive account of what has been done, and what is being done at the present time, to maintain the boasted position of Britannia as 'ruler of the waves.' The work comprises a complete history of the building of modern ships of war, from the time of the attack upon Gibraltar in 1782, when iron bars were suspended over ships' hulls, to protect them from the comparatively feeble projectiles then in use, to the present day, when steel plates two feet thick form the protective armour. The title of the book does not altogether do it justice; for it includes copious descriptions of the modern ships of war of all nations; and this latter section is one of its most interesting and valuable features.

Every month seems to bring forth some new invention by which armour-plates are made more resistant, or on the other hand, by which the shots which are to pierce them are rendered more penetrating. The battle between the plates and the guns has been waged so long, and with such skill on both sides, and the combatants have grown to such huge and unwieldy proportions, that there is great difficulty in either moving the ships to their destinations, or keeping them afloat when they get there. Perhaps we shall some day reach a time when ship's armour will be considered obsolete; just in the same way that fighting-men have long ago agreed that chain-mail and

the heavy cuirass are impediments to their work. In the meantime, we have to record an improvement, or discovery in the science of gunnery, which is likely to lead to important results.

It has always been the aim of artillerymen so to proportion the size of the powder-chamber in the gun, the amount of powder, and the size of the projectile, that the full power of the explosion shall be brought upon the projectile without any escape of gases, or unburnt material. The cartridge, which would seem to the uninitiated to explode all at once, does not in reality do so. It burns through from end to end, and as it does so, the expanding force of the gases evolved acts with increasing power on the projectile as it moves along the bore of the gun. Now, it has been proved by experiment that if slow-burning powder be exploded in a vessel sufficiently strong to withstand the shock, it can be ignited—turned into gas—and held, as it were, in subjection for any required time. This fact has been taken advantage of by Captain Maitland, R.A. By means of a metal ring fixed round the base of the shot, he retains it in the breech of the gun until the powder is sufficiently fired to produce a pressure of about two tons to the square inch. By this means an altogether unprecedented velocity is obtained. It will be understood that the method is only applicable to breech-loading ordnance, and that the retention ring is somewhat larger than the bore through which it has ultimately to be forced by the pent-up gases.

In once more bringing before parliament his Bill for the protection of Ancient Monuments, Sir John Lubbock had the opportunity of a quiet satire on our boasted civilisation. He pleaded that the pay of a competent Commissioner to look after such relics would not amount to more than the cost of a few trial-shots from one of our big guns. In the course of his remarks, he stated that interesting archaeological relics had in many instances been destroyed, because the materials were wanted to mend the roads, or to help towards the construction of new buildings. Only last year we saw workmen engaged in digging stones out of the wall of the celebrated old Roman camp of Brementium, in Northumberland, in order to assist in the erection of an additional cottar-house within the limits of the ancient inclosure. It seems strange that Britons should take far more interest in such treasures abroad, than they seem to do in those of their own land. Constantly we hear of the demolition of old buildings which form landmarks in our history, without any effort being made even to preserve their outlines for the pleasure and instruction of posterity. But an honourable exception must be made in the case of 'The Society for Photographing Relics of Old London' (Henry Dixon, 112 Albany Street, N.W.), whose labours we have before noticed.

Smeaton's lighthouse on the Eddystone Rock, which has now been superseded by a similar structure, can hardly be looked upon as an archaeological treasure; but the movement which is on foot to preserve it as a national monument is one certainly to be commended. The old building, which has withstood so many storms, must be removed, or it will fall into the sea, not from any structural fault, for it is as strong as

when it left its builder's hands, but because the restless sea has undermined the rock on which it is built. It is suggested that this old tower should be removed and built on Plymouth Hoe, or that it should recommence a new lease of life on some spot where its light would continue to be of use to those at sea.

In connection with the course of Cantor lectures now being delivered at the Society of Arts (London) by Captain Abney, there is in the same building an interesting exhibition of Photographic Processes and Apparatus. The gradual progress of the art-science from its first feeble attempts to the grand results possible by modern methods, is well illustrated by specimens lent by the pioneers of photography. Photographs burnt in upon porcelain by Mr Henderson's method are specially worthy of notice, and the exhibitor suggests a very useful field of employment for such pictures. The foundation-stone of a building can have cemented into it a slab or slabs of porcelain bearing an inscription with a picture of the structure itself or of the buildings which it replaced. Such inserted slabs can also be used for gravestones, in this case bearing the portrait of the deceased. It need hardly be said that the permanence of a burnt-in picture is beyond suspicion.

In one of his lectures, Captain Abney demonstrated in a very practical manner the intense sensitiveness of a photographic plate as now prepared. A wheel having black-and-white sectors painted upon it, was rapidly revolved in front of the camera, but in complete darkness. An electric spark from a battery of six small Leyden-jars was suddenly caused to illuminate it. The experimenter estimated the duration of the spark at less than five-millionths of a second. The resulting photograph displayed an image of the wheel seemingly at rest!

The importance of a knowledge of chemistry to the modern agriculturist has been recently exhibited in a very practical manner in France. In the northern part of the country there are many growers of beetroot who are also distillers. A residue from beet distillation, called *vinasses*, is found to contain the nitrogen, phosphates, and salts of potash which the plant has originally drawn in from the soil. This liquid is now returned to the ground, and by its aid a good crop of beet can be looked for every two or three years. It is customary to alternate the beet-crops with wheat on the same ground; and it was found that in one case, although the beet maintained its quality, the wheat deteriorated. Upon an analysis of the soil being made, it was found deficient in phosphoric acid. Phosphates of lime were then put on the soil, after which treatment the wheat rapidly recovered its normal vigour.

A specimen of the desert land tortoise was recently shown at a meeting of the San Francisco Academy of Sciences. This animal, which is about the size of an ordinary bucket, seems to have some very peculiar characteristics. It carries on each side a membrane attached to the inner portion of the shell, holding about a quart of pure water. Its food is the giant barrel cactus, and from this watery plant it no doubt obtains its supply of liquid. The animal inhabits tracts of country where there is no water, and very little vegetation, with the exception of the cactus just

named; so that a thirsty traveller could on an emergency kill a tortoise for the water it contained. The Mexicans highly prize them for the excellent soup they afford.

M. Tissandier lately pointed out, in the pages of *La Nature*, the utility of the microscope in forming a rough analysis of articles of food in common use. Thus, a little starch moistened with water and placed on the stage of the microscope, will soon show its characteristic form; while any adulteration by gypsum or other mineral body can be immediately detected. In like manner, coffee, chocolate, pepper, milk, &c., can be submitted to critical examination. The only drawback of the system is that no durable record of the observation is made. But this difficulty can be easily obviated by the use of the photographic camera. In the municipal Laboratory of Chemistry in Paris, photographs of microscopic observations form a notable help to the work carried on there. M. Tissandier suggests that these photographs should be published, for the guidance of amateurs.

To any one who remembers the early years of the present century, when a large number of persons, men and women, whom you met were marked by smallpox, when poor beggar-men blinded by smallpox were pitifully led about by dogs, and when on all hands you heard of the multitudes that were swept away by smallpox—we say, to any one who remembers all this, nothing seems more surprising in the annals of human perversity than the bitter antagonism that still prevails among certain persons concerning the utility of vaccination. Notwithstanding the most convincing statistics which prove that the dreaded smallpox has been arrested, there are many people who will persist that vaccination has proved a curse rather than a blessing. It is some satisfaction to notice that the Society for the Abolition of Compulsory Vaccination, lately invited an opponent, in the person of Dr W. B. Carpenter, to speak at one of their meetings. Dr Carpenter showed that the mortality in England from smallpox had gradually declined from about four thousand per million, to two hundred and seventy-six per million. We trust that anti-vaccinators will bear his facts in mind, and profit by them.

According to the recent returns of the Registrar-general, a week of London fog has a most fatal effect on the health of the Metropolis. The death-rate of London, which during the winter months is generally less than twenty-two per thousand, rose in one week of fog to the abnormal proportion of 35.3 per thousand. This occurred, it must be remembered, in the absence of any severe frost, and when there was no prevailing epidemic to account for the increase. From being one of the most healthy cities of the empire, London is thus by one week of fog suddenly relegated to the lowest position on the list.

Dr Fothergill, during a lecture in connection with the Smoke Abatement Exhibition at South Kensington, said that 'if the fog of the last few days, which had got down our throats and impeded the action of our lungs, did not make people take an interest in the abatement of smoke, he did not know what would.' From the returns of the Exhibition, which is now

closed, it would seem that a vast number of people have taken an interest in this important question—a question not only affecting the Metropolis, but one which will in time force its attention upon every large town in the kingdom. Many foreign countries have sent over reporters to this Exhibition; and corporations and public institutions in various parts of the kingdom have been represented among the visitors. More than one hundred and sixteen thousand persons have entered its doors; and although there is a deficit of eight hundred pounds, the object of the display in bringing forward recent inventions bearing upon smoke-prevention has been fully attained. We may hope that the movement thus begun, which will be supplemented by similar Exhibitions in Manchester and other large cities, will lead to some permanent results. The reluctance of many manufacturers to consume their own smoke, and thus effect a saving in their coal-bills—irrespective of the sanitary point of the question—is to us unaccountable.

The *Builder* calls attention to the different method of treating lime for making mortar which prevails in Italy, from that commonly adopted in this country. In Italy, the first operation is to dig a pit for lime, in which it remains covered with water for two years before it is used. In England, on the contrary, lime is slaked and used the same day, any remaining over and above the quantity actually required being regarded as so much rubbish. Most building specifications mention newly-slaked lime as a *sine qua non*. The friable and powdery character of the mortar in a newly-built house, which can often easily be picked from between the bricks by the finger-nail, would lead to the conclusion that there is something radically wrong in its composition. It forms a great contrast to the hard and stony condition of the mortar used in many buildings which have stood for centuries. Long attention to the subject of buildings in Italy, leads the writer in the *Builder* to assert that the Italian method is the right one.

The Exhibition of Electrical Apparatus and Appliances, at the Crystal Palace, was opened on the 25th of February, and is likely to prove of great utility in the advancement of electrical science in this country. The Exhibition is in every respect most complete, and illustrates almost every department of electrical science at present known. In some respects it is even more important than the Paris Exhibition, as the experience which inventors there gained led many of them to make important improvements on their apparatus and appliances previous to sending them to the London Exhibition.

BOOK GOSSIP.

ANGLING, whether viewed as an art or a recreation, has ever been agreeably associated with much that is beautiful in nature and pleasurable in society. One of its earliest and the best known of its advocates, Izaak Walton, gave to the pursuit a distinctive and pre-eminent place among kindred sports when he christened it, on the title-page of his book, the 'Contemplative Man's

Recreation.' And he further added to its attractiveness by blending with his angling instructions and adventures, pleasant dissertations—or rather digressions—on men, and animals, and birds, and flowers; lifting the whole subject out of the sordid ruck of merely worldly amusements, in which the money spent is expected to yield the money's worth, and placing it almost in the higher rank of literary and artistic pastimes, wherein the mental pleasure of the effort itself is to the person who puts it forth, a sufficient and satisfactory reward. Walton has had many followers, especially in the present century, with its Christopher North, its Ettrick Shepherd, Thomas Tod Stoddart, William Stewart, Francis Francis, and a host of others, whose writings have in a greater or less degree attracted public attention to the angler and his art, throwing around the subject a halo of literary brilliance, and dressing it out in all the rich and fantastic trappings of poetic sentiment and artistic fancy.

Another contribution to the same department of life and literature comes to hand, in the shape of a second series of collected papers by the Members of the Manchester Anglers' Association. The volume is entitled *Anglers' Evenings* (Manchester: A. Heywood & Son), and its illustrations, as well as its letterpress, are principally the work of Members of the Association from which it emanates. In all respects it is a creditable volume—a few of the papers being something more than creditable. We have fishing adventures in England, Scotland, Wales, and Norway; each narrative containing not only a certain fund of amusement, but for those who ply the rod, bits of genuine experience and instruction as well. Some of the papers show considerable narrative power; and the descriptions of scenery, from the wild surroundings of the White Coomb in the Southern Highlands of Scotland, to the marshy levels and osier-bordered meres of Staffordshire, have about them that touch of genuine appreciation, without which all scenic description is as lifeless as the back-scene of a theatre. The book is sure to be a favourite with those who are anglers; and it is almost equally sure that it will likewise be a favourite with many who are not.

The meaning of culture, says Matthew Arnold, is 'to know the best that has been thought and said in the world.' How best to attain this knowledge is one of the questions of the day. The Universities give the great weight of their sanction to the dead languages—to the classical productions of Greece and Rome; and in this they have been followed by individual thinkers. John Stuart Mill has said that 'the noblest enthusiasm, both for the search after truth and for applying it to its highest uses, pervades the classical writers. In cultivating, therefore, the ancient languages as our best literary education, we are all the while laying an admirable founda-

tion for ethical and philosophical culture.' But in recent years the opinion has been gradually emerging more and more into prominence that the dead languages have not the value as an element of culture which many would assign to them—that they are not the be-all and end-all of our educational wants.

Foremost among the advocates of this new doctrine—this heterodoxy of the schools—is Professor Huxley, and in his latest publication, *Science and Culture* (London: Macmillan & Co.), he has discussed the subject at some length, and with his accustomed vivacity of thought and breadth of illustration. But this does not form the sole topic of the volume. There is an admirable biographical and critical lecture on the life and opinions of Joseph Priestley, the Birmingham divine and scientist; another on the 'Method of Zadig'—Zadig being a more or less apocryphal character who lived long ago at the court of Babylon, and who is credited with having had a singular faculty of observation—the same kind of faculty indeed which makes a man of science at the present day. The essay on the border territory between the animal and the vegetable kingdoms, is replete with startling information bearing upon the question of what is plant and what is animal. These in the main are readily distinguishable; but as we approach the frontier, so to speak, of either kingdom, the power of defining between what belongs to the animal and what to the vegetable becomes more and more difficult, the one apparently leading into the other through such an insensible series of gradations that it is impossible, as Professor Huxley holds, to say at any stage of the progress—here the line between the animal and the plant must be drawn.

OCCASIONAL NOTES.

HOUSE OF REST FOR WOMEN IN BUSINESS.

THERE is an Institution in the south of England about which we believe many of our readers may have never heard, and about which not a few of them may be the better for knowing something. We refer to what is called the House of Rest for Women in Business, at Babbacombe, in Devonshire. Pleasantly situated close to Babbacombe Downs, and surrounded by beautiful scenery, this unique establishment is under a Committee of management, consisting of the Duchess of Sutherland and other ladies, along with the Rev. John Hewett, Vicar of Babbacombe. The distinctive object of the Institution is to afford temporary rest and change of air to *women engaged in business*; and it is further intended rather for the prevention than the cure of sickness. It is well known that a short cessation from the cares and worries of business will often prevent a long illness; but the difficulty with many is not only to obtain the requisite opportunity for rest, but to know where to spend their short holiday. It is to meet this want that the Babbacombe Institution was organised; and it is especially intended for milliners, dressmakers, shopwomen, post-office clerks, and the like, many of whom in London and elsewhere break down for want of a rest *in time*. It is also available for such as desire to spend their annual holiday at

the seaside, but are deterred from doing so by the discomfort of solitary and expensive lodgings. Domestic servants, however, are not included in the list of those eligible for admission to the Institution, which is thus strictly reserved for 'women in business.'

The place is managed more on the principle of a large country house, than as an *Institution*, and those residing in it are treated rather as *visitors* than as lodgers. Pleasant intercourse and music indoors, and outdoor rambles, constitute some of the attractions. As such an Institution might be found useful elsewhere throughout the country, we may state that it is upheld partly by subscriptions, and partly by the revenue from visitors. The sum charged to visitors is twelve shillings per week. Donors, however, for each guinea which they give as a yearly subscription, are entitled to a ticket of admission for a period of three weeks. This ticket may be presented to any 'woman in business' whom the donor chooses in this way to assist, and the holder of the ticket is thereby entitled to reside in the Institution for three weeks, at the reduced rate of five shillings a week. The intending visitor, moreover, by sending a post-office order to the Rev. John Hewett, for the amount of a single railway fare to Babbacombe from the place where she resides, and a stamped and directed envelope, will receive from him a voucher for a *return* railway ticket; thus halving the expense of the journey. The Rules of the Institution, which may be obtained from the lady superintendent, Miss Skinner, Bayfield, Babbacombe, provide that each visitor must bring a reference either from her employer or from her clergyman; and that no one can be admitted as a visitor who is suffering from serious illness, or who is recovering from any infectious complaint.

Both the above Institution in particular, and the principle of its organisation in general, are, we think, worthy of the attention of those who have at heart the health and welfare of our 'women in business.'

'HOW FISHER-FOLK MIGHT PROVIDE FOR A RAINY-DAY.'

With reference to our article on this subject, which appeared in No. 947 of *Chambers's Journal*, we have received from a correspondent certain printed documents relating to a Mutual Benefit Society in Liverpool, which documents contain information that may be of interest in connection with the proposal advanced in the above article, for the institution of a Friendly Society among our fisher-folk. The Mutual Benefit Society alluded to is that of the Montreal Ocean Steamship Company, whose offices are at Wellington Dock, Liverpool. The members of the Society are the officers, seamen, shore hands, and others, employed in the service of the Company. The objects of the Society are (1) to afford assistance to the members in case of accident, and (2) to provide a stated sum in case of death. It is managed by office-bearers selected from its own membership. The officers and higher class of officials pay to the funds two shillings entry-money, and the sum of eightpence weekly; while seamen, firemen, and the like, pay one shilling entry-money, and fourpence weekly. Among

those members who pay fourpence weekly, any one of them who shall meet with an accident while in the Company's service shall be entitled to receive the sum of twelve shillings per week for the first twelve weeks, nine shillings per week for the next four weeks, and five shillings per week for other four weeks; then all claims for weekly allowance shall cease. In the case of death, the widow or relative shall be entitled to the sum of ten pounds. Those members who pay eightpence weekly are entitled to double the before-mentioned sums. The members number fifteen hundred and seventy-eight; and the Society, which was established in 1863, has already nearly twelve thousand pounds of invested funds.

The above shows what might be done in the way of self-help by our fisher-folk, were a similar organisation formed for this purpose. The small sum payable per week by each member would scarcely be missed; while the fund thus secured would form a valuable protection and support to families in the event of accident, illness, or death overtaking their bread-winners.

We may add that two other companies now exist in this connection, namely, 'The Scottish Boat Insurance Company (Limited),' and 'The Scottish Fishermen's Accident Insurance Company (Limited),' the head office of both being at 20 Seaforth Street, Fraserburgh, whence, or from the branch offices elsewhere, information may be obtained as to the conditions of insurance either for life or boats.

FLORAL DELIGHTS.

BACK again to wood and dell,
Come the flowers we love so well.
Foremost in the flowery train,
Violets bring their sweets again,
Lingering from their early birth,
Till primroses shall deck the earth,
Which with golden cowslips blent,
Shall greet our gaze with sweet content.
And the blue forget-me-not,
With graceful cheer shall bless each spot;
And orchard blossoms, wild and sweet,
Shall rain their petals at our feet;
The while the tasselled larch shall bring
Further tokens of the Spring;
Till tree and hedge in Summer dress,
Shall each day grow in loveliness,
And Winter, sour and harsh, shall be
Quite banished from our memory. J. H.

The Conductors of CHAMBERS'S JOURNAL beg to direct the attention of CONTRIBUTORS to the following notice:

- 1st. All communications should be addressed to the 'Editor, 339 High Street, Edinburgh.'
- 2d. To insure return in case of ineligibility, postage-stamps should accompany every manuscript.
- 3d. MANUSCRIPTS should bear the author's full *Christian* name, surname, and address, legibly written; and should be written on white (not blue) paper, and on one side of the leaf only.
- 4th. Poetical offerings should invariably be accompanied by a stamped and directed envelope.

Unless Contributors comply with the above rules, the Editor cannot undertake to return ineligible papers.

REMINISCENCES OF THE MINOR STAGE.

BY AN OLD STAGER.

PART I.

SINCE the days of the early mysteries and moralities down to our own time, the attractiveness of all matters appertaining to the stage and its votaries has become proverbial. My reminiscences in matters theatrical carry me back fifty years, yet I can recall with vividness my early emotions, my close identification with the *dramatis personæ*, their joys and sorrows. But although keenly alive to all tender feeling, I never remember to have been afflicted by terror, or even fear; yet was there a certain complex passion arising out of these which would occasionally result in a sensation of profound awe, in such scenes as the Ghost in *Hamlet*, the murder in *Macbeth*, or the death of Virginia.

In the days of which I speak, tragedy with a 'star' in the chief part, was a luxury not to be indulged in every day; hence we were fain to content ourselves with ordinary fare—melodrama and farce. This was by no means a hardship. The food was melodrama pure and simple, laughter and tears closely allied, a combination dear to the adolescent heart. I do not hesitate to affirm that the ecstasy experienced by a Columbus or a Vasco da Gama in the discovery of a new continent, is only to be equalled by the felicitous delight of a first night at the play! Doubtless, many of my elder readers can revert to this very memorable event in their lives, and corroborate me. In my own case, a half-holiday from school was held to be necessary, in order that a preparatory admonition as to behaviour might be administered while being inducted into my theatre-going gear; my usual ready appetite became absorbed in the novelty of the whole thing, and utterly forsook me at the early tea. But for this deprivation I was compensated later on.

In these early days, the doors of the theatre were opened at half-past five or six o'clock, the curtain rising at half-past six; and as every

lessee competed to give full value for the admission fee, the time of closing was rendered problematical. To lose any part of the entertainment, was of course out of the question; the forecasting housewife therefore provided herself with a plentiful supply of eatables, to satisfy the cravings of nature; and as 'apples, oranges, and ginger-beer' were an institution, there was no lack of provender for either body or mind.

I suppose that every boy has had his hero, and duly given him his boyish worship. Mine were numberless. Some of them, it is true, had shuffled off this mortal coil hundreds of years ago, and become immortal; but the larger proportion were of my own creating; genuine to the core, without flaw or speck. In like manner, my heroines were all angels; and if our heroes were immaculate, our villains were of the most disreputable type, most emphatically-pronounced rascals.

Our low comedian was a comic man, albeit gifted by Dame Nature with the saddest countenance ever beheld. I never saw upon his face the remotest approach to a smile, and yet withal, his quips and cranks were provocative of incessant merriment. His fate and his fortunes were cast in unpleasant places: his perplexities were simply delightful, and in his direst misfortunes we vouchsafed him no sympathy. Always in difficulties, his life seemed a burden to him; and but for the tender feeling existing between himself and the pert *soubrette*, I think he would have succumbed. Of course he married her in the end; but as a boy, I used to have my doubts as to whether they were happy ever afterwards.

In the year 1834, I was bound apprentice to a London house-decorator in the Westminster Road, nearly opposite to Astley's Amphitheatre, then under the management of the famous Ducrow; and in the practice of my vocation, it not unfrequently happened that I was employed in a theatre, hence my predilection for the amusements thereof.

My first visit to the above establishment was made some years earlier than this. My parents had taken me to witness the Battle of Waterloo.

The noise and smoke deafened and choked me; but the visit was made memorable by two circumstances. I dropped into the pit a huge piece of currant dumpling, for which I was severely reprimanded; and I saw Gomersal as Napoleon! This gentleman I had many opportunities of seeing subsequently in the same part; indeed, so clearly was he identified with it, that I never remember to have seen him play any other. Figure, gait, and costume combined with more than ordinary talent tended to make the impersonation quite unique. He died at Leeds in 1862, aged seventy-four.

The battle over, and complete suffocation not having supervened, we had the scenes in the circle—Ducrow as the Courier of St Petersburg, with his eight horses; Miss Woolford; Stickney as Shaw the Life Guardsman; and the enjoyable humour of Bullock the clown, a fellow of infinite jest. This part of the entertainment suited my taste far better than gunpowder. But Widdelcombe the ring-master, the Widdelcombe, must not be forgotten. Picture to yourself a short, stout, swarthy man, clad in the most resplendent uniform, profusely decorated with various orders. His long black hair, well anointed and perfumed, was parted over a low forehead, and hung in ringlets across the broadest and whitest of shirt-collars, open at the throat, and worn *à la* Byron. His eyebrows and moustaches were trimmed to perfection; and his boots, so small and so highly polished, were at once objects of envy and admiration. Mild and unassuming in private life, his natty person was as well known in the streets of Lambeth as is that of John Bright in the House of Commons. He served the various managements at this house for a period of four-and-thirty years, and died in 1854, at the age of sixty-seven.

John G. Cartlitch, the 'original Mazeppa,' was born in Manchester in 1793. Allured by the attractions of the sock and buskin, he took to the stage in early life, and afterwards became known as the principal tragedian in Richardson's show at the various fairs throughout the country. From there he was engaged for Astley's. He was, as stated, the original Mazeppa, and played the part more than fifteen hundred times. He then went to America; and after many vicissitudes both as manager and actor, he settled down in Philadelphia as the keeper of a café in Fourth Street; there he died as lately as December 1875, aged eighty-two.

Cartlitch was not by any means a bad actor, neither was he a very good one. Touching the 'business' of his part he was perfect; but his acting was deficient in light and shade; the glare and noise of the strolling booth seemed to be always clinging to him; yet with his stentorian voice and emphatic gestures he held us in thrall.

Now Palmer, though equally loud-toned—it was a fashion in those days—had greater variety, an easier movement, and could on occasion be pathetic without being maudlin; a fair average actor, of whom we shall see more anon. Mrs Pope, an estimable woman, who afterwards became the

wife of Mr Shepherd, late lessee of the Surrey Theatre, was our leading lady, and played Olinska. A more unsuitable part for this excellent actress could not well have been found. Instead of the lithe youthful figure of the Polish maiden, we had the statuesque and matronly graces of a Hermione. Well grounded in her art, tall and majestic in person, slow and measured in speech, she belonged to the stately school of the Kembles, and at this date was altogether unfitted for the performance of juveniles.

But if my reader will in imagination follow me to the Far East, to the old Garrick Theatre—long since burnt down—I will attempt a portrait of her at her best, at the same time affording a glimpse of some of her coadjutors. The drama is *Rob Roy*, with Charles Freer in the title rôle. As this gentleman has been dead nearly five-and-twenty years, the present generation of playgoers can know nothing of him excepting by report. He was a celebrity in this part of the town for a long period. Industrious, and endowed with fine talents, he soon became an acknowledged favourite; nor was his popularity undeserved. Strongly built, and about the middle height, gifted with a resonant voice—which became somewhat coarse in his latter years, from constant exertion—he was capable of giving full expression to every emotion. If you did not obtain from him that degree of intellectual insight into individual character as exhibited by a Macready or a Vandenhoff, you at least discovered a ready appreciation of the text, coupled with a singular power of illustration. His performance of the Highland outlaw was good and satisfying. Poor Charles Freer outlived his talents and his fame; and increase of years, and consequent loss of power, reduced him to the lowest ebb. On the evening of the 23d of December 1857 he wandered across Westminster Bridge, and entered a small coffee-house situated in a narrow turning at the foot thereof. Having partaken of a scanty meal, he was shown to his room, and was never more seen alive. During the night, while in a fit of temporary insanity, he committed suicide. But the evening I speak of was long before this melancholy period.

Mrs Pope appeared as the wife of the Macgregor, her personality, as described above, eminently qualifying her for the part. Helen does not appear until the third act, when she confronts Thornton and his men in the Pass of Lochard. Her sudden entrance on a point of projecting rock, claymore in hand, to interrogate the Captain, sent a thrill through every vein, and her first words, 'Hold there; stand! Tell me, what seek you in the country of the Macgregor?' roused us to enthusiasm. There was no bravado in her defiance; the brave and injured woman stood there upon her 'native heath,' prepared to do or die. Her deliberate manner and slow utterance served only faintly to conceal the surging passion in her wounded heart. You saw the fierce light of the coming struggle settling on her face, and felt that come what might, she would be equal to either fortune. Anything more august than her bearing after the conflict, I cannot conceive; her eyes sparkled with triumph, and victory seemed to radiate from every limb. Much too elated to be vindictive, I thought I even detected a covert sense of humour in her interview with the Bailie;

but the 'Lament,' heard from afar, struck her dumb for an instant; and before recovery was possible, came the news of her husband's captivity. Now the fire kindled by her wrongs burst into flame, the floodgates of her wrath were burst in her desire for instant vengeance; if smitten, she would return the blow with signal vehemence. The situation here is a fine one, and our actress made the most and best of it; self-contained, there was no ranting, but such an exhibition of suppressed power as is rarely witnessed on the stage nowadays.

The Garrick Theatre was at this period under the management of Conquest and Gomersal—the Gomersal. Conquest being the principal low comedian, was announced to appear as Jerry Sneak in Foote's now almost forgotten farce, *The Mayor of Garratt*. It was a most amusing performance. In 1852, on the death of Rouse, Mr B. O. Conquest became the proprietor of the Grecian Theatre in the City Road, and conducted its affairs with much success until his death in July 1872, at the age of sixty-eight. The evening's entertainments concluded with Howard Payne's drama entitled *Clari, the Maid of Milan*, Freer and Mrs Pope enacting the chief parts. Freer was admirable as Rolamo; but the leading lady failed to convey the remotest idea of the betrayed maiden; she sung the song of 'Home, sweet Home,' plaintively and with expression; nevertheless, the entire assumption was a huge mistake.

Let us now step across the water once more, and take a glance at the dramatic doings on the Surrey side. Can any of my readers call to mind the various excellences of that thoroughly good actor Elton? I dwell upon his histrionic exploits with affectionate remembrance. Though occasionally engaged at the larger houses, his home was on the minor stage, where he was always a welcome favourite. It must, I think, have been about 1834 when I saw him play *William Tell* at the Victoria before one of the most enthusiastic audiences that ever graced a theatre. Unlike Macready, the original exponent of the part, he was small in person, and not by any means robust, did not, in fact, look the character, as did his friendly rival at Drury Lane; but once engaged upon the scene, the genius of the man magnified the actor, until his proportions seemed to grow almost heroic. A fine elocutionist, endowed with a rich melodious voice, exquisitely modulated, he threw such an amount of patriotic fervour into his declamation, that gratification was imminent, and applause compulsory. The looking-glass curtain and the juggler Ramo Samee, who performed in front of it, were additional attractions.

I next met with Elton at the Rotunda in the Blackfriars Road—rather a notable place in those days—where he was engaged to deliver a course of lectures on Shakspeare's plays with illustrations. These were admirably rendered, and obtained much success. An amateur at this season, and eager and willing to learn, in order that I might plant my foot on the lowest rung of the professional ladder, I profited greatly by his instructions. Only twice subsequently did I have the pleasure of seeing him act, and these performances took place on the Surrey stage. The first occasion was made remarkable by its

being one of the final performances of Dowton, previous to his retirement, a fine old actor of the best school. The play was *Henry IV., Part I.* Dowton enacted Falstaff; Butler, Hotspur; and Elton, Prince Henry; the minor characters being filled by members of the regular working company. Again I saw him in Sheridan Knowles's *John of Procida*, an excellent, but unappreciated tragic drama, without dreaming for a moment that that was to be our last meeting. Full of hope, with good engagements awaiting him, abreast of his highest power, he was justified in anticipating a long and prosperous career in his profession. Elton had been fulfilling an engagement in Edinburgh, on the completion of which he took passage in the steamship *Pegasus*, which plied between Leith and Hull; bad weather ensued, and the vessel was lost, July 18, 1843. He had just completed his forty-ninth year.

In the autumn of 1835, a translation from Scribe's *La Juive*, entitled *The Jewess*, was produced at Drury Lane; and the proprietors of the Victoria, not to be behindhand with their patrons, determined on placing a version of the same piece on their own boards. This was accomplished in the December of the same year; and the result was a succession of crowded houses to witness what was perhaps one of the finest spectacular displays ever exhibited. On this occasion, a remarkable feature was introduced—a raised platform was erected, which encircled the pit; and this was traversed by the procession from one side of the stage round to the other. Nor was good acting wanting. Thomas Archer—the original Gessler in *William Tell*, was the Jew Eleazar; N. T. Hicks appeared as Leopold—his first stepping-stone to popularity; Gann was the Cardinal; and Mrs Selby played Rachel the Jewess. This cast was scarcely inferior in talent to that of Drury Lane.

Consequent on the prosperous issue of this venture, the management wisely resorted to the facile pen of Mr J. T. Haines, who furnished them with an excellent historical drama in *Richard Plantagenet*. In brilliancy of effects, this production successfully vied with its predecessor. We had nobles and knights armed cap-à-pie in complete steel and in coats of mail, with richly caparisoned horses; in short, all the gorgeous paraphernalia of a mediaeval pageant. Nor was the attractiveness of this costly display at all diminished by the relative merits of the company engaged. We had Charles Hill, a Surrey favourite; Palmer, from Astley's; Haines, Marshall, and Suter, as principal members; and Miss Richardson, who now became leading lady. Beyond question, the main dramatic interest centres itself in the characteristic portraiture of the insurgent leader Wat Tyler. Haines—of robust habit—invested the part with his own vigorous personality, and made it exceptionally prominent. But indeed the cast all round was equal and efficient; and yet, with all these approved adjuncts, which brought crowded houses nightly, the management failed in recouping themselves, and the theatre closed in the following March.

Mr Haines, the author of *Richard Plantagenet*, was not only a most prolific author, but also a very successful one, some of his productions running for hundreds of nights consecutively;

My Poll and my Partner Joe, for instance. As an actor of certain parts, his talent was conspicuous. He died May 18, 1843, aged forty-five.

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

BY DAVID CHRISTIE MURRAY.

CHAPTER XI.—ARMED AND LIKE A GIANT.

'LIFE,' said Val Strange, repeating the dictum of the dyspeptic philosopher, 'would be tolerable if it were not for its pleasures.' Fully equipped for the slaughter of pike, and intent especially upon the beguiling of one wary monster, Val stood upon the river-brink, and employed all the arts he knew, and employed them all in vain. In the summer-time, a lover of rural scenery in search of placid beauty might have gone further than the spot and fared much worse; but under the gray, cold mist which lay upon it now, it looked not altogether inviting. Reginald Jolly, stamping his half-frozen feet upon a shelf of rock near at hand, and carrying himself as one who is without interest in anything the world can offer, gave a grunt in answer which might have been either affirmative or negative. The speech which followed the grunt set the matter at rest.

'If you class this with life's pleasures,' said the diminutive man sadly, 'I am with you. Let us go home, like reasonable people.'

'I should like to catch that fellow,' said Val wisely.

'He knows that,' said the little man, 'and in his fishy mind derides you. He is aged, and the years have made him wise.'

'I'll take another cut at him,' Val returned.—'Where are you going? Stop and help to carry him. He weighs half a hundredweight at least.'

'You'll be able to carry all you catch of him,' returned Reginald. 'He scorned the devices of the angler when you were in the cradle. I am going to the mill, to sit by the manager's fire and thaw my bones. When you are tired of luring the ancient Esox of the stream, you'll find me there.'

'I'll come along at once,' said Val reluctantly, 'since you are bent on going.' He got his tackle together whilst the little man executed a grotesque dance with his hands in his pockets; and all things being ready, they marched side by side down stream. After travelling some half-mile through damp and rimy grasses, they came in sight of a raw-looking mass of building on the other side of the river.

'What an ugly thing it is,' said Reginald, nodding at it, 'that paper-mill.'

'Yes,' said Val; 'most things seem to be ugly, if you make money out of them. I mean—that things out of which one makes money are generally ugly. This was my uncle's doing. It spoils the landscape, but it's a valuable property.'

There were two or three barges lying in front of the building, and in one of them a boy was making pretence to do something, conscious of the eye of the proprietor. Val hailed him, and ordered him to bring over a punt. The boy obeyed; and the two friends crossed the stream, and landing, entered the manager's room, where

a cheerful fire blazed on the hearth. The manager was absent; but Val on his own property was of course at home. He stirred the fire, and drawing forward a chair, seated himself.

'Anything to eat and drink?' asked the little man. 'I'm starving.'

'Sherry and sandwiches,' said Val, producing them as he spoke.

Reginald attacked the provender. 'I say, Strange,' he said, arresting a sandwich midway to his mouth, 'you haven't seen my sister, have you?'

'No,' said Val, stirring the fire again, and sitting with the poker in his hand. 'Yes; I have. I met her out riding once, about a fortnight ago, I think.—Why do you ask?'

'I don't know,' returned the little man, with his mouth full. 'I was thinking of her just then. I haven't told you the news yet, I fancy. She's going to be married.'

'Ah!' said Val carelessly. 'And who's the happy man?'

'Who do you think?'

'How should I know?'

'Lumby!'

'Lumby?' said Val. 'They haven't known each other long, have they?'

'Three or four months, perhaps,' said Reginald. 'It's rather sudden; but you never saw a man so gone in all your life.' He laughed, irreverent of the tender passion. 'I like Lumby, though,' he added. 'He's a good fellow, and I suppose he's a good match. If he weren't,' pursued the candid youth, 'the governor wouldn't have stood it. She's had lots of chances; but they were all a poverty-stricken lot who came. It's hard lines to be poor when you go into the matrimonial market.—You're not a marrying sort of man, are you, Strange?'

'No,' said Val, toying with the poker still; 'I think not. I don't know. I shall marry some day, I suppose.'

'It's a sort of thing,' said Reginald, with much philosophy, 'that runs in families.'

'Lumby is a good fellow,' said Val, balancing the poker. 'I like Lumby.'

'I suppose he's rich?' inquired Reginald.

'Will be,' answered Val shortly.—'Let's go home.'

'Wait a bit,' returned the other; 'I want to get warm.—What's the matter with you? You look as sulky as the pike which still lies among his reeds.'

'I should have liked to catch that fellow,' said Val, brightening up a little.

'There are two sides to everything,' said the young philosopher. 'He's happier as he is.'

Val threw the poker into the fireplace with a clang. 'Come along!' he cried, rising. 'Let us go home. This place makes me dull, I think.'

Reginald, with some protests, arose; and the two left the mill and struck out afoot across the fields. Val was a little preoccupied, and conversation languished. They came, after a walk of two miles, to Strange's house; and having washed and made some alterations in dress, they went to luncheon.

'It's a rather odd thing,' said Reginald, 'that you and I should have been chums so long, and that you should never have met my people.'

'I don't know,' said Strange, who was unusually depressed. 'I shall see them to-morrow.'

'We shall have quite a houseful,' pursued the other. 'Old Langton's there, and the three girls. Nice girls. I'm in love more or less with all three of 'em; but I can't afford it. Now, you might marry one of 'em, if you liked—you, "with lands in Kent and messuages in York," can marry whom you will.'

'Oh,' said Val abstractedly, 'I sha'n't marry.'

'You never,' said Reginald, 'did what you said you would do; and you generally do what you say you won't do. I'll bet all I'm worth, you marry within five years.'—Strange made no response to this challenge.—'Within three years,' pursued the challenger. 'Within two. Come, now!'

'I don't know,' said Val, rousing suddenly, 'that I ought to go to-morrow to your place, Jolly.'

'Why?' asked his companion.

'Henderson has been at me for a week past,' said Val; 'I've seen no accounts for a quarter of a year. They'll take a day or two, and'—

'Pooh!' said Reginald, taking advantage of the pause. 'I've asked you three times. If you don't like to come, say so.'

'Don't like to come?' cried Val, positively flushing in his warmth. 'I'll forgive you that, old man. Never mind. Let business slide for a while. I'll be with you.' After this little burst, he fell again into moodiness; and his companion finding him intractably dull, retired to the billiard-room, and there solaced himself with a book and a cigar. Dinner-time came, and Val was in wild spirits, talking with random brilliance; but in the evening he faded back to his afternoon condition.

'What is the matter with you?' cried his companion at last, throwing away a book, and taking his stand on the hearth-rug.

'I'm hipped,' said Strange. 'If you had come out of that lovely Neapolitan climate into this beastly English winter, you'd feel the same. To think that I might have stayed there, and that I didn't! To think I might go back now, and that I don't! What fools we are, to be sure!'

'Apropos,' said the philosopher with a grin, 'how it soothes a man to speak in the plural number. It's easy to say, "What fools we are;" hard to acknowledge, "What a fool I am." Isn't it, Val?'

'Well,' returned Val, 'what a fool I am.'

'Are you?' asked Reginald, with provoking coolness. It was not to be wondered at that Val at once departed for his bedroom with a mere 'good-night.' His friend looked after him with sly humour in every wrinkle of his comic face. 'I think I can lay my finger on the affected spot,' he mused. 'Here's another man in love. Things are a bit rough with him. Perhaps she's too great a swell—perhaps somebody else is in the way—perhaps she has pronounced the fatal "No." Anyway, he's in love, and unprosperous. He will marry some time. He won't marry. The mere mention of an engagement to be married sets him off, and he spends a whole afternoon and evening in brooding about somebody else's luck and his own ill-fortune. I wonder if ever I shall be taken that way? Oh, my dear young man, if ever you are attacked with that complaint, turn hermit till it's over. For if Strange is laughable, and Lumby comic, think what

you'd be, you bald-headed little beggar—think, and tremble!'

Whatever cause disturbed Val Strange's peace of mind, it was certainly not clear to himself. Perhaps he was merely suffering from the ennui which inevitably results from an aimless life. It is beyond dispute that he was in an abominable temper, and this was all the more remarkable from the ordinary placidity and sweetness of his ways. He threw a boot at his valet, and drove that obsequious friendly attendant from the chamber in bodily fear; then laughed at his own anger, and sat down by the bedside to gnaw his moustache, and think gloomily about nothing in particular.

It was not in the nature of the attack itself, or in the nature of the man affected by it, that this unpleasant mental condition should last long, and in the morning Val descended in his customary spirits. Yesterday's mists had cleared away from the fields as well as from his mind; the wintry air was keen and bracing; the drive, to youth and recovered jollity, a real pleasure. Reginald introduced his friend with all due ceremony.

'Mr Strange,' said Mr Jolly, after the first few commonplaces of conversation had passed, 'I am told that you have quite a wonderful collection of British birds.'

'There's something of the sort at my place, I believe,' said Val.

'I have no doubt that mine is but a poor exhibition after yours; but I should like you to see it.'

'I took them over from the late proprietor,' said Mr Jolly, waving his hand, as they entered a long chamber which contained the collection. 'I think I shall complete the collection, and hand it over to the British Museum or some kindred institution. This,' indicating a moth-eaten owl, 'is the renowned'—he fixed his double-glasses, and failing at a casual glance to make out the Latin inscription, bent lower, murmuring—'the renowned—the renowned—in short, a species of bird with which you are no doubt familiar.' The inscription was indecipherable, and Mr Jolly was the least thing in the world embarrassed.

'I am like Hamlet,' said Val; 'I can tell a hawk from a heron when the wind is nor'-nor'-west.'

'Exactly,' returned Mr Jolly—'exactly.' His manner was a little abstracted.—'Oh, by the way,' he cried, suddenly turning upon his guest with a smile of surprise, 'I fancy, Mr Strange, that you and Gerard Lumby are old friends. Reginald has told me so, if I remember aright.'

'We were at Rugby and Oxford together,' Val answered.

'A charming fellow Lumby,' said Mr Jolly—'a charming fellow. Frank, unaffected, English.' He spoke with an approach to fervour.

'He's a good fellow,' said Strange—'a very good fellow.'

'You moderns,' said the host with great geniality, 'are terrible fellows. I have been young myself; I have heard the chimes at midnight. We thought we travelled at a good pace in those days, but you leave us far behind.'

'How?' inquired Val.

'Every way,' said the genial elder—'every way. You travel like tornadoes. You do everything off the reel, whether you storm a fort, make a

tour round the world, or engage yourselves to be married. Nothing takes so long a time as it used to take.'

'Except dinner,' responded Val.

'Except dinner,' laughed the host. 'Exactly—exactly. In all other matters, you go headlong. Your friend Gerard, for instance, has quite amazed us all.' It was Mr Jolly's constant misfortune that he could not find the *juste milieu*. He was always on this side of the line or the other, and in any mood, transparently unreal.

'What does he want to find out about Gerard?' Val asked himself. Believing in the extreme subtlety of his own approach, Mr Jolly advanced behind his mask of genial candour.

'He might write like Cæsar—"I came, I saw, I overcame." It was very sudden; but when young people are so impetuously resolved, what can old people do but yield. And after all, an honest love-match is the best thing. I don't pretend to have any scorn for money. I could very well have endured to see my daughter married to a wealthy man.'

'Ah!' thought Val to himself, 'he wants to know the true extent of Lumby's fortune. What an ingenuous, artless old fife he is!' A smile, quickly suppressed, played on Val's features, and he added aloud: 'People think too much of money in affairs of that sort, nowadays, Mr Jolly. And Lumby has a nice little competence, after all.'

Mr Jolly turned upon him a countenance of swift amazement, and his jaw fell. 'Yes,' he said, tremulously—whilst, in the words of the great soothsayer, 'an ice-taloned pang shot through brain and pericardium'—'a nice little competence.' Would it be necessary to break off the match? A nice little competence merely, was not what he wanted. Was it possible that rumour had deceived him? The Lumbies kept no style after all, and a mere two thousand a year might keep them going as they were. What if the wealth were all a bubble? It could not be true.

Val, with an inward laugh, came to his relief. 'A very nice little competence indeed.' He could not resist the temptation to a little solemn chaff at this unskilful fisherman's expense. 'Forgive me, Mr Jolly, if I exercise so much freedom as to compliment you upon your generosity and unworldliness. But even in these extravagant days, a young couple may do very well on five-and-twenty thousand a year.'

The unskilful fisherman breathed again; but even now the smile he forced was all awry. 'You are surely jesting, Mr Strange. Five-and-twenty thousand a year is a large fortune. The Lumbies live as modestly as I do, and I am not a wealthy man.'

'Fact, I assure you,' said Val lightly. 'That's the tune to which old Lumby's annual income may be said to dance in to him. I don't suppose he spends much more than a tenth part of it. He is saving everything for Gerard.'

'You amaze me!' said the disinterested parent. 'I thought,' he added with a touch of emotion, which seemed to him quite proper in the circumstances, 'of nothing but my daughter's happiness.'

'Of course,' said Val, smiling to think of the fright he had given him.

'And after all,' said Mr Jolly, with easy stoicism, 'wealth and happiness are separate

things. Five-and-twenty thousand pounds a year! You amaze me, Mr Strange—you amaze me.'

Mr Jolly had forgotten the collection of British birds by this time; but Val, mischievously feigning an interest in it, went carefully round among the feathered creatures, and examined them with great minuteness, until the joke began to pall, when he released his host, long since weary, but unable gracefully to escape. The room in which the collection was arranged opened upon the garden, and Mr Jolly led the way thither. Strange had not yet encountered Constance a second time; but he saw her now standing at a window which opened flush upon the lawn. Almost for the first time in his life he felt awkward, and his legs and his arms seemed a little in his way. He felt her eyes upon him, and had a ridiculous contest within himself as to whether or not he ought to bow to her, as though he were a schoolboy, or an aspiring shopman whose study of the *Book of Etiquette*—priced at sixpence, and written by a Member of the Aristocracy—had as yet been incomplete. And this was Val Strange, whose eligible bachelorhood had introduced him to rank and beauty half over England, and who was rumoured quite a killing personage among the fair. It was surely somewhat surprising. Constance threw open the window and made way for them to enter.

'My dear,' said her father, 'this is Mr Strange, an old friend of Gerard's.—This is my daughter, Mr Strange.'

Mr Strange bowed, and plunged into small-talk, whereof he was accounted a master. Constance answered with a pleased and pleasing vivacity, and Val's unaccountable awkwardness vanished. The great slow Gerard had none of the polite arts, and no capacity for small-talk in the world. When he had a chance of spending an hour with Constance, he sat and adored; and being adored, young ladies, is dull work in the long-run, let me tell you, unless you adore in return. Then—ah, then!—who shall say how much of heaven's own colour is flashed across the sober gray of common hours! The proverb says that Love begets Love. But that is only true when Love can surround its object with sweet observances, not when it can do nothing but sit and worship with devout eyes and hungry heart in the presence of other people. And since that day when Gerard had pleaded his own cause with such success, he had never seen Constance alone; and even if he had, might scarcely have dared to plead it anew in like manner. And so the influence he had gained, faded, and was lost; and a noticeable thing came out of it, for no influence that ever the world saw set a-rolling yet, stood still before it had set something else in motion. Gerard had broken beyond the magic circle of maidenly reserve, and it was no longer *absolutely* sacred. And beside that was this fact—that Constance, being disposed of in the matrimonial market, and her disposal being known to the world she moved in, was not liable to misconstruction if she surrendered herself to pleasant human speech with nice people of the sterner sex. She was not leading on Val Strange to a declaration—she had no need to try to lead anybody to a declaration any more. She could be herself, and could lay down her guarding

weapons of coldness and hauteur and the rest, and no man could come to heart-wreck any more because of her. Observe also, that if all men were to be henceforth accounted safe from her, she also thought herself safe from any assault which Love might make. For was she not engaged to be married to Gerard? And what made the thing safer yet than safety need be, was that Val Strange was Gerard's friend. And again—to heap up reasons—what reasonable young woman thinks that every pleasant man with whom she talks is going to fall in love with her?

On Val's side, love was far enough away to begin with—or at least seemed so. He acknowledged Constance's beauty, as any but a blind man would have been obliged to do. He felt something of the fascination of her manner, but as yet not in an alarming degree. He thought Gerard a man to be congratulated, but not as yet a man to be envied.

Gerard was so near a neighbour, that he came over only as a privileged guest, and stayed his hour or two, and went away again; or made one in a shooting-party, dined afterwards at Mr Jolly's table, and rode home to sleep. Val on the other hand was in the house, and saw much more of Constance than did her accepted lover. She too saw more of him than of Gerard. There was no fancy of unfaithfulness to her mind. Her lover bored her, that was all, and the other man amused and interested her. And so the tragedy began.

One day, Constance and Milly—who by this time were fast friends, and bound in the bonds of an enduring sisterhood, after the manner of young ladies who have known each other intimately for a week or two—rode to the meet to see the hounds throw off. Mr Jolly, who had never jumped a hedge in his life, used to announce with a pensive sigh of regret, that his hunting days were over, and he and Val were escort to the ladies. Gerard was at the meet, but for some reason unknown, forbore to follow the hounds. Strange had taken his place at the side of Constance, Mr Jolly was pompously playing at politeness with Milly, when Gerard rode after them and joined Constance, assuming the position to which his right entitled him. Val fell behind, and on a sudden, black Jealousy rose up in his heart, armed and like a giant. And with that the scales fell from his eyes, and he saw, and trembled at the precipice upon whose edge he stood, the abyss into which that same black giant threatened to toss him. For when Society has done its absolute best with a man, when it has given him a knowledge of the classics and taught him a foreign language or two, and dowered him with social gifts, and has in short polished him, until he scarce knows himself in his new-found brilliance, it has left him at bottom where he was before, and the passions are with him still, eternal and ineradicable. Fear, and Remorse, and Hate, and Rage, and Jealousy, and Love, with all the rest, live on in spite of civilisation, and make life noble as the soul guides them, or make life ignoble as they guide the soul. All human history is built on them, all human life environed with them. They fire the deathless lines of Æschylus, and

sprinkle with dews of Hermon and of Tophet great Shakspeare's page; and with them the masters of fiction still awe and melt us; and the merest yokel who reads the daily papers may see them alive among us to this day.

And with two of that Titanic band it was Val Strange's lot to fight, until he won or fell; for in a battle with the passions there is no drawn-fight possible. Love and Jealousy came out of their hiding-places, and called Honour to the conflict. Lumby was Val's friend; but with Val, friendship was not, as it is with some rare man here and there, a passion. Yet he was fond of Gerard, and would have done much for him. He watched the accepted lover from this time in all his interviews with Constance. He could not doubt the worship in Gerard's eyes; but he saw no responsive glance in the maid's when she looked at her declared wooer. He saw that Constance brightened when she talked with *him*, that her whole manner was changed and triste when Gerard sat by her.

'It is a mere sale for money,' he cried within himself, raging. 'She does not care for him. If I were free to plead, she might listen. She might learn to love me. She will never care for him.'

Gerard was blind to Constance's weariness in his own presence, and had no jealousy for Val's advances. He was like Othello—once to be in doubt was once to be resolved—and he was himself so loyal-hearted, that by nature he and Suspicion dwelt in opposite camps, and held no communion. And so the tragedy went forward.

A FEW NOTES ON SIBERIA.

PERHAPS the leading idea which the name of Siberia calls up in the popular mind is associated with its unpleasant notoriety as the chief penal settlement of Russia, to which criminals and social and political offenders of every kind are being continually drafted off in hundreds. It is a country about which little was formerly known, and probably that little was sufficient for the demand. In our maps it was conspicuous simply by its blankness; and the public mind, so far as any adequate knowledge of the country went, was as blank as the maps. Indeed, until a comparatively recent period, it may be said to have been an unknown land. Yet, notwithstanding all its physical drawbacks, the country is showing signs of improvement, its valuable produce in minerals and furs being alone sufficient to give it a position of some importance in the commercial world. We take the opportunity, therefore, of the publication of a book on the subject, entitled *Frozen Asia*, by C. H. Eden, F.R.G.S. (London: Society for Promoting Christian Knowledge), to lay some information on Siberia before our readers.

For present purposes, Siberia may be defined geographically as an immense crescent-shaped tract of country, circling along the northern borders of Asia, and presenting its hollow or concave edge to the Arctic Ocean. So vast a country is far from being uniform in its physical characteristics, the degree of its sterility varying with its latitude and configuration. Its southern margin, adjoining the confines of Turkestan and the Chinese Empire, is in general

well watered and fertile. Farther north are the Mining Districts, and beyond these the Wooded Region, the latter 'unadapted to cultivation, the whole extent being clothed with varieties of pine and fir, amidst whose gloomy forests the fur-bearing animals find a home.' Farthest north of all lies what is called the Tundra, an immense tract of country extending along the shores of the Arctic Ocean for more than three thousand miles, and varying from one hundred and thirty to four hundred and fifty miles in breadth. This is in general a low level plain, destitute of trees, with a dreary uniformity of landscape, its soil to an immense depth frozen hard as iron, which the short summer is only able to thaw to about a foot below the surface. Yet, melancholy as this land is, towards its inner border there are numerous little valleys, which have been described by Seeböhm as 'complete gardens of the most brilliant wild-flowers, swarming with birds by thousands and tens of thousands, enjoying during the summer season a perpetual day.'

As might be inferred from the nature of the country, Siberia is very sparsely populated, there being less than three and a-half millions of inhabitants scattered over a territory of nearly five million square miles. As Mr Eden observes: 'Many third-class English towns contain more inhabitants than a Siberian province, and our great metropolis in itself numbers more souls than the entire length and breadth of Northern Asia.'

Siberia was, so to speak, late in being discovered. It was hardly known to the Russians before the middle of the sixteenth century, since which time, however, they have made repeated incursions upon it, thereby gradually overcoming the native tribes, till now it may be said that the whole is practically under the sway of the Czar. For the purposes of government it has, since 1822, been divided into two immense but unequal portions—Western and Eastern Siberia, each presided over by a Governor-general, and each further divided into districts and provinces, ruled over by officers who receive all orders from their Governor-general, and can only apply to the court of St Petersburg through him. The religion of the people is of a mixed kind, partly that of the Greek Church alternating with a bastard form of Christianity called Shamanism, and partly that of the Buddhists.

The aboriginal or native races of Siberia are split up into several divisions—Voguls, Ostiaks, Buriates, &c., nearly twenty in all, many of them presenting interesting points of study to the ethnologist. They are generally small in stature, with the round broad face and prominent cheek-bones of the Mongols. Their habits, dress, and manners are of a very rude and primitive type. They seem rarely to build houses, but content themselves with *yurts*, or huts, constructed of a few poles stuck in the ground or the snow, and covered with reindeer skins or birch bark. During the winter the men occupy themselves chiefly in hunting wild animals for the sake of their fur; and when winter is past, leading a life of indolence, loafing about their *yurts* sleeping or smoking, and 'breathing an atmosphere that few European lungs could stand; for clouds of gnats compel them to fill their miserable huts with suffocating

smoke, which in a measure baffles the tormenting insects.' In the matter of dress, the most essential articles are precisely similar both for men and women, and but that the latter cover their faces with a veil, a stranger would find considerable difficulty in distinguishing between the sexes. Their feet and lower limbs are incased in coverings of deer-hide; while the same material, with the fur turned inwards, constitutes the outer garment, which resembles in appearance the French blouse, sewn together in a sack-like form, having an opening to put the head through, and furnished with sleeves. A pair of gloves, with the hair outside, and a hood to cover the head and neck, complete their equipment. Their garments are well adapted to the rigorous clime in which they live, and are so constructed as to form little or no impediment to free action in their chief occupation, which is hunting.

Many of the habits and customs of these people are very singular. Along with much rudeness and simplicity, they have a high degree of ingenuity. At night, for instance, an Ostiak can tell the time very accurately by judging the position of the Great Bear; and as this constellation is constantly varying with the season, the operation involves on the part of the Ostiak a calculation of some magnitude. In common with all barbarous and semi-barbarous races, they manifest great dexterity in the use of weapons. In shooting small animals such as squirrels, hares, &c., for the sake of their fur, care is taken that the animal shall be struck on the head only; and in this the natives seldom fail, even though their rifles are very clumsy in construction. With the bow and arrow, which is the weapon most in use, they are equally dexterous. Their method of capturing salmon, as described by a Cossack officer who witnessed it, is peculiar. In marching through the country at the head of a detachment, he encamped one evening on the banks of a river; and on the following morning he observed one of the natives walk to a pool near at hand, into which he waded, and then stood motionless as a statue, his spear poised aloft, and his keen eyes fixed on the water before him. Not a movement indicated that life inhabited the figure, until, with lightning rapidity, the spear was launched forward, and as quickly withdrawn, a fine salmon quivering on its barbed point. Three times in twenty minutes was this operation performed, and each time a fish rewarded the native's skill. And yet their cleverness is but slightly applied to the arts of life. The Tungusoes, for instance, use bear and reindeer skins to form their beds; but as they have never discovered the art of tanning, these articles when not in use are buried beneath the snow, by which means the hair is prevented from falling off. This same tribe, too, are remarkably improvident; they will consume nearly a week's provisions in one night, and go hungry the remaining six days. Over against this, however, must be placed their detestation of robbery, which is regarded by them as an unpardonable sin.

Among the Buriates, another tribe, a ceremony is used for the detection of theft which has a strong family likeness to some of the methods at one time in vogue in this country for the detection of witchcraft. 'When a robbery has taken place,' says Mr Eden, 'and a shaman (or sorcerer) is called in to discover the guilty person, he places

his drum and dress before the burning embers of a fire; and the suspected individual is placed near these garments, facing the sun, in which position he invokes most dreadful anathemas on his own head if he is guilty. The sorcerer, who has been eyeing him closely, now advances and throws butter upon the embers; whereupon the accused steps over the drum and dress, swallows some of the smoke thrown up by the butter, and looking up at the sun, expresses a hope that the great luminary will deprive him of both light and heat if he has sworn falsely. After this, he is required to bite the head of a bear, a liberty which the animal will suffer patiently if the accused is innocent; but if forsworn, Bruin will return the compliment with compound interest.' The narrator adds, what is quite to be expected, that 'the Buriates, even when conscious of their rectitude, are much averse to this ceremony, not entertaining the shaman's high ideas respecting a bear's power of always discriminating aright between guilt and innocence.'

Many odd superstitions exist among the various tribes. When a Gilak dies, and is buried, a small wooden house is erected over his ashes by his sorrowing relatives; and as they believe that the soul after death takes up its abode in the body of a favourite dog, that unhappy animal is sacrificed at the grave of his late master, after having been fattened for the occasion. Again, a Gilak will feel himself dreadfully aggrieved if you ask permission to light your pipe at his fire, fully believing that a single spark taken from his habitation will occasion some great disaster, such as the death of a near friend, or a total failure in fishing and hunting. The reindeer holds a deservedly prominent place in the esteem and affections of the Siberians. Some tribes, although they have large herds of reindeer, betray the greatest aversion to kill these animals for food, subsisting almost entirely on the bodies of the game which they take for the sake of their fur. Unless a family is very rich, its members never think of slaughtering a reindeer until they have been eight days without food. This half-superstitious reverence for the reindeer assumes an odd form among the Koriaks and Tschuktschis. 'They will sell a traveller as many dead animals as he likes to buy; but neither love, money—no, nor brandy—will induce them to part with a single deer as long as life remains in his body. Offer them five hundred pounds of tobacco for a live reindeer, and they will refuse it; let them turn it into venison, and the carcass is yours for a string of glass beads. During the two years and a half that the members of the Russo-American Telegraph Company were scattered over Siberia, not one of their parties succeeded in purchasing a single living reindeer from either the Koriaks or Tschuktschis, notwithstanding the enormous prices in tobacco, copper kettles, &c., which they offered for what, to them, was an absolute necessity.' They were indebted to the Tungooses for such deer as they obtained.

The same tribe of Koriaks here referred to have another peculiarity which they evince very strongly—namely, a conviction that all men are equal—refusing to show personal respect to any individual, however exalted his rank. An amusing instance of this democratic feeling is narrated in connection with a Russian major, who wished

to get what he wanted from the natives by impressing them with a proper sense of his rank and power. For this purpose, he called one of the oldest and most influential of them one day, and proceeded to tell him, through an interpreter, how rich he was, what rank he held, what immense resources in the way of rewards and punishments he possessed, and how becoming it was that poor wandering heathen should treat him with reverence and veneration. The old Koriak, squatting on his heels, listened to this enumeration of the officer's attributes without moving a muscle of his face; but finally, when the interpreter had finished, he rose slowly, walked up to the major with imperturbable gravity, and with the most benignant and patronising condescension, patted him softly on the head. 'The major turned red, and broke out into a laugh; but he never tried again to overawe a Koriak.'

But these native races, with all their oddities of thought and habit, their curious customs of marriage, death, and burial, are a decaying people. Mr Eden is of opinion that although, upon the whole, they have been benefited by their subjugation to Russia, yet the latter has among other things introduced disease and brandy, which between them are doing much mischief. The tribal wars are now, however, at an end, and the various races are free to turn their attention to the arts of peace. 'Still they are dwindling away; broad though that inhospitable area of steppe and tundra may be, it is too circumscribed for the conquerors and the conquered to dwell side by side. Years may elapse before it come to pass, but the aboriginal races of Siberia are doomed ultimately to perish.'

The country is very rich in minerals, and in these and furs the chief commerce is done. In the south-western districts, adjoining Russia, iron-foundries have been worked for two hundred years, though the most of the manufactures have sprung into existence but recently. At Neviansk, in the Ural, very good bar-iron is produced, which, when manufactured into domestic utensils, finds its way to every part of Siberia. The clumsy rifles we have before alluded to, are made at this place also, these weapons costing only a guinea and a-half, but said, as regards accuracy, to bear comparison with the masterpieces of English makers. In other districts there are copper and iron works, copper mines producing malachite, as also valuable deposits of platinum. The government works at Barantchinsk turn out shot and shell; and at Kamensk, ordnance of very heavy calibre is manufactured. On the Kirghiz steppes, nitre is abundantly found, and is utilised in the production of the coarse gunpowder used by the natives. In the Ural, there are quarries of porphyry, jasper, and agate, which are worked into stupendous columns by machinery of the most ingenious description. 'The labour required to cut out a solid column is enormous, and the workmen have recourse to a very clever expedient which lightens their toil. Having selected the portion of jasper that they wish to separate, they proceed to drill holes a few inches apart, along the whole length of the block, to the depth required. When this operation is completed, they drive into the holes thoroughly dried birch-wood treenails, on which they then pour a quantity of water.

This the thirsty wood soaks up, which causes it to swell; and the lateral strength thus exerted throughout the whole length of the line simultaneously, rives the stubborn rock from its bed, to be lowered down in triumph by its ingenious assailants. The jasper thus obtained is of a dark-green colour, and the enormous vases sometimes seen of this material are made at Kolyvan.' Besides the minerals mentioned, the quarries of Siberia also produce mica and plumbago; and a considerable trade in fossil ivory is conducted at Yakutsk.

For many years the great drawback to Siberian commerce was the absence of communication between Europe and the northern coast of the country. Three large rivers debouch into the Arctic Sea from Siberia—the Obi, the Yenisei, and the Lena; and it was felt that if communication could be had by sea with the mouths of one or other of these rivers, the problem as to Siberian commerce would be solved. Captain Wiggins of Dundee had formed the idea that the thing was practicable; and in the summer of 1874 he successfully tested the correctness of his views, having sailed from Dundee on June 3d, and arrived in the Gulf of Obi on the 5th of August. In the following year, that intrepid explorer Nordenskiöld, similarly took the matter in hand, and succeeded in reaching the mouth of the Yenisei in a Norwegian sloop, ascending the river, and proceeding himself overland to St Petersburg, whilst his vessel returned by sea to Norway. Numerous explorers have followed since then, and the practicability of a route between Europe and the Siberian rivers is fairly established. This was all that seemed awaiting to the development of the commerce of Northern Asia; and now that it has been effected, we may anticipate that the splendid mineral produce and costly furs of Siberia will find their way more readily into European markets, and that the Siberians themselves will reap corresponding advantages of a higher kind, by being thus brought more intimately into contact with the great centres of civilisation.

SETTING THE SNARES.

CHAPTER I.

At a retired village in Surrey, there lived, some twelve or fourteen years ago, Mrs Francis Richmond, a widow lady, with her family, consisting of two boys and two girls. The boys were the eldest and the youngest of these; Arthur, the senior, being a fine lad of some seventeen years of age; high-spirited and truthful, as boys should be, but never exercising his spirit, as do too many boys, in thwarting or opposing his mother's wishes. That Mrs Richmond was intensely fond of him, may be taken for granted; and there was every excuse for her doting on the candid, bright-eyed, active lad, who grew every day more and more like his dead father.

The village in which they lived, although within twenty miles of the Metropolis, was so quiet, and its population so limited, that when Arthur had finished his education at an excellent school in the neighbourhood, she feared she should be obliged to part with him and let him go to London. For Mrs Richmond's income was a small one, barely large enough to keep them all

in the plainest respectability; while, to give Arthur his education, the widow had been obliged to trench seriously on the limited fund which her husband, Mr Francis Richmond, had left her. Fortunately, however, a gentleman residing in the nearest town took notice of, and a liking to Arthur; made inquiries about the family; and finally waited upon the widow and offered to take the boy into his office without a premium. This gentleman, a Mr Rodpole, was the chief architect and surveyor of that district, while his office was, for a long-striding youth like Arthur, within walking distance, so that he could go and come every day. It need hardly be told how thankfully the offer was accepted. Arthur went at once; his conduct was all that was expected of him; and at the opening of our story he had been at his profession about a year, was now nearly nineteen, and was making rapid progress.

Mrs Richmond was happier than she had been for years; the dread of parting with her idolised son was removed; she was proud to hear of his advancement, and no day passed without her gratitude breaking forth into thanks, when she remembered that now they need never separate. Every alternate Saturday it was Arthur's privilege to remain at home all day. The office closed at one; and Mr Rodpole, who seldom attended on Saturday, allowed his staff, when no special business was on, to take the morning in addition alternately. So, on this bright April morning, Arthur stood with his mother in the little front garden of their cottage, listening to various improvements which Mrs Richmond was suggesting, and which they themselves were to effect; the casual assistance even of a gardener being a thing not to be thought of by the family. As they were so engaged, the village postman came up. His calls at the cottage were so rare, that they scarcely glanced at him; but the next moment he opened the wicket, and holding out a letter for Mrs Richmond, gave the packet, and trudged off.

'Why, who can this be from?' exclaimed the lady. 'I don't know the writing. And what a curious stamp!'

'It is from America,' said Arthur—'from the United States. Let us go in and see what it is about.'

'I do not know any one there,' said Mrs Richmond, complying with the request of her son; and then seating herself in the little front parlour, she opened the letter. 'It is such curious writing,' she continued; 'and the blue paper so dazzles my eyes, that I can scarcely make it out. You had better read it, Arthur. But first tell me who it is from.'

She handed the epistle to her son, who, glancing at the signature, exclaimed: 'From Absalom Holt. Who is he?'

'Oh, I have heard of him,' returned Mrs Richmond; 'but not for many years. He is a connection by marriage of your dear father's. What can he have to say?'

'Well, I will tell you, mother,' responded Arthur; 'I will read the letter, and settle our doubts. Now, here it is.'

"Holt's Rancho"——

'Holt's *what*?' interposed the lady.

"Holt's Rancho," repeated Arthur. 'I don't

know what that means. It is the name of a place, I suppose. But let us go on.

"HOLT'S RANCHE, ANDREW JACKSON CITY,
COLORADO, *March* —, 18—.

"MY DEAR MADAM RICHMOND—I expect that so many changes have eventuated since I wrote to you or your husband, who is now dead, that you will scarcely remember my name. But I married Francis Richmond's sister, who proved a good wife, but who is now also dead. She spoke so well of her brother, which was natural, and of his wife, which I reckon is not so common, that I have a kinder taken a fancy to you and your family. So, as I am getting in years, and am lonely, the relative who has been located here having left me, I write to ask your boy to come out; I believe your eldest is a boy. I am considerable prosperous, and will refer you to the firm of Swope, Jerabody, & Co., of 4 Magwen Court, in the City of London, for guarantees. If you conclude to send the youth out, the firm just named are authorised to hand you the sum of one thousand dollars, or its equivalent in English money, for his expenses. I should wish him to come out as soon as possible, as it will be dull in the fall, with no one around. There is splendid buffalo and antelope shooting here; while the creek which runs through the ranche has the finest trout in the territory. I do not make big promises; but if the boy comes, and behaves well, he shall have the best ranche in the western territories, and some dollars besides. Please write at once in reply.—I am, Madam, yours truly, ABSALOM HOLT."

At the conclusion, Arthur drew a long breath and looked at his mother, who had turned very pale during the reading; then said: 'I—I wonder what sort of a place his farm is! Ranche means a farm. Don't you think so, mother?'

'I am sorry this letter ever came,' returned the poor lady, putting her handkerchief to her eyes for a moment. 'I had a presentiment it was for no good, directly I saw it in the post-man's hands.'

'But, dear mother, you need not distress yourself about it,' said Arthur, rising, and putting his arm tenderly round his mother's neck. 'We need take no notice of it.'

'Ah! my dear,' replied Mrs Richmond, 'I feel—I am sure we shall take some notice of it. I feel, and am sure that you will go to that dreadful place. But first we will speak to Mr Rodpole; he will perhaps tell us what we ought to do.—You would not like to be a farmer; would you, Arthur?'

Arthur tried to answer his mother in the most comforting manner possible, but he was unable to say he would not like to be a farmer; he had thought very little of such a mode of life, previously; but the visions of antelopes and buffaloes—real buffaloes!—the shooting, and the trout in the creek, were exercising a fascinating influence over him.

Mr Rodpole was consulted; and this gentleman was struck with admiration at the opening it presented for the boy. He only wished, he said, that some one would write with such an offer for the whole of his tribe. He had ten sons and daughters; they should pack, every

Jack and Jill among them. This was very different from the opinion Mrs Richmond had hoped to hear, and she was proportionally disheartened by the interview. It was even worse when Mr Rodpole returned from Messrs Swope, Jerabody, & Co., to whose office he went the very next day, paying a special visit to London for that purpose. He came on to the cottage, delighted; congratulated Arthur, congratulated his mother, again regretted that it was not his own case, and said that the firm in Magwen Court gave Mr Holt the highest character. One of the partners, whom Mr Rodpole saw, had just returned from the West, and reported that Mr Holt was the wealthiest proprietor in his district; that he was highly respected; and as for cashing his draft for a thousand dollars—their New York branch would gladly do it for twenty times the sum!

This favourable report naturally increased the excitement in Arthur to fever-heat; and while he might have hesitated, by himself, to press forward a change which evidently gave his mother pain, yet the energy of a stranger in the matter was irresistible. Supported by Mr Rodpole, Arthur could urge his wishes; and poor Mrs Richmond, dreading lest she was selfishly opposing that which would benefit her son, only feebly resisted their arguments. So a letter of acceptance was written; the draft was paid; Arthur's passage was taken by the Cunard steamer *Celebes*; his outfit bought, including an excellent gun; and the day of his departure arrived.

Mrs Richmond went to Liverpool with her boy, who was—as any boy would be—buoyed up with visions, so splendid and so delightfully impossible, that he formed a marked contrast to his mother, whose power to call up such phantasies had long since faded from her mind. But one vision constantly recurred, one promise he continually made, which was, that directly he began to be a farmer and understood how to make money, the first thing to be done was to send over for his mother, for Grace, for Alice, and for Gus, his young brother. Of all the pictures which moved so brightly before his eyes, this was the brightest and best; and this was the last one he uttered as he kissed his mother's tears away for the last time, ere she left the huge ship for the satellite which took her back to the shore.

The incidents of a voyage from Liverpool to New York have been told too often to allow of their possessing the slightest claim to novelty, especially when no wreck, fire, or even hurricane has to be detailed. The *Celebes* happily escaped these exciting but dangerous incidents, and made her voyage in good time; and when at length the vessel was fairly in harbour, the tender alongside to receive luggage and take passengers on shore, and the hasty friendships of a week were dissolving like melting wax, Arthur, who knew that no one was likely to come to New York to meet him, was growing lonely, as one after another of his late companions passed him with just a slight nod of recognition and farewell. He did not know where to go; he could see already that there would be no lack of choice, but the difficulty was, where to make that choice. He was about to descend the gang-

way to the tender, whither most of his fellow-passengers had already preceded him, when a voice said: 'What hotel are you going to, sir?—Excuse my asking the question, but you seem alone, as I am.'

Arthur turned, and saw a dark young man, some few years older than himself, about whose clothes, hat, hair, and beard there was a certain unmistakable cut and style, which he had already learned to recognise as American. 'I do not remember to have seen you during the voyage,' said Arthur. 'Have you been ill all the time?' They had descended the gangway while speaking, and now stood on the deck of the tender.

'Ha! ha! that is a good idea,' said the stranger. 'No; I have not been a passenger by the old *Celebes*. I arrived in New York this morning, to meet an elderly relative who was coming in her, I thought; but I have had my trouble for nothing. My own home is a long way off, so when I saw you standing alone, and—as I fancied—undecided, I took the liberty of speaking to you. I ought to apologise'—

'O no! far from that!' exclaimed Arthur. 'I am very glad you did speak; for I was making up my mind as to whom I should apply for information.'

'Well,' continued the stranger, 'if you have no better recommendation, I will tell you that I am advised to try the *Amsleigh House*, in Broadway. Cheap—which will suit me, for I am not rich—and quiet.'

'The *Amsleigh House* it shall be,' replied Arthur; 'for I am not rich either. However, I shall only stay a day or two in New York, as I am going on to Colorado.'

'Colorado!—that is a long ride,' exclaimed the other. 'I have often thought I should like to go there; some day, perhaps I may. Well, here we are ashore. I will see after your baggage, if you will allow me. But first let me introduce myself. Here is my card.'

Arthur took the card handed to him, and read: 'MR PHILIP G. A. BELLAR.'—'I am sorry to say, Mr Bellar,' he returned, with a little flush, 'that I have no card; but my name is Arthur Richmond; I come from London, and am going to Andrew Jackson City, in Colorado'—

'No more, my dear sir; such an explanation was not needed,' interrupted his new friend. 'It was only I, who have in a sense thrust myself upon you, that required credentials. But do you wait here, and I will see the baggage through the customs.'

He was as good as his word; he 'cleared' the luggage, a process the anticipation of which had been worrying Arthur for days past; engaged a vehicle to take it to the *Amsleigh House*; then suggested that it would be pleasanter to walk on to the Broadway, than to take a 'hack'; and Arthur could not sufficiently thank his good fortune for throwing such a cheerful and useful companion in his way.

The *Amsleigh House* was all which Mr Bellar had described it; the bedrooms were rather bare, but scrupulously clean and comfortable; the bill of fare was amazingly profuse; and Arthur felt himself thoroughly at home by the time he had been there half an hour. Looking down the paper, Bellar pitched upon one or two entertainments, which he said promised to be very good,

and asked Arthur to accompany him to see one that night; but the latter felt tired, and preferred to read in the saloon and retire early. Bellar did not attempt to dissuade him, but laughingly rallied the youth upon his exemplary old English habit—as he supposed it was—of going to bed early. As for himself, he would take a run for an hour or two; and on the next day he would show Mr Richmond the Central Park, the great avenues, and all the wonders around New York. Arthur thanked him in the same strain; and after tea—'supper,' Mr Bellar called it—they parted, each seeming well pleased with his new acquaintance. Arthur resumed his paper, while Bellar sallied forth to enjoy his evening stroll.

ODD NOTICES.

IN his interesting work on the Newspaper Press, Mr Grant, speaking of the hard work which the editor of an important paper has to encounter in the accomplishment of his daily task, says nothing is more trying to the patience and temper than the tiresome and unprofitable visits of certain political personages, who think themselves and their communications of the most vital importance, and who never think of the preciousness of the editor's time. Not only the newspaper editor of to-day, but the studious of all ages, have thought with Lord Bacon that 'friends are robbers of our time,' and have attempted to act up to Shakspeare's advice, 'Ever hold time too precious to be spent with babblers.' Pope draws a vivid picture of the annoyance to which he was subjected by poetasters requesting an opinion on their sorry productions. He cries to his servant:

Shut, shut the door, good John; fatigued, I said.
Tie up the knocker; say I'm sick—I'm dead!
The Dog-star rages; nay, 'tis past a doubt
All Bedlam or Parnassus is let out.
Fire in each eye, and papers in each hand,
They rave, recite, and madden round the land.

While some have shown in their writings their dislike at being disturbed by inopportune callers, with nothing to say worth listening to, others have attempted to prevent the annoyance altogether by means of menacing inscriptions over their study-doors.

Zachary Ursinus, a Professor in the University of Heidelberg in the sixteenth century, to prevent interruption during his studies, placed over his study-door a Latin inscription, which translated runs: 'Friend, whoever thou art that comest hither, either briefly despatch thy business, or begone.' Justus Scaliger, Professor of Polite Literature at Leyden, and the creator of chronological science, entered into many angry controversies with his contemporaries, yet he gave a gentle hint to intending visitors that they might retire at the last moment without crossing lances with him. The entrance to his study bore the following inscription: 'Tempus meum est ager meus,' which translated means that my time is my estate.

Dr Cotton Mather, of Boston, United States, the founder of a Society of Peacemakers—similar to the Quakers—whose objects were to settle differences and prevent lawsuits, was a man of such great activity and despatch in his numerous

affairs, that Dr Johnson's words, 'Panting Time toiled after him in vain,' might appropriately have been applied to him. To impress on his numerous law-avoiding and peace-seeking clients the necessity of remembering the passage of 'the inaudible and noiseless foot of Time,' and to save himself the tedium of listening to interminable stories of all sorts of wrongs, real or imaginary, he had written over the door of his sanctum in prominent letters the pungent words: 'Be short.'

Probably the student of Harvard University was endeavouring to improve on Dr Mather's inscription by specifying more exactly the brevity desired in his friends' visits, when he affixed this announcement to his door: 'Notice—Hours for Visitors, 7 to 7.45.' Whether this period consisted only of forty-five minutes, in the morning or evening, cannot be discovered from the more than ambiguous inscription itself. And if the 'hours' actually set apart for the entertainment of his fellow-students were from 7 A.M. to 7.45 P.M., or *vice versa*, then we are afraid that young man would find himself 'plucked' at the first 'little go' that took place. We cannot help thinking this must have been the promising student of whom the story is told, that he bought a dozen towels, and writing his name on number one, put Ditto on each of the others.

Those who indulge in legends over their door lintels, however simple, do not always get all the say to themselves. That arch-trickster, Theodore Hook, addressed the following lines 'To Mr Blank, who puts over his door "Pen and Quill Manufacturer:"

You put above your door and in your bills,
You're manufacturer of pens and quills;
And for the first, you well may feel a pride;
Your pens are better far than most I've tried;
But for the quills, your words are somewhat loose;
Who manufactures quills must be a Goose!

While some scholars are accustomed to bury themselves so deeply in their studies, that the entrance of a visitor causes annoying mental perturbation, and have in self-defence found it necessary to adopt the deterrent expedient we have been illustrating, every individual, we think, desires immunity from such persistent callers as tramps and beggars. The brass plate of a teacher of the French language in Glasgow, in addition to the information such 'brasses' are meant to convey, forbids beggars and old-clothes dealers to ring the bell.

A gentleman near Winchester made a rockery in front of his house, in which he planted some beautiful ferns, and having put up the following notice, found it more efficient and less expensive than spring-guns or man-traps. The fear-inspiring inscription was: 'Beggars beware; Scolopendriums and Polypodiums are set here.'

The wall of a gentleman's house near Edinburgh some years since exhibited a board on which was painted a threat quite as difficult for the trespasser to understand as the preceding: 'Any person entering these inclosures will be shot and prosecuted.'

An eccentric old gentleman placed in a field on his estate a board with the following generous offer painted thereon: 'I will give this field to any man who is contented.' It was not long

before he had an applicant. 'Well, my man, are you a contented fellow?'—'Yes, sir, very.'—'Then why do you want my field?' The applicant did not wait to reply.

The following lines are engraved on a stone tablet at the entrance to a certain summer-house, and surrounded by a border of spiders, beetles, earwigs, and centipedes, and other natives of these cool grots:

Stranger, or Friend, whatever name accord
With Timkin's hearty shake or civil word;
Enter, where interlacing boughs have made
O'er latticed trellis-work a verdant shade.
Here seat thyself on benches greenly damp,
Fraught with lumbago sweet, and cooling cramp;
Here rest thy back against this wall of brick;
Perhaps the recent whitewash will not stick.
Here view the snail, his lodging on his back,
Mark on the table's length his silvery track.
Here, when your hat and cane are laid aside,
The caterpillar from the leaf shall glide,
And, like a wearied pilgrim, faint and late,
Crawl slowly o'er your forehead or your pate.
Here shall the spider weave his web so fine,
And make your ear the period of his line.
Here, should still noon induce the drowsy gape,
A fly shall headlong down your throat escape;
Or should your languid spirits court repose,
Th' officious bee shall cavil at your nose;
While timid beetles from a chink behind,
In your coat-pocket hurried shelter find.—
Oh, thou to whom such summer joys are dear,
And Nature's ways are pleasant—enter here!

The invitation which follows was likelier to have a freer response, than the rather lively one to enter the arbour. The *Weekly Magazine* of 1777 says the lines were inscribed over the door of a house at Bruntstock, remarkable for its hospitality:

Who'er thou art, young, old, or rich, or poor,
Come, gentle stranger, ope this friendly door;
Each social virtue here the mansion fills,
Unknown to vice and all her train of ills;
Content and mirth some pleasure may afford,
And plenty spreads the hospitable board;
Good-humour, too, and wit my tenants are—
Right welcome thou the general treat to share.
Here Youth and Beauty, Age and Wisdom dwell;
Each neighbouring swain my happiness can tell.

A bridge at Denver, Colorado, boasts of a notice which might almost claim the dignity of being ranked as a mathematical proposition. It is to the effect that 'No vehicle drawn by more than one animal is allowed to cross this bridge in opposite directions at the same time.' An equally slipshod specimen of the Queen's English may still be found exhibited as a 'Public Notice' by the South-eastern Railway Company at the Cannon Street Terminus: 'Tickets once nipped and defaced at the barriers, and the passengers admitted to the platform will be delivered up to the Company in the event of the holders subsequently retiring from the platform without travelling, and cannot be recognised for re-admission.' Having been deluded into buying a ticket, the unsuspecting passenger on passing the barrier is 'delivered up' to the Company's 'holder,' who evidently has the privilege of 'retiring from the platform' with his prey 'without travelling.' Detectives may be sent in pursuit of the 'holder,' we presume, by the missing passenger's friends, in spite of the statement that he 'cannot be recognised.'

Seventy years ago, the *Universal Magazine* recorded the fact that the notice 'Reding and

Wrighting taut hear,' appeared over the door of a school in the neighbourhood of Hoxton; and a few years since, the *Leeds Express* contained evidence that the schoolmaster was still abroad. According to that newspaper, two curious documents were to be seen in two different windows in the neighbourhood of Hunslet. The first, in a wretched scribble, is as follows: 'A Da Skool kept hat—plaise, terms 2 and 3 pens per week for reeding and knitting and righting and sowing.' The other, in the window of a shoemaker, is similar to one we have seen in a shop-window in Drury Lane:

A man lives here which don't refuse
To mend old boots, likewise old shoes;
My leather is good, my price is just,
But times are bad—I cannot trust.

Fifty years since, the following doggerel lines were to be seen written over the door of a little alehouse on the road between Sutton and Potton in Bedfordshire:

Butt Beere Sold Hear
by Timothy Dear

Cum tak a mugg of mye trinker cum trink
Thin a ful kart of mye very stron drink
Harter that trye a cann of my titter cum tatter
And windehup withe mye sivnty tymes weaker thin water.

The native landlord of the hotel at Lahore, in which the following notice to the guests is posted up, is apparently determined to charge for every possible item of expenditure, and to allow no fuss about the payment of what he anticipates his customers will look upon as overcharges: 'Gentleman who come in hotel not say anything about their meals they will be charged for; and if they should say beforehand that they are going out to breakfast or dinner, &c., and if they say that they not have anything to eat, they will be charged, and if not so they will be charged, or unless they bring it to the notice of the manager; and should they want to say anything, they must order the manager for and not any one else; and unless they not bring it to the notice of the manager, they will be charged for the least things according to the hotel rate, and no fuss will be allowed afterwards about it. Should any gentleman take wall-lamps or candle-light from the public rooms, they must pay for it without any dispute its charges. Monthly gentlemen will have to pay my fixed rate made with them at the time, and should they absent day in the month, they will not be allowed to deduct anything out of it, because I take from them less rate than my usual rate of monthly charges.'

We have before us a printed circular, headed 'Invitation of Subscription,' issued by a continental firm, and urging upon postage-stamp collectors the immense advantages of a stamp-journal published by the said firm. It is, says the notice, 'the only stamp-paper in all the world that takes care to publish regularly the commercial accounts of principal centres of stamps trade; besides which with this year the direction intending to satisfy evermore its readers, has given earnest to same new correspondents at London and Paris.' Over and above 'autentic accounts' of certain society proceedings, the paper promises various new features. Among these there is to be—'An apposite ruddle'—though what 'ruddle'

is meant for we cannot guess—'entitled correspondences is designed to the demands, requests, delucidations, and whatever similar article inspecting stamps that subscribers are in right to insert.' 'The paper,' it is further announced, 'for the modicity of its insertions prices sustain the competition with whatever other paper.' This assertion must be cheering to the postage-stamp collectors who understand it.

AMBER.

THE origin of amber has always been obscured in a more or less deep halo of mystery. Pliny the Naturalist wrote of it under its Greek name *electron*, as the fossil resin of an extinct cone-bearing tree. Although these firs or pines became extinct at a period far anterior to all historical time, it is certain that they lived in a later age and were of a higher organisation than the giant forms of the semi-tropical carboniferous era, which were prototypes of the cypress trees still existing in eastern North America. Professor Zaddach says the amber-producing trees must have grown on green sand-beds of cretaceous soil forming the shores of estuaries where the lower division of the Tertiary accumulated. And it is not only to these prehistoric forests that amber bears witness; for in this resin, fossilised by centuries of time, have been discovered nearly eight hundred different species of insects, mostly now extinct; and many specimens of the flora of that period, embalmed whilst still a living vegetation, which differ entirely from the fossil plants supplied by the brown coal-beds resting immediately above.

On the Prussian coast of the Baltic Sea, mines are now worked to a depth of a hundred feet, where Professor Phillips found in a stratum of dark bituminous wood, forty feet thick, stalactites of amber; and round masses with pyrites and sulphate of iron in the coarse sand beneath. Indeed, the true home of amber is on the borders of that inland sea, the *Ostsee* of the Germanic and Scandinavian nations; and vast quantities are still thrown up in stormy weather, when the restless waves break in foam upon the shore, particularly on the seagirt promontory of Samland. It is found also at Cape Sable, in Maryland; and in insignificant quantities in Siberia and Greenland. In Britain, it is so rare as almost to be unknown, although small pieces have been discovered in the sandy deposit of the London clay at Kensington. But the most beautiful specimens of a varying purple shade have been torn from their far-away home in the classic isle of Sicily.

The first record of this antique treasure is found in the old Homeric poems; we read in the *Odyssey* of amber beads in a necklace of gold brought by a Phœnician merchant to the queen of Syra; and in the description of the palace of Menelaus, the mighty king of Sparta, it is said to shine like the sun or the moon, in its splendour 'of copper, of gold, of amber, and ivory.' The Greek name for amber, *electron*, was occasionally also used in ancient times for a mineral composed of gold and silver, because its pale yellow colour resembled amber. In those old days, amber was in great request for the imitation of precious stones by artificial staining, from its brilliant

lustre, and the ease with which it could be cut and polished. From changes induced by its fossilised condition, amber differs from other resins in respect of its peculiar hardness, and in being less brittle, and of greater electric action. Blazing like a torch when a light is applied, it was peculiarly adapted for use in religious ceremonies; and great quantities have alone been consumed in the unbroken worship of thirteen centuries at Mecca, that holy city of Arabia, which saw the birth of the Prophet, the dawn of the Mohammedan religion. There is a quaint fascination in this ancient town, the cradle of Mussulman traditions, where the 'Beitullah' or House of God stands surrounded by colonnades, to which hundreds of thousands of weary pilgrims annually resort, crossing great sandy deserts, through hardships innumerable, to fulfil the command of the Prophet, that the faithful should stand at least once in their lives before the shrine at Mecca. They are enjoined to walk seven times round, prostrating themselves, and kissing reverently at each turn the great block of black basalt, now fixed in the north-east corner of the massive stone structure called the Kaaba; but at which, in a far different religion, the same strange rites were observed many centuries before the birth of Mohammed.

If we could unweave the tangled web of centuries, we should probably find that the burning of amber was not the least amongst the rites and ceremonies of the past. It was strangely intermingled with the myths and legends of the ancient Greeks, and was largely used in the adornments of their temples, being laid, with other precious things, upon the sacred altars, where all costly gifts were thought acceptable to the gods. It is difficult now to realise the feeling of superstitious veneration with which amber has been regarded through successive civilisations, or the strange fantasies evoked by its mystic properties which transformed it into a passion and a faith. Not only in the luxurious cities of Greece and in Rome, but under the great historic dynasties of China, and amid all the extravagance of oriental splendour, it was esteemed very precious. One of the gates of Thebes, 'the city of the hundred gates,' whose superb ruins, perhaps the most ancient in the world, now lie scattered on both banks of the Nile, was, Herodotus tells us, made of amber. Even in the oldest of known sepulchres, the British barrows, amber beads have been found along with pierced stone axes, arrow-heads, and other buried treasures.

No doubt its value was enhanced by the curious electrical phenomena which it exhibits; for six hundred years before the Christian era, Thales of Miletus noticed that, when rubbed, amber or electron attracted light and dry bodies; in which remote observation lay the foundation of our modern science of electricity. It was believed to bear a charm against disease, and to possess the power of detecting the presence of poison. Pliny remarks upon its wonderful properties, and says: 'True it is that a collar of amber beads worn round the neck of young infants is a singular preservative against secret poison, and a counter-charm to witchcraft and sorceries.' The same authority mentions that the price of a small figure in amber, however diminutive, exceeded that of a healthy living slave. In the reign of Nero, a Roman knight was sent with an

expedition to the shores of the Baltic in search of this foreign treasure; and returned with thirteen thousand pounds of amber for the Emperor, including a single piece which weighed thirteen pounds. The dull barbarians of that northern land, who were stirred to labour for this valued product of their stormy sea, could not comprehend the startling price paid for it, or its use in the great and unfamiliar world beyond the Alps.

The best pieces of amber are now taken in the rough by Armenian merchants to Constantinople, where they are carved and chased and polished by the hand of the engraver, as mouth-pieces for pipes. In the Pipe Bazaar of the great Byzantine edifice—which contains mosques, fountains, and a labyrinth of arcaded streets, each a separate bazaar—are hidden away amber mouth-pieces of fabulous value, in every shade of colour, lustrous as crystal, and set with diamonds and rubies. Supported by sculptured columns, and decorated with arabesques, this dimly lighted city in the heart of Stamboul is full of marvels and treasures. Through its narrow thoroughfares, camels and carriages and horsemen force their way, amongst a dense throng of people of every nation and type—Turks in muslin turbans, Persians in pyramidal bonnets of Astrakhan fur, Hebrews in yellow coats, with Greeks, Armenians, and running-footmen in gorgeous liveries; and in this shifting crowd are dignitaries of the court, who spend perhaps fifty thousand francs on their pipe collections; and harem-ladies, wrapped in long white veils, who come for gray amber, gold-embroidered bags of musk and sandal-wood, and the sweet-scented gums made by the women of Chio, which are all sold in the Perfumery Bazaar of this great oriental fair.

Thus we find that amber, little esteemed as it is at the present time in Europe, and although no longer the important source of wealth that it once was, still has a place in the luxury and religion of the East; and the dim records of its venerable history furnish us with many picturesque and poetic associations, whether we think of it in its early home amid archaic forests, or, as in classic lore—

The sweet tears shed by fair Heliades—
Apollo's daughters,
When their rash brother down the welkin sped,
Lashing his father's sun-team, and fell dead
In Euxine waters.

SILKWORM-FARMING IN ENGLAND AND NEW ZEALAND.

THOSE who have ever kept silkworms must know the difficulty which is sometimes found in obtaining the mulberry leaves on which they feed. Indeed, sometimes in consequence of bad weather the trees are so behindhand in putting on their leafy garments, that large numbers of worms perish of starvation. This evil can be mitigated by throwing the eggs into a lethargic state by the application of intense cold. In this state the eggs can be kept until the mulberry leaves appear in full vigour.

On the above subject, in connection with eggs received from the antipodes, Captain G. Mason of Yateley, Hants, writes to us as follows:

On the 23d of February 1881, I received one ounce of silkworm eggs from Sydney, *via* San Francisco, the produce of moths on the 3d of December 1880. On the 1st of May, I placed these with ten ounces of eggs laid at Yateley in August 1880, in a refrigerator fed with lumps of ice in the morning, and again in the evening of each day, when required to keep down the temperature at forty to forty-five degrees, and in the last week to fifty degrees, at a cost of three to four shillings per week; and from the 1st of July, at intervals of five days, one-third part of these were moved very gradually to a temperature of from seventy-five to eighty degrees. From the 5th to the 19th, the hatching was perfect; the worms looked strong, and 'roused' well in their changes until the fourth age, when their unequal size gave the first symptom of careless feeding. In the fifth age, the greater number died without sign of any specific disease; yet many of the stronger worms mounted the hurdles well, and formed perfect cocoons. The weight of food given to the worms was very insufficient, although the trees which were stripped yielded an average of thirty-nine pounds of sorted leaf. On the 22d of June, I received a few of the same eggs, laid about the 3d December 1880, in a half-ounce letter from Sydney, which, coming *via* Suez, I did not submit to the refrigerating process; yet, though kept in the same temperature—namely, from seventy to eighty degrees—from the 5th of July, these did not begin to hatch until the 22d of August, the worms coming out so slowly, that all were not hatched on the 20th of October, when, with no prospect of food, I destroyed the remainder. Many formed excellent cocoons.

In 1879 I was led to try the experiment of retarding the hatching of eggs by use of ice, from the success in stocking the rivers of New Zealand and Australia from the ova of fish so treated. In that year all my eggs hatched out perfectly; while in 1880 the hatching stopped after three days from the too sudden rise of temperature and drying of the atmosphere, caused by the careless use of the stove, from which the eggs never recovered vitality.

In tracing the above Australian eggs through their dormant state, it is remarkable that the first lot, coming *via* San Francisco, after passing two months in this climate, and two months in my refrigerator, hatched out in a little over seven months from the time they were laid; while the second lot, having passed about four months at Sydney, coming in mail-bag *via* Suez, and subsequently kept in a high temperature, without any hibernation, did not begin to hatch until nearly nine months, and had not finished in eleven months; so that, with these eggs, artificial hibernation appears to be absolutely necessary to enable us to reap the rich produce of the *Bombyx mori* in six or seven months, which the opposite seasons of our Eastern Colonies would allow for rest; indeed, without this aid, patience would be exhausted and labour unprofitable. Last year, by favour of Messrs Green, I sent about an ounce of eggs in the ice-room of the *Chimborazo* of the Orient line, to the Secretary of the Melbourne Exhibition, for distribution, who kindly acknowledged the receipt in good order; but I have no further report. From past experience,

I have no doubt that the climate and soil of Australia, New Zealand, and Norfolk Island, are well adapted for the production of cocoons or silk; while the temperate climate of England is better suited for sound eggs.

The quality of silk and eggs produced in England from the *Bombyx mori*, fed on the leaf of the *Morus alba*, which grows luxuriantly on any soil (excepting clay or chalk), has been judged 'excellent.' The supply of food is safe in summer; and with the aid of a small wrought-iron stove, hygrometer, thermometer, and the perfect ventilation of the trays which I have adopted in these last two seasons, the worms in the magnanerie are guarded against any damp or sudden chill, which are their most fatal enemies in every stage of their active or dormant life. The weight of produce, whether of cocoons or eggs, from a given measure of waste land, will much depend on the standard of reason and intelligence acquired in our schools by the women and children, to whom this industry is so well adapted.

A Pope's Slow Combustion Stove, fitted with a quick-candle, to avoid smoke in lighting when the atmosphere is heavy, will be found perfect both for radiation and circulation of the air in the magnanerie.

'THE HAVEN WHERE THEY WOULD BE.'

I know a grave,
Half hidden in the sombre yew-trees' shade,
Where sunbeams never play
With golden arrows; only grasses wave
In melancholy rhythm. Let me stay:
Angels have knelt with me when I have prayed.

'Tis nearly Home.
The space of time 'twixt Heaven and the sod
Is not so hard to span.
Life's inner working is as one great tome
Which Death unseals. The noblest thoughts of
man
Have much of the divinity of God.

I know a grave,
O'er which no restless mourners weep and wail.
Only an aged form
Doth bend in meek submissiveness, and crave
A rest there too. The grief that like a storm
Still shrieks and raves, but little can avail.

I have no tear.
Those steps that falter in life's beaten track,
Those furrowed, time-worn cheeks,
Those trembling hands which grasp the yew, have
here
But little left to prize. True sorrow speaks
In that we would not wish our darlings back.

Are we not glad
That they who in this life did labour well,
Have reached the goal?
We ne'er shall win the Crown by being sad;
There is a Cross to bear, a task for all;
There is a stubbornness of Self to quell.

And griefs are sent
To mellow earth's crude harmonies, and tears
Are rained from weary eyes
To freshen faith that is too often bent;
To water that pure germ whose flower shall rise,
And blossom in God's garden, through all years.

KEEPING ORDER IN CHURCH.

It may not be known to many of our readers that for more than three centuries, the duties of awakening sleeping members of congregations and of driving out intruding dogs from churches were discharged by regularly appointed and salaried officials in various parts of England, and to a more limited extent in America. These duties, moreover, were often performed by a single individual.

The earliest mention of dog-whipping in connection with religious services which we have noted, is in 1550, in which year the churchwarden's books at Louth contain an entry of the payment of twopence 'to the bellman for beating the dogges out of the church.' The same set of books contain similar entries. In 1705 one shilling was paid for the discharge of this duty. The next note respecting dog-whippers states that in the year 1597 the sum of '0:0:9d.' was 'paid to old Verde for whipping of dogs' in the parish church of Worksop. In 1616 the accounts of the churchwardens of the same church state that 'for whipping dogges out of the church one whole year' the sum of twelvepence was paid.

At Youlgrave, the church authorities appear to have been more liberal than their Nottinghamshire friends in the payment of their dog-whipper, as the accounts show that one shilling and fourpence was the annual salary received in 1609 by 'Robt. Walton for whipping the dogges forth of the church in tyme of divyne service.' Eight years later (1617), the authorities of the same church rewarded Robert Benbowe for his services in the same direction by the payment of two shillings. Whether the Youlgrave dog-whippers had any distinguishing badge of office at this time, we are unable to state; but the accounts for a century later (1715) show that a 'coat and furniture' were provided for that officer at a cost of eleven shillings and sixpence.

The churchwardens of Wakefield were even more liberal than those of Youlgrave; for we gather that in 1616, there was 'paid to Gorby

Storker for whipping doggs' the sum of half-a-crown. Eight years later (1624), the dog-whipper received only two shillings for his services; and in 1625 and 1628 only the same salary as was paid at Youlgrave in 1609 was granted at Wakefield—one shilling and fourpence. It is evident that other duties besides those of driving dogs out of church were imposed on the so-called 'dog-whipper;' for the books for 1664 state that the quarter's wages of that official amounted to four shillings. It would appear that the practice of partly clothing the 'dog-whipper' originated about the commencement of the eighteenth century; for, as we have already stated, the Youlgrave official was, in 1715, provided with a coat; and in 1703 the dog-whipper and sexton at Wakefield were provided with 'hatts, shoes, and hoses,' at a cost of eighteen shillings and sixpence. These personages were officially clothed down to the year 1820.

Amongst the 'layings-out' for the parish church of Ash-next-Sandwich, for 1634, is the following: 'Item, payd to tomas brown for on quartar for A year keeping the dodgs out of the church 0:2:0;' and a similar entry for the 'wadges' due to the same man for the Christmas 'quartar.'

The practice of intrusting to a beadle or some other official the duty of awakening sleeping members of a congregation, seems to have prevailed in America more than two centuries ago. In 1646, the Rev. Dr Samuel Whiting was minister of Lynn, Massachusetts. One Obadiah Turner kept a journal at that time, from which we give the following amusing extract: '1646, June the 3d. Allen Brydges hath bin chose to wake the sleepers in meeting, and being much proud of his place, must need have a fox taile fixed to the end of a long staff, wherewith he may brush the faces of them that will have naps in time of discourse; likewise a sharp thorne, wherewith he may prick such as be moste sounde. On the laste Lord his day, as he strutted about the meeting-house, he did spy Mr Tomkins sleeping with much comforte,

his head kept steady by being in the corner, and his hand grasping the rail. And soe spying Allen did quicklie thrust his staff behind Dame Ballard, to give him a grievous prick upon the hand. Whereupon Mr Tomkins did spring up much above the floor, and with terrible force strike his hand against the wall, and also, to the great wonder of all, prophainlie exclaim in a loud voice: "Buss the woodchuck!" he dreaming, as it seemed, that a woodchuck had seized and bit his hand. But on coming to know where he was, and the great scandall he had committed, he seemed much abashed, but did not speak. And I think he will not soone againe go to sleepe in meeting. The women may sometimes sleep and none know it, by reason of their enormous bonnets. Mr Whiting does pleasantly say that from the pulpit, he does seem to be preaching to stacks of straw, with men jotting here and there among them.'

The duty of dog-whipping was not confined to the sterner sex; for the churchwarden's accounts at Barnsley show that 'Richard Hodgson's wife' received two shillings for discharging that duty in 1647.

An entry in the churchwarden's book of the Bolton parish church records that in 1654 there was 'paid to sexton for whipping the dogs, 6s. 8d.'; a much larger sum than was awarded to the official at Forest Hill, near Oxford, named Thomas Mills, who received only one shilling for his dog-whipping duties in 1694. In 1659, Richard Dovey of Farmcote bequeathed a sum which produced eight shillings a year to be paid to a poor man for acting as sluggard-waker and dog-whipper at the church of Claverley in Shropshire. There are similar provisions for the exclusion of dogs from, and preserving order in church in the parishes of Chislet in Kent, and Peterchurch in Herefordshire. At the former place, ten shillings is paid annually for about two acres of land, which is known as 'Dog-whipper's Marsh.' Eight shillings was the salary paid at East Whitton, Yorkshire, for the dog-whipper.

From the register of Kirkby-Wharfe, Grimston, near Tadcaster, we gather that three shillings was the amount which the churchwardens paid as the annual salary of the dog-whipper in 1705 and in 1706; whilst in 1711 there was paid to Thomas Pawson for awakening those who sleep in church and for whipping dogs out of it, '0:4:0.' One of the parish books of Croft in Lincolnshire records that seven shillings and sixpence was paid 'for dogs wipping' in 1718. We find from the Castleton parish records that the salary of the sluggard-waker in 1722 was ten shillings. John Rudge, on the 17th April 1725, bequeathed to the parish of Trysull, Staffordshire, twenty shillings a year, that a poor man might be employed to go about the church during sermon and keep the people awake; also to keep dogs out of church. For his wages, the dog-whipper at South Wingfield church received one

shilling and eightpence in 1728; whilst for 'whipping dogs' at Burnley during the same year four shillings was paid. 'For waking sleepers' at Barton-on-Humber, one 'Brocklebank' received two shillings in 1740. The parishioners of Prestwich agreed 'that thirteen shillings a year be given to George Grimshaw, of Rooden-lane, for the time being, and a new coat, not exceeding twenty shillings, every other year, for his pains in wakening sleepers in the church, whipping out dogs, keeping the children quiet and orderly, and keeping the pulpit and church walls clean.'

In the churchwarden's accounts of Sutton-on-the-Hill, Derbyshire, is the following resolution, under date July 1, 1754: 'Samuel Lygoe shall have five shillings a year for the whipping of the dogs out of the church on all Sundays and other days on which there is divine service, also he is to prevent any one sleeping in the church by wakeing them with a white wand.' At Hayfield in Derbyshire the dog-whipper received seven shillings in 1783. While at Kirton-in-Lindsey, the sum of six shillings and eightpence was set apart as the salary for the dog-whipper in 1817.

The sluggard-waker was known at Warrington as the 'bobber.' A very masculine kind of woman, named Betty Finch, occupied this position at Holy Trinity Church in 1810. She is said to have walked majestically along the aisles during the service, armed with a long stick like a fishing-rod, which had a 'bob' fastened to the end of it. When she detected any one either sleeping or talking, she gave them a 'nudge' with her official implement. Her son used to sing:

My father's a clerk;
My sister's a singer;
My mother's the bobber;
And I am a ringer.

Truly, an official, if not an officious family.

Between thirty and forty years ago, one of the churchwardens or apparitors of Acton church in Cheshire used to go round the church during divine service with a long wand in his hand; and if any of the congregation were asleep, they were instantly awoke by a tap on the head with this staff of office. A similar usage existed at Dunchurch. A person bearing a stout wand, shaped like a hayfork at the end, stepped stealthily up and down the nave and aisle, and whenever he saw an individual asleep, he touched him so effectually that the spell was broken—this being sometimes done by fitting the fork to the nape of the neck. A writer states that on one occasion he watched as the sluggard-waker mounted with easy steps into the galleries of that church. At the end of one of them there sat in the front seat a young man who had much the appearance of a farmer, with his mouth open, and his eyes closed—a perfect picture of repose. The official marked him as his own; and having fitted his fork to

the nape of the sleeper's neck, he gave him such a push that, had he not been used to such visitations, he would probably have produced an ejaculation highly inconvenient on such an occasion. But no; all seemed quietly to acquiesce in the usage; and whatever else they might be dreaming of, they certainly did not dream of any infringement upon the liberties of the subject; nor did they think of applying for a summons on account of the assault.

A beadle in another church is described as going round the sacred edifice during service time carrying a long staff, at one end of which was a fox's brush, and at the other a knob. With the former he gently tickled the faces of the female sleepers; whilst on the heads of their male compeers he bestowed with the knob a smart knock, which roused them to a sense of their position.

Mr J. C. Cox tells us that 'in the vestry of the church of Baslow, Derbyshire, there still remains the weapon of the ancient parish functionary, of whom we read in so many churchwardens' accounts in almost every county of England—the dog-whipper. It was his duty to whip the dogs out of church, and generally to look after the orderly behaviour of both bipeds and quadrupeds during divine service. The whip in question is a stout lash, some three feet in length, fastened to a short ash stick, with leather bound round the handle. It is said that there are those yet living in the parish who can remember the whip being used. We believe it to be a unique curiosity, as we cannot hear of another parish in which the whip is still extant.'

There is, we understand, still in existence in the church of Clynnog Fawr in North Wales an instrument for dragging dogs out of church, which has been described as a long pair of 'lazy tongs' with sharp spikes fixed at the ends.

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

CHAPTER XII.—'MARY,' SAID HIRAM MEDITATIVELY, 'I'VE MADE A DISCOVERY.'

IN the days when Athens was a fairy city, when Duke Theseus, who governed it, was in love with Hippolyta queen of the Amazons, and Hermia, loving Lysander, was beloved by Demetrius, even Signor Bottom had his tender passages. And whilst gentlemen owning broad acres and living in country mansions in these later days were perturbed by Love's doings, even an omnibus cad might feel his smart. The whole round globe is impartially governed. However humiliating it may seem to the devoutly constitutional mind, royal toes have been plagued with corns and crowned heads with toothache; and at the very hour when Royalty has gone limping, or with swollen cheek awry, the merry goatherd and his tattered lass have played for kisses, like Cupid and Campaspe in the ballad. Love, monarch of hearts, all hail! Thou levellest men, not as Envy would, by pulling down the lofty, but by lifting all to equal heights, making a goatherd as happy

as a king, and an omnibus cad as blest as a country gentleman.

Hiram, on rare holidays, was a sight worth seeing. All the sartorial art of the East could do was done for him. In summer-time, a white hat; a white waistcoat; a grass-green scarf, whereon a poet so minded might have written a ballad; a nosegay at the button-hole; white gaiters, in spotless contrast with the polish of his shoes—these were his signs of holiday. In winter, he affected a more sombre glory, and his dark overcoat bore a collar of sham Astrakhan. His scarf was of some subdued crimson inclining towards maroon; his gloves were edged with fur at the wrists; and the natty walking-cane of summer days was exchanged for an umbrella. A chain of some metal, which he who had faith enough might take for gold, crossed the white waistcoat, or lay outside the furred overcoat, according to the season. On these days of splendour, few and far between, Hiram would arise early in the morning, and would be heard cheerfully whistling whilst he went deftly about certain household work, taken upon himself within a week of his settlement in his new lodgings. Poor Mrs Martial might well have fancied at first that some Norwegian troll had by good hap strayed into Whitechapel, and assumed the guardianship of her kitchen. Every morning, Hiram made it as neat as a new pin, lit the fire, polished the copper kettle, black-leaded the hobs and the grate, varnished his own boots, washed and dressed, made tea, took his own early breakfast, and was gone before the household was astir. It was only on holidays that Hiram had let loose that mellow whistle; and so, since holidays were so few, the little household had only heard it twice or thrice. But one heart had begun to beat at it. When Hiram came home at midnight, one little head would stir upon the pillow, and in the dark, two pallid cheeks grew rosy for an instant as the stealthy footstep of the late comer passed up the stair. Was ever lodger so helpful and so unexacting? Did ever omnibus conductor pay his rent so punctually, since omnibuses first began to run in London highways?

Why should the little milliner's heart so beat at the cheerful tones of Hiram's mellow whistle? Why? Oh, undiscerning querist, not to guess that, by some occult arrangement, her holiday was made to chime with his. And what a difference the letting of the lodgings made! The eminent 'Atlas' once repeated to me a ballad—I know not whose; his own, perhaps, for he wrote verse once upon a time, and wrote it gracefully—and the burden of the ballad was, 'What is a pound?' What is a pound when you can afford to spend it on a dinner? What is a penny when it stands between you and hunger? A pound? You may spend an evening at the Opera by means of it. You may live on it in London for a fortnight. It may make all the difference between slow starvation for a month, and plenty for the same period. And this last was just the difference it made each month for Mrs Martial and her daughter. Hiram never admitted by word or glance that he knew this; but he knew it well. The poor spare room had never been let until he took it, and he came to the house like a lean American angel, making the physical conditions of life just bearable to its

inmates, and giving them both heart enough to bear more troubles than his coming left to them.

'Now, Missis Martial, ma'hm,' said Hiram, one cheerful morning, when the air was crisp even in London, and the sunlight golden, 'where air we goin'?' He was particularly gorgeous that morning, with a bit of crimson silk handkerchief peeping from his breast-pocket, and a pair of buff-coloured dogskin gloves dangling in his left hand. Mrs Martial looked at Mary. Mary looked down, and blushed a little, without knowing why; and Hiram, with a polite flourish, bowed to her, and observed to her mother: 'We must go, ma'hm, where these attractions may be seen.' At that, Mary's blush deepened, and the care-worn mother smiled timidly. 'I should like to see your Tower of London, ma'hm,' said Hiram, 'if I might suggest, an' if you air not tired of it.'

'I have never seen the Tower,' said Mrs Martial.

'Nor I,' said Mary.

'Ladies,' said Hiram, 'you surprise me.'—They felt almost guilty beneath his glance of wonder, and explained that Londoners know little of the sights of London, leaving them for the most part to the exploration of country visitors.—'Your Tower of London,' said Hiram, 'is perhaps as inter-estin' as any monument in the Old World. It is chokeful of objects which air hallowed by the touch of history. It is interwove with the most remarkable associations of your mo-narchical institootions.' He spoke with so much severity, that they decided to wipe out their reproach at once, and set forth; Hiram giving an arm to each, and piloting them along the quieter streets with mingled grace and grandeur. Coming upon busy thoroughfares, this comfortable order was perforce abandoned, though Hiram still kept Mary's arm within his, probably with a view to instruct her, with the more convenience, in the history of the Tower. Reaching that stately edifice in course of time, they were parcelled off with other visitors, and then huddled through it, after the senseless manner of the place, by a venerable beef-eater, with whom much familiarity with its contents had bred contempt, and who was as interested and as interesting as a parrot might have been. It was not his fault, poor old fellow, He had fought for his country, and the leave to go through this dull routine was his reward; and the Tower was a quiet haven to him, after a life in camp and barrack and the tented field of war. Hiram was severely historical during the hurried gabbling run the veteran gave his party; but I fancy that for one moment the present drew him from the past. Visitors to the Tower know one darksome dungeon—a mere black-hole in the wall, where one of the noblest of English spirits sighed itself slowly towards heaven in pious resignation, through weary years of undeserved imprisonment. It was here—if our surmise be true—that Hiram's interest in history momentarily ceased. He and Mary entered this darksome dungeon together, and were alone there for the space of perhaps thirty seconds. And when they emerged, Mary's hair and bonnet were, by the merest trifle, disarranged, and she was blushing; whilst Mr Search's hat was the least thing on one side,

and a lurking smile of satisfaction was in his eyes, though his features bore the impress of an imperturbable gravity. Perhaps a careful observer might have noticed after this a certain air of proprietorship on Hiram's part, a way of disposing of Mary's arm, for instance, as though, having kissed her in that dungeon—if he really did kiss her—he had sealed her for his own. Mr Search talked a great deal; but he said wonderfully little about himself or his own sentiments; and yet he and the little maiden seemed to understand each other perfectly. Once started, they seemed to be indefatigable as sight-seers; and after a rest, they set out for the British Museum. Arrived there, what made Mrs Martial pause outside the Egyptian court, whilst the young people went in together? Perhaps her excuse of fatigue was true, though Hiram had brought them all the way in a four-wheeled cab, as though he had been a millionaire. Anyway, Hiram and Mary went in, and found themselves alone in that solitude of old; and there, undismayed by the presence of the grave Egyptian faces, Hiram repeated the experiment first attempted in the Tower dungeon. They sat upon the base of a pedestal on which stands the vast presentment of a head, deity or hero. Beneath the plaited stone beard, a yard square—Cheops might have known the face—the little London milliner and her Yankee lover sat and talked together. Maybe Egyptian lad and lass made love on such a pedestal, and found it a pretty pastime, before blind Homer begged and sang through Greece.

'Mary,' said Hiram meditatively, 'I've made a discovery. Bus-conductin' is not the way to fortune. 'Taint even one o' the ways, an' I shall have to shelve it. Same time, it's reg'lar work, an' brings in reg'lar money, an' I don't want to be throwed loose again. When I was in Boston, I used sometimes to get a piece o' work in a printin'-office p'raps two days a week. While I was at it, I used to earn as much as I do now in a week; but workin' by flashes, an' idlin' three parts of the time, it was like tryin' to warn your house with gunpowder. An' I don't want to do that. I want to keep the fire burnin' steady, an' burnin' always; not to have, now a flare, an' now nothin' but the smoke. So I can't throw over what I've got till somethin' else turns up.'

To this sensible view of things, Mary gave complete adhesion; and they sat and discussed the future. Or rather Hiram discussed the future, and Mary listened, believing in him. Mrs Martial, sitting outside, had her own thoughts. She knew the situation and accepted it with some natural reluctance. Mr Search was kind; Mr Search was honest and gentle and manly; but if things had gone otherwise than they had, she might have looked higher for her daughter. Meantime, Hiram had not even seemed to think of marriage except as connected with fortune; and he was so confident of getting on in the world, that he inspired both the women-folk with his own certainties. When he and Mary had settled what was to be by their own desires, like people who make much more noise in the world, they strayed back from the stony remnants of old Egypt, and Hiram took the ladies to dinner. In the evening, they went to the play, and Hiram chose for them Mr Dillon's once celebrated performance of Belphegor,

which he had seen advertised in America. And when they had all three laughed and sorrowed with the mountebank, they went home in an omnibus, and the holiday was over.

ON A SUGAR ESTATE.

IN TWO PARTS.

PART I.—PLANTING-OUT.

THE object of the present paper is to give, as simply and concisely as possible, a sketch of the way in which the great industry of sugar-planting is carried on, the materials for which the writer gathered in the course of a long experience as a sugar-planter in the island of Trinidad. This island, as most readers may know, is the most southerly of the West Indies, and at one extremity is separated from the mainland of South America only by a passage known as the 'Boca' or mouth, some ten miles in width. Inside this 'Boca' expands the great Gulf of Paria, bounded on the east, and partly on the south, by the island, and in every other direction by Venezuela, one of the great South American republics. The only entrances to the Gulf are the 'Boca' above mentioned and a narrow opening called the 'Serpent's Mouth,' in the south. It thus forms an immense land-locked basin, in which the combined fleets of the world might in safety ride out anything short of a hurricane; the anchorage—stiff mud—being good.

It is in that part of the island which lies on the western side of the Gulf that sugar-planting is chiefly carried on. The greater part of the country is flat, or consists of low rolling hills; and the soil in both cases, though differing materially in constitution, is exceedingly rich and fertile. A considerable quantity of sugar is also made in the north, along the course of the Caroni—the only stream in the island approaching the dignity of a river. But the soil in this district—though I suppose it would still be thought by an English farmer wonderfully good and marvellously productive—is beginning to suffer from the immense crops it has produced.

No such thing as a variation of crop is ever thought of by a sugar-planter. He grows one thing only, and that is sugar-cane—always sugar-cane. And since he takes many tons of a most exhausting kind of plant every year from the ground—in many instances this has been done for nearly a century—and returns nothing to it worth speaking of except guano and sulphate of ammonia—which substances act more as stimulants than restoratives to the jaded soil—I think its deterioration is not to be wondered at. It is not, however, the purpose of this article to enter into the agricultural policy of the Trinidad planter, but to give such an account of his daily work and life as may have some interest for the general reader.

We shall suppose it is the month of August, and that we are safely landed on an estate, which we shall call St Helens. We are on a good gravelled road, which branches off into short streets, lined with houses looking something like a colliery village, but that the houses

are all one storied and have verandas; also that they are all whitewashed, and adorned with the most glaring red window-shutters and doors. And you will also notice that there is not a single chimney to be seen, except that tall one away to the left, which clearly cannot be used for domestic purposes, as it might vie in size with some of the giants of Manchester. It belongs to the 'works' or manufactory, of which we will have a closer inspection when we come to that part of our subject.

The houses are built in rows, with only here and there a gap between them. By taking a step or two, you can see that many have small gardens attached, which are carefully fenced in and full of vegetation. There are some two hundred of these houses; and they consist, except in rare instances, of only one room each; but then the space under the wide veranda in front can be, and is, utilised by the inhabitants as kitchen, dining, and general utility room; the house proper being reserved for storeroom and sleeping apartment. These rows of houses are known as the 'Barracks,' and are occupied by the labourers employed on the estate. St Helens is a large estate, and can turn out a gang of two hundred 'hoses,' besides 'tradesmen,' such as coopers, carpenters, blacksmiths, engineers, assistants, &c., some of whom, however, are 'outsiders'—that is, not living on the estate, but in some adjacent village. You will find that, including children, the sick, the old, and non-workers of all kinds, the total number of people on the place will not amount to much less than seven or eight hundred—a large number to draw their subsistence from about the same number of acres of land, together with the handsome profit expected by the owner at home, and the savings which many of the more prudent hands manage to accumulate.

That large building somewhat apart from the others, with a neat and bright-looking flower-garden in front, is the hospital. It has a gallery ten feet wide running right round it, where the convalescent patients can find cool breezes and fresh air, in spite of the burning sun outside. The hospital is divided simply into two wards, one for men, and the other for women and children. It contains apartments for the nurse, and a dispensary for medicines. Outside is a kitchen with rooms for the cook and two or three hands employed about the place; also a large shed containing iron tanks with a store of water; for in many places in Trinidad, spring-water is not to be had, and the people are dependent in the dry season on the water they can collect during the rains.

Close by is a building with more pretensions to be called a house than any in the Barracks. It is the quarters of the four overseers who assist the manager. Not far off, again, is the manager's house; and close to it is the mule-pen, which contains some ninety stalwart Texan mules, imported at a cost of forty pounds a-head. Besides these, the estate has forty head of draught oxen, bred on the place, and lodged in the cattle-pen, situated some distance off in the 'savanna' or pasture.

The first duty is the feeding of the mules, which takes place between four and five in the morning, and is a duty which falls to the

youngest of the four overseers, who is the first to begin and the last to leave off work. He unlocks the door of the store, and proceeds to distribute among the stock-keepers, who have followed in after him, the oats, molasses, &c., necessary for the morning feed. Mules are as fond of treacle as children; and in Trinidad, always get a liberal allowance of it mixed with their food. Their drink is also sweetened with it. The overseer narrowly watches his assistants, to see that there is no pillaging, for they are very fond of molasses too, and their chickens have no objection to oats. The feeding is soon done; and we hasten away, for the place is actually thick with mosquitoes and sand-flies. These pests always bite viciously during moonlight nights, and the poor mules have a hard time of it with them. Sometimes it is necessary to make a dense smoke in the pen all night, to enable the poor beasts to get a little rest. There are three things which sand-flies and the like cannot stand—sunshine, a fresh breeze, and smoke. But for these remedial agencies, it would be impossible to live on a low-lying sugar estate.

Proceeding to the manager's, we find that he occupies a large house, although it is only one story high, with a well-kept garden, and a fine avenue of cocoa-nut trees leading to it from the Barracks. At five o'clock A.M. we sit down to 'coffee,' which is the name by which the first meal of the day here is called. It is a simple meal, consisting solely of bread-and-butter and coffee, and is soon despatched. Then come the overseers and drivers for 'orders.' The latter are of the labouring class, but act as foremen to the various 'gangs.' They all stand round the door; and each of the drivers gets directions for the work to be done during the day by his particular gang; while the overseers are told off to superintend the drivers; after which, they proceed to the Barracks, and go from house to house arousing the people.

The manager offers to take us with him on his rounds; and we all mount and follow the overseers. The road is swarming with the hands on their way to work. These you probably expected to find were all negroes, or varieties of that interesting race; but it will be observed that while they have a dark skin, their hair is as straight as your own. They are East Indian coolies, with here and there a Chinese. These have been brought from their native land to supply the place of the negroes, who since their emancipation have had a great aversion to labour, preferring idleness to wages, and finding it easy to indulge that preference in a land where the common necessities of life spring almost spontaneously from the soil, and the climate allows clothes to be a compliance to the demands of mere decency. It ought, however, in justice to be stated that this aversion to labour is principally directed against field-work, the artisan class being mainly composed of negroes, though those of course are but a comparatively small number.

The coolie immigrants are imported by the colonial government at a large cost to the planters; and a watchful vigilance is exercised over their welfare. Their minimum wage and their hours of labour are fixed by law, and a

severe punishment is inflicted on any one ill-using them. On their arrival on the island, they are indentured to an estate for a term of five years; after which they are free men, and can work where they please. Should they remain in the colony for another five years, making a residence of ten years in all, they are entitled to a free passage to their own country; or if they decide to stay—as most of them do—to a grant of ten acres of land. Those who return to their homes are generally rich men, owning thousands of dollars, all made in Trinidad. Each coolie has to work five days a week, if not sick. Should he absent himself, he is liable to fine or imprisonment, on conviction before a magistrate. He is supposed to be, on working days, either at work, in hospital, or in jail.

Nearly all the adults—for the women work as well as the men—have now left the Barracks. As many mules as are wanted for ploughs, carts, &c., have been harnessed and led off, and the rest driven to the savanna.

It is only in the dry season that sugar is manufactured. If the canes were cut in August, for instance, their juice would contain but a small percentage of saccharine matter. At this time the canes are short, the tallest of them not more than four feet high; but when they reach maturity, some six months hence, their tops will be from ten to sixteen feet from the ground. The difference should also be noticed between the 'plant-cane' and 'ratoons.' Sugar-cane is a perennial plant, and after being cut, will grow again from the old root, like rhubarb, so that it is not necessary to plant it every year. Ratoons are canes which have thus sprung up again; the plant-canes, those that have not yet been cut. Sometimes, canes will ratoon for ten or twelve years; but more generally they are only ratooned for three years, so that a quarter of an estate has annually to be replanted.

Out in the fields, the first gang we come to is that of the 'plant-cutters,' who are engaged in a field that is 'abandoned'; that is, one of those that will be replanted this year. The canes from the old 'stools' (roots) have grown up weakly and scatteredly, for no care has been taken of them; and the 'cane-piece' (field) is choked with weeds, and there are only three or four canes in each stool, instead of some dozen or more. We find about thirty hands here; some dragging the canes from the stools, as you would pull a stick of rhubarb; others collecting and carrying them to a third party, who are sitting down, and cutting with a cutlass one piece from the top, and another from the bottom of each cane. Taking up one of these pieces, you find it is about ten inches long, and jointed at every two or three inches; at each joint there is an eye—like a potato. When planted, these eyes grow, and produce new cane-stools—the only way of propagating sugar-cane. It is a really beautiful sight to see a cane-piece with its long plume-like flowers, swaying in the breeze like a lilac-coloured sea. The hands employed here are very busy, for they are on piecework. In another part of the same field there is a gang of 'cut-lassers,' who are cutting down all the weeds, and also the canes which the plant-cutters have left. The cutlass is here made to do the work that a scythe or sickle would do at home. When

they have all the field outlashed, advantage will be taken of a few hours' dry weather and sunshine to burn the weeds, leaving the ground clear for the plough.

The morning is bright; but we are provided with those broad-leaved hats, without which our faces would soon be scorched and peeled. Mackintoshes are also carried, and must soon be put in requisition, for here comes a shower. We have scarcely time to don our protective garments before it is upon us. You never saw rain like this in England; it comes down not in drops, but as if it were poured out of innumerable spouts; and we find even our overalls but a poor protection; and our legs and feet, having no protection, are soon thoroughly wet. The rain, however, does not last more than a few minutes; and the sun shining out with seemingly augmented power, quickly dries us.

We next arrive at a cane-piece that is being planted. It is well turned up by the plough, and all over it are things which look like thin straight sticks, some three feet long, standing up from the ground. They are not sticks, however, but the sword-shaped leaves of the canes which have been brought from the next field. They are in rows six feet apart one way, and four feet the other. They are known as 'pickets,' and are put the right distance apart by means of a surveying-chain, the process being called 'lining.' Their use is to insure the canes being planted in equidistant rows.

This cane-piece presents quite an animated appearance; there are perhaps sixty or eighty people in it, all busily employed. Those we first come to are engaged in digging at each picket a wedge-shaped hole nine inches deep, and a foot square at the surface. The implement they use is a narrow heavy hoe, specially manufactured for the purpose. These men are called 'holers;' and each has to dig two hundred and fifty holes. But as they can do this by noon, they will then be free for the rest of the day.

Closely following on the holers are the 'planters,' who put into each hole two plants in a slanting position, so that one end of each plant touches the bottom, and the other protrudes about an inch above the top of the hole. The holes are then carefully filled with mould, which is pressed firmly round the plants with the naked foot of the operator, for all labourers go barefooted here. The plants are brought in carts from the field which we first visited, are emptied from them on the trace or roadway, and are then conveyed to the 'planters' by women, in baskets carried on the head. Both negroes and coolies carry everything they possibly can on their heads, and you would scarcely find such a thing as a wheelbarrow, if you searched the whole island.

The planters are not employed at piecework, as their work requires some care, and must not be hurried over. Their hours of labour are from six A.M. to four P.M., with two intervals of half an hour each for meals. Nine hours a day is the legal limit to a coolie's employment during the rainy season. You notice that between every fourth row of pickets there is an eighteen-inch surface-drain to carry off the superabundant moisture. Subsoil drains are un-

known here, but no doubt would be a great improvement. Some hands are engaged with hoes in giving to the beds between the drains an oval shape, high in the centre, and low at the edges, so that the rain will quickly run off them. This operation is called 'round-riding.'

We next arrive at the field where the 'Paragrass' gang is employed. Paragrass is a weed that takes its name from a district in Venezuela where it is indigenous. It is one of the best foods for stock in the world, and was for this reason introduced into the island about thirty years ago. Animals that are fed on it can be kept in good condition, and do hard work without oats or any other grain. But then, while it is everything that can be desired in the way of food for stock, it will not grow in the savanna or open pasture, for the simple reason, that the beasts are so fond of it, that they never give it a chance, picking it out from among the other grasses as fast as it springs up. Yet in the cane-pieces, where it is not wanted, it grows to such an extent, that although so few years have elapsed since its arrival in the colony, it has overrun every estate, and is the most noxious of all the weeds the planter has to contend with. Cutting it with a hoe is worse than useless, as, after being so treated, it multiplies with ten-fold vigour. Digging it out root and branch and utterly consuming it with fire, or burying it in deep pits, has been found the only effectual way of keeping it down. It is impossible completely to eradicate it from an estate in which it has once got an entrance; for the smallest piece, if dropped on the ground and left undisturbed, will take root. The roots of the Paragrass grow deeply in the ground, and the implement used in digging them out is either an ordinary four-pronged fork, or a sort of pick with a long slender point. It takes a large gang to keep pace with the rapidity of its growth; and there are some fifty people employed in this field, the men digging it out, and the women and children carrying it in baskets to the traces, where it is heaped up to dry before burning.

The 'weeding gang' is next reached, where one hundred and sixty hoes are at work. Weeding is done by piecework, or the 'task' as it is called. Each person gets a certain number of square feet to do, and can leave when he or she has done it. The 'tasks' are measured by the drivers, who carry a 'ten-foot rod' for this purpose. The weeds when cut down are piled in heaps called 'boocans' between the rows of cane. In this hot and moist climate, decomposition rapidly takes place; and the next time the cane-piece is weeded, the boocans will be found to consist of little else than earthy matter, which will be scattered over the ground before erecting a new one. Each cane-piece is weeded about four times a year. The weeders also 'strip' the canes; that is, relieve them of the leaves that have become old and withered. Every joint on a cane marks where a leaf once grew; the lower leaves dying off as the plant increases in size.

At eleven o'clock, the manager takes breakfast; and about one o'clock the labourers who have been employed on 'tasks' begin to arrive from

their work, and in another hour have nearly all come in. The overseers who have had the superintendence of the task-work gangs, and who had returned to them after breakfast, have also finished for the day, with the exception of 'making up' their 'field-books;' and one of them also must attend to the stock being fed and locked up at six o'clock. The field-book is a register kept by each overseer of the work done and wages earned by each person employed in his gang. When these books are 'made up,' they will be handed to the junior overseer, who acts as book-keeper, and who will post their contents into a ledger. He will then make an 'abstract' of the day's work and expenditure for the manager's use. He has also to furnish weekly and monthly returns of various sorts for owners and other interested persons. And as this requires to be done after the outdoor work of the day is over, he is kept pretty busy. However, he consoles himself with the thought that he will not always be the junior.

SETTING THE SNARES.

CHAPTER II.

WHEN Mr Bellar left the *Amsleigh House* to enjoy an evening stroll, as he said, his manner betrayed little of the indecision or doubt which marks the aimless lounge. On the contrary, although he did not hurry in his pace, he struck quickly across Broadway, turned down Wall Street, and thence again into another thoroughfare, with the air of a man who has a purposed goal. He was soon in Gem Street; and then, turning again into a narrower thoroughfare, entered a house of no very inviting aspect. Many a stranger, indeed, would have hesitated to enter this street at twilight, and still more would have been reluctant to enter the building. Not so with Bellar, who walked boldly along the passage, and opening a door at the end, stepped at once into a room. This apartment was rather spacious, being long, although low; and by the arrangement of several bare wooden tables and wooden seats or forms, it seemed to be used as a dining-room, or place of some low entertainment. At present, however, there was nobody within it excepting an old woman, of unusually repulsive aspect, who was seated by a low fire, watching the boiling of a large iron pot or caldron.

'Where is Little Jake?' asked Bellar abruptly.

'Is he in the house?'

'Guess I dunno,' replied the old woman.

'He expected me to-night, did he not?' continued the visitor.

'Spoke he did,' returned the crone. 'He said you would come. But you air here too soon—about ten o'clock, he said.'—

'Yes; I know,' interrupted Bellar. 'But things have not fallen out just as I wished. Can you find Jake?'

The old woman stooped, and evidently put her mouth to the end of a tube, although, in the gathering gloom of the room, it was impossible to see exactly what she did; but she was heard

to desire some one to come. The next minute the door opened, and a young negro or mulatto boy appeared. 'Thar—you can tell him what you want,' said the woman; and Bellar, who was evidently too familiar with her manner to take offence, told the lad to go and find Little Jake. The black nodded and vanished. Bellar seated himself upon a bench; while the old woman, having done her part, seemed no longer to be conscious of his presence, but resumed her watch over the simmering caldron.

Bellar had not long to wait, for in a few minutes a heavy step—in no degree like that of the nimble messenger—was heard in the passage, then the door opened, and a huge, ruffianly looking fellow—a model of the worst and most dangerous type of the New York rowdy—appeared. 'Wal,' he said, without any preliminary greeting, 'you air here mighty early, Major. How have you fixed the business now?'

Without speaking, Bellar glanced meaningly at the old woman, and then looked inquiringly at the new-comer.

'Oh, she don't signify a particle,' returned the latter aloud. 'Old Carry there could hang half of the gang, if she liked, and we must trust her. We trusted her at first, because she was useful; now we trust her because we can't help ourselves.'

The expression on Bellar's face showed him to be but half satisfied with this ominous explanation. He had not meant to show his feeling on the matter; but he must have done so; and dark though the room had grown, low as was the fire—its only illumination—the hag caught the expression, and exclaimed, with a short laugh: 'Why don't they kill me, eh? That's what he is thinking—that's what he wants to know, Jake!—Oh, I reckon you need not deny it; it's no use telling a lie, stranger; and you ain't the only one who has asked why old Carry isn't cleared out. I'll tell you, stranger'—

'There! dry up!' cried Jake. 'Guess, he don't want to hear about our affairs.'

'But he shall; and—ha! ha!—so shall you, Jake,' laughed the crone. 'It does you good to be told why you are afraid of me, that is a fact.—Wal, stranger, old Carry is a witch, and the boys here all know it. She can tell their fortunes, and bring them bad or good luck, accordin' as they treat her; and they know that too. There are two or three would get rid of her if they dared; but the balance of the rowdy boys know there would be no luck for many a day if a hair of her head was hurt, so that keeps her safe on both sides.'

'Oh, you are a witch, are you?' exclaimed Bellar. 'Perhaps you can tell my fortune?'

'Of course I can; but I should be ashamed to do it,' was the unexpected reply.

'Ashamed to do it! Why, granny?' asked the young man, a little piqued at this answer.

'Why, do you think it needs a witch or a conjurer to tell what you are, and what you will come to?' retorted old Carry, who was clearly determined not to be friendly with the visitor. 'A child could do that by only looking at your false face, smooth and cunning as you are. I guess I can tell pretty nearly what you have come here for. But Little Jake will not find his part so easy to play as he thinks.'

Jake growled out something which was evidently not a blessing, unintelligible as it was; then the twain removed to the extreme end of the apartment, where they conferred in tones too low to be overheard. Old Carry, however, seemed to have no interest in them or their conversation, her whole attention being focused in the caldron, or in feeding the small fire with fragments of coal and wood which she gathered from the hearth.

'Did you meet him?' began Jake, as they took their seats at the end of the apartment.

'Yes; I saw him on board the *Celebes*,' replied Bellar. 'I should have known him without help; but I inquired, to make sure. I spoke to him.' He then detailed, with tolerable accuracy, what had passed. 'So, as he would not come out to-night, I have arranged to take him to Central Park to-morrow,' he continued. 'It must be done to-morrow, if at all, for he goes West the next day.'

'Central Park!—that's an odd enough place for it,' growled Jake; 'in daylight too!'

'Oh, there are plenty of quiet places about there,' said Bellar; 'some parts where the waste material for the buildings is thrown, and where the earth has been shovelled up, will do; and I'll take care he goes there, and in the evening too, when few are around.'

'If he's missed—but there ain't no one in New York to miss him,' said Jake; 'and I reckon he don't know your name.'

'Not he! I provided myself with a card, which was good enough for him; and he no more knows who I really am than'—Bellar checked himself so abruptly here, that the pause was rather awkward.

His companion noticed it, and with a hoarse chuckle said: 'No more than I do, I suppose you mean, Major? Wal, that's right. Caution all round. I don't want to know nothing of the Britisher; one man's the same to me as another. You've paid me, and I will stick to the bargain. Now then; just tell me when and where you will bring him.'

Here the tones of the speakers were lowered almost to a whisper upon the subject, which appeared to be satisfactory to Jake, who nodded assent to the arrangements; and then Bellar rose to go.

'I wonder what she meant,' whispered Jake, with a nod of his head towards the old woman, whose ugly outline and profile were brought out in strong relief at that moment by the kindling of some pieces of wood which threw out more flame than before; the light seeming all the more vivid from the increased gloom of the apartment, which was now, indeed, almost pitch-dark—'I wonder what she meant by saying I wouldn't do my part? I never failed in a bargain yet, Major, and I never will.'

'Oh, pay no attention to her,' returned the other. 'A drivelling old idiot, with just sense enough to be spiteful, and to know how to play on the fears and superstitions of those around her.'

'Mebbe, Major, mebbe; but let me tell you that if you tried to play on the fears and superstitions of the particular outfit that hangs around her, you would find that it took a sight more sense than you p'raps calkilate on,' retorted Jake. 'The boys here don't take no more spitefulness

than suits 'em, stranger, but they are afraid of old Carry. She meant something, I'll bet my bottom dollar.'

'Well, I don't care what she meant,' returned Bellar. Then, having risen, they walked down the room and passed the old woman in silence.

Parting where the opening joined Gem Street, Bellar hurried away as if his aim were to mix himself with the throng of passengers; and several times he glanced swiftly round, as though to ascertain if he were followed. But he need not have been anxious about this; for Little Jake—as the huge rowdy was ironically termed—remained at the corner where they had parted, until he had broken off a suitable plug from a huge cake or slab of tobacco, and had duly inserted the same in his cheek, after which he slowly lounged away in a different direction from that taken by his employer.

The latter passed an hour or two at a music-hall, or—as it was termed there, and as it is gradually growing to be known here—a Varieties Theatre; then, returning to the *Amsleigh House*, he inquired for his friend Mr Richmond; and found that, in accordance with his resolution, he had retired to bed early. In the morning, they met at the breakfast table, with the various 'fixings' of which Arthur was delighted, as the variety exceeded even the sumptuous and redundant fare of the *Celebes*. He was, too, in the mood to be pleased with everything, as in the bright morning air he felt that he had shaken off part of the despondency inseparable from landing in a strange country. The cheerful conversation of Mr Bellar was also not without its influence.

Arthur's time in New York being so limited, Bellar proposed two or three short excursions during the day to various parts of the city and its suburbs; trips just sufficient to fill the intervals between breakfast and dinner, and dinner and supper—these trips to conclude with a ramble round Central Park.

'We must not omit the Park,' said Bellar, with a smile; 'because we find all you English—Britishers, I ought to call you—so dreadfully prejudiced on behalf of your own Parks, in London I mean, that you really will not even go to look at ours, if we dare to say a word which sounds like a comparison.'

'That will not be the case with me,' replied Arthur; 'for I have heard so much about the Central Park, that if you had not volunteered to show it to me, I should have asked to see it.'

'Come! that is well for a Britisher!' exclaimed his companion; 'and since you have only one clear day, let us lose none of it, but start at once.'

In compliance with this, they rose, and in a few minutes had started on their first excursion.

Everything was new, everything was delightful, and Bellar was the most entertaining of guides. Although not a resident in New York, he had been there several times, and had made himself thoroughly acquainted with the city. They returned to dinner; and after a short rest, started on another exploration, which was to end at the Central Park, whence they would take an omnibus back to the *Amsleigh House*, to supper. It happened, however, that as their preliminary stroll had been extended so much beyond their

first intention, it was late in the afternoon—evening indeed—when they arrived at the Park, both somewhat tired.

'It will be too late for supper,' said Arthur, glancing at his watch, 'even if we go home at once; while, if we enter the Park'—

'Oh, we must not return without doing that!' exclaimed Bellar. 'I will never let you go away without seeing our Central Park. Besides, I really do not know whether you will not see some parts of it to greater advantage in the twilight of a beautiful summer evening, such as this, than at any other time.'

'With all my heart,' replied Arthur. 'I was only afraid of trespassing on your kindness. Let us go in, then.'

Entering the Park, they at first followed the main drives; but presently Bellar referred to his watch, and said: 'We shall just have time to see the most really romantic bit of the Park. Let us make a 'short-cut.' He then struck across the grass and down a slope, at a tolerably brisk pace, followed by Arthur, soon losing sight of the more frequented paths, until they found themselves in a spot which was wild and untidy indeed, with nothing romantic about it. It was a mere waste deserted corner of the demesne, where, apparently, builders had stored their spoiled brick and stone, while here and there mounds of earth were thrown up; brought, it seemed, from some excavations.

'This is a miserable-looking place,' began Arthur; 'you don't call this romantic, do you?'

'Ha! ha! *This* romantic!' replied Bellar; and there was something so strange in his laugh, that Arthur involuntarily turned round.

'Why, how pale you are!' he exclaimed; 'are you ill?'

'No; never better,' said Bellar. 'But I am not pale; it is the effect of the rising moon. You look pale, as if you were frightened.—We will cross yonder corner, under those trees, then we shall—shall see something better.' His manner was so constrained, his voice so altered, that Arthur looked at him in wonder. 'You are armed—have got a pistol, I suppose?' continued Bellar. 'All Britishers think they must have them, directly they land.'

'What an odd question to ask now,' returned Arthur. 'No; I am not armed, beyond this cane, which is heavily loaded with lead. A friend gave it to me as a keepsake. It is a tolerably effective weapon.' Arthur made the cane whistle around his head as he said this; and being a tall powerful young fellow, a loaded cane in his hands would indeed be an effective weapon.

Bellar slackened his pace as he approached the corner indicated, a gloomy uninviting spot, dark in itself, and rendered especially so by the shade of a few great trees. He drew out his watch and glanced uneasily round.

'Ha, ha!' laughed Arthur in his turn; 'any one would think *you* were afraid now! I don't believe I am so white as you are. But let us get away from this wretched corner.' He strode resolutely on as he said this. Bellar again glanced anxiously round, hesitated, then hurried up to Arthur, keeping, however, a little behind him.

They were now passing under the deepest shadow of the trees, and Bellar stole his hand

into his breast, where he seemed to be clutching something. He hesitated again for a moment, in which moment Arthur's long stride had taken him once more into the clear moonlight; and bounding up a slope which faced him, he exclaimed, looking round with a cheerful smile: 'There is not much romance here, Mr Bellar; but there is a good deal of life, which is pleasant after that dreary hole. And I can see carriages in the distance. I shall hire one, and get home to tea.'

Bellar hurried up the slope without reply, turning for an instant, when at the summit, to look back upon the sullen spot he had just left, with a face in which anger and dismay were equally mingled. By a great effort, he threw off his embarrassment; and in the ride home and at the supper—a special meal, the regular hour being past—he was the same gay, easy companion he had proved all along. To Arthur's astonishment, Bellar, tired as he must have been from his long ramble, pleaded an engagement which would prevent his passing the evening with him, as had been arranged. This was startling news to Arthur, who had heard nothing previously of such an engagement; but Mr Bellar was firm, and after a hurried meal, rose from the table, bade his friend 'good-evening,' and departed.

It was to the same house as on the previous evening that he bent his way. At the door of the building he found the mulatto-boy enjoying, imp as he was, a pipe in the refreshing evening air. The atmosphere of the place was dull and stagnant enough in the hot summer night; but the mulatto-boy lolled against the door-post and smoked, with the air of a man thrice his age.

'Wal, stranger! you're waltzing around again,' began the boy. 'Do you want Marm Carry, or'—Bellar was pushing by him without ceremony, not feeling in the mood to gossip with a boot-boy, when the youngster caught him by the coat, and exclaimed: 'Say! you'd better not put on a sight of style, when a man wants to do you good. Don't you go into that room to-night.'

There was something in the boy's tone which arrested Bellar in spite of himself. 'Why not?' he asked.

'I'll tell you why, stranger,' returned the mulatto. 'There's some boys in that room that you will find it easier to get among, than to get away from. They've been drinkin' whisky too, all day, and the hull lot of 'em have got their knives and six-shooters. You want to know what has become of Little Jake?'

'I do,' said Bellar, astounded by the turn the conversation was taking.

'Then suppose you go to corner of Gem Street and wait for me; it do me no good to be seen talking to you. Marm Carry hate you, and, by thunder! she soon hate me too, and gib it me hot!'

Unintelligible as was the proceeding, Bellar deemed it the better plan to take the boy's hint; and so, returning to the larger street, he loitered in the neighbourhood for two or three minutes, when he spied the mulatto lad, who caught sight of him as quickly, and made a signal for him to follow. Bellar complied; and the boy led him, at a pretty good pace, some half a mile

from the spot, when he paused and waited for the young man to join him.

'Golly!' he began; 'it not very bully to talk near Marm Curry to-night. Never can tell where she is! Good thing for you, stranger, you not go into that room. I did, and I hear them say things about you, make your blood all chill.'

'But what for—what has made them unfriendly to me?' asked Bellar, not unnaturally.

'Marm Curry say you 'sult her last night, and laugh at her,' replied the boy. 'She never forgive that; I know her. I know things she have done.' The mulatto shook his head meaningly here, as though the remembrance was not pleasant, then proceeded: 'Sides, she say you bring bad luck to this place. Police get Little Jake last night, and now he in prison.'

'Jake in prison!' echoed Bellar. 'What was that for?'

'What dat for?' echoed the boy in turn; but in a tone of the profoundest contempt—'what dat for? Why, for everything. Little Jake thief, robber, murderer. Every one there thieves and murderers. You know dat, stranger, else you not pay Little Jake to do your work. Dat's quite plain. Wal, Jake very bad man; but he keep him word. If he promise to kill man for you, or burn house, he do it. But he never come out of prison now; I guess they will hang him this time.'

Bellar did not care to hear any more; he thrust a dollar into the boy's hand, and hastened away in the direction which took him most readily from the region of Marm Curry.

Arthur was much surprised to find, in the morning, that his new friend had not returned to the hotel all night. What was still more disappointing, he did not appear prior to the time of the train starting by which Arthur was to commence his journey to Denver. He was at first alarmed, and thought of communicating with the police; but on mentioning his anxiety to the bar-clerk, he found that Mr Bellar had sent for his luggage and discharged his bill; so that, whatever the cause, it was clear that his absence was with his own consent.

TROOPING THE COLOURS.

THE site of the old Tilting-yard at Whitehall—now termed the Horse Guards Parade, where in olden times the royal tournaments were held, and where many a lance has been splintered and many a noble life sacrificed to the cause of chivalry—is annually the scene of a pretty military spectacle; which last year, on the occasion of the sixty-second anniversary of the Queen's birth, was witnessed, or rather attended, by about twenty thousand persons. The presence of the King of Sweden, the Prince and Princess of Wales, the Dukes of Connaught, Cambridge, and Teck, the Marchioness of Lorne, and the ever-welcome Princess Mary, gave *éclat* to the ceremony; while the fact that the Commander-in-chief's staff was expected to include the famous Sir Garnet Wolseley and the no less renowned general, Lord Strathnairn, increased the interest which was felt in the day's programme.

The ceremony which thus drew together so distinguished an assembly is an ancient one, and is called 'Trooping the Colours.' It is only seen to perfection in London, and on the Queen's birthday; and it may prove interesting to our readers to have before them a full and authentic record of the proceedings.

As soon as eight o'clock has struck on the morning set apart for keeping the Queen's birthday in London, people who wish to view the ceremony of the day begin to wend their way in the direction of St James's Park. While the crowd is gathering, the bells of the various churches in the great city fling forth their joyful tones, and the Royal Standard is unfolded from the flagstuffs on the top of the public buildings.

Those who have been fortunate enough to obtain tickets of admission to the inclosure, enter it either from the archway which connects Parliament Street with the Park, or else make their way thither before the cordon of troops has been drawn around it. The tickets, which are issued by each of the three regiments, and are obtainable by anybody with sufficient social standing to warrant them in applying for one, enable the holders to view the parade from the side of the square where stands the saluting-point, namely, directly beneath the windows of the Horse Guards. About nine o'clock, a strong body of the Household troops—infantry—arrive on the ground, and are immediately posted, at about six paces from each other, all round the vast square, each side of which is nearly a quarter of a mile in length. By the time this is done, the crowd has increased to a wonderful extent, even the railings of the Park, the trees, and the windows and roofs of the great public buildings overlooking the spot, being crowded with occupants.

On the outskirts of this immense crowd, much amusement is generally caused by the efforts of the police to prevent benches from being used to stand upon; much annoyance also being caused thereby to those who have already parted with their money for this frail kind of accommodation, and who find themselves suddenly called upon to 'stand down.'

At half-past nine, the strains of the regimental bands are heard; and presently the troops selected to represent each regiment of the brigade of Foot Guards march gaily on to the parade-ground from the direction in which their respective barracks lie, and take up the position assigned to them in the ceremony. By ten o'clock, the crowd has become very dense, and stretches right away along the historic Malls—famous for many a royal procession—until it reaches the Milk House Gate, near which stands Marlborough House, the residence of the Prince and Princess of Wales.

As mentioned already in our previous article on 'The Queen's Guard' (No. 845), the regiment whose turn it is to find the guards at St James's Palace, and other places in the Metropolis on that day, has the *place d'honneur* assigned to it, namely, on the right of the line, and furnishes the State Colour which is the object and centre of the whole ceremony. This regiment, as a matter of course, supplies the greatest number of men to the parade; while the other two corps supply the flank companies, or picked men of their several battalions. The whole of these troops are drawn up in line facing the saluting-point, and with their backs to the Park. The men are clad in their new uniform,

which is taken into wear from that day. The bands of the three regiments are combined, and take up a position a little way off from the right of the line, but facing down, headed by the drum-majors in their gorgeous state uniforms of crimson and gold.

Presently another band is heard approaching; and in a few minutes the silver-burnished helmets and cuirasses of the Life Guards are seen glittering in the May-day sun. This body of cavalry, perhaps the finest in the world, is only a detachment, which also forms part of the Queen's Guard; but instead of mounting guard at St James's Palace, where there is no stable accommodation, they do so at the Horse Guards, every day throughout the year; the other regiment of Household cavalry, namely, the Horse Guards Blue, or 'The Blues' as they are popularly called, also taking its turn in the same duty. It is only on the Queen's Birthday, however, that the band attends, and then it appears clad in frock coats of crimson and gold, with velvet hunting-caps.

In some of the newspapers, this band has been erroneously stated to be Her Majesty's private band; but the Queen's Private band and the Queen's State band are quite distinct in themselves, and have no connection with the bands of the Household cavalry.

The cavalry guard having taken up its position to the right of the combined bands of the Foot Guards, with its own band on the right, everything is ready for the advent of the reviewing officer. At a quarter after ten there is a sound of cheering in the distance, which is taken up gradually along the Malls as His Royal Highness the Prince of Wales, in his uniform as Colonel of the Life Guards, and other distinguished personages, such as the Dukes of Connaught and Cambridge on his right and left, followed by a brilliant staff, including, perhaps, the well-known forms of the Duke of Teck, Sir Garnet Wolseley, and Lord Strathnairn, ride down to the parade-ground. As the Prince appears on the scene, the troops present arms, the Life Guards lower their standard, and the bands play the first eight bars of the National Anthem. On reaching the saluting-point, the Prince returns the salute of the troops, who then 'shoulder arms' once more, and the ceremony of the day commences.

While the Prince rides from right to left of the line, and back again along the rear, the State Colour is brought forth by a sergeant, under the escort of the sergeant-major of the regiment to which it belongs. They take up a position to the right of the saluting-point and on the northern side of the square, immediately facing the cavalry guard. On the return of the reviewing officer, the officer commanding the parade gives a signal to the senior drum-major, who immediately turns round to the bands and gives the command to 'Troop!' Three slowly-given strokes of the bass drum follow, succeeded by a roll of the side drums, *crescendo* and *diminuendo*. As the sound of the rolling dies away, the drum-major, in a loud voice, gives the command 'Slow March;' and the combined bands, playing a stately march, parade slowly from one end of the line to the other, countermarching at the other side of the parade, and, after a brief pause, returning to their original position in quick time.

As they cease playing, the escort for the

Colour is called by a peculiar beat of the drum performed by a drummer standing on the extreme right of the line. Then a Captain, Lieutenant, and a company of men advance from the right of the line, and preceded by the bands playing the time-honoured *British Grenadiers*, they proceed to the spot where the State Colour is in waiting. Here the escort halts; the sergeant-major takes the Colour, which is a handsomely embroidered banner, and advances towards the Lieutenant. The escort then presents arms; and after saluting the Colour, the Lieutenant sheathes his sword, and receives from the sergeant-major his precious charge. The latter then draws his sword, and salutes the Colour also, the bands playing *God Save the Queen*, and the Prince and the troops also saluting. The salute finished, the line 'shoulders arms,' and the escort marches in slow time, preceded by the bands playing the *Grenadiers' March*, to the left of the line. Arrived there, the band ceases playing, the Captain, followed by the Lieutenant with the Colour, proceeds along the front of the line, while the men forming the escort file along the rear. At the same time, the troops once more present arms, and the band resumes playing until the Colour and its escort reaches its place at the right of the line.

When this ceremony is concluded, the whole of the troops march past in slow and quick time, and the cavalry trots past, the bands playing the parade-march of each corps as it passes the saluting-point. Then the whole line advances in review order, gives a royal salute, and the 'trooping' is finished.

The Queen's Guard, with the State Colour in its custody, then proceeds to St James's Palace, where, surrounded by a great crowd, the ceremony of relieving guard is gone through; and the united bands play several fine selections from the various operas, the Princess of Wales and her children generally listening to the music from a stand above the garden wall of Marlborough House.

As one o'clock approaches, people rush off to the parade-ground again, to witness the guns fire a royal salute, a battery of artillery from Woolwich having last year come to London for the purpose of performing this part of the ceremony. This was a great novelty; for hitherto the royal salutes in London have always been fired from the time-honoured 'quart-pots,' or small guns, somewhat like mortars in shape. Like everything of the kind, we presume that these miniature cannon have at length succumbed to the prevailing love for change, though, as a matter of fact, the largest guns must be the safer of the two.

When the military ceremony closes, thousands of persons are set at liberty to seek further enjoyment elsewhere; and the streets of London become crowded with holiday-seekers, all intent upon taking the utmost advantage of the most enjoyable holiday of the year. Some seek the river, some the railway; while others amuse themselves in the various Museums and Galleries for which the Great Metropolis is famous. An agreeable and novel feature last year was the perambulation of the streets by van-loads of children singing the National Anthem, and distributing bills respecting the representation of an historic spectacle at one of the Metropolitan theatres.

As a rule, the Queen's birthday is not a general holiday, and this is a pity; for one of the Bank

holidays might well be spared, in order to give all classes an opportunity of celebrating the birth of the best and gentlest monarch that ever graced the British throne.

FELIX DEAN'S ADVENTURE.

'I'm off,' said Mr Charles Bevan, junior, putting on his overcoat. 'It's one of our "free-and-easy" nights; and I wouldn't miss a meeting of the Jolly Savages, no, not for the gold medal in *materia medica*.—If you're coming with me, Dean, put on your traps, and let's be off.'

'No, Charley; not to-night. I must really get to work and do some reading. Time flies; and unless I make a beginning, I shan't even have a fight for it.'

'Get to work! Nonsense! Let's enjoy life, a little. You've got the luck to be here in London, instead of our native Slowcester, so you'd better make the most of it. Come with me to the Savages to-night, and get to work to-morrow refreshed and inspirited.'

'Yes; with a splitting headache. No; I have spoken. I have said work, and work I mean. You Savages must get on without me, this time. I've been looking at dates, and feel positively frightened. I find I've only got a little over a month to prepare for the examination. How I shall pull through, I don't know; but it is clear that I must make a start and stick at it.—Don't press me—there's a good fellow, but leave me to myself.'

Charles Bevan could see that his friend Felix Dean was in earnest. He sighed, put on his hat and prepared to go forth unattended by his companion.

'If you won't, you won't, though I don't see why on earth you shouldn't. However, here's luck to you over your musty problems. I will see that your health is proposed in a neat speech by yours truly; and we'll drink success to virtue and industry. Ta, ta.'

Left to himself, Felix Dean took out a printed list, and began to study it attentively. As he did so, his open, frank, good-humoured young face became clouded. 'I shall never do it,' he said to himself. 'I've put it off till it's too late, and I shall have to go home now, like a bad penny. What will the guv'nor say?'

The young fellow had certainly good reason for looking and feeling gloomy. The time fixed for the Competitive Civil Service Examination, Control Department, was drawing appallingly near, and he had scarcely opened a book to qualify himself for the coming contest. It was the old, old story of the country lad with insufficient strength of purpose to resist the allurements of the town. Two months before, Felix Dean had come up to London from his native city Slowcester, full of buoyant hope and noble resolves. He was to join his early friend and fellow-townsmen Charles Bevan, medical student at St Bartholomew's, in his chambers, and work on

steadily, with a view to emerging first in the list of candidates. How had he carried out his resolutions? By attending athletic-sports meetings at Lillie Bridge and Lord's; by frequenting theatres; by being a boon-companion at 'free-and-easies,' with a good song invariably ready; by being guilty of the thousand-and-one follies which young men, who always have been and always will be young men, commit daily without being in many instances apparently much the worse for them. Only Felix Dean had let time slip by, and had gone a little bit too far.

Discouraged, but determined to make some attempt at a beginning, he brought out his Euclid and sat down in the cosy sitting-room to read. But the task was not an easy one. Long disuse made it difficult for him to concentrate his attention on his work. Words and facts got somehow to be mixed. The letter A at the end of a diagram refused at any price to correspond to B; and C flatly denied any correlation with D.

'C D,' said Felix, with just the ghost of a smile on his handsome face—'C D; yes; that is exactly how I feel—very see-dy indeed. I don't know that it's much use my trying to do anything to-night.' He went on vainly plodding for twenty minutes or so, but at last threw the book away from him in disgust; and it may be well surmised that a man capable of such barbarous witticisms must have been truly at a low ebb. 'I'd better go out and take a turn in the fresh air,' he thought. 'That may brighten me a bit. I'll go to bed early too, and see what can be done to-morrow. It shan't be for want of trying, anyway.'

His inclinations as a provincial, who had not yet learned to despise the attractions of lanes with trees—even though bared by Winter's hand,—and the soft stillness of unfrequented paths, led him to walk onward briskly till he came long past Haverstock Hill, up the steep road which takes one to Hampstead, and which heats omnibus horses and shortens the wind of the obese. It had been a good trudge from the neighbourhood of the Strand; but Felix Dean, a stalwart, stout-limbed pedestrian, the triumphant champion of many a mile-race, felt as fresh as at starting. The road was not exactly the place for adventures; but adventures come to the adventurous, and Felix Dean was at an age when men are on the alert for incident, and disposed to put their newly acquired manhood to the mettle on the least provocation. He had been walking gloomily along, alternately tormenting himself by reproaches, and soothing his despondency by making stern resolves for the future, when he became aware of the near presence of two other persons. One was a young lady, a pretty young lady—so at least thought Felix, on catching a glimpse of her as she passed under a lamp. Her figure was lithe and graceful; and he felt sure, from the little he had seen of her, that a gentle, sweet-eyed face made harmony with the rest. Behind her, close at her heels, strode a ponderous, thick-set, bearded man, dressed in every-day dark clothes, but evidently a foreigner, by the cut of him. The young lady seemed to be conscious that some one was behind her, for she hastened her step, in order to distance her pursuer and

avoid him. The man, however, began to speak to her, and the startled girl hurriedly crossed the road. This manœuvre was not attended by the success desired. Her follower crossed too, and was soon once more close to the young lady's side. Alarmed, she hastened her pace still further, and crossed back to the side where Felix was walking and quietly watching. With unabashed impudence, the man again followed in her wake, and continued pleading, in a half-whining, half-threatening tone, for alms. The young lady, terribly frightened, paid no heed save by putting extra pressure on her speed.

Felix became very soon master of the situation. Tramps, ready to take advantage of the helplessness of lonely wayfarers, were common enough in his part of the country, and he knew well how to deal with them. Without any further ado, he quickened his step until he got quite close to the man. 'How dare you molest this lady, you vagabond!' he said in a loud clear voice.

The man turned round suddenly in surprise, and swore one of those guttural never-ending oaths familiar to the German. The young lady indulged in a little scream of terror. 'Vot vor you interfere?' growled the man. '*Donnerwetter! was wollen sie?*' He looked very wicked, and put out his fist prepared to deal a blow. But Felix did not give him either time or opportunity. Dropping out with his left, he made the German reel and see more stars than were certainly shining in the skies that night.

'Take that; it will teach you to know better another time.'

The man looked for a moment as though he meditated a savage spring; but Felix's calm and collected attitude caused him to pause and reflect. He had already tasted the smarting effects of one good rap, and was sensible enough to perceive that in his young antagonist he had to do with a practised boxer. Blurting out an unintelligible series of anathemas, he turned away like a beaten hound.

'How can I thank you!' said the young lady, looking up at Felix timidly. 'I was so frightened, I hardly knew what to do.'

'Don't speak of it; I am very glad I happened to be by.'

'He has been following me ever since I left the house of some friends down the road. I live quite close by, and would not allow them to send their servant with me as an escort. I have come home at this hour time after time, and no accident of the kind has ever happened to me before. Oh, I was so terribly frightened!'

Felix noticed that she gave way to the daintiest possible shudder; and—yes, she was pretty, with the sweetest imaginable pleading face.

'Pray, don't distress yourself any further. The scoundrel has gone, and I don't think it's likely he will return. May I in any case have the pleasure of seeing you to your door?'

'Oh, thank you; but I am afraid I am putting you to a great deal of trouble.'

'Not in the least; my time is my own.'

He offered his arm, and felt the pressure of the lightest and tiniest of gloved hands. They

walked along. What did they talk about? Felix Dean himself could not have told you. All he knew was that the moments seemed very sweet and very brief. Before he had time to fully realise his position, he was brought to a stand-still in front of a handsome solid-looking villa.

'I am at home now, and thank you very, very much. May I—may I ask to whom I am so much indebted?'

Felix fished out a card from his case. He was glad she had said this; not through boastfulness or vainglory, but simply because in his heart he longed to have the chance of seeing her again. It seemed to him cruel that they should have met just that once, and possibly for that once, only.

She took the card, bade him good-night warmly; and her little active graceful figure was soon lost amongst the maze of shrubberies that lined the garden-path leading to the house.

That same night Felix dreamed of bearded Germans and fistic encounters. But one bright smiling face ever and anon shone forth, and broke the combative spell at its most truculent stage, filling his soul with gladness.

The next morning, however, the old grief became paramount. There was his Civil Service Examination staring him pitilessly in the face, and sternly reminding him that this was no time for idle dreaming, but for hard work. He sat down to his unattractive task, and became wholly absorbed in his studies. Discouraged but not vanquished by the formidable list of subjects to be mastered in a very limited space of time, Felix toiled on steadily, undisturbed. In the afternoon, the servant brought in a card. 'If you please, sir, a gentleman has called to see you.'

'Called to see me?'

Felix glanced at the name: Alfred Morrison.

'Morrison, Morrison?' he thought. 'I knew a Morrison once at school. Can it be the same?—Ask the gentleman up,' he said to the attendant.

A rather diminutive, carefully dressed personage, jovial and saucy in looks, and about the same age as Felix Dean, entered the room.

The two recognised each other at once.

'Why, it is Dean after all!' said the new-comer, holding out his hand effusively. 'I thought there couldn't be two Felix Deans going about.'

'Morrison! So it is, to be sure! How on earth did you manage to rout me out here?'

'In a very simple manner, my dear boy. My sister, whom you met last night, gave me your address. My visit here was partly at her request, to thank you for your timely help; and I'm delighted to have stumbled across an old school chum as well.'

'What! are you—your sister's—brother?' exclaimed Felix, fairly taken aback at this unexpected recognition. 'I'm awfully glad to meet you again, old fellow.'

The two sat down, and joyfully renewed the links of an early and fast friendship, severed as most school friendships are, by time and diversity of pursuits in after-life. Alfred Morrison had been in the same 'form' as Felix at the big proprietary scholastic establishment in Slowcester, and their relations had ever been those of close chumship.

They naturally questioned each other as to their careers. Morrison was filling a humble yet, as a step to something better, an important situation in a government office; and Felix soon explained to his friend how and under what circumstances he found himself in London.

'So you're going up for the Control, are you?' said Alfred Morrison. 'Well, I wish you every luck and a first place in the lists.'

'Thanks; but I'm afraid it's rather late in the day. I've been putting off things till there isn't the ghost of a chance now. I shall get ploughed horribly, and disgust my poor old governor. I mean to have a try, though; I shall work morning, noon, and night for the next fortnight.'

'You'll have to leave a blank this evening, for I'm going to ask you to come and dine with us at home; just a cosy family affair, no strangers. The governor will be delighted to make your acquaintance.'

The allurements were a powerful one; but Felix felt himself in duty bound to resist. He pleaded the urgency of his work.

'Rubbish!' said Alfred Morrison with a knowing wink. 'Don't let that prey upon your mind; you'll pass right enough; I'll answer for that. I'm not going to take any refusal with regard to this evening; and won't somebody be pleased! She talked of nothing else except you, this morning at breakfast. Why, Dean, you're coming out as a hero of a romance in first-rate style!'

Felix would fain have continued to excuse himself, as he felt too much concerned about his preparation for the examination to indulge in renewed idleness.

'Oh, but you must come, old fellow,' said Alfred; 'and I'll tell you what I'll do if you'll let me. I've been through the grind myself, and know what it is. I think, therefore, I can give you some useful hints. If you give this night to us, therefore, I will come to you every alternate night till the exam., and "coach" you. What do you say to that?'

Felix admitted that he had been seriously thinking of employing some such help, but it was the rag-end of the session, and his purse was light, and he could hardly see his way to the expense. But he would gladly accept of an old friend's help; and as a proof of his gratitude, would devote that evening to him and his friends.

During the rest of the time before his day of trial, Felix worked like a negro slave. Strong-bodied, clear-headed, and with tremendous staying powers, he, with the most useful help of Alfred, made the very utmost of the brief period that remained. As he went on too, he felt that he was gaining lost ground very fast. At school, his intellectual capacities had been by no means of an insignificant calibre, and he found his task one of no such great difficulty after all. The list of subjects, once hopelessly formidable, became 'small by degrees and beautifully less,' till within two days of the one fixed for the competitive examination, he knew himself sufficiently strong to do good battle.

He had found time also to pay a visit to the Morrisons, and to pass a delicious hour with Amy—an hour fraught with results in which Cupid played no unimportant part.

On the day previous to the contest, he shut up every book, and pulled himself together by a good healthy march, miles away into the country. The oldest and most experienced 'coach' could not have suggested to him anything more sensible.

The momentous hour came, and Felix walked into the big rooms at Burlington openly and frankly, with the air of one who meant to win if he could, but by fair and square means.

'Now for success—and, Amy!' That is what Felix Dean said, when the papers were handed to him. They seemed to have been made up by a charmed hand, so well did they lie within the range of his knowledge. His good luck continued throughout the examination, and he rose at last confident that he had done well. It was not without a feeling of gratitude to Amy's brother that he made this acknowledgment to himself; and it was not without a sense of pity that he glanced round at the rows of young fellows like himself, poring over their desks—pale, earnest, and thoughtful students many of them too—youths of all stations, and from all corners of our sea-girt isle—English, Irish, Scotch, and Welsh, all eagerly struggling for ten vacant appointments!

A fortnight or so after, Charles Bevan, who was greatly interested, called Felix's attention to the published list of successful candidates in the *Times*.

Cool to the last, Felix took it up carelessly, and began to read. His name appeared *third*!

'Got it, by Jove!' shouted Bevan, delighted beyond expression. 'Hurrah!'

In time, the young official in Her Majesty's Control Department, with the full consent of everybody concerned, took unto himself somebody as a fair little official in his own Domestic Control Department. It need scarcely be stated that the somebody was Amy Morrison, and that Felix more than once blessed his happy stars for bringing him the Hampstead Road adventure; for without his renewed acquaintance with Amy's brother, which was thus strangely enough brought about, he might never have held an appointment in a government office.

ROYAL COLLEGE OF MUSIC.

MORE than a year ago reference was made in this *Journal* (No. 878) to the proposed institution of a Royal College of Music, having for its object the education of persons evincing special aptitude for music, but unable to bear the whole expense of their education. The proposal originated in a petition presented by the Prince of Wales to the Queen, praying Her Majesty to grant a Charter of Incorporation for the purposes indicated, and giving a brief history of the efforts made in the same direction by the establishment in 1875 of the National Training School for Music, at Kensington Gore (South Kensington), of which the Duke of Edinburgh—himself an accomplished musician—was President.

This praiseworthy proposal, thus inaugurated by the Heir-apparent and his illustrious brothers, has now taken definite shape, and a Charter of Incorporation for a Royal College of Music has

been prepared and laid before the Privy Council. The Prince of Wales has graciously accepted the office of President of the new College; and in this capacity he recently called together in London a large body of gentlemen, representative of the counties and towns of England and Scotland, dignitaries of the church, and other religious and educational bodies, to aid him in what he described as 'the promotion of a truly national object, by obtaining contributions for the Royal College of Music.' The principal resolution embodying this object was moved by the Duke of Edinburgh; and the Prime Minister, the Archbishop of Canterbury, and other distinguished personages, took part in the proceedings. At the conclusion of the meeting a very large sum of money was subscribed for the endowment of the College.

The purposes to be served by the Royal College of Music were stated by the Prince of Wales with great clearness in his opening speech. It was desired, he said, that those to whom nature had bountifully given a good ear for music, or a good voice, but to whom she had been niggardly in worldly fortunes, should be sought out in their obscurity, and given the opportunity of distinction by facilities for a proper course of training. He laid stress upon the combination in the new College of two systems of instruction—a system of gratuitous education on the one hand, and of musical education paid for by those who were not upon the foundation. For both classes the teaching and rewards would be the same. Another feature was that of including in the College scheme the instruction of those who did not intend to make music a profession. The smallest number of scholars worthy to constitute a foundation for the College would be one hundred, of whom fifty should have their education free, and fifty should be maintained as well as educated. The latter would be selected by competition throughout the United Kingdom. A system of examination would be organised by which, in every town and in every village, opportunities might be afforded of participating in the College instruction. Only let eminent ability be found in the village choir, and the promising pupil would be brought to London for full opportunities of advancement. It was estimated that eighty pounds a year would be required for each pupil who had to be educated and maintained, and forty pounds a year for each who had only to be educated. He hoped that the public liberality would grant him means to found at least two fellowships, in order that rising musicians on receiving their education might not be tempted to sacrifice their aspirations and their art to the necessity of immediately earning means for their own support.

It is impossible to doubt the success of a movement which has been so auspiciously inaugurated, and which aims at the accomplishment of so praiseworthy an object. It must also be matter of congratulation to the country that the leader and organiser of the movement should be the Prince of Wales, who, while shut out by constitutional barriers from participation in many pursuits open to others less exalted, is thus lending the influence of his high position to the advancement of what will so much contribute to the social and intellectual pleasures of the community.

RAIN AT MIDNIGHT.

O MIDNIGHT Rain,
Heard 'mid the restlessness of weary pain!
Thy cadence brings
Sweet thoughts of peace on silver-tinted wings.

In this dim town,
I hear thy thousand streamlets trickle down:
Ere thou hast fled,
Tell me, O Rain! the source where thou hast fed.

I see arise
Bright pearly dewdrops from blue violets' eyes;
I see the mist
Come from the wood-rill's ripples, evening-kissel.

The green fields gleam
Before me, as to thy sweet rhyme I dream;
And birds and flowers
Are with me in my restless midnight hours.

More blest than these,
I feel the fragrance of the summer seas;
Along the coast
I see the never-resting billows tost.

Lying here still,
Thoughts of the ocean make my sad heart thrill—
That ocean rife
With strength and majesty and glorious life.

Each gem long-sought,
From dewdrop or from distant waters brought,
O bounteous Rain!
Thou scatterest for a blessing on the grain.

Spend and be spent!
O gracious Rain! through thee I grow content:
Thy calm-voiced spell
Goes deeper in the heart than words can tell.

Watching through night,
Many with me await the morning light
In pain or care,
Or rapt, it may be, in the trance of prayer.

To each, to all,
Hearing thy rhythmic music softly fall,
Sweet thoughts may come
Of Him who by His ways doth lead us home.

For not one drop
Falls from the cloud upon the bare hill-top—
Falls, through dark hours,
Upon the closed chalice of the flowers;

Or on the sea,
Or on the murmurous thickly-foliaged tree,
But falls to cherish
What else would pine and, drooping, sadly perish.

And shall the tear,
Shed by the Father's well-loved children here,
In doubt and pain,
Fall for a less wise purpose than the Rain?

A WORD ON FARMING.

WE have been favoured with the following communication from one who has had much experience as a practical agriculturist, and whose remarks on the relation of crops to soil, and *vice versa*, will, we believe, be of value to many of our readers.

There are various things that farmers presently wish for. Most of them desire a reduction of rent, better seasons, higher prices for farm-produce, and the American 'anywhere out of the world,' or at least out of the British market. Reduction of rent many have got already; but the necessity for importing foreign grain will never grow less till farmers themselves learn to 'make two blades of grass grow where only one grew before.' Better seasons we cannot command; and our only hope is that Meteorological Science may in time enable us to foresee with a tolerable degree of certainty the kind of seasons that may be expected. Higher prices we are not likely to have, and nobody wishes for them but the farmers; and their wishes in this particular, therefore, will not help them out of their troubles. What farmers want is not only sunlight, but the light of science. A country man and a cultivator of the soil, we have all our life long associated with farmers, land-agents, and landlords, and we unhesitatingly say that the present amount of farm-produce taken from the soil is not more, and we think less, than two-thirds of what it might and ought to be.

What the farmer wants to know is the geological formation on which his farm rests. He knows that some soils are naturally fertile and others barren. He may have heard that wheat demands phosphoric acid; potatoes, potash; and turnips, lime; but whether he be on trap soil, calcareous soil, or, better still, a combination, he may not know; but he ought to know. If he is on trap, or on a soil having trap for its basis, he will know that potatoes will prove a paying crop rather than turnips; and that if he is

on limestone, turnips will probably form the most lucrative crop. If he is on the fertile New or Old Red Sandstone, he will know that wheat may be grown again and again, with artificial help, without the soil being materially impoverished. What the average farmer does not know is, the chemical element or combination of elements his land is rich in, and the manurial dressings that he ought to apply or withhold. Nor does he know what his soil is deficient in, and what it therefore specially wants. Scores of farmers have applied nitrate of soda to land that had an inexhaustible supply of soda, and while thus throwing away their money, have condemned artificial manures! Hundreds have land that is infertile simply because soda is absent, or present in deficient quantities; and they yet fail to apply it. Lime is continually being added to land that has enough in itself; other lands want it so badly that they produce poor crops and grasses of inferior nutritive value, only wanting lime to be made productive and have their produce changed. Almost all soils contain more silica than will ever be removed, yet landlords insist—and farmers consent—that straw, which in the market would bring money to its owner's purse, shall be rotted into a manure of no particular value!

What the farmer wants to know is the chemistry of the plants he grows; the animals he feeds, and the foods they eat; the soil he cultivates, and the manures he uses. It is, for instance, a sad waste of capital to apply nitrate of soda to plants that require potash; or potash to plants that want lime; or phosphoric acid where it may already exist. It is failing to make the most of everything, to feed hard-working horses on fattening foods, while their muscles starve; and full-fledged fattening beasts on highly nitrogenous food, instead of on food that would cause a rapid gain in weight.

Farmers, landlords, and land-agents need to learn that plants take only *mineral* matters and nitrogen from the soil, and therefore need only these added, to maintain them in continued and

increasing fertility. It is a tremendous and a costly mistake to imagine that the carbon, the hydrogen, and oxygen which constitute the bulk of all crops, come from the soil, or constitute property when buried in it. It might help the landlord's rent, and leave a balance for the farmer's pocket, if they could be brought to understand that the carbon comes wholly, or practically so, from the carbonic acid which exists in the air in sufficient though small quantity, and which is being as continually extracted from the air by the waving cornfields and the towering forest trees, as it is as constantly being restored from every decaying organic substance, from every fire, every furnace, and every lung. The hydrogen and oxygen the plants find in water; and the carbon of the rotting straw, though it adds humus to the soil, furnishes it with no plant-food. In short, the burying of straw is a most unprofitable business; yet the landlord insists on it, because he believes he secures the return of the more valuable part of what the crops remove. As a matter of fact, that goes, never to return, in the grain.

The wealth of every landlord consists in the *particular minerals* his estate affords; and the farmer as truly works up and removes the mineral wealth, as does the lessee of a coal-seam, a bed of paraffin shale or a vein of iron ore. The idea that land-wealth consists in the amount of the *farmyard manure* in the soil, and that the land would be useless and valueless if it were gone, is a mistake that impoverishes the nation to the extent of millions yearly. Land-wealth consists partly of the various salts on which plants feed, and this depends on the geological constitution of the soil. The amount of plant-food *available* on any given soil is very small; and whether soil is naturally poor or rich in this plant-food depends on whether the soil contains—locked up in the grains of rock of which all soils are composed—much or little sustenance for plants; and whether what it does contain can be readily liberated by cultivation, exposure to the elements, or dissolved out by the acids in the soil, or the acids which the roots of plants secrete. The yearly amount thus liberated is all a farmer *can* take from the soil; hence it is a great mistake to suppose that particular ways of cropping permanently impoverish soil. Unless what the soil is deficient in be put there by the farmer, he, rather than the landlord, will be made poor. 'Condition' is only temporary enrichment; hence a poor soil cannot be *permanently* enriched.

Till the landlord has ascertained by chemical analysis the amount his soil contains of potash, phosphoric acid, lime, soda, magnesia, and the other less important elements found in plants, he will never exactly know the letting value of his farms. And not, till then, will he be able to say to his tenant what manures must be bought and what crops raised; neither till then, will the farmer know what he is buying, nor be able to lease a farm on sound commercial principles. Till then, he will never know what to buy and what to raise; for he will hardly be sure whether his land can grow potatoes continuously, or grain continuously, or whether the old-fashioned rotation will suit best.

Farmers and landlords generally require to learn

that on large breadths of land, corn may be grown profitably at a minimum of expense, because only a few substances need to be applied artificially, the soil furnishing the rest. Above all, they need to learn that what is carried off in the grain cannot be returned to the soil *in the straw*. They need to know that phosphoric acid, potash, lime, &c., have been for generations carried away and never returned; and that superphosphate of lime, sulphate of potash, and nitric acid, in small quantities, along with the waste products of the farm, would in ever so many cases restore what has been taken away, much better and more economically than by the application of straw-manure, which simply means the destruction of straw. The straw furnishes chiefly what the soil is in all probability already rich in—silica. It follows then, that the money which stable-keepers in towns, paper-manufacturers, &c., pay over to the Dutchman for straw, might be divided between the landlord and the farmer, to the advantage of both; and their want of knowledge alone prevents the consummation of this desirable state of matters. Then the landlord's rents would go up, and the farmer's capital increase, thus enabling the former to work improvements which now stand over. The farmer would be able to furnish abundance of the plant-food wanted, and so secure better crops—thus profiting doubly.

'Waste not, want not,' is a trite and forcible expression which is in the mouth of every one. As a nation, we are guilty of a frightful amount of waste. The farmer and the whole nation want the sewage—which now abominably pollutes our rivers, which generates disease-raising germs in the sewer-pipes, and frequently makes victims of men—turned upon our half-barren fields, in order to change them into fields of the greatest fertility. Dried clay and charred peat not only deodorise but render altogether innoxious any unpleasantness possessed by sewage, and in themselves are valuable improvers of soil. Many soils pay badly for want of clay in their body to *hold* the applied manurial matter—the sand allowing the rain to wash it out. What better manure or permanent improver could any one invent than clay-treated sewage? Much clay land is ill to work because of its adhesiveness—what better corrective could be invented than charred peat? Moreover, sewage contains the very matters which our fields want; that of which they have been so long robbed; and for want of which, they are below a proper standard of fertility; the very essence of grain, and in great part formed from it.

Till science and economy go hand in hand in farming, it will never pay; with these, no farmer need fear competition, and the landed interest will again look up. The present state cannot continue, for it is not paying. A better state of things must ensue, for it, though on far too small a scale, is paying even now; and continued adversity will cause the farmers and landlords to adopt a system they could *once*, but cannot now, afford to neglect.

The farming interest demands a Minister of Agriculture, and the establishment of Agricultural Colleges to impart a scientific education in the principles of agricultural chemistry. At present, there are few schools for farmers' and landlords' sons; hence the landed interest, and still more the

nation, suffers. New land-laws may be needed; security from the ravages of game is needed; freedom of contract; free trade in land and in farm-produce is needed; but above all, and beyond all, farmers and landlords need 'more light.' Free trade in land means much more in reality than it does in the mouths of those who repeat a mere parrot cry.

The light shines now that would guide British agriculture into a profitable course, but only a few walk in it. Meanwhile, it is for farmers to gather from books* which deal with agricultural science—and these are plentiful—the knowledge that ought to be spread broadcast by teachers; and when once he *knows* his wants, his wishes will be listened to, and the necessary alterations in the law will in all human probability be granted.

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

CHAPTER XIII.—'THAT COIN IS MARKED,' SAID HIRAM SERIOUSLY; 'I SHAN'T TAKE ANOTHER.'

HIRAM went back to work, and plotted all day how to force Fortune to his own pattern, and thought of many ways, though none of them seemed to answer. In his studies of the daily papers, he came again and again upon the phrase, 'Plans and particulars sent free on application'; and as an example of the direction his thoughts continually took, I give the scheme which this suggested to him. 'S'posin' now,' said Hiram to himself, hanging behind his 'bus, and turning this fancy over, 'I was to take a bureau, and make a list of every one of these coons, and send a letter to each of 'em.—"SEARCH & Co.'s *Advertising Office*.—MISTER. Be so good as send to us in future all plans and particulars of sales by your noted firm.—Yours truly, HIRAM K. SEARCH & Co." Reckon theer's a thousand on 'em. That takes five pound to post 'em all. One expense an' done with. Reckon, again, theer's an average of one sale a day, an' each packet weighs four ounces, what with postin'-bills, auctioneers' catalogues, an' wrappers. That's two hundred an' fifty pound-weight; fifteen hundred pound-weight a week. Sell it for waste to the paper-mills at a farthin' a pound—that's a trifle over thirty shillin' a week, English money.' Having completed this calculation, Hiram smiled. 'Thirty shillin' a week. That's so. An' when you've cleared your expenses, if you do, you air pro-vided for by a government which is proud to recognise financial talent. Pro-vided for, say at Portland or some other eckally attractive quarters, for at least five years. No; my inventive young friend; we will not perform in that partic'lar show.'

But there was no possible financial enterprise in the direction of which Hiram did not at one time or another cast his thoughts.

A week after the holiday, he went home to his lodgings at the usual hour, and was surprised to find a light in two of the front windows. Entering with a presentiment of evil on his mind, he

encountered Mary, standing at the door with a candle in her hand. 'Mr Search,' she whispered.

'Hiram,' he said, correcting her lightly, though he could see that some trouble weighed upon her. —'What's the matter?'

'I sat up to see you,' she said hesitatingly, 'to ask you'—

'Yes, my dear,' said Hiram, taking the candle in his hand—'To ask me'—

'Oh, Mr Search,' she whispered, in such evident distress that it pained him to see it, 'I scarcely know how to ask you. You have been so good, and we have tried your kindness so often'—

'Mary,' said Hiram, putting his arm round her waist, 'don't you lose my respect for you. I won't have you talkin' nonsense. You air naturally the wisest as well as the prettiest little gell in London, an' I don't want you to fall into any ridic'lousnesses.—Now, my dear.'

'Hiram,' she began again—and he, with a nod of bright approval and a little pressure of the arm which encircled her waist, bent down to listen—'mother is ill, seriously ill.'

'Dear, now!' said Hiram gently, drawing her nearer to him.

'We are so miserably poor, just now!' said the girl, speaking softly still, but with difficulty through her fast-rising tears. 'The doctor ordered quinine wine and beef-tea.'

'Did he, now?' asked Hiram, patting the wet cheek.

'And I had to pawn a jacket and some other things to get them; and now they are gone; and I have no more money, and nothing left to take'—

'My darlin',' said Hiram pitifully.

'And will you,' she whispered, sobbing still, 'let us have the week's rent in advance, this once? I am so ashamed to ask you'—she would have drawn away from him; but his arm restrained her—'you have been so good and generous ever since you came.'

'Now, now, now,' said Hiram, patting the wet cheek again, 'I wish I was a millionaire; but I ain't. You wait a minute, an' I'll be down again.' He left her, and mounted the stairs with long silent strides, and returned in a few minutes with a lean chamois leather purse. 'It's only nine shillin',' said he mournfully; 'but I shall have more by-an'-by.' He placed his hand above her lips, when she would have thanked him. 'You just leave a note for me, if you should want me in the mornin'.—How long has she been ailin'?'

'Ever since the day we went out together,' the girl answered.

'Mebbe a bit tired,' said Hiram soothingly.—'Don't you fret, my pretty. An' if you want anythin', ask me fur it, an' if I can get it, you shall have it; an' if you don't, I'll never forgive you, not if you was to love me all your lifetime as well as I love you.—An' that,' added Hiram to himself, 'you never will, because why on airth should you?' He left her there with a kiss, and mounted again to his own room, where, by the light of a single dim candle, he sat solemnly down at a small green-painted deal table, and surveyed himself in an oblong mirror some eight inches by six. It was not vanity which taught him thus to gaze upon himself. 'Tain't your face an' figger, Hiram, my lad, that makes the

* The following are examples of works which may with advantage be consulted: *Johnston's Agricultural Chemistry*; *Manners*, how to make, buy, and use them; and Professor Tanner's *First Principles of Agriculture*.

little gell cling to you, you fortioitous concourse of disadvantageous anatomical circumstances! Wall, that's a pretty phrase, I vow, an' it has the merit o' bein' fairly descriptive. Yes, sir. It pokes you up in the identical cave you live in. You air a fortioitous concourse of disadvantageous anatomical circumstances. That, sir, is your personal ticket. An' yet, Hiram, he continued, laying down the mirror, and rubbing his lean cheek thoughtfully with the tips of his fingers, 'it ain't the prettiest men as the best gells care for. No, sir. Grit tells. An' Hiram, you're takin' noo responsibilities, an' grit is wanted. Now I tell you, sir, an' I tell you straight, that if theer is in your ugly figger one soft place, it's got to be macadam'd; fur I am not goin' to let that poor little creetur mire her feet by walkin' over any swampy spots in you. That may be figgerative; but my meanin's clear. You air not a sentimental party, Hiram, an' so fur as I know you, you never wrote a set o' verses in your life; but you know as well as I do, theer's nothin' in the world, no blessin' in it, like a good woman's love. An' how you got it, I dunno, but got it you have. Take care of it; be worthy of it, Hiram, an' your personal appearance will not count. An honest man, if he's as ornery-lookin' as Zebedee Pitman, can give Apoller p'int, an' then knock chunks off him.' And with this moral reflection, Hiram began slowly and gravely to disrobe, and in a few minutes was sound asleep.

There was no note for Hiram in the morning; but he wrote and left upon the kitchen table a small missive, asking that news of the patient's progress should be left for him at night. Just three words answered this, 'Mother is better,' written in a thin hand, upon a scrap of letter-paper; but in the very dead and hollow of the following night, Hiram, always a light sleeper, was awakened by a creaking sound; and sitting upright in the dark, listened. Light footsteps went hastily to and fro, and were lost on the carpeting of the lower room. Then Hiram heard a voice groaning; and having struck a light, he hurried on his clothes, and went out to see what was the matter. Mary, with a scared face, was coming up the stair when she caught sight of him.

'Is she worse?' he asked. 'You want a doctor. Tell me where he lives?' Armed with the doctor's address, he was away at full speed, rang up the medical man, and brought him home. The doctor kept a small dispensary in a poor and crowded neighbourhood. Poverty and sickness were so common in his locality that he had grown somewhat hard.

'My fee,' he said, as they walked together, 'is five shillings.'

'Very well,' said Hiram sadly.

'I can't afford,' said the poor medico, 'to come for less at such a time of night.'

'Very well,' said Hiram again; and they walked on in silence through the sleeping streets. Reaching the house, Hiram opened the door with his latchkey, and sat down in the darkness of the lower room to wait. In a few minutes, he heard the medical man descending, and went into the narrow hall, faintly illumined by a street lamp, to meet him. 'How is she?'

'Come with me,' was the answer, 'and I will

give you a mixture.' Again they passed into the streets together. 'Relatives of yours?' asked the doctor as they walked, nodding his head backwards towards the house.

'No,' said Hiram; 'I'm only a lodger there. How is she?'

'It's a gone case, I should say,' returned the doctor. 'There's just a chance for her, and that's all.'

Hiram made no answer; and they reached the dispensary in silence; and there, from his meagre store of drugs, the doctor made up the best prescription his means allowed. 'Five shillings,' he said, as he handed the bottle to Hiram.

'Keep that till I bring the money to you,' said the 'bus conductor, detaching his imitation gold chain from his waistcoat, and drawing forth the showy cheap aluminium or oroid watch. 'I haven't got it with me.' The doctor took it reluctantly and with some grumbling; and Hiram sped away with the medicine. A police officer looked suspiciously at him as he raced along; but, reflecting probably on his own inability to compete with Hiram's lengthy legs, forbore to pursue him. Running all the way, Hiram burst breathless into the street he lived in; and there, lest his hurried footsteps should disturb the patient, subdued his haste and walked on tiptoe. Having given up the medicine, he whispered: 'I shall be in the kitchen if you want me;' and before the girl had time to remonstrate, he was gone. He sat alone in the darkness, thinking, until the house had dropped once more into midnight stillness, and at last fell uncomfortably to sleep, awaking every now and again with great nods, which seemed almost to shake him from his chair. At the usual hour, he lit the fire, guessing the time by the look of the outside air, performed all the small household duties he had taken upon himself, and went out. The morning was raw and foggy, and as the day went on, the fog deepened. His anxieties grew so, that at mid-day, finding a temporary substitute, and promising him payment for his services, he pleaded illness, and went home again, and heard worse news than ever of the patient. Going to his own room, he opened a little drawer, and taking out a small bag, made search within it until he found, in a corner, amongst odds and ends of thread and a score of buttons of various patterns, the half-sovereign which Gerard Lumby had given him, carefully treasured until now.

'I don't like parting with it,' he murmured as he turned it over. 'If I'd ha' spent it in a racket of any sort, I should ha' felt like flyin' in the face o' Providence. But it's a good cause—an' yet I don't like partin' with it.' Suddenly his face brightened; and putting the coin carefully in his pocket, he left the house, and walked the streets, with curious glances at the shop-windows and the signs, blurred with the fog. Coming at last to a pawnbroker's, he entered, pushed aside a swinging-door, and found himself in a wooden box with a counter before him.

'What do you want?' asked the boy behind the counter.

'What will you give me on that?' asked Hiram, producing the half-sovereign and laying it on the counter.

'Why, wodderyer a talkid about?' asked the

boy, who was probably of Hebraic extraction. 'That's half a thick-ud. Get out!' He said this playfully, as if in response to a humorous overture.

But Hiram's face was grave. 'That's a half a sovereign,' he said solemnly; 'worth ten shillin', ain't it? What will you lend on it? I wouldn't part with that coin for five pound. It's all the money I've got, an' I want to realise on it; an' when I can get it back, I shall come for it.'

'Are yer id eardest?' asked the boy.—Hiram nodded with funeral solemnity.—'All right,' said the boy, with his beady Jewish eyes a-glitter. 'Nine shillings.'—Hiram nodded again.—'What's yer dame?'

'Hiram Kysarchichus Search,' responded the client gravely.

'What?' said the boy.—Hiram repeated it.—'Here,' said the boy, pushing the pawn-ticket and the pen across the counter. 'Write it dowl yerself.'

Hiram wrote it in a clerkly hand; and the boy, having demanded and received a halfpenny for the ticket, handed over nine shillings, and the transaction was complete.

'That coin is marked,' said Hiram seriously. 'I shan't take another.'

The boy turned it over, and looking sideways at Hiram out of the corners of his eyes, passed his thumb and finger across each side of it. His trained and cunning touch detected the mark; and fixing a watchmaker's glass to his eye, he read, 'G. L. to H. K. S.'

'All right,' said he, folding it into a little parcel, and tossing it into a drawer, after pinning it to its ticket duplicate.

Hiram then left the shop, and again made his way to the dispensary, where, the doctor being at that time abroad, he left word for him to follow on his return. It was already late in the evening when the doctor again reached the house. He spent but a brief time in the sickroom, and then descending, took Hiram by the sleeve and drew him into the street, where the fog drove in visible billows across the bleared flicker of the lamps.

'It will be all over in a few hours,' he said. 'She asked me, and I told her so. There is somebody she wants to see, and I have sent her daughter to her. Have you got the five shillings?—Thank you. Here's the watch. I shan't charge for this visit, because I've not been able to do anything. I shall come round to make out the certificate in the morning.' It was an everyday matter with him, and practice had taught him an outer hardness.

Hiram went back to the little front room, and sat there until Mary came down. 'My dear,' he said, 'you must get a nurse.' He dreaded what he knew was coming, and could not bear to think of the helpless girl alone at such a time.

'Our next-door neighbour is a nurse,' said the girl. 'I can ask her to come in. But I want to go to Fleet Street. My—my father lives there, and mother says she must see him.'

'You call in the nurse, while I go to Fleet Street,' said Hiram. 'Give me the number.'

She gave him full instructions; and he set out, and remembering the doctor's words, 'It will be all over in a few hours,' he leaped into a cab, forgetful of his scanty store of money, and drove hastily. Then came the interviews already

chronicled, and then the silent watches of the night; and for Hiram in his loneliness, and Mary in her terror-stricken watch, as for Garling in his sleep, with every passing second the warp and woof of Circumstance shot in and out, and not one of the three had any knowledge of the web which Time's swift shuttle was weaving.

PROCRASTINATION.

THERE is a standard work of English literature which, though deservedly popular with our grandfathers, has been but little read by a later generation. We allude to Young's *Night Thoughts*, a poem of sustained merit, in which the philosophic student cannot fail to find a mine of suggestiveness. If the book be new to him, he will probably smile, and be reminded of the individual, unread in Shakspeare, who, taken to see one of his plays, declared it was all made up of quotations; for such a reader will find in the *Night Thoughts* many a line, many a phrase that has taken deep root in the English language as an expressive familiar quotation. Not every one who talks of 'Tired Nature's sweet restorer, balmy sleep,' knows whence the passage is taken; and perhaps fewer persons still credit Dr Young with the true and pithy saying that 'Procrastination is the thief of Time.' Yet the line is imbedded like a gem in his poem.

How true that saying is, we rarely find appreciated by youthful minds; and yet procrastination—the putting off till to-morrow what ought to be done to-day—is one of the most fatally bad habits the young can acquire. When the thing to be done has been fully considered, and a clear decision arrived at, nothing remains but to fix on the right time for action, and if, as often happens, that right time is the 'now,' the wise man acts promptly, does the deed, whatever it may be, without further parley, and very often is able to throw the whole affair behind him, and so have his energies free for fresh tasks. But the procrastinator talks of 'plenty of time,' of 'by-and-by'; or if pressed, maybe of 'to-morrow'—that to-morrow which is ever a morsel of the veiled future which no human being can have any certainty about, but which is pretty sure to bring with itself its own burden of cares and duties.

It is hardly too strong an assertion to declare that no decided procrastinator was ever really successful in life. Perhaps if he belongs to the limited band of people who are independent of active employment, the habitual procrastinator may seem a comparatively harmless and inoffensive person. His affairs are so small, that we are apt to think that he cannot greatly injure others or himself; but even he sometimes frets his friends by delays and neglect and unpunctuality, which act as clogs on the social wheel; and a life that seems to have no higher purpose than to get over time, can hardly be considered a happy or successful one.

But a vast multitude of persons are so constituted, that the habit of procrastination early acquired and long continued, or its opposite, that of prompt action, will make all the difference between partial failure and real success in life. Observe, how 'unlucky' the dilatory person is often considered, or at anyrate considers himself;

while the truth is the ill luck can five times out of six be clearly traced to his own neglect of opportunities and to his needless delays. He had a certain letter of introduction a week in his pocket, but finds on delivering it that the advantageous post he was seeking has been two days filled up. He knows that a friend whom he promised to visit for the leave-taking is about to go abroad for years; but he puts off the little necessary excursion so long, that when at last he makes his call, he is told 'Mr So-and-so sailed yesterday; he was expecting you all the week, and seemed sorry not to see you.'

Worse still is it when the too long delayed visit is to some sick friend or relative who has pined to behold once more the long absent one. With the old or the seriously ill, it is a sad thing to wait expectantly for a beloved face and not to see it; and very terrible is the recollection of the one summoned, when his conscience tells him he has trifled with time, as he finds that he arrives at last just too late. He can find small comfort in the excuses he makes to himself: 'I never thought the illness was so serious;' 'I never thought that the end was so near.'

It is impossible to read history and biography without being struck by the momentous issues which have been decided by prompt action or needless delay. It is said that the unfortunate Louis XVI. and his Queen would in all probability have escaped from France had not Marie Antoinette waited for some jewels to be packed, and so delayed the starting for that little journey which resulted in their arrest at Varennes. Who can tell how different the history of Europe might have been, had that jewel-packing been left alone!

Corporate bodies—nations even—are as apt to procrastinate as individuals, putting off the execution of measures, the expediency of which has been fully acknowledged, from time to time, till the recipients of 'favours to come' are often 'heart-sick' from 'hope deferred.' 'He who gives promptly gives double,' says the old Latin proverb (*Bis dat, qui cito dat*), and it certainly applies to all cases in which benefits are to be conferred. The Yankee advice to be quite sure you are right, and then 'go ahead,' is not to be despised.

The truth is, that little unfulfilled duties are like so many stones in our path, hindering and obstructing our progress, and not seldom tripping us up. How often do we find a plan frustrated because some preliminary step, necessary to its execution, has been needlessly delayed. On the other hand, a seemingly small duty promptly fulfilled is often like an acorn that is planted in suitable soil. We think little more about it, till one day there is a sapling before us, which will grow into a sheltering tree by-and-by. Probably duties fulfilled at the right time have always a germinating power that is at work for our benefit, and of which we shall see the results sooner or later.

We believe it was Madame de Staël who said that 'No more' was the most mournful phrase in the English language; but we think that the words 'Too late' are sadder still. To be too late—when it might have been otherwise—with the kind word or kind action which would have comforted the suffering; too late with the word of forgiveness that ought to have been spoken long ago; too late in acquiring useful knowledge that

lay within our grasp; too late in gaining wisdom that would have saved us from a multitude of errors: what sorrow and remorse may be behind the words!

We wonder if Lord Chesterfield felt the sting of Dr Johnson's famous letter to him. The great lexicographer had accomplished his task, though long years of penury and privation would have daunted a weaker spirit. Lord Chesterfield was called his patron; and when the Dictionary was completed and its author well known, that nobleman appeared proud of the title. It was then that Johnson wrote: 'Is not a patron, my Lord, one who looks with unconcern on a man struggling for life in the water, and when he has reached ground, encumbers him with help? The notice which you have been pleased to take of my labours, had it been early, had been kind; but it has been delayed till I am indifferent, and cannot enjoy it; till I am solitary, and cannot impart it; till I am known, and do not want it.'

But though 'Too late' has a mournful sound, like the plaintiveness of a minor chord, there is surely an inspiring trumpet-note of cheerfulness in the proverb, 'It is never too late to mend.' It is worse than folly to let the mind fossilise in its old opinions, if these be erroneous; though there are people who do not see that changing an opinion is often only tantamount to saying, 'I am wiser to-day than I was yesterday.' Yes; to mend what is evil as far as we can, is the one thing certainly which it is never 'too late' to do. 'For want of a nail, the shoe was cast; for want of the shoe, the horse went lame; and so the race was lost.'

'A stitch in time saves nine,' is another homely proverb, and one that, by dint of its assonant rhyme, clings to the memory. Never should it be forgotten by those who are given to procrastination. Let them couple it with 'Never too late to mend,' and taking both sayings to heart, begin a new system. They will probably be surprised at the happy results.

SETTING THE SNARES.

CHAPTER III.

IN common with all fairly educated lads, Arthur had heard and read much of the United States; the wonderful progress of the country, its vast extent of territory, its ever-swelling population, and its great cities. Yet with all this, his excited imagination was disappointed at seeing nothing to remind him of the 'Last of the Mohicans'; and when, after a thousand miles or so of travel, he stopped at St Louis for a night, he was fairly astounded to find such an enormous city so far from the coast, just as busy and orderly as an English city. He had secretly watched from the windows of the car, in expectation of seeing at least a few rattlesnakes; but not a single one was visible, though during the journey through the prairie country a few buffaloes were descried; while as for the travellers by the cars, there was not a trace of any one of Cooper's heroes among them all.

At last they reached Kansas, to an agent in which city Arthur had sent a telegram from New York; and this agent was now in waiting for him at the station. The agent had been authorised

by Mr Holt to furnish Arthur with whatever was necessary for his equipment, and to give him any information and assistance in getting forward to the ranche. It was necessary therefore that Arthur should stay for at least a day in Kansas City, in order to complete these arrangements. He had still, the agent told him, about four or five hundred miles to travel by rail, and on arriving at a certain small station on the road, a wagon would meet him from Mr Holt's ranche, and convey him to his destination.

On the day following Arthur's arrival in Kansas City, he was busily engaged with the agent in procuring various commodities and articles of personal equipment, agreeable to Mr Holt's instructions; and among the latter was an article—namely, a six-shooter revolver—the necessity for which, as impressed upon him by the agent, gave Arthur a somewhat alarming idea of the nature of the country he was now to enter upon. Along with the revolver, however, he got, what fully restored his equanimity, namely, a rifle, in the handling of which he had pleasant anticipations of the sport he was likely to enjoy on his uncle's ranche. Towards afternoon, the agent and he had completed their work, and Arthur returned to his hotel to dine. Thereafter, he went out to see the city and its surroundings, and for a time was delighted and interested by all the novelty of the place and the people; but by-and-by the ennui which is almost the inevitable companion of a solitary traveller in a strange town, seized upon him, and he felt dull and weary enough as he sauntered aimlessly through the streets after nightfall.

It was during this aimless saunter that he made what he felt to be a ridiculous mistake, due, doubtless, to his preoccupied mind. He was passing an hotel or restaurant, and happening to look into the entrance as he passed, he met the gaze of a man who was standing behind the glass doors. In an instant Arthur's lethargy was gone; he hesitated for a few seconds and then pushed the doors apart, and stepped into the hall. There was no one there. Half-a-dozen doors, opening upon various parts of the interior, would of course have afforded retreat to any one who chose to evade him; but his entrance had followed so quickly upon his seeing the man, that unless the latter had instantaneously taken the alarm, he could not have vanished. Yet he *had* vanished; and why he should do so—why he should seek to avoid Arthur at all—what it all meant, was inexplicable.

As Arthur looked around him with a puzzled air, a coloured waiter came out from one of the further rooms, and seeing a stranger, civilly asked him what he wanted. The young man felt at a loss to explain why he was there, but managed to tell the negro that he thought he had seen a gentleman whom he knew, standing in the hall. The waiter threw open a door, and said: 'Des is de saloon, sah; gentlemen come out of hyar and go in hyar. Is de gentleman in dere, sah?'

Arthur looked round; but there was no one in the spacious saloon resembling the person he sought; so, with a few words of excuse, he left the place, feeling remarkably ashamed of himself for making such a mistake.

'I was thinking,' he said to himself, 'of the

events of the few days I passed in New York; but I did not think I was so utterly absorbed as to fall into such a blunder. Still, I *must* have seen him! I could have sworn I saw the face of Mr Bellar on the other side of that glass. I could have sworn to his eyes—to every feature! Yet he cannot be within a thousand miles of this spot.'

He was quite unable to solve the problem, although he thought of little else during the evening; the only tangible and sensible result he could arrive at being the too evident conclusion that he had made an excessively stupid mistake.

In the course of the next afternoon, having concluded all business with the agent, he started on the last stage of his journey by rail, arriving at an early hour next morning at Big Turkey Springs, the place at which the wagon from Holt's Ranche was to meet him. This place had been spoken of to Arthur, at Kansas, as 'Big Turkey Springs City;' but, excepting the station offices and a few huts close by, possibly for the use of the railway servants, he could not see a single house. He asked a man, apparently the solitary porter of the place, who was gazing after the departing train, while he changed the exhausted plug of tobacco he had been chewing, for a fresh one, where the city was.

The man turned slowly round, looked at Arthur as he stood by the side of his packages, and after a moment's deliberation, replied: 'I reckon you air a stranger out West—a Britisher, too. Is that so?' Arthur replied that he was a Britisher as reckoned; and the man smiled grimly as he continued: 'I thought so; and being a young Britisher, you don't know a Western city when you see it. This is *goin'* to be a city, stranger.—Air you bound for Squire Holt's?'

'Yes,' replied Arthur.

'I guessed as much,' resumed the man. 'You air waited for. There's a man with a team around here somewhere; he has been waiting—Oh, here he is.' With this he gave a curious shout, which was answered from a little distance; and Arthur saw a man emerge from among some trees. 'That's the gentleman from Holt's Ranche,' said the porter, moving off with the air of a man who had exhausted his interest in the matter; and Arthur was left to introduce himself. When this was done, the 'gentleman' from the ranche said: 'I guess these are your fixings?'—pointing to Arthur's luggage. 'We will call a couple of the boys to help.'

Following the man, Arthur found himself in a rude path, which led to three or four low cottages—'shanties,' they were called—where stood a wagon, shaped like a long and very narrow box. He judged rightly that this was his conveyance.

His conductor gave a shout; and the 'boys'—who were both middle-aged men—came out from a stable in answer, and in compliance with the instructions of the first man, brought round Arthur's 'fixings.' Then the mules were put to the wagon, the driver and Arthur mounted, and with no more words, they drove away.

'How far is it to Mr Holt's?' asked Arthur.

'About thirteen, or mebbe fourteen mile,' was the reply.

'Is it near the city—Andrew Jackson City?'

'Wal—yes, it is,' returned the man, after a shrewd glance at his questioner.

'Is the city a large place?' pursued Arthur, with his eye upon Big Turkey Springs City, as he spoke.

'The place is large enough; yes, it's a large place,' said the man.

There was something so ambiguous in this answer, that after a pause, our young traveller asked if there were many people in the city.

'Wal, no; there ain't,' replied the man. 'But you will see for yourself, bimeby.'

After a journey of some two hours, or rather more, they passed a low but somewhat extensive building, evidently a farmhouse from the surrounding tokens, but differing a good deal from the farmhouses of Surrey.

'That is Squire Gaisford's,' explained the driver; 'our nearest neighbour. Them 'doby shanties is where his Mexicans live.' He pointed with his whip to three or four huts, built, it appeared to Arthur, of some dark earth, but in reality of huge blocks of clay, dried in the sun, and termed *adobes*, but shortened into 'doby' in ordinary Western parlance. A woman with some children came to the door of one of these huts to watch the passing wagon; her dark hair and swarthy features, with the equally swarthy children, told her Mexican blood. These were the only persons seen on their journey.

Soon after, the road crossed a narrow stream, climbed a short slope; and Arthur, on arriving at the crest of this eminence, saw another low but large house, built partly of logs and partly of *adobes*; with several large inclosures and sheds near, and four or five 'shanties' hard by. There were several Mexicans moving about the inclosures, in which were a number of cattle; and altogether, especially after such a lonely ride, the place had a cheerful look.

'This is Holt's Ranche,' said the driver. 'And here is the Squire hisself.'

As he spoke, a tall man turned a clump of trees and came towards them—an elderly, weather-browed, but sinewy and powerful man; dressed in garments which, but for the broad slouched hat, would have given him much the air of an English farmer. Yet no farmer at home ever carried a gun in the manner which the Squire bore his rifle, nor did farmers at home carry large revolvers on their hips in leathern sheaths.

Our young friend sprang from the wagon, and approaching the new-comer, introduced himself as Arthur Richmond.

The Squire, as he was often called, took the boy's hand in his own grip, and looked for a moment searchingly and closely into his face. 'Well,' he said at last, as though satisfied with his scrutiny, 'there's a look in your eyes like my wife that's dead; and if you are as good as she was, or don't belie your own face, I will ask no more.—This is Holt's Ranche. You are welcome, and I hope you will find it a happy home.'

CHAPTER IV.

Thus agreeably received, Arthur felt at once at home; and before long, life at Holt's Ranche began to prove very enjoyable to him. He had

his choice of half-a-dozen horses, and was shortly initiated by Texas Dick—the man who had driven him from the station—in all the mysteries of horse-breaking, as that art is practised there on the spirited creatures that run wild, though not ownerless, upon the prairies. Dick had taken quite a liking to Arthur, whom he evidently regarded as having been introduced to the ranche under his auspices; hence he was willing to impart any knowledge in his power to the young man. Much of his time was also at first spent in riding over the ranche with Mr Holt, receiving some explanation as to the character of the soil, learning the brands on their cattle; seeing where the range of feeding-ground was; and making acquaintance with the various 'helps' on the ranche, who were chiefly Mexicans, there being only two 'white' helps besides Texas Dick. Of these latter, one was an Englishman, the other a New Englander.

Arthur was soon on capital terms with all the men, although Texas Dick remained his especial 'chum.' He also found, to his surprise, that he was apparently popular likewise with the Mexicans, not only on his own ranche, but on Farmer Gaisford's, and, in fact, for several miles round. At first, he thought it was merely the usual manner of these people, and spoke to Texas Dick on the subject, although with some timidity, expecting that grim frontiersman to ridicule his vanity. Texas Dick, however, did no such thing. He listened to Arthur's account attentively enough, then with a grave nod of assent, said: 'You air right there, sir-ree; yes. Them Greasers'—thus he and most of his comrades spoke of the Mexicans—'they like you; and you will get on with them considerable smart. You air the first of the white men here that has treated them well, and has spoke civil, and the ignorant cusses like it.'

'I suppose they do,' said Arthur. 'But why is not everybody civil to them?—and why does not everybody treat them well? Why do not *you* treat them civilly, Dick? I see that you don't always do it, at anyrate.'

'Wal,' began the Texan reflectively, and without the slightest touch of irritation in his voice—'wal, I reckon it ain't the natur of most whites to con-sort with the Greasers, nohow; and that's where it is.'

Further elucidation or justification of this dislike Arthur could never obtain, either from Texas Dick or from any other white man to whom he spoke—the Mexicans, after all, having just as much claim to be reckoned 'white' as themselves.

The favourite ride—nobody walked a mile at a stretch in those parts, if he could possibly avoid it—was to the ranche of their next neighbour, Squire Gaisford. (Andrew Jackson City, by-the-by, was the group of half-a-score cabins, with a store and a post-office, and was some two miles from either ranche.) Squire Gaisford had rather a large family, the eldest being a daughter, Miss Rachel, a girl of eighteen or nineteen; and although at first shy and silent in the presence of a young gentleman from the Old Country, she soon got over this drawback, and proved to be as frank, cheerful, and good-tempered, as she was pretty. She was a capital rider too, and when mounted on her favourite pony—called from the

bright colour of its mane, Goldthread—she would lead the way over such places as quite appalled Arthur, more than once fairly daunting him, so that he would not and did not follow—to the openly expressed mirth of the young lady.

It was at the Gaisford Rancho, indeed, that Arthur saw his friend Texas Dick first exercise his skill in horse-breaking. He had ridden over in the morning with Mr Holt and Texas Dick, in company with another horse-breaker—a Mexican called Manuel, and had received a most cordial greeting from the farmer. In the course of a general conversation, in which Arthur spoke to Rachel about the horses, he took occasion to compliment her on the beauty and spirit of her favourite pony Goldthread.

'Ah! Mr Richmond,' she said, 'you should have seen my beautiful Lily, my white pony! She was the prettiest pony in the territory. Father was offered a thousand dollars for her. But Mr Tony rode her so carelessly over some rocks, that she broke her leg, and had to be shot.'

'What a misfortune!' said Arthur.—'But who is Mr Tony?'

'Mr Tony!' echoed the girl. 'Who is Mr Tony! Is it possible that you do not know who Mr Tony is?'

'I do not indeed,' said Arthur, who was considerably astonished at the emotional way in which Miss Rachel spoke. 'I never heard of him. Who is he—or who was he?'

'He was resident with Mr Holt until shortly before you came,' replied the girl. 'But no one knows where he is now, or even if he is alive.'

'Why did he leave?' inquired Arthur, who now recollected that in the letter he had first received from the farmer, the latter spoke of a relative having left him, so that he was alone.

'I—I don't know,' replied Rachel. 'No one seems to know. I do not think—he and Mr Holt parted very good friends. But I wish I had not spoken about him.'

Her father, who, with Mr Holt, had been standing conversing at some distance, now approached them, and thus put an end for the time to their conversation on the subject of Mr Tony.

A herd of horses had just been driven from the prairie into the spacious inclosure of the corral, for the purpose of having selected from them as many as were required of those which bore the Gaisford brand. Arthur was entering the gates of the corral, the farmer having momentarily stopped to give some directions to a 'help,' when the young man started and recoiled at finding himself face to face with an Indian, the first he had yet seen, the tribes having left the district for a while to hunt the buffalo.

'Ugh! Como le va! how do?' said the savage, in a deep guttural voice, but holding out his hand with a friendly smile as he spoke.

Arthur took the proffered hand, and returned the greeting, smiling in his turn. The Indian was a man a trifle above middle height, rather broader and thicker built than was the rule; with coarse black hair, hanging in straight threads; his dress being a buckskin jacket, buckskin shirt, and buckskin leggings fringed

with the same material, and ornamented with beads. He was armed with rifle, bow, and quiver, while a long straight knife hung in a sheath by his side.

'Ha! Good-morning, Cuervo,' said Mr Holt, who now came up.—'This is a good Indian, Arthur, and one of the Uté captains.'

The Indian replied in broken English and Spanish, pointing to his gun, and displaying an empty pouch. Holt shook his head. The Indian looked very dejected.

'He says he has no caps for his gun, and they are quite out at the store; so he cannot go after some antelope he has seen on the foot-hills.'

'I can let him have some,' said Arthur. 'I brought a large packet with me from Kansas, and he can have as many as you wish. I have some of them in my pocket.'

'Give him fifty, if you can spare them, by all means, for he is a good Indian,' said Holt, who turned to the Uté, and evidently informed him of his good fortune; for the latter again seized Arthur's hand and shook it heartily, exclaiming at least a dozen times over, 'Bueno! bueno!' [Good, good!]

After the work of the day was finished, and Mr Holt, Arthur, and Texas Dick were riding home together Dick suddenly exclaimed: 'Say! Didn't I see you talking with old Cuervo, the Uté, to-day?' This abrupt question was to his master, who replied in the affirmative.

'Wal,' continued Dick; 'I don't feel no kind of surprise at that, as I hearn tell the Utés was camping out yonder. But the Apachés have come back too.'

'No; you are wrong there, Dick,' returned his master. 'They are out on the plains some two hundred miles north. I met a man who came on by the mail yesterday, and had seen them there.'

'Wal, I see two of 'em crossing Rabbit Tail Creek yesterday, when I was looking after that steer,' pursued Dick.

'Oh, they must have been Utés,' said his master. 'You were not very close to them, I estimate.'

'Utés!' exclaimed Dick with some indignation; 'you may as well tell me they was burros' [Mexican for asses]. 'Why, one of them was that Pedro, the drunkenest, meanest cuss in the tribe; the other was Pequito Miguel. It was Pedro who stole my pony last fall, you bet your sweet life.'

'But his tribe are out on the great prairies, I tell you,' returned Mr Holt.

'Wal, I don't care,' persisted Dick; 'I know Pedro when I see him, and I know the other Injun too. They was Apachés, or I don't know nothing. But what puzzled me, boss, was that there was a white man along, and I thought I knew him too.'

'Who was he?' asked the farmer, as the other paused.

'Wal, I don't know,' replied Dick, knitting his brows thoughtfully; 'they was a smart piece away, and I could not see his face. They saw me first, unluckily, and made tracks till they got among the hills and lost me. But I knew the white man's walk, his figger, the very turn of his head, as well as I do yourn. Yet, I can't for my life tell where I have seen him.'

'It is strange that you should have seen these men yesterday,' said the farmer, after a pause, 'for as we rode through Crowsfoot Cañon, I felt sure that I heard an Indian's whoop. There was no doubt of it, in fact, but I fancied at the time it was an Apache yell. I thought afterwards that I must have been mistaken; but from what you now tell me, I may have been right.'

'Bad Injuns loafing around with whites, don't mean no good,' said the Texan significantly.

MORTIMER COLLINS.

In the press of competitors for literary distinction, it is only, as a rule, the very expert and the very strong that are able to render themselves conspicuous in the public eye. Yet, while in this as in other departments of human effort, the saying holds good that the weakest go to the wall, it is still possible that a few competitors of real merit may by the force of circumstances be jostled out of the current of notoriety, and only be known to the few who have had occasion to mark their skill and dexterity. Mortimer Collins probably belongs to the latter class. Genial and easy in life, he took little thought for fame's to-morrow. He lived happily, light-heartedly, almost boyishly, for the day, not over much concerned as to the opinion outsiders might form of him; glad if only he might make happy those immediately around him; and throwing off, with the easy strength of an expert, the work called for by the exigencies of the hour.

But although he has written some things which deserve to live in the coming years, it is possible that he might have produced work still more worthy had he not been compelled to make a *living* by literature, and to write at the high-pressure speed demanded of all feeders of modern journalism. He laboured under disadvantages from the very first; for his father dying early, his mother was left with very slender means for her son's education. But that he made the best use of such instruction as was given to him, may be gathered from the fact that when he was in his teens his mother asked Dr Craik to read Virgil with him; and the worthy doctor soon declared it was quite useless, as the boy knew Virgil better than himself. When he left school, he became tutor in a gentleman's family in the north of England.

But tutorial work did not satisfy his ambition. He had while at school, and unknown to his mother, contributed to several papers. *Punch* had accepted some verses from him; and in *Fraser's Magazine* there was a very sprightly legend from his pen, in the manner of Ingoldsby; the poet's corner in various provincial papers was filled by him; and he was a regular contributor to a newspaper published in Bath, the editor being unaware at the time that these contributions, which he thoroughly appreciated, came from a mere lad. Fired with success, he longed to go to London and try his fortune in the world of letters.

Consequently, he gave up his tutorship and repaired to the Metropolis; but after a few months his mother persuaded him to go back to teaching, as a safer means of livelihood. When about three-and-twenty, he was installed as Mathematical Master at Queen Elizabeth's College in Guernsey. Here he remained five years; but he did not lose his taste for literary occupation. He started a little journal called the *Guernsey Star*, and he still continued to contribute to various English papers. Before leaving Guernsey, he published his first work, a collection of poems entitled *Idyls and Rhymes*. In 1856 he left Guernsey, and started seriously as a journalist, to which profession, at first, he devoted himself almost exclusively.

His second work, being another collection of poems, called *Summer Songs*, was published in 1860. His first novel appeared in 1864 in the *Dublin University Magazine*; the second following three years after. In 1868 came a decided change in his career. He had been known for some years amongst men of letters in London as a thorough Bohemian; and had even been dubbed the King of Bohemia. At length, casting off the attractions of London life, Collins took unto himself a better-half, and retired to the cottage at Knowl Hill, in Berkshire, which has become associated with his name. Here he lived an almost idyllic life for eight years; and it was during this time that his best works were produced. Besides fifteen novels, he published another volume of poems called *The Inn of Strange Meetings*; also *The British Birds*, a modernisation of the old Greek comedy of Aristophanes; and *The Secret of Long Life*; while, since his death, two collections of essays and other prose writings, under the titles of *Pen Sketches by a Vanished Hand*, and *Thoughts in My Garden*, have appeared. His widow has likewise issued an excellent Memoir of her husband's life, with his letters; also an admirable collection of his brightest thoughts and wisest sayings, entitled *Attic Salt, or Epigrammatic Sayings, Healthful, Humorous, and Wise*.

By his novels it is not easy to judge him; but the collections which have appeared since his death have perhaps done more to enlarge and solidify his reputation than all before. His intellect seemed to brighten towards the close of his life; and his latest poems, written shortly before his death in 1876, are better than any of those previously collected. His poems have been deservedly admired for their *esprit*, wit, sparkling satire, and what, for want of a better word, we may call airiness. Here is one of his quaint conceits:

O touch that rosebud! it will bloom,
My lady fair!
A passionate red in dim green gloom,
A joy, a splendour, a perfume
That sleeps in air.

You touched my heart; it gave a thrill
Just like a rose,
That opens at a lady's will;
Its bloom is always yours until
You bid it close.

His love of nature included that of quadrupeds and birds, the latter to such an extent that the 'feathered songsters' of Knowl Hill, taught by their instinct whom to trust, would perch on his shoulder while he was writing on the lawn, follow him about the garden, and allow him to stroke them while sitting on the nest. One of his most admired poems is an address to a Thrush, which made its home in the row of limes round his garden:

All through the sultry hours of June,
From morning blithe to golden noon,
And till the star of evening climbs
The gray-blue East, a world too soon,
There sings a Thrush amid the limes.

God's poet, hid in foliage green,
Sings endless songs, himself unseen;
Night seldom come his silent times.
Linger, ye summer hours serene!
Sing on, dear Thrush, amid the limes!

* * * * *

May I not dream God sends thee there,
Thou mellow angel of the air,
Even to rebuke my earthlier rhymes
With music's soul, all praise and prayer?
Is that thy lesson in the limes?

Closer to God art thou than I:
His minstrel thou, whose brown wings fly
Through silent æther's summer climes.
Ah, never may thy music die!
Sing on, dear Thrush, amid the limes!

Mortimer Collins's philosophy and religion were thoroughly unconventional, but very real; and were so much a part of the man himself, and not merely a one-day habit, that signs of both occur frequently in all his writings, whether prose or poetry, in novel or newspaper. We cannot help seeing the large-heartedness of the man, and his charitable feelings towards his fellow-creatures. As the writer of the preface to *Attie Salt* remarks: 'For the young and old alike, for the rich man and the poor, for boy and for girl, for business man and for poet, he has written words of counsel which are worth their weight in gold; and for a young man or for a girl just entering life, I can imagine few authors from whose works they could gather advice so precious—advice which would make them more manly and more womanly, or have upon them a more lasting influence for good.'

And yet, with all his seriousness, he was possessed of a bright, subtle humour, which occasionally took the form of that persiflage which is so conspicuous in some of Byron's writings. He has great freedom of style; occasionally, however, showing the errors of haste and worry—as in a man who was overworked. And this might be the case, for he was one of the hardest workers in the literary world of his time. There seems to be no doubt that his death occurred from overstrain of the mental powers and from want of rest; for he had taken no holiday for some years.

In the month of July 1876, Mortimer Collins died of rupture of the heart. Lamented by his widow, and by a large number of friends, his loss seemed personal even to many who knew him only by his books; for we see in them the

man himself—lovable and large-hearted, gentle as a child. As he himself expresses it, he passed into

The new life of the new world, unshorn
Of the swift brain, the executing hand;

for he continued his labours until within three days of his death.

THE ADVENTURES OF AN AMERICAN 'SPECIAL.'

BY ONE OF THEM.

SECOND PAPER.

WE all knew Boggs. He was captain of a Target Excursion and Clam Chowder Association, composed of the greatest blackguards of the Sixth Ward, known by many to be one of the worst districts of New York. His nod could influence five or six hundred votes, and cause the ballot-box to be stuffed with as many more. It will therefore hardly be a matter of surprise if, under these circumstances, Boggs set all justice at defiance, and cherished within his bosom such a free scorn of law and order, as could only be entertained by a New York ruffian under the golden rule of the Tammany Ring, of which our acquaintance was a staunch supporter.

Boggs was 'capper' for a dishonest gambling saloon in Ann Street, and probably part proprietor. He did a flourishing business in several mock-auction shops known to the police as Peter Funk Dens. His advertisements, headed by a flaming woodcut representing bags of gold pouring forth untold riches, might be found in most of the 'respectable' weeklies; and in short, though he had as many changes as Proteus, we knew of a surety that no matter what new swindle might be started, from a Wall Street gudgeon broker to a Third Avenue lottery-shop, it was simply a change rung upon the genius of Boggs. Not Jonathan Wild in his palmy days was surrounded by a more devoted band than our acquaintance. His blacklegs and political loafers were thoroughly trained; and the various members of the 'Sawdust Gang' were at any moment ready to sacrifice themselves, so that their leader might escape the penalties due to his free style of making a living. He had been arrested so many times and discharged as often, that at last the police gave up all hope of ever proving anything against him. He was a stout, good-humoured-looking man of forty, with coal-black eyes set close together, close-cropped black hair, a small retreating forehead, short cropped moustache, and a rather sallow complexion. A gorgeous watch-chain reposed on his white vest; and above it flashed a cluster of diamonds in the centre of a snowy shirt-front, which many a humble thief in his own fierce ward longed to clutch. But that cluster was as secure as if in the bank; for at the back of Boggs's 'spring-bottom lavender pants,'

there reposed a Colt's four-shooter, which its owner was apt to produce on short notice and use freely. Boggs was a good-humoured free-handed rascal, full of quaint stories and short cynical sentences; but if he conceived himself offended, fearful was the language he used, and most woful his vengeance. Having thus endeavoured to give a description of Boggs, we will take our leave of him for the present, promising that we shall encounter him again.

Going to the assignment book of the journal on which the writer was engaged in the summer of '75, he found the following: 'Mr Blank will work up gang of counterfeiters; particulars in his desk.'

The 'particulars' consisted of a letter from one of the Chicago readers of the journal, stating that he had received the following circular from New York.

Private and confidential.

DEAR SIR—We have made extensive inquiries about you in your city, and find that you are a good business man, and one to be trusted thoroughly to do a great trade with.

We have on hand a number of fac-simile United States' notes ranging from five to one hundred dollars, of which inclosed is a specimen. We will send them to you cash on delivery at the following rates: good 25 dollars = 100 dollars queer; 50 dollars = 250 dollars queer; 75 dollars = 550 dollars queer; 100 dollars = 1000 dollars queer.—Hoping to be favoured with a large order, for it is a sure fortune, we remain your obedient servants,
PAUL AND PAUL.

P.S.—If you send us a big order, we will deal with no one else in your town.

Our correspondent informed us that he had passed the five-dollar specimen with ease, the teller of the first National Bank having assured him that it was a good one.

The circular bore no address, so that it was evident some one in the post-office had been 'squared'—that is, bribed—a not uncommon occurrence.

Obviously, the first thing to be done was to purchase some of the 'queer' from Messrs Paul and Paul, not only for the purpose of proving the uttering, but also to establish a confidence which might enable one to get at them directly.

The writer wired to his correspondent, telling him to write to Messrs Paul and Paul, inclosing them twenty-five dollars, and stating that he would arrive in town on a certain date to make further large purchases if he found them go well. Meanwhile, Captain Allair of the Second precinct was interviewed, and preparations made to effect a capture.

In less than a week, a letter arrived, per Adams' express, from Chicago inclosing a tin case filled with fac-similes of United States' notes to the amount of one hundred dollars. The writer had of course, long before this, come to

the conclusion that Boggs, and no other, was the party at the bottom of the swindle.

And a most ingenious one it was; for the party so swindled could get no redress except by acknowledging himself a knave. Paul and Paul knew very well that their victim would take right good care to keep his own counsel. To use a nautical term, we were all 'taken aback,' and had been neatly done out of twenty-five dollars.

It was no use working it up through the post-office. At the first intimation of danger from that quarter, the rogues would decamp long before we could prove anything against them. Besides, as the writer stated in his last paper, it is a point of honour amongst New York journalists not to be beaten.

Rogues are proverbially careless; and it was just that forlorn hope which started the writer off to Philadelphia, whence he wrote to Messrs Paul and Paul, saying that he had received their circular, and passed the five-dollar note easily, adding that he was afraid to trust the Adams' Express Company, owing to his being so well known amongst the community. But he would come to New York and buy a thousand dollars-worth of the 'queer' if it was as good as specimen.

The letter purported to come from the paying teller of the tenth National Bank. The bait was a large one, and the rogues, forgetting their usual caution, fell into the trap. Ere long, a letter arrived, telling the writer to come on to New York on Wednesday following, by the nine o'clock train; to put up at the *New York Hotel*, corner of Fulton and Pearl Streets, where a man would call on him. He was on no account to speak to anybody. If he did, he would see no one, as he would be 'shadowed' all the way from Philadelphia.

Captain Allair promptly engaged a room; and on the appointed day, half-a-dozen plain-clothes policemen were scattered about the hotel.

The writer arrived from Philadelphia in the rôle of a dashing young bank clerk, wrote his name down in the hotel book, was given his key, and went up to his room, to find Sergeant Omahony under the bed.

Half an hour afterwards, a knock announced the agent of Paul and Paul. He found 'the gentleman from Philadelphia,' apparently in the greatest agonies of a sudden attack of cholera and remorse, and was despatched for some brandy.

'No,' said the writer on his return; 'this is a judgment on me for this wicked thing I was about to do. I'll go back; I won't have anything to do with it.'

'Brace up and be a man,' said Paul and Paul's agent. 'Have you the money?'

'Yes,' responded the writer; 'I took it out of the bank-vault before I left, intending to replace it with "queer" to-morrow morning. But I won't do it now. I am afraid this is a judgment.'

'How much have you got?'

'Fifteen hundred dollars.'

The man's eyes fairly glistened with greed, as the writer, by a great effort, got up and unlocked a hand-bag, showing a pile of United States' greenbacks, which were furnished by the police for the purpose.

'Don't you touch them!' added the writer sternly. 'I won't part unless I see the "queer." Have you got it with you?'

'No,' said the agent; 'you must come to our place of business.'

'What's the address? I'll come and see you in the afternoon, if I'm better.'

'I dursn't tell you the address,' said the agent cautiously. 'But come with me. It's only a few minutes' walk from here, and you needn't buy unless you've a mind to.'

Thus adjured, the writer put on his coat and vest, and was going without the bag; but the agent begged him to bring it, as he was almost sure to buy some 'queer.'

A drink was obtained at the bar, for the double purpose of allowing Sergeant Omahony to get out of the room, and the plain-clothes men to form a link-line right and left; these rogues being so suspicious, that if the same man follows them for a hundred yards, they fear 'a shadow.'

For a good twenty minutes the agent kept his supposed victim twisting and turning up and down various streets, within five minutes' walk of the hotel all the time, and at last turning down a dirty little street, announced that they had arrived. After traversing a narrow passageway, and ascending a dirty flight of stairs, a door was opened to a signal; and behold the writer in the presence of Boggs, surrounded by some of his Sawdust Gang!

'Here's the gentleman that wants to buy the "queer,"' said the agent.

But Boggs jumped up with a mighty oath, and clapped his hands behind him.

'It's no use, lads,' exclaimed the writer. 'Hands up! You can't escape. The place is surrounded.'

At the same moment, Sergeant Omahony and the others bounced into the room, and in a twinkling we had the handcuffs on.

'I'm a commission merchant, and I want to sell coals,' yelled Boggs; and then his wrath fell upon the agent. 'You didn't know that fellow, you fool!' yelled Boggs. 'Don't you know he's a special?' And then turning rapidly on the writer: 'I'll be at you for this, if I get a life-stretch for it.'

We searched the place, and found quantities of tin cases ready for packing, and letters showing the swindle to have been in full blast.

At the station, Boggs was searched, and over seven hundred dollars found on him. But he had recovered his ready knavishness by this time, and coolly informed Captain Allair that the writer had 'rounded on him' because he had refused to 'square him.'

Boggs was committed for trial before the United States' Court on a charge of attempting to utter counterfeit money; but Colonel Spencer, his counsel, got him off with flying colours; whereupon he coolly turned round in court and vowed a solemn oath to put out the writer's eyes at the first opportunity. The police, he said, he had no animus against. They merely did their duty

when it came in their way. But the prying specials that were always poking their nose in places where they had no business, and ferreting out things that would otherwise be left alone, would be taught a lesson that they would not soon forget.

These were taken as the mere vapourings of one who had had a lucrative swindle spoiled; but knowing the character of the man and the reputation of his gang, the writer was particularly careful where he went for some time afterwards.

About six months after the above described events, the writer was challenged by a friend to a game of billiards, and unthinkingly entered a billiard saloon near Ann Street, which was the down-town headquarters of the gang. He turned round the venetian screen which faced the door, to find himself in the presence of Boggs and some five more of the most desperate of his ruffians. Almost instantly, one of the party made a movement to get between him and the door. To make a sudden dash for liberty was to invite a conflict, and probably be either shot or beaten senseless ere assistance could arrive. A second's reflection convinced the writer that there was only one course to pursue. Walking boldly up to the cue-rack into the centre of the room away from the door, he turned to Boggs, and said: 'I understand, Mr Boggs, that you have announced your intention of putting out my eyes, and I have come to give you an opportunity of doing so. Will you commence now?'

Boggs was silent, evidently thinking matters out.

The writer pursued his advantage. 'I am going to play a game of fifty up, Mr Boggs,' he said; 'during that time, you can make up your mind.'

Selecting a cue, the writer placed a silver whistle, such as are used to call cars, carelessly in his mouth, and began the game. The mental torture endured in those fifteen minutes was something dreadful. Every moment the writer expected a sudden rush, a knife-thrust, or a bullet. But nothing occurred save muttered whisperings, and once or twice the word 'plant' became audible. When the game was over, the writer put away his cue, and walked with a slowness that forced him to perspire from inward perturbation towards the receiving clerk, and deposited the price of the game. Then he turned towards the gang. 'I am glad for your own sake, Mr Boggs,' he said, 'that you didn't make any attempt on my eyes. Take my advice; it will never be wise to do it.'

'You don't think I'm such a flat as to run my head into a police plant,' said Boggs in awful language; 'but I'll get you dead to rights yet.'

The writer then withdrew; but so great was the reaction from the strong tension of the nervous system suddenly relaxed by safety, that he was seized by an excessive fit of trembling, which lasted nearly three hours.

This was the last time the writer ran across Boggs. He was killed some time after in a bar-room fight on election-day in the Sixth Ward; and his gang, bereft of the presiding genius, soon afterwards broke up. He was a fair sample of the

superior class of the New York *chevalier d'industrie*; more refined and gentleman-like than his brother of the Pacific slope, but certainly by no means his inferior in ferocity or cunning.

TYPOGRAPHICAL TRIPPINGS.

READERS blessed with a keen appreciation of the ridiculous have to thank remiss 'readers' of another sort for much unlooked-for amusement. Erring compositors have a knack of blundering as felicitously as though some mischief-loving sprite ruled the work of type-setting, and impelled the perpetration of mistakes looking exceedingly like premeditated jokes. One cannot help being a little suspicious when a tender-hearted politician is made to declare he would rather the Russians stabbed their horses in the Bosphorus, than that the Turks should be permitted to exercise their cruel propensities unchecked; a temperance-advocating bishop reported as exhorting his hearers not to give up the bottle; and a senator as expressing the wish that he had a widow in his bosom—possible as it may be that the conversion of 'stabbed' into 'stabbed,' 'battle' into 'bottle,' and 'window' into 'widow,' came about quite accidentally, without malice aforethought.

We can sympathise with Mr Proctor's dismay upon finding himself responsible for 'links, bonds, and stripes for the violent kind of spectres,' in a paper on Spectroscopic Photography, when what he had written was, 'lines, bands, and striæ near the violet end of the spectra.'

Swift's *Battle of the Rooks*, Macaulay's *Laps of Ancient Rome*, Palmer and Drake's *Dessert of Exodus*, have been priced in a bookseller's list; and a work on block-printing catalogued as containing 'sixty-nine engravings either from wood or metal, twelve of which have been inscriptions, representing scenes of Christian mythology, figures of patriarchs, saints, devils, and other dignitaries of the Church.' For the last, we cannot hold the printer blamable; but he is assuredly answerable for the chronological impossibility involved in the announcement for sale of 'an old *History of England* by Hume (published in 1767), from the Invasion of Julius Cæsar to Revolution 1868.' By another mishandling of figures, an inquiring correspondent was informed that an Act for abolishing Gretna Green marriages was passed in 1856, and came in force on the 1st of January 1837. Trifling with figures is a thing to be avoided. The Hamburg almanacs for 1880 announced the holding of the February horse-fair on the 4th instead of the 24th of that month; and the influx of horses and horse-dealers into the city upon the first-named day caused much perturbation to the authorities, who, ignorant of the blunder of the almanac-mongers, had made no arrangements for the reception of the visitors. They got over the difficulty, to their own and everybody else's satisfaction; but ordained that henceforth no

almanac should be published until it had received official certification.

Journalists nowadays give such free play to their invention, that the credulity of newspaper readers is sufficiently taxed without asking them to believe that certain causes were heard in the Common Fleas Division; that the Copenhagen police intercepted a box of Orsini bonds on its way to Princess Thyra as a wedding-gift; that one summer day at Coventry there was 'a fresh freeze, and the heat eighty-four in the shade'; that two hundred tenant-farmers went to a farm near Loughrea, belonging to a 'suspect' in Galway jail, and cut, bound, and stacked four acres of cats (for 'oats'); and that Professor Virchow, on his appearance upon the platform at the International Congress, was greeted with an oration from a very large number of friends; that 'the snouts of ten thousand Democrats rent the air' at an open-air demonstration.

According to a newspaper report of the last royal progress to Westminster, 'Gold Stick' was ousted from his accustomed place in the procession by 'The Old Stick'; an official who might have done his sovereign good service when 'The Queen drove two cows to visit the King and Queen of Denmark at Lisburne House,' though Her Majesty might drive through *Coves* without his assistance. Just before the General Election, one of the organs of Her Majesty's Opposition announced that the Liberals of Marylebone had repaired all the breeches in their ranks, and buckled on the armour of battle. Another public instructor lately informed us that among the works of art to be seen in London streets were 'the statutes of King George III. with his pigtail, in Pall Mall, and of the Duke of Bedford ploughing in his ducal robes in Russell Square'; while among less curious news items we read of a ship becoming a perfect rock; of the purchase of a plot of land for the Ionic Sol Fa College; of a builder charged with not doing his work in a proper way, 'nor had the copings, coigns, been made of stones, bricks, or other inflammable material'; and of a dead man who 'bore an accidental character, and the jury returned a verdict of excellent death.' In a mining-camp story, a player at poker deals himself a bigger hand than ever the Heathen Chinee could accomplish, namely, 'both bowers and the king, besides two aces'; and another story-teller says: 'At the gate, an honest tar, with one wooden leg, and suspiciously ample nether garments, craved arms,' blunders of which the writers were as innocent as the Philadelphian editor who found himself obliged to apologise for stating that a man who died in the street had been kicked up by a policeman, through the compositor taking the liberty of substituting a *k* for a *p*, with as little respect for an 'editorial' as that shown by his brother-typos, to whom we are indebted for 'Happy is the country which has no animals,' 'Master M'Grath (the famous greyhound) is a good god,' and 'American preachers pay great attention to manner, but British preachers pray very little.'

When editors themselves suffer at their printer's hands, mere advertisers cannot expect to escape. A music-master desiring the public should know that his system of instruction extended from the primary elements to thorough-bass, saw

himself described as the exponent of a method extending from primeval liniments to thorough-bore. The members of a Quartette Society discovered all too late that 'When married wretches sink to sleep,' did duty in their programme for 'When wearied wretches sink to sleep.' A patent-medicine vendor found himself lauding the virtues of 'Live Pills;' and a waste-paper dealer who advertised for old ledgers had occasion to wonder how many landladies would respond to the tempting offer of so much per hundredweight for 'lodgers without covers.' Sometimes the victimised advertiser has had reason to be grateful to the wrongdoer. On the night of the first performance of *The Woman in Red* at a country theatre, the house was packed, much to the surprise of the manageress, who had not found the townsfolk very eager for theatricals. She discovered next day that the play had been misprinted *The Woman in Bed*.

Sometimes things get mixed, and nicely too, if not quite so neatly as was done by the printer of a Canadian newspaper who tagged part of a recipe for tomato catsup on the opening paragraph of an article on Catholicism in Africa, with the following result: 'The Roman Catholics claim to be making material advances in Africa, especially in Algeria, where they have a hundred and eighty-five thousand adherents, and a missionary society for Central Africa. During the past three years they have obtained a firm footing in the interior of the continent, and have sent forth several missionaries into the equatorial regions. They are accustomed to begin their work by buying heathen children and educating them. The easiest and best way to prepare them is to first wipe them with a clean towel; then place them in dripping pans and bake them until they are tender. Then you will have no difficulty in rubbing them through a sieve, and will save them by being obliged to cut them in slices and cook for several hours.'

An atmospherical phenomenon was witnessed in the west of England in October 1880, which must have been of a very remarkable nature, if we may accept a local journal's description of it as correct. It ran thus: 'A singular phenomenon was observed in the sky last night. A blue Police Court charged with stealing a quantity of apples. The prosecutor said he had been the victim of frequent robberies, and in the eastern horizon it disappeared amidst a shower of sparks. The sight was witnessed from the bridge by a large number of spectators, and the Bench were unanimously of opinion that no case had been proved and dismissed the sky was clear, the temperature low, and very little wind blowing.' Still better, or worse, as an example of printer's mixture, was the announcement given forth by one of the London dailies: 'Her Royal Highness Princess Louise arrived this evening in the Duke of Argyll's steam yacht *Columbia*. Her Royal Highness, who was received on landing by Lady Evelyn Campbell, drove immediately suffering from typhus fever, and told her mother it was an attack of gout.' This was too bad, yet the Princess was not more hardly treated than the heir to the throne, of whom a Scottish newspaper said: 'The Prince of Wales, who had accepted an invitation to shoot in France with

the Duc de la Rochefoucauld-Bisaccia, has telegraphed that owing to imperative circumstances, his visit must be postponed. Magistrate issued a distress warrant against his goods.'

A HOLIDAY EPISODE.

ON a glorious October morning, the writer, in company with other excursionists bound for Westward Ho, found himself upon the Ilfracombe pier, awaiting the arrival of the Swansea steamer. The day promised to be a most enjoyable one; a bright clear sun was shining overhead, its hot rays being pleasantly tempered by the delicious freshness of the ocean spray, dashing at intervals high over the pier-head. Long white fleecy clouds lay in streamers along the horizon, moving steadily across the sky under the coaxing influence of a stiff north-westerly breeze, which at times caused the feathery crests of the billows to rise gracefully in the offing, in picturesque relief to the dark blue foreground of the Bristol Channel. At length a faint wreath of smoke in the direction of the Mumbles announced the approach of the overdue steamer, her labouring movements and the glistening condition of her paddle-boxes as she eased up alongside the pier half an hour later, telling of the heavy seas she had encountered in crossing.

Nothing daunted, however, by such dispiriting signs, the passengers were soon crowding her deck; and backing astern, she slowly swung round, and commenced her journey down Channel. The fluttering white handkerchiefs on the fast receding pier grew fainter and fainter; and crossing the romantic cove of Wildersmouth, we experienced the first evidences of the rough sea, in the obstinate pitching of our little steamer. With a strong head-wind, she wavered as she rose upon the crest of a wave, until the succeeding billow striking her before she had time to dip into the hollow, caused her to quiver with the smartness of the blow. The majority of us, however, appeared to be fair sailors; and if any felt uneasy in their minds, they yet summoned up sufficient courage to stifle such at this early period of our voyage. Hugging the coast, we made progress past the Tors, with the charming walks dotted here and there with tiny specks, recognisable as pedestrians, evidently engrossed with the erratic motions of our steamer. An hour's struggle with the tide and head-wind brought us at length off Morte Point, one of the most dreaded spots on this rugged coast. A tremendous 'race' sets in here from off the sides of Lundy Island, and breaks with terrific force upon the eastern headland of Bideford Bay. We recalled it as being the scene of many a terrible shipwreck; in one year, five vessels rapidly followed each other here to destruction.

Upon clearing this point, a wide curve of land now met our view; and the full force of the Atlantic billows, having a clear sweep of nearly ten miles to shore, caused our small vessel to roll uncomfortably, and very sensibly diminished the number of passengers on deck. The huge green rollers careering majestically shoreward, presented a thrilling spectacle. Westward Ho, we were informed, lay somewhere in the centre of the extensive curve; but the distance which intervened prevented it from being clearly sighted. The

neck of sea on our extreme left indicated the estuary formed by the junction of the rivers Taw and Torridge, out of which, in former days, the heroes of Devon sailed forth upon their famed explorations. We had now reached the middle of the Bay, and the picturesque village of Clovelly appeared in front; the long steep line of houses sharply defined against the dark ridge on which it rests, gave it, at a distance, a striking resemblance to a tiny waterfall.

Suddenly, our paddle-wheels were stopped; and upon inquiry, we learned that the captain had abandoned his intention of going to Westward Ho, in consequence of the threatening aspect of the weather, which had now grown worse, and suggested that we should make for Clovelly, as it afforded snug shelter in its little harbour. As most of the passengers, from the state of the weather, were unable to form any determination other than that of reaching *terra firma* as soon as possible, they willingly assented to the captain's suggestion; and accordingly the order was given to steer for Clovelly. This, however, was greatly annoying to myself, as I had friends at Westward Ho whom I was most anxious to visit. Going forward, I endeavoured in vain to shake the captain's determination; and the only concession I could gain was the order peremptorily given to his men to 'put me ashore then, and give me a ducking.'

Silently, therefore, with this contingency hanging over me, I took my seat in the boat lowered for me. We had a good five or six miles' pull to shore; and the two bronzed tars who accompanied me improved the opportunity by naively observing they doubted whether we should be able to land. Being no stranger to the delicate idioms of a sailor's speech, I placed my hand in my pocket; and under the magic spell of a silver tip, the boat seemed to shoot more rapidly through the water. As we repeatedly rose on the crest of the swelling hillocks, the elegant outlines of the pier loomed out more distinctly every moment, and I could shortly discern the forest of heads crowding its top, evidently most interested in our approach, but greatly mystified as to the nature of the situation. With a few more strong pulls, we were under the shadow of the pier of Westward Ho; and obeying instructions, I stood up in the boat. Waiting until a more favourable billow reached us, we were carried forward on its green crest. 'Jump now!' simultaneously shouted the boatmen; and mechanically springing forward in the direction of the pier, I fortunately succeeded in grasping the iron taffrail of the ladder, while the boat swept swiftly from underneath. Scrambling beyond the reach of the succeeding wave, I was saluted with ropes, life-buoys, and outstretched arms waiting to receive me; and reached the top amid the enthusiastic welcome of the assembled spectators, where, breathless with my exertions, I endeavoured to explain the non-arrival of the steamer, which still lay rolling obstinately in the offing.

The cause of this most singular reception was partly explained by the fact, that the writer was the first and, as subsequent events proved, the only passenger who ever landed at that pier, as the unfortunate structure was shortly afterwards swept away during a storm of unprecedented violence.

EASTER GREETING.

FROM THE GERMAN OF KARL VON GEROK.

'Why weepest thou?' How soft the words come stealing!
What greeting, blessed Magdalene, is this?
Fraught are its accents with a wondrous healing;
They still thine anguish like a mother's kiss!
Methinks I hear that voice as thou didst now—
'Why weepest thou?'

'Why weepest thou?' So breathes the balmy air
After the winter frosts, this sweet spring day;
The blooming fields, the flow'rets rich and fair,
The golden sunshine drive thy cares away;
All nature sings in cadence sweet and low—
'Why weepest thou?'

'Why weepest thou?' Dost thou thy Lord bemoan?
His precious body has the false world ta'en;
O see! not death could keep Him from His own;
Victorious o'er the grave He comes again,
And tenderly His dear voice asks thee now—
'Why weepest thou?'

'Why weepest thou?' The world afflicts thee sore!
O see! Him, too, they thrust the cold grave under,
And placed their watchers on the gate before,
And yet with mighty strength He brake asunder.
Dost thou then think that now God's wonders sleep?
Why dost thou weep?

'Why dost thou weep?' Dost thou thy sins bemoan?
Is *that* the stone at which thy soul doth quiver?
O see! in His dear eyes is love alone;
Our sins lie hidden in His grave for ever!
O dread Him not, and lull thy fears to sleep;
Why shouldst thou weep?

'Why shouldst thou weep?' Is it that thou dost mourn
That over thee the cloud of grief is seen?
O see! how bright the glorious Easter dawn
Is rising on the fatal Easter e'en.
Trust, pray, and hope, nor 'neath thy burden bow—
Why weepest thou?

'Why weepest thou?' Dost thou bewail the dead?
Here is but earth that back to earth was given;
Seek not the Immortal in this narrow bed,
The spirit soared on angels' wings to heaven;
One day, and He will break the grave's charmed sleep—
Why dost thou weep?

'Why dost thou weep?' Poor pilgrim, burdened sore,
After these weary years, wouldst thou be home?
O see! thy gentle Lord is gone before,
And waiteth till His little child shall come;
Then thou, too, surely thy reward shalt reap—
Why dost thou weep?

'Why dost thou weep?' Aye Lord, one drop of peace
Thou canst in every cup of sorrow pour;
And though on earth my grief shall never cease,
Soon shalt Thou dry these tears for evermore;
Then shall the angels sing: 'O mortal, now—
Why weepest thou?'

POST-OFFICE ASSURANCES.

By the energetic and praiseworthy efforts of the Postmaster-general to extend and improve the several departments of the Post-office, public attention is now being called to Government Assurances through the Post-office. For a long period—nearly ninety years—the subject of Friendly Societies has frequently occupied the attention of the legislature; and a Friendly Society is but another name for an Assurance Society, the only difference being that the sums assured in the former at death, in sickness, or in old age, are for a smaller amount than is granted by the general and ordinary Assurance Companies.

On the 14th of July 1864, the government brought in an Act 'to grant additional facilities for the purchase of small government annuities, and for assuring payments of money at death;' so that government may be said to have undertaken assurance business on their own account and responsibility on behalf of the industrial classes. Under this Act, the sum to be assured, payable at death, was *not to be less than twenty pounds*, nor to exceed a hundred pounds, and no annuity was to be granted to exceed fifty pounds per annum. It was expected that year by year the amount of new business would increase; but from some cause, the reverse has been the case. Indeed, during 1880, the number of contracts issued was only two hundred and fifty-eight, assuring the sum of twenty thousand three hundred and seventy-eight pounds—less than one half the number and amount insured in the first year.

This result is a disappointment to all who are interested in the subject. The Postmaster-general, referring to it in a recent address, said: 'I cannot conceal from myself the fact that hitherto the facilities offered by the Post-office for life-insurance and for the purchase of annuities have been taken advantage of by the public to only a very limited extent. Whether this comparative failure is due to a disinclination on the part of the people to avail themselves of these advantages, or whether it is due to any

administrative defects which can be remedied, I will not now attempt to decide. Recognising, however, the extreme importance of affording the people the fullest possible opportunity of making a prudent provision for the future, I think no effort should be spared to see whether anything can be done to popularise these schemes for effecting life-insurance and for the purchase of annuities.'

The question, no doubt, for the Postmaster-general to consider is: What is the cause of this failure? Is it due to any administrative defects? We feel sure it is not. The management of all the departments in the Post-office has been so excellent and successful as to command universal approval; and the want of success in the assurance scheme must be sought elsewhere. Neither is the comparative failure due 'to a disinclination on the part of the people to avail themselves of the advantages.' The amount of business done annually by the hundred and seven non-government Life Assurance Societies and the forty-four Industrial Insurance Companies and Collecting Societies, proves the contrary. The new business effected last year by fifty-six of those Life Assurance Companies was twenty millions; and the total premiums and interest received on existing assurances by all the Life offices was a little over nineteen million pounds, assuring the sum of four hundred and twenty millions. The success and prosperity of the Industrial Assurance Companies are quite as great in proportion, the annual subscriptions of the forty-four Societies amounting to the enormous sum of two million six hundred thousand pounds, contributed solely by the working and industrial classes to provide a sum of money payable at death.

How, then, can we account for the comparatively small amount of business done by the Post-office? Is it not to be found in the Act which regulates Post-office Assurances? Without doubt, the Act was intended and passed for the benefit of the working-classes, that they might have the advantage of assuring with the government;

for at that time there was a great outcry against the instability of the Friendly Societies.

Now, it is certain that the working-classes have not been able to avail themselves of the privilege, however much they desired to do so, because of the *limit put on the amount of the assurance* under the Act. It must not be, as we have already stated in Italics, for a less sum than twenty pounds. We believe that Mr Gladstone pleaded hard at the time that the limit should be five pounds, which would have met the case, as the average amount of the sum assured by the working-classes in the Industrial Assurance Companies has been found to be only about eight pounds. At present, the average sum of each assurance in the Post-office is eighty pounds; a sum which represents a class of insurers far above the ordinary working-classes. Besides this, the Act provides that no sum in respect of instalments or premium payable at any one time shall be of less amount than two shillings, which in itself is nearly equal to a total prohibition of assurance for the working-classes. We are informed—indeed, it is very easy of calculation—that the average premium or subscription received by the Industrial Insurance Companies is only three-halfpence per week, which assures for eight pounds, payable at death. Here, no doubt, is a difficulty; for how could the Post-office receive a penny or twopence weekly for an assurance policy? Mr Fawcett has himself answered the question, and met the difficulty by the use of the penny postage stamps to promote and encourage savings, in the Post-office savings-banks. We venture to suggest that the same plan may be adopted by the Post-office for the assurance scheme, namely, that of accepting postage-stamps, periodically, in payment of the working-man's life-policy.

It cannot be too widely known that there are several conditions and terms in the present assurance contract issued by the Post-office which are more favourable to the assurer than the policies of ordinary Industrial Societies. For instance, the premiums are lower, and a larger sum is assured by the Post-office for the same money. By the present Post-office Assurance Act, no profit is sought to be made out of any assurance granted; the fund to be formed is only to be adequate to meet all claims, without entailing any charge in respect thereof, or in respect of costs and expenses on the Consolidated Fund. We cannot say that this will always be the case, especially when the Post-office system is extended; neither do we see why it should remain so; for why should the Post-office not make a profit out of the assurance department, as well as out of any other department under its management?

Another special feature in all assurance contracts with the Post-office is that made with the members in the event of their discontinuing their policies. The Act provides that 'after having

paid the premiums for five years, if any one assured for a sum payable at death shall desire to surrender his policy, or shall be unable to pay his premium, the party shall receive at his option such sum of money, not being less than one-third of the premiums paid by him; or may receive a paid-up policy, or an immediate or deferred life annuity.' The Industrial Insurance Companies, so far as we know, make no provision of this kind.

The Post-office Assurance department embraces also the granting of immediate and deferred annuities not exceeding fifty pounds per annum; and there can be little doubt that the Postmaster-general will also endeavour to popularise this department, that the working-classes may avail themselves more readily of the privilege. The granting of annuities is especially the work of the government through the Post-office. None of the existing Industrial Insurance Companies grant annuities. Most of the Friendly Societies provide a small superannuation allowance to their members; but it is in this matter that so many Friendly Societies have failed to make ample provision, although they have fairly met the claims for sick allowance and payment of sums at death.

At the request of the Royal Commission, Mr Finlaison, the government actuary, supplied them with an example of an annuity table suitable for the working-classes. There were two schemes proposed. Under the first, a man aged twenty-four might secure five shillings per week on attaining the age of sixty, by a subscription of eightpence per week, or at sixty-five by a subscription of fourpence-halfpenny per week. Should the man, however, die before attaining the prescribed age, his representatives derived no benefit from the sums he may have thus paid, no money being returnable. It was not therefore to be expected that many persons would undertake to pay eightpence a week for thirty-six years, with no prospect of any benefit therefrom unless they outlived the said period, and reached the age of sixty. Accordingly, a second or alternative scheme was proposed, called the Money Returnable Scheme, under which, by paying elevenpence per week instead of eightpence, and sevenpence-halfpenny per week instead of fourpence-halfpenny, the same sum of five shillings per week might be secured at the ages of sixty and sixty-five respectively, with this advantage, that should the person making these payments die before attaining the prescribed age, the whole of the money he had thus paid would be returned to his representatives.

We do not think the existing Societies need fear the competition of the Post-office. The population is so continually increasing, that without doubt there will be always a large business for all. When the Post-office savings-banks were established in 1861, it was supposed by some that the ordinary savings-banks would be ruined; but notwithstanding the great success of the Post-office banks, it has made but little difference to the old banks. Mr Scudamore, in his evidence before the Royal Commission, said, in answer to questions by the Lord Mayor, 'that in nine years the Post-office had secured one million three hundred and three thousand depositors in the savings-banks, with only a reduction of one hundred and fifty

thousand depositors out of one million five hundred and fifty-four thousand who were customers of private banks; and that the government, by increasing the facilities for granting assurances, would be increasing the provident habits of the people, without materially interfering with the old business of the Friendly Societies.'

The Annuity scheme opens out a large field of operations for the Post-office. Let the working-classes—as we have on former occasions hinted—have government security for payment of their pensions in old age, and many thousands of them will immediately join. Indeed, it is impossible to overestimate the great advantage and benefit of such a scheme to the working and industrial population of the United Kingdom, who would be ever grateful to the government for giving them this certain means of providing for infirmity and old age.

How, then, could the Post-office carry out this increased system of assurance and extensive business which is known as Industrial Assurance? We think a plan might be adopted similar to that used by all Insurance Companies, ordinary and industrial, by the employment of agents to obtain members and collect subscriptions when necessary. The Post-office has a very large staff of agents already at hand in the thirteen thousand eight hundred and eighty-two postmasters, and sixteen thousand eight hundred and eighty-three postmen and letter-carriers; they are trustworthy, respectable, and would no doubt be efficient for this work; and they are well known, and know every house and householder. 'We recommend,' said the Royal Commission on Friendly Societies, 'that the existing system of government assurance through the Post-office for death and government annuities be extended so as to cover the whole ground now occupied by what is termed Industrial Assurances.'

We heartily join in this recommendation, believing that it will be a great advantage to the community, and will afford large, safe, and profitable facilities for the savings of the working-classes especially, for whose benefit Post-office assurances were established.

Since the above was written, a Select Committee of the House of Commons, appointed to consider the advisability of revising the present scheme of Insurance and Annuities to be effected through the Post-office, have been taking evidence on the subjects of inquiry. Mr A. Turnor, C.B., Financial Secretary to the Post-office, explained that the system of insurance now carried out through the Post-office was a failure, owing to the fact that the maximum amount (one hundred pounds) which they had power to insure, and the maximum age (sixty) were too low; while the minimum amount (twenty pounds) and the minimum age (twenty) were too high. The maximum, he thought, should be raised to over two hundred pounds. Another official, who gave evidence for himself and Mr Chetwynd the Accountant-general, explained that under the present system half the post-offices throughout the country were savings-banks; while only one-seventh, or about two thousand, were insurance offices. The new scheme that was under consideration would enable an intending insurer to take out a policy at any of the savings-bank

offices. He would be able to open an ordinary savings-bank account, and would be able to make deposits at any time and at any office, and all that was required was that he should have paid in the amount of the premium by the time that premium became due. The insurer could by this means even make use of the recently introduced cards on which he affixes twelve stamps, and pay said cards into the bank.—The Committee have now embodied the above recommendations in their Report to the House of Commons.

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

CHAPTER XIV.—'YOU LOOK WRETCHED, VAL. WHAT IS IT?'

It befell that although Gerard Lumby made little progress enough with Constance in those parlour encounters, in which, perhaps, the most earnest of lovers is the least likely to thrive, he talked with a lover's enthusiasm outside her presence, and chose Val Strange, of all men in the world, to talk to. Val, dreading his own love all the while, listened to him with such heart-burnings as may be imagined, but gave no sign.

Mr Jolly in the meantime kept his house *en fête* for a whole winter month, and was almost crowded from his own rooms by guests. Gerard having proclaimed Val great in private theatricals and charades, that young gentleman was installed as a sort of amateur manager of the Grange revels. This partly delighted and partly frightened him. No man schools himself to dishonour in a day. The shiftless, helpless, sponging spendthrift, the hopeless drunkard, the betrayer, the sharper—all have had their remorse, their struggles, their backward longings towards relinquished honour, or at least their piteous glances that way cast. And Val Strange was less than most men fitted to be a happy wrongdoer. By nature candid and kindly, and greatly careful of the good opinion of the world, he was sure to suffer horribly if he played any man false; and here was temptation growing almost too much for him. He was torn by love and jealousy, and drank alternate draughts of sweet and bitter poison. The poison was sweet when he stood alone with his friend's plighted wife and talked with her, and drank the beauty of her face and voice and the exquisite intoxication of her presence; or when his arm circled her in some slow waltz, and they moved, as on air together, to the dying falls of Strauss's melodies, when the music sighed as if foredone with pleasure half grown into pain. Bitter the poison—how bitter, only Jealousy can know—when the unsuspecting Gerard came to claim his right, and talked with her—walked, rode, drove, danced with her, always with right on his side, and the surety of an admitted claim. And much as the rages which sometimes filled him taught him to fear himself, he feared Gerard too, by an instinct which warned him that the latter was the

last man whom it might be wise to turn from a friend into an enemy. Yet perhaps I do Strange some injustice here, for he had physical courage enough, and it may be that his dread of Gerard was of a better sort. To face eyes once friendly, and now full of hatred and reproach—to give any man the right to say, 'You have played the villain, false friend,' might well inspire more dread than a man could summon at any mere physical call.

At last, in his miseries and perplexities, Val made one resolve, and as the outcome of it, he sat down and wrote this letter to his old yachting companion :

MY DEAR GILBERT—I am in the dullest hole I ever got into in my life. I cannot escape with any degree of grace under a fortnight, and I am in danger of being bored to death. Pray, send me a telegram, purporting to come from any fictitious personage whom you may be pleased to invent for the occasion, advising me of important business, and insisting upon my return. Do this for old friendship's sake. 'I do adjure thee, by old pleasant days,' make the message sufficiently urgent to bear me away without apology. I am peppered, I warrant you; and if your telegram should come later than to-morrow, it will find me indeed a grave man.—Yours, VAL STRANGE.

The resolve to write this was not arrived at without much trouble, although it is one thing to determine and another to do. When he had sent it away, he thought of all he was leaving, and half wished it recalled. He went sleepless nearly all night, and tossed to and fro upon his bed undecided. Now he was all for flight, and now flight seemed so cruel as to be impossible. There are some pangs it is not in human nature to endure voluntarily. When he presented himself at the breakfast table, he looked ill, and Constance, who sat near him, spoke of it.

'It is nothing,' he responded—'a headache.'

People gave him their condolences, and it cost him a great effort to keep his temper. Breakfast over, he retired to his own room and brooded there, longing and dreading to be called away. By-and-by a young man on a dirty gray pony rode up the drive and delivered an envelope, buff-coloured, and bearing side by side with Mr Strange's name and present address, the inscription, 'Five shillings for portage.' The footman leisurely sought out Mr Strange, who, tearing open the envelope, read: 'From BROWNE, 13 Mount Street.—Everything going to smash. Must have you up at once, or we shall both be broken.'

'Anything to pay?' asked Val, grinding his teeth at the clumsiness of the message.

'Five shillings, sir,' said the footman.

Val gave him the money, and dismissed him.

'I can't show this to anybody,' he cried aloud, crossing the room ill-temperedly. 'What a fool the man must be to send me such a message!' He was so eager to stay, so unwilling to go, that he was ready to catch at any straw of self-delusion. He tried to persuade himself that since he could not reasonably show to anybody this ridiculous message, he could not allow it to call him away; but he was not yet so blind as to allow that fraud to pass. 'Shall I go?' he asked himself. 'I must

go.' He paced to and fro in the room. 'I can't go.' Reginald Jolly's words came somehow into his mind: 'You are always in the primrose way,' and his own flippant answer: 'I like primroses.' He stood still in a sudden hot rebellion against Fate. 'Let it lead me where it will, I take the primrose way. The other road is too thorny. Yet, where will this way lead? Where will it lead?' He clenched his hands, and dropped them by his side, and said very quietly and softly: 'Let it lead me where it will, I take it.' He tore the telegram through and through, until his hands had no grip upon it to tear it further, and cast the fragments broadcast on the floor. Then he went slowly down-stairs, and meeting Reginald in the hall, he said languidly: 'Rags, old man, I think a little stir in the open would do me good. Will you come down to the warren and have a pot at the rabbits for an hour?'

Reginald assented, with a look of some anxiety at Val's pale face. Folly is not only left unjustified of all her children, but she rarely manages to justify herself to them, or even to enable them to justify themselves to themselves. A man born and bred within Folly's kingdom, is sometimes happy there. You may almost unfaillingly know him by his smug contentment. He knows no other boundaries. His own walks content him. He mocks wisdom, and disdains humility. His conversational chalk-stones are to him more precious than the rubies of the wise. He is wise in his own conceit. Like Dogberry, he prays you, write him down an ass. It is his glory to be bald. Like the fox who lost his tail in the fable, he would fain have you also shorn. One touch of wisdom would ruin his complacency. But for a man born outside the demesne of Folly, to stray into it, is to walk into a very atmosphere of misery. 'Let it lead me where it will, I take the primrose way.' There will come a day, Val Strange, when no road could seem more awful to your eyes than that flowery path wherein your feet are set. Glad youth who mayest read this story, and haply take pleasure in it, I, thy poor lop-sided fellow-creature, who, with Hamlet, may own to having more offences at my beck than thoughts to put them in—I, who can put on no garb of saintliness, and am not constituted the preacher of any sect, bid thee have pity on thyself that is to be, and cherish Honour as thy friend. So shall the primrose spring *behind* thee—in sweet companionship with all sweet flowers—and when thy frequent feet in age shall travel again where thou hast trodden in thy heedful youth, the way shall be gracious, thy going shall be pleasant, and thy heart at rest. But still Will Waterproof's song is not without truth:

[For] others' follies teach us not;
Nor much their wisdom teaches;
And most, of sterling worth, is what
Our own experience preaches.

And every man must dree his own weird, and fight his own giants, to slay them, or to be led to captivity, as he himself may choose.

* * * *

'You look wretched, Val,' said the little man, laying a friendly hand on him. 'What is it?'

'I am worried and unwell,' said Val, ready to

vent himself on anybody, and really angry at Gilbert. 'I've just had a most idiotic telegram from a fellow in town. I suppose he regards himself as a practical joker, and thinks it fun to wire disturbing nonsense to a fellow. Wants me to go to London.'

'If it's at all important,' said Reginald, 'don't think about the theatricals. We can let them slide easily enough.—Who is it?'

'That ass, Gilbert,' said Val unguardedly. 'It's a thing of no importance.' Just then, a man came racing down the field they had just entered, bearing in one hand a salver, and in the other a buff envelope.

'For me?' asked Reginald.

'No, sir,' gasped the man; 'for Mr Strange.' He placed the envelope on the salver, and handed it to Val, who opened it, read it at a glance, and burst into an execration. 'No chaff in last wire,' ran the message. 'Things really awfully serious. Come up at once.' Val impetuously tore the missive into a hundred pieces. The servant gaped at him open-eyed with wonder.

'What are you standing and staring there for, you impudent scoundrel?' cried Val, catching sight of him suddenly.

'Five shillings for portage, sir,' returned the servant; 'mounted messenger, sir.'

'Hang the five shillings!' shouted Val inconsequently, as he handed to the man, or rather half threw at him, a half-sovereign. 'Keep the change, confound you!'

'Gentleman's bark ain't very dreadful,' mused the servant as he departed; 'and he haven't got a bite in him seemin'ly.'

'Val,' said Reginald, 'what is it? Can I be of any use to you?'

'It's nothing,' said Strange, laughing vexedly. 'I ought to be able to take a joke with better temper, however stupid it might be. Come along, and let us have a pot at the bunnies.'

'Of course I know nothing about the matter,' said Reginald; 'but is there a chance of its not being a joke after all?'

'I tell you,' cried Strange pettishly, 'there's nothing in it.' Reginald said no more, and they crossed the fields in silence. Val had no care for sport, and having had two or three chances, and having missed them all, he sat upon a tree-trunk and smoked discontentedly. 'Fly while you may,' the inward monitor whispered. 'Fly from this enchantment, lest it madden you.' The whisper never left him. 'Go!' it urged him—'go! It is your only safety.' Reginald, meeting with better success than his companion, was keenly set upon the pleasure of the hour; and having hallooed once or twice to him, and received no response, wandered wide of where Strange sat.

'Mister Reginald!' shouted a panting voice.

'Hillo!' he cried in answer. 'This way.'

A serving-man came bursting through the bushes of a neighbouring spinney. 'Is Mr Strange along with you, sir?' he panted. 'Here's another telegram, sir.'

Reginald smiled, and lifting his voice on high, called aloud to his friend.

'Hillo!' roared the recluse in answer; and guided by his voice, the two made way towards him.

'Here's another message,' said the bald-headed

youth, grinning broadly. 'Excuse me for laughing, but it's too comic.'

'Is it?' said Val sardonically. Again the mythic Browne of 13 Mount Street insisted upon his return: 'Your affairs menaced on all hands. Necessary to consult Boyd at once.' Wire answer. Come up by next express. Urgent.' This time, the recipient of the telegram dropped his hands like one resigned.—'Anything for portage?'

'Yes, sir,' the man responded; 'five shillings, sir.'

'Ah!—Have you change, Jolly?—Thanks.—Tell the messenger,' he said to the man, 'that if any more telegrams come for me to-day, they can wait until the letter-bag is sent up.—Look at that, Rags,' he continued languidly, handing the telegram to him. 'That's the third I've had to-day. Isn't it enough to make a man angry?'

'Who's Boyd?' asked Reginald.

'I don't know Boyd from Adam,' Val returned.

'Hillo!' cried Reginald suddenly. 'Look here, Val. There must be something in it after all. You said it was Gilbert who sent the others. This is from Browne, of No. 13 Mount Street.'

Val blushed a little at this; but answered quietly and wearily: 'That, I suppose, is part of the joke. I don't know anybody named Browne. I don't know Mount Street. Where *is* Mount Street? Who is Browne? Did I say Gilbert? Gilbert East, I meant. Ah, you don't know him.' O Val Strange, Val Strange, that a man once honourable should lie so glibly! But somehow, the atmosphere of the primrose way sets Honour off to sleep, as the air in the Enchanted Grounds did with the Pilgrims in Bunyan's allegory.

'I can't conceive,' said Reginald, 'that any man would be such an ass as to send a message like this without a meaning. I should go and see what is the matter. You can catch the one o'clock train, and be back here by three o'clock to-morrow. There *might* be something in it. There *must* be something in it!'

Here were accidents urging Val to his salvation, and the inward voice urged him: 'Go! It is your only safety. Go!' And for the moment it so far triumphed with him that he answered: 'Yes; I think I'll run up, if it's only for the pleasure of horsewhipping Gilbert—East.' The pause was scarcely noticeable; but the bald-headed youth was keen, and there was something in this whole matter which went beyond his penetration for the present, and piqued his curiosity.

'Yes,' he said, with his keen eyes on Val's face, 'I think I should horsewhip Gilbert—East.' Val changed colour ever so little.—'What is it?' asked Reginald of himself. 'He is making a mystery of something or other. Well, it's no affair of mine.'

'Come,' said Val, taking up his gun; 'let us go up to the house. I must pack.' He tried to hope that, being once away from the attraction which so strenuously held him, he might be able to stop away altogether. Perhaps he began to find the primrose way already thorny. They went up to the house silently; and Val having ordered his own man to pack his portmanteau, made his excuses to his host, and started.

Reginald drove him to the station. 'Let me know,' said he, as the train came clanking in,

'if it's all right when you get there. I shall be anxious till I hear.'

Strange promised; and in another minute was rolling towards London.

ON A SUGAR ESTATE.

IN TWO PARTS.

PART II.—GATHERING THE CROP.

In taking up the next step of a sugar-planter's duties, the reader must imagine that six months have elapsed, and that the sugar-crop has now come to maturity. The canes bordering the 'traces,' which when we last saw them were only some four feet in height, are now nearer fourteen; and have each projecting from their tops a straw-coloured rod, called the arrow, about four feet long, and as thick as a walking-stick. The canes bloom in the months of October and November, and these arrows are the stalks that bore the lilac-coloured plumes. The flowers have fallen off; but the arrows, although withered, retain their place.

The country looks something like a huge chessboard, checkered with yellow and green; the yellow squares marking the fields where the canes have already been cut and carted, leaving behind only a mixture of cane-tops, leaves, and arrows, which soon withers in the sun, and is then called 'trash,' covering the ground about a foot in depth. The green patches mark where the canes are still standing; for the leaves retain their verdure until the canes are cut. On our way, we pass the cane-field which we saw in course of being planted. From each 'stool' has sprung up some eight or ten canes, now six feet in height, and forming long regular rows. The leaves arch over until their tops meet, completely covering the ground. These canes will not be fit to cut this year, for 'plant'-canes take fifteen months to arrive at maturity, and crop-time only lasts from January until May. 'Ratoons' can be cut every twelve months.

On our arrival at a cane-piece that is being harvested, we notice that all the lower leaves have been stripped off, leaving each cane, which when ripe is of a pale yellow colour, clean and bare, except for the bunch of leaves and arrow at the top. The cane-cutters, who work by the task, are busily engaged. Their implement is a sharp and heavy cutlass. It requires some practice to become a good cane-cutter. Let us watch this one at work. Seizing with one hand a cane by the middle, with one swift stroke of his cutlass he severs it, close to the ground, from the stool; then bringing the top within reach of his weapon, with another blow he cuts it off just where the hard cane ends, and the soft stem—from which the leaves and arrow spring—begins. This 'cane-top,' as it is called, contains no saccharine juice, and forms with its leaves about one-fourth of the total length of the cane. He then, still holding the cane in his hand, divides it with another rapid stroke or two into lengths of about four feet each; taking care to let them fall on the ground in such a way that the 'trash' does not cover and conceal them; after which he grasps another cane and proceeds in the same way. The canes are from one to two inches in diameter at the bottom, and taper to about half that size at

the top. They vary from ten to sixteen feet in length, including the 'cane-top;' and there are from sixteen to twenty thousand of them in each acre of land. Every cane-cutter will cut down about half a rood before his day's work is done.

The canes must be carted and made into sugar as soon as possible after they are cut; for if they are left lying in the sun, their juice soon turns sour, and would not crystallise; so the carts are working close behind the cane-cutters. The carting of the canes is superintended by the head-overseer, and a driver who is designated the 'head-carterman;' both being mounted. The mule-carts weigh when empty about nine, and when loaded about eighteen, hundredweight, and unless when going up-hill, are driven at a brisk trot, the carterman sitting on the front rail with his feet on the shafts. These carters are generally the smartest men on the estate, and are well paid, for it requires some skill to handle a team of mules quickly and properly. They are each assisted in loading their carts by a lad called a 'loader,' who remains in the cane-piece while the cart is away, and collects a heap of canes; so that when the cart returns, no time is lost in again loading and despatching it. Large cattle-carts are also going to and from the manufactory with four oxen yoked to each; and these, although moving much slower, carry a far larger load than the mule-carts.

There are two methods of manufacturing sugar from the cane—one known as the 'common process,' by which 'muscovado' or common brown sugar is made; and the other as the 'vacuum-pan,' which results in the white sugar or 'crystals.' St Helens is a common-process estate; and the works consist of a long building divided into three parts. At one end is the engine-room, at the other the 'curing-house,' and between these the 'boiling-house'—all connected with each other by doors. The engine is a high-pressure one of forty horse-power, which drives the 'mill' that crushes the canes. This 'mill' is composed of three heavy iron rollers, placed horizontally, two below and one above, and known respectively as the first, second, and top rollers. They are about five feet long, and two feet in diameter, and are geared in such a manner that the top roller revolves in an opposite direction to the lower ones. The canes are emptied by the carts in the mill-yard, and are carried by the 'mill-gang' in bundles on their heads, and thrown by them on to the 'cane-carrier,' which is an arrangement of endless chains and laths looking something like a huge ribbon, revolving round two drums, one placed close to and above the rollers, and the other some distance off in the mill-yard. Its use is to convey the canes in a regular supply to the mill. On reaching the mill, the canes fall off the cane-carrier, and are caught between the first and top rollers, which crush them, the juice falling below into a receptacle called the 'mill-bed;' whilst the crushed cane, known now as 'megass,' passes out between the top and second rollers, and is received in wagons pushed by men, running on a small tramway, and is conveyed by them to the megass-houses. These are large barn-like buildings, situated a little distance from the works, and there the megass is stored until it becomes dry

and fit for fuel. Some of the megass is also spread in the mill-yard to dry in the sun, but is always taken up before sundown, as the dew would soon saturate it.

The cane-juice when it leaves the rollers is of a dirty drab colour, for it is full of impurities. To get rid of these, 'clarifiers' are used. The clarifiers are square iron tanks of about eight hundred gallons' capacity, with rows of copper tubes at the bottom, into which steam can be admitted. They are placed on a platform erected at one end of the boiling-house; and the juice is conveyed to them by a pump. Let us go up and see how they are used. You see one of the clarifiers has just been filled, and the attendant now turns on the steam; he then proceeds to weigh out a certain quantity of lime, which, after slaking in a bucketful of juice, he pours into the clarifier. Cane-juice, although having a very sweet taste, contains an appreciable amount of citric acid, which without the addition of the alkali (lime) to counteract it, would prevent the crystallisation of the sugar. The lime also aids in purifying the juice. This operation is called 'tempering' the liquor. A few minutes after the steam has been turned on to the clarifier and the liquor has got hot, the impurities begin to rise to the surface. Just before it arrives at boiling-point, the steam is turned off; and after the expiration of half an hour or so, the liquor becomes covered with some three inches of a thick puffy scum, which is removed with a skimmer. The juice is next run into another iron tank called a 'subsider,' where it remains about an hour, and where, as its name implies, a subsidence of further impurities takes place.

The liquor is now of a pale amber colour, and is fit to undergo the process of boiling. This is performed in a 'battery' of iron bowl-shaped pans, open at the top, and suspended from walls of masonry in such a manner that the furnace flues pass round and under them. The furnace is placed at one end of the battery, and the fire from it boils all the pans in succession on its way to the chimney. The liquor runs first into the 'grand,' or pan farthest from the furnace, which holds about six hundred gallons. As it evaporates, it is passed on, by means of ladles, to the next pan, and from it to the next; and so on, getting thicker and more sirupy, until it reaches the 'tache,' which is the smallest of the pans, and holds one hundred and twenty gallons. The tache is nearly directly over the furnace, and is in a state of furious ebullition until all the water is evaporated from its contents, which is then a mixture of molasses (treacle) and sugar, and rises in large swelling bubbles, from which but little steam issues. This mixture is next ladled from the tache into a wooden spout, which conveys it to large shallow coolers, in which, as it cools, crystallisation takes place, the sugar, however, still remaining mixed up with the molasses. Only a small quantity is put at a time into each cooler, so as to allow it to cool quickly; to assist which end, and also to aid the crystals in forming, it is stirred about with a long wooden instrument like a baker's 'slice.' When a cooler is full, the contents are left for a day or two, and it then looks something like a mass of toffee, and is hard enough to bear a man's weight. This stuff is then dug out, chopped

into small pieces, carried into the curing-house, and put into hogsheads. These hogsheads have small holes pierced in their bottoms, to allow the molasses to drain out, which it does in about three weeks, leaving behind the common brown sugar seen in any grocer's shop. The hogsheads are then headed up, have the drainage-holes plugged, and are ready for shipment.

The 'mill-gang' are all coolies. They throw themselves with much energy into their work, because, before the day is done, they have to supply sufficient cane to the mill to fill twenty-five clarifiers—equivalent to twenty thousand gallons—with juice; and it has been calculated that in doing this, they each lift to their heads and carry a distance of twelve yards, twenty-five tons of cane. Another reason for their activity is the competition existing between them and the cartermen; the cartermen striving to block up the yard with canes, and the mill-gang doing their best to clear it and leave it bare; and then, with huge glee, they blow the engine whistle as a note of triumph, until the carts arrive at full gallop, their drivers in high dudgeon. A shrewd manager takes advantage of this rivalry, which is shared in by the overseers, and so proportions the number of carts and mill-hands, that the emulation is kept up, and the work proceeds at high pressure.

A gang of women and children, under the superintendence of an elderly negro dame, are employed in spreading and turning over the megass that is being dried; something after the manner of hay-making. The old woman rules them with shrill expostulations and lynx-eyed vigilance, allowing them but small opportunities for trifling. The women all wear bright-coloured 'julas'—short tight-fitting sleeveless bodices—and quantities of silver jewellery. Some of them are absolutely covered with it on their necks, arms, ankles, ears, in fact wherever a coin or a ring can be carried; and many besides have the additional ornament of a gold-ring dangling from their noses. A coolie's wife is his bank. All his savings are transformed into jewellery, and attached, oftentimes forged on, to some part of her body. This leads to great unpleasantness in the event of a woman's choosing a new partner—a thing which not unfrequently happens, for the men far outnumber the women. The deserted swain declares that the jewellery is his property; while the faithless Helen as stoutly maintains it to have been a free gift from him to her, and besides that, largely composed of her own earnings. Much litigation and perjury is the usual result.

In the matter of jewellery, the men are more moderate than the other sex; a gold piece, usually a United States double eagle, suspended from the neck, generally satisfying them. But some, particularly the younger beaux, rejoice in bracelets and armlets.

Coolie women when young are, as a rule, handsome; but they soon lose their good looks. Outdoor labour and early marriages are no doubt the principal causes of their early fading, many of them being mothers at twelve years of age. They occupy here, however, in relation to the male members of their family, a far higher social position than in their native land; their opinions, tastes, and feelings being consulted on every

occasion, in a manner that would be very anomalous in a Bengalee family that had never crossed the 'Burra Pahneé' (great water). This is owing to their being in such a minority, and also to their position as joint bread-winners with the head of the family.

Of the 'boilermen,' some are Creoles and some coolies. They are superintended by an experienced old negro, who directs the whole process of clarifying and boiling the liquor. He works entirely by rule of thumb. And although he makes a great parade of using a saccharometer, a test-tube, or a thermometer, and insists on being supplied with these articles, he does it merely to impress his subordinates with the profundity of his knowledge, and to convey the idea that 'tempering' liquor and making muscovado is a very recondite business, and that the post of 'head-boilerman' is a most important one. Nevertheless, if left alone, or, in his own words, if 'Massa no a bodder him too much,' he will turn out a very fair quality of sugar by the judicious use of his eyes, nose, and tongue, which perform for him the duty that saccharometer, test-paper, &c., are required to do for 'Massa's' less well-trained senses.

The manufactory we next visit for the purpose of seeing the 'vacuum-pan' process, which results in producing white sugar, is a much more imposing structure than the St Helens' sugar-works. Far more sugar, and of a better quality, is made here, than there; for in this 'work' is ground, not the cane of one, but of many estates, which are conveyed to it by tramways. The machinery necessary to make crystals is very costly, and it pays an estate working by itself better to make muscovado and sell it to the British refiners,* than to erect expensive machinery, which would necessarily lie idle half the year. The case is different, however, when several estates belonging to one proprietor are so situated that their canes can be conveniently conveyed to one central factory. Then it is decidedly better to adopt the 'vacuum process,' as it turns out the more valuable product. The machinery for crushing the cane here, differs from that used in the other method only in that it is larger, and can supply greater quantities of juice in a given time. The operations of tempering and clarifying the liquor are also similar to those we have just seen. It is in the treatment of the juice after clarifying, that the divergence from the 'common process' takes place. The liquor in leaving the clarifiers is, as we saw, of an amber colour. This is owing to colouring-matter contained in the juice itself, and is in noway to be ascribed to feculent admixture. In making muscovado, this colour of course gets intensified as the water evaporates, until it results in the sugar being of a more or less dark-brown hue. The darkness of the shade is also partly owing to the grains of sugar being but imperfectly free from molasses, which is never completely drained away by 'curing.'

In making crystals, the juice is pumped from the clarifiers to the very top of the building, and is then allowed to filter down through long tubes about four feet in diameter, which contain

powdered animal charcoal. This effectually removes all traces of colour; and when it emerges from the bottom of the filter, it is nearly as clear as water. The liquor is then concentrated to a thin sirup, by means of the ordinary open pans, or else by a French invention called a *triple effets*, which is a combination of three pans; the first of which is boiled by means of steam-pipes supplied from a boiler; the second is made to boil by the steam arising from the liquor in the first; and in its turn, supplies heat in the same manner to the third—thus effecting a great saving of fuel. When of sufficient density, the sirup is pumped into a vacuum-pan.

In boiling sugar in open pans, a high temperature is necessary. In the 'tache,' just before it is discharged into the coolers, it rises to two hundred and forty degrees Fahrenheit, which is very injurious to its granulating properties; and it is because of muscovado having such a fine grain, that much of it passes away with the molasses. To obviate this, the vacuum-pan was contrived, Mr Howard, its inventor, realising a large fortune by it. It is a well-known fact that the boiling-point of any liquid depends on the weight of the column of air it supports; or in other words, on the pressure of the atmosphere on its surface. Thus, it will take less heat to make a kettle boil on the top of a mountain, than at its base, because the air gets rarer and lighter the higher we go. So, if we can apply heat to cane-juice in a vessel which contains little or no air, we shall be able to evaporate the water from the sugar, at a very low temperature. This will give us large crystals, and prevent the waste that occurs in boiling the liquor in the open air, where a great heat is required. And this the vacuum-pan enables us to do. The vacuum-pan is a round, air-tight vessel covered with a copper dome. It is heated by means of steam-pipes in its interior, and is provided with an air-pump, driven by a steam-engine, which maintains the vacuum, and removes the vapour as it is generated. Complete evaporation is secured in it by a temperature of one hundred and forty degrees Fahrenheit, and consequently the sugar crystallises in those oblique prisms that look so handsome on our breakfast tables. Each pan is of large capacity, holding from two to four tons of sugar. There are four of them here, which jointly turn out some forty tons of sugar a day.

When the sugar leaves the vacuum-pans, it is still mixed up with the molasses, as in the other process. To separate them without the long and wasteful operation of 'curing,' science again comes to the aid of the sugar-planter. The mixed sugar and molasses are first, as before, run into coolers. When quite cold, they are conveyed to the machines that are to divide one from the other. These are called 'centrifugals,' and are round, open vessels about two feet in diameter, and the same in height. Their sides are made of fine wire-gauze. They revolve on two pivots—one placed under and one above them—are driven by a steam-engine, and make more than one thousand revolutions a minute. Here you see a row of a dozen or more of them with an attendant to each. Let us watch the operation. Two or three

* A description of the British method of sugar-refining and of making loaf-sugar, was given in *Chambers's Journal*, No. 871.

showelfuls of the mixed sugar and molasses are put into a centrifugal. It is then started. Off it sets, whirling with such velocity, that but for a slight tremor, it would appear motionless; and its contents, obeying the natural tendency of all bodies, to fly from a revolving centre by the law of centrifugal force, in their efforts to escape, cling tightly to the gauze sides of the machine. The crystals are too large to get through; but the molasses finds no difficulty; and to assist it, a fine spray of water is played on to the mixture, from a jet placed near the centre of the centrifugal. This effectually cleanses the sugar, and as the water also hurries through the gauze, crystals may be said to be washed and dried by the one and the same operation. Channels are made in the floor, through which the molasses finds its way to the tank reserved for its reception. In a minute or two, the centrifugal is stopped, the sugar in it removed; a fresh charge is put into it, and it is again set whirling. The crystals are then taken in a small tram wagon to another apartment, where they are put into bags ready for shipment.

PAVEMENT PORTRAITS.

SONG AND SYMPATHY.

IN one of those long streets stretching from Buckingham Palace Road across railway bridges far away to the fog-oppressed 'dark-flowing' Thames, a thoroughfare perplexing in the sameness of its houses—which only differ from each other in the numbers on their doors—and distressing in its dullness and want of expression, stood one night in 'bleak December,' two years ago, a strange figure. It was a man; but other evidence than that of the eyes was necessary to convince an inquirer of this fact; for the wind was blowing hard, and the snow was falling, or rather rushing down from the dark sky with blinding impetuosity; and the object referred to looked, at first sight, something like an old coat hung upon a spike of area-railing, and fastened thereto by a rude kind of knot at its top; while the sleeves were stretched out on each side, caught, as it were, on other railing spikes; and the legs—if the object had any—were lost to view in the shifting white and black of fresh-fallen and melting snow on the pavement. It had all the appearance, indeed, of a scarecrow, though, upon closer investigation, it proved to be, as I have said, a man.

Drawn close up to the railings, to which he was tightly clinging, as though afraid of being swept away by the cruel wind, and with his face partly thrust between two of the spikes, as if to conceal it from the passers-by, the scarecrow gave the required evidence that it was a man, by singing, in a piping wheezy voice, a song, the burden of which, repeated over and over again, so often that it seemed as if all the song was composed of it alone, was, 'Mother, dear Mother!'

'Mother, dear Mother!' came the words again and again in an ascending scale, until they almost approached a faint scream. Across the area they went, contending with the rushing wind in a competitive attack upon the dining-room window of the house; until at last 'Song' seemed to have

won a victory in his assault upon the plate-glass guarded fortress; for the blind was pulled up, and a flood of warm light fell upon the pinched and wan face of the singer, whose voice was hushed as 'Sympathy' looked out upon him. 'Sympathy' was none other than a beautiful elderly lady. Seated alone she had been, in a low armchair, seeking faces in the fire, and dreaming dreams of early days, of maturer years, of happiness and grief, of storm and sunshine, when her thoughts were arrested by the weary song of the singer—'Mother, dear Mother!' 'With anxious, softly-stepping haste,' she went to the window, and 'Song' and 'Sympathy'—the latter roused by the former—were face to face.

The bright light of the fire and wax candles revealed to the strange minstrel a face of calm dignity, and almost holy benevolence. A pair of clear kind gray eyes looked out upon the blustering rude night and the tousled old man; and the contrast between the comfortable, peaceful room and the storm-drowned street was not greater than that between the dignified dweller in the former and the poor drenched creature outside.

To some people, the discovery that the singer of a disjointed street song with its ever-recurring cry of 'Mother, dear Mother!' was a toothless old man some seventy odd years of age, would have been a subject for ridicule. It was not so to the lady at the window. Our thoughts are often beyond our control, and, like a horse that takes the bit in its mouth and bolts with its rider, frequently carry us whither we least expect to go. So it was in this case. No one would be able to trace any resemblance between the street singer, the street of which I am speaking, the blustering dark night, and a beautiful boy with dark curly hair, a lovely cottage embowered with roses deep in the Weald of Surrey, and a hot June afternoon; and yet it was to these last that the thoughts of the lady rushed as she gazed at the singer across the narrow area.

That boy with the brown locks—he stood before her now! She was no longer in the neighbourhood of Eccleston Square. She was far away in the country, in a bright little drawing-room, gay with flowers. The scents and sounds of summer floated round her, the song of birds and the perfume of roses were wafted in at the windows opening on to a closely shaven lawn. Sunshine streamed into the room, and on a patch of it lay on the floor a favourite collie dog. And the boy—her boy—in a loose black velvet jacket, stood in one of the windows, and read her a letter telling how one of his pictures then being exhibited at the Royal Academy had been sold. Then turning his bright face to hers, the young artist lifted his straw hat from his head, and, opening his arms, exclaimed: 'Kiss me, mother!'

The vision—for the recollection amounted almost to such—vanished. Gone was the bright day, crumbled away the pretty house, vanished the beautiful face and form of the beloved artist son; and left, a lonely London room, a cruel winter night, and a cracked-voiced old beggar squeaking within a yard or two of the dreamer.

What takes so long to write, hardly occupied a minute. The lady, brought back to herself, rang her bell; and soon the street door was opened, and a neat little maid beckoned to the scarecrow to come to her. He shuffled up the steps, had the

shortest of interviews with the messenger of 'Sympathy,' and then passed away into the black night, breasting the storm with an energy remarkable to behold.

That night marked an important epoch in that old man's life. It was a Friday; and thenceforth the shabby figure might be seen every Friday evening shambling up the street to the house of his fair sympathiser. His song was soon dispensed with, and he became a regular pensioner on the lady's bounty. Her warm heart was touched by the helplessness of the poor fellow. He was past work—that was evident—and the lady, herself certainly not in the heyday of strength or health or fortune, lent what material and moral support she could to keep her poorer brother from the workhouse—whither, he said, he would never go while his 'old missus' was alive.

The life of the street singer had not been one of much incident or interest until its closing chapters were reached. Born and bred in service, he had been a gentleman's servant, page, footman, valet, butler, until paralysis had struck him down; and then, though he partially recovered, he was cast aside, like an old coat or a worn-out piece of furniture. He had, however, married; and when he and his wife finally left service, they set up in a very tiny little house, in a horribly dull dirty little street running out of the New Cut, Lambeth. They managed to get the house at a remarkably low rent, and hence the choice of this unsavoury locality. The wife let lodgings to working-men; and the old man, when he had regained sufficient strength to go about, procured a little connection for himself, running errands for servants in houses where he had formerly been in high service, brushing clothes, cleaning boots, and generally performing the very minor character of gentleman's gentleman's gentleman.

This occupation began twenty years before he met 'Sympathy,' and day after day, up to nearly last Christmas, he went out and brought home his little share towards the joint support of his wife and himself in their New Cut nest.

On Friday, the 23d December 1881, the weekly visitor appeared for the last time at the house of his benefactress, and received an extra dole, because of the season of the year, and because of a more tiresome wheeze than usual which was noticeable in his voice. He received also two pair of warm socks from the bountiful hands of the good lady; and was sent away with words of comfort and sympathy, which he laid to heart as he walked home. He was very ill, and he knew it.

On the last Friday of the old year he failed to appear at the house near Eccleston Square. Then the lady sent to the Lambeth address, and found that on Christmas Eve the old man had passed away, saying with his last breath: 'Place those socks which the dear lady gave me, on my chest, old woman; they seem to cheer me.'

The widow of a week was sent for by the widow of many years, and then a strange discovery was made. The latter spoke to the former about what she could undertake to do for a living; and the former, who was much younger than her deceased husband, said she thought she was still strong enough to look after an office. Then the lady said—how sweetly, sadly, and diffidently, I cannot describe: 'But, you know,

I fear there may be some difficulty, when I come to explain how I knew your husband.'

'What do you mean, ma'am?' asked the dead singer's wife.

'Well, you are aware that some people would be prejudiced against you, if they knew that he sung in the street for a living.'

The widow stood for a moment as if rooted to the floor, her face puckered with pain; and then her knees seemed to give way, and she sank in a heap on the carpet, flung her arms on a chair, buried her face in her hands, and sobbed out: 'Oh, he ne-ver ne-ver told me this! He al-ways said he'd got a few frien's in Westminster who he did a thing or two for! O ma'am, ma'am, how good he was! Oh, my poor old man—my poor old man! An' he did this for *me*; an' Lord love 'im for it, 'e kep' it from me to the very end!'

She ceased, rose trembling from the floor, took the extended hand of 'Sympathy,' reverently kissed it, and went her way.

SETTING THE SNARES.

CHAPTER V.

TEXAS DICK's judgment was not at fault; for it *was* a white man whom he had seen in company with two Apachés, and this white man was not unknown to him. Nor was the fact of these Apachés being seen there at that time, devoid of a certain ominous significance; for the tribe were away, and none but loafing, or as they are expressively termed in the West, 'bad' Indians would be in the district apart from their chiefs and comrades. Texas Dick had also, as he rightly suspected, been seen by the white stranger; for the latter had hurried to the shelter of the broken ground, in order to avoid him.

The two Indians so seen, either understood the design of their companion, or obeyed without questioning; for nothing was said among the three until they stood in a little ravine, and the white had made sure of the Texan's disappearance.

'Señor Tony,' then said one of the Indians, in his broken jumble of English and Spanish, 'that not the man you go for show us—ugh?'

'That!' exclaimed the white man, in a tone expressive of supreme contempt. 'That is Texas Dick. You should know him surely, Pedro. The man I want to show you is the new boss at the ranche. I know that old man Holt is to ride through Crowsfoot Cañon to-day, and this boy will be with him. I have never met him alone, or I would have'—The speaker ceased abruptly, and tapped the revolver in his belt with a glance which was meant to be fierce. The red man of the West has his features well under control; he rarely laughs or shows—to white perceptions, at anyrate—what he thinks; but there was a momentary roll of two pair of dark eyes, which met in their glance, and the expression was as near an approach to a sneer as an Indian would allow himself.

The white man noticed nothing of this, but strode on at a round pace in silence, until one of the Indians—both of whom had fallen a little behind—stepped close to him, and laying a hand on his shoulder, said: 'Bueno, bueno señor!'

Injun much tired: Injun want whisky. No can walk more over this mountain without whisky.'

'You shall have whisky soon, Pedro,' returned the white; 'but I want to show you this man first. We shall strike the cañon directly; then, after they have gone by, you shall have whisky.'

'Injun stop here. Injun go to sleep, if no whisky,' sullenly rejoined Pedro, who at once, without further notice, seated himself on a fragment of rock. The second Indian, being either of a taciturn disposition, or understanding even less English than Pedro, grunted out the invariable 'Ugh!' and imitated his comrade.

'You are a sweet pair,' growled Tony, as he looked from one to the other of their obstinate, animal-like faces, so stolid and expressionless. He added some bitter and very strong words; but these also were growled in an under key; for Indian ears are sharp, and are never sharper than when the barbarians are apparently most stupid and abstracted.

With some more half-intelligible grumbling, the white man produced a bottle from one of his pockets. The two Indian faces lighted with a momentary flash as they saw it, and they uttered guttural ejaculations of approval. Making the best of the situation, Señor Tony first drank a deep gulp himself of the raw spirit, then handed the bottle to his companions, who drank with immense gusto, and with repeated exclamations of 'Good—very good,' until the whisky was exhausted, very few minutes being required for this. As soon as the bottle was empty, Señor Tony exclaimed: 'Now then, boys! hurry on to the cañon.'

But, to his disgust, Pedro insisted upon a still further supply of liquor: 'More whisky. Injun no had plenty enough whisky.'

'I have no more with me,' protested the white man. 'Search me if you like. Come, my good men, let us hurry on, or we shall be too late.'

'Señor Tony ought have bring along much more whisky,' said Pedro. 'Injun no had plenty.' Curling round like a dog as he said this, the Indian disposed himself for sleep, which so exasperated Tony, that he seized him by the shoulder and shook him violently.

In an instant the Indian was erect, his broad knife glittering in his hand, while his eyes wore so diabolical an expression that Tony fell back appalled. For a moment the Indian paused, and then broke into what was intended for a laugh of approval, perhaps of contempt for the scared face of the white man. It was but a grunt or chuckle, yet it awoke the risibility of Miguel, who laughed in concert, and the danger was over. Tony, who had turned ghastly pale, also tried to join in the laughter, but only partly succeeded. As they again walked on, he wiped the cold perspiration from his forehead, and while appearing to be calm, was really mad with rage and quivering with fear.

Tony, however, was pretty well acquainted with the temper of his companions; and by submitting to their rude jokes with apparent enjoyment, and by frequent references to the 'heaps of dollars' which would be earned by them in this enterprise, he got over the crisis safely, so that by the time they entered Crowsfoot Cañon, the Apachés had somewhat toned down. So much time, however, had been wasted, that

Tony dreaded lest those they had come to see had already passed; but, happily for his plans, it was not so; and ere they had been at their post of espial many minutes, they descried a small party of mounted men turn the angle of a huge cliff or 'bluff,' and ride up the cañon towards them. 'Hist! keep down, Pedro; keep down, Miguel!' exclaimed the white man in a whisper, for his allies showed signs of breaking out with shouts of defiance and flourishings of knives. 'If they see you to-day, there will be no dollars, no whisky over the job.'

'Ugh!' ejaculated his two associates as this convincing logic reached their ears. Then crouching down behind the broken rocks, they watched patiently the approach of the unconscious riders.

The horse-track ran close under their lurking-place. The party was six in number, consisting of Mr Holt and Arthur, Mr Gaisford, and three of their men. They were so near, that any attempt on their lives might have been executed with every prospect of success; but the survivors would infallibly have discovered their assailants, and there were some deadly marksmen in the party, as Tony knew right well. Neither would it have suited his plans to bring on a *mêlée* in which Mr Holt was exposed to danger. These plans, whatever they were, did not include the death of the farmer. As the riders passed within pistol-shot of the spies, Tony silently pointed with his finger full at Arthur, who for the moment had fallen back a little, and was riding separate. The gleam in the eyes of the red men and their silent nod, showed that he was understood; and no word was spoken until some minutes after the cavalcade had passed.

'You know him now?' eagerly whispered Tony; 'you know the muchacho—the boy?'

'Know him enough,' said Pedro, touching his knife.

'That is right!' exclaimed Tony. 'The sooner the better, boys. Mind! I have promised you fifty dollars, when I know he is dead; and now I say that I will give you a keg of the best whisky as well—the real old rye. You shall get drunk like white men, for a month.'

At this promise, so delightful to their ears, the dark eyes of the Indians blazed again; and Pedro, in whom the fumes of his late potent draught were still working strongly, forgot in this ecstasy his habitual caution, and plucking his knife from its sheath, waved it above his head, and gave one long hideous yell, or 'whoop,' which rang throughout the cañon, and reached the ears of the horsemen, distant as they were. They instantly pulled up, and listened; but the yell was not repeated. Had Mr Holt and his friends been at the entrance to the cañon, they might have been more suspicious; but they had reached a spot where the great breadth of the valley forbade all fear of an ambush; hence, after a brief pause, they rode leisurely on.

CHAPTER VI.

Friendly meetings on the part of Mr Holt and Mr Gaisford, and their respective households and servants, were by no means uncommon; and Arthur, among others, had come to know the roads and passes between the two farms extremely

well. Indeed, it had even been remarked by friendly observers how frequently Arthur found it necessary to ride over to Gaisford Rancho, and how often his business was such as to detain him there for a whole day. It did not, moreover, fail to be noticed, that should Miss Rachel at any time happen to go out for a ride, it was almost certain, by the most curious concurrence of circumstances, that on that very day it should happen to Arthur to go out for a ride likewise; and not only so, but it further happened, through an equally surprising series of coincidences, that though both started to ride towards opposite points of the compass, their paths were almost sure at some point to cross each other; and when this occurred, it was of course necessary that Arthur should see the young lady safe back to her father's house. This series of recurrences was, as must needs be, known to Squire Gaisford, for no endeavour was made to conceal it from him; and as it was noted by all the 'helps,' it was probably known also to Mr Holt. There is, however, good reason to believe that it met with the approval of these elders.

On one particular evening, when Arthur had accompanied Rachel home, and they and the farmer were sitting at supper, the conversation turned upon the Indians. Mr Gaisford, in his antipathy to them, vowed himself willing to give a whole section of his farm—by which he meant one hundred and sixty acres—to bury as many of the red scoundrels as could be corralled within its four corners.

'But the Utés are not so bad, father,' said Rachel. 'I am sure old Cuervo'—

'Bury the hull outfit!' exclaimed Mr Gaisford, who was strongly imbued with the prejudices almost inseparable from the frontier farmer's life. 'Some may be a little better, some a little worse; but the best of them are only just good enough to shoot.'

'Cuervo was here this afternoon,' said Rachel; 'but was fetched away suddenly by one of the young men of his tribe.'

'I thought I saw him,' said Arthur, 'as we rode up the slope; but when I came near the place, I found I had mistaken the trunk of a tree for his brown body.'

'Maybe you had, maybe you hadn't, Arthur,' returned the farmer; 'there's no telling with these red robbers. He might have been lurking there, for all you can tell, and shifted as you came near.'

'Cuervo seems very much attached to Mr Richmond,' interposed Rachel; 'and, I am sure, means him no harm.'

'Harm!' laughed Arthur; 'no, indeed! If I dread anything on the part of Cuervo, it is his great demonstrations of friendship. For some odd reason or another, he has certainly taken a strange fancy for me.'

'Yes,' said the farmer reflectively—'yes; that is so. You might depend on Cuervo. I will say that, although he's an Injun. When the Injuns or Mexicans do take a liking to a man or a woman, they will do almost anything to serve them.'

'By the way,' said Arthur, 'I called at the post-office as we came in, to see if there were any letters; but there were none. I do not like your postmaster very much.'

'What have you against him?' asked the farmer.

'We saw old Seth Birrable,' explained Rachel; 'and there was something very strange about him. First of all, as we rode up to the shanty where he keeps the office, we found the door fastened. We might have gone away, after knocking, but that I had seen for sure a face peeping at us as we rode up, and saw the door gently closed. So we knocked again'—

'Rather loudly,' interposed Arthur.

'Yes; rather loudly,' continued Rachel, with a smile; 'and then old Seth came to the door. He looked as skeered as if he had seen a ghost. He stood just in the opening of the door, which he held in his hand, as though he wished to prevent us from entering, which we had no intention of doing. When we asked about the letters, he answered so gruffly, we could scarcely understand what he said, and then slammed the door close without another word.'

'Whisky,' said the farmer sententiously. 'I have noticed something uncommon about Seth for a long time. He is pretty nigh played out, I reckon.'

'Perhaps you are right,' replied Arthur; 'but he did not look like a drunken man, to my thinking.'

'Whisky,' again repeated Mr Gaisford, in a tone which showed that he, at all events, was perfectly satisfied with the explanation; and neither of his listeners caring to dispute its correctness, the subject dropped.

It was somewhat later than usual when Arthur set out on his homeward ride. The night was clear, from the moon being in her first quarter; and there was no difficulty in a rider, tolerably familiar with the road, finding his way safely enough across the country. Arthur had not proceeded far, when, to his surprise, and a little to his alarm, three mounted figures suddenly emerged into the clear starlight and approached him. He saw they were Indians, and that they separated as they drew nigh him, so that two would approach on his left side, and one on his right.

Seriously alarmed at observing this disposition, he checked his horse and drew his revolver. The action was noted; and a deep guttural voice, which he instantly recognised, said: 'Indianos amigos [friends]. I am Cuervo! No shoot;' and the next instant the friendly Uté was by his side. Resuming his journey, all four rode on towards Mr Holt's Rancho.

Cuervo talked a good deal; but owing to the frequent occurrence of Spanish words in his conversation, Arthur could understand but little of it. He was much puzzled also by the style in which they 'crowded' him, as they rode along. At last, when about half the distance had been traversed, the Indians either saw that he did not like such close quarters, or their zeal, from some cause, slackened, for they fell away from him; and then, after riding a few hundred yards farther, they quitted him abruptly, with a brief 'Good-night,' and in another minute were lost in the gloom of the prairie.

There had been something so odd in their sudden appearance and disappearance, that Arthur could not help mentioning the circumstance to Mr Holt on his reaching home.

The farmer on hearing mention of Cuervo's name, said: 'If it had been any other Injun, I should have thought less of it. I should have put it down to whisky. But Cuervo! he is different. Who were the others with him?'

'They were Cuervo's sons,' replied Arthur.

'Oh,' said Mr Holt; 'I know them well; very decent boys for Indians. Whatever Cuervo could want away from his camp after nightfall, I can't imagine; it is so different from his conduct in general. I don't half like it.'

The farmer shook his head as he concluded; and no more was said for the time on the subject.

One bright afternoon not long after this, Arthur had ridden early over to Mr Gaisford's. Goldthread was speedily saddled, and Miss Rachel and he set out for an easy canter towards the high broken ground known as the 'foot-hills,' beyond which in the distance rose the great summits of the Rocky Mountains. This was a favourite ride, as the views there were more extensive and picturesque than from the low-lying country through which the river ran.

'Yonder,' said Arthur, pointing to a group in the distance, 'is Texas Dick and some of our men. They are going to build a sheep corral there—they see us!' With this, he waved his hat; the signal was returned, and then the men went on with their work.

While they had been exchanging signals with Dick, a man had come to the edge of a thick copse which grew just there, and although he drew back instantly, paused within the shelter of the little wood to watch them. It was only for a minute, and then he disappeared; and they, unconscious of this espionage, proceeded on their ride.

The man who had thus watched them immediately struck through the wood, emerging at the opposite side. Then at a quick pace he descended the sloping ground, and made towards the cluster of huts which we have described as calling itself Andrew Jackson City. On approaching these dwellings, the man's gait became slower, and he paused occasionally in places where he was screened by a tree, bush, or mound of earth from the observation of any one who might chance to be looking from the buildings. At last, he reached them without seeing a soul; and climbing a low fence at the back of the post-office, entered the open door, closing it carefully behind him. He then turned the handle of another door and stepped into the front room, in which a man was seated. With a startled exclamation, the postmaster half drew a large pistol which hung at his belt, but replaced it when he saw who was the intruder.

'There's business to be done to-night, Birrable,' said the intruder.

'Is thar?' replied the other. 'Well, look here! Squire Tony! I have had enough of your work, and not enough of your dollars. I know what you want; you want the young Britisher at the Holt Rancho sent up, and I don't propose to run that line any longer. I opened old Holt's letters and took copies for you, and I opened the Britisher's. You met him at New York; and why you didn't clinch the business then, I don't know, as you own you had plenty of chances. You saw him at Kansas

too, and there ain't a better place in the States for such work than Kansas. You have not the real grit, Squire Tony, that's where the trouble is'—

'Now drop this,' interrupted Tony. 'I mean business, and if you can only say'—

'So do I,' interposed the postmaster in turn. 'I mean business, and I am coming right to it. But you must really let me show what I have done. The other afternoon that gal would have seen you here with me, if I had not stuck around that doorway; and then, where would your plans have been? And you get your precious Injuns down here, and catch the boy riding home after dark, and then are afraid to touch him.'

'We should have shot him that night!' exclaimed Tony, 'but for those blackguard Utés, who rode so close beside him that we dared not fire. I will never believe that was chance; some one must have told them.'

'Shoo!' ejaculated Birrable contemptuously. 'I would have shot Utés and all, and been glad to have taken such a chance. However, that's how it stands. You know what I have done, what you have not done, and what you want me to do now. All I have had is fifty dollars and promises. I want a hundred dollars before I stir another particle in your business; the promises to stand the same as they do now.'

After some argument, Tony drew fifty dollars from his pocket, and this was accepted as a compromise. They then entered upon a kind of whispered conversation, which was broken off by Tony saying: 'Now, there is no time to be lost; for if you can't meet that Britisher before he gets to the Gaisford Rancho, there will be some questions asked which may be difficult to answer; but if you catch him and the girl alone, he will believe anything.'

'I have got just the man for the messenger,' replied Birrable; 'leave it to me.'

ACONITINE.

THE important trial which has recently taken place, ending in the conviction of Dr Lamson of the murder of his brother-in-law by the administration of aconitine, has turned attention not only to this very powerful poison, but also to the facility with which it and similar poisons may be obtained for felonious purposes. Considerable uneasiness has consequently taken possession of the public mind—and not unnaturally, we confess, when we consider the powerful agent employed in this case, and the little apparently known regarding it both by medical men and experts. This uneasiness may be said to have found expression at the conclusion of the trial in the jury recording their conviction that the sale of such poisons should be more strictly guarded; an opinion also supported by the judge, and since re-echoed in the columns of many of the daily papers. Probably no better method will be found of allaying this anxiety and at the same time securing proper legislation in the sale of potent poisons—if such be needed—than a just appreciation of the facts of the case now before us.

But what we have already said of the com-

parative ignorance of medical men as to the effects of aconitine, as exhibited in the above case, must not be stretched too far. Medical men have had as many opportunities of studying the toxicological effects of aconite and its preparations, as of any other poison in the pharmacopœia. Indeed, poisoning from the root alone, of that well-known plant monkshood, owing to a certain resemblance which it bears to the common horse-radish, has been so frequent, that most works on botany and materia medica carefully give the distinguishing characteristics of each; and every medical work gives detailed instructions both as to symptoms and treatment, in cases of poisoning from its use. All that ought to be assumed, therefore, regarding the medical evidence is this, that the cases of poisoning from the active principle aconitine have been so few, that medical men have not had an opportunity of relatively examining the intensity and duration of the symptoms, the post-mortem appearances, and the means of detecting its presence in the tissues and organs of the body. Even in these respects, however, the case before us will have supplied much of the data required for future guidance; and it may, therefore, we think, be safely assumed that there is practically no more risk that poisoning from aconitine, where given surreptitiously, will escape detection by any ordinary medical practitioner, than there is of any other vegetable poison more commonly used.

Cases of poisoning from aconitine, though very rare, are not unknown. In April 1880, for example, a Dr Meyer of Winschoten died from an overdose of this poison, having taken in mistake a dose of French prepared aconitine instead of a German preparation. Herein lies one reason, and probably the principal, why British practitioners avoid the use of this powerful agent—namely, the impossibility of regulating the dose, owing to extreme variations in the quality of the substance. This variation in strength is forcibly brought out in a series of experiments undertaken by a French chemist, and recently published. He demonstrated that while it took five milligrammes of English aconitine (Morson's) to kill frogs in thirty minutes, three milligrammes of one foreign make killed them in three minutes; and one-twentieth of a milligramme of another foreign preparation also killed them in three minutes. Powerful as this last preparation is, others more powerful still are known, and can be obtained by using certain species of roots, and exercising care in the extraction and crystallisation of the active principle. In short, different roots and different modes of extracting and purifying the active principle give products widely different both in activity and constitution. To understand how this is, it may be necessary to explain that the substance known commercially as aconitine is not of definite chemical composition. Recent investigation has shown that the *Aconitum Napellus*—from which it is prepared in this country—contains, besides aconitine, two other substances, which have only been partially examined. At least one of these substances is comparatively a

harmless bitter; and probably the other has no great medicinal activity. The official process does not provide for the separation of these or other proximate principles which may be present in the roots, nor is there any sufficiently strict test given whereby changes in the aconitine itself can be detected—changes in which it passes by the ordinary process of preparation, and probably also of exposure, into other and unlike compounds, with probably unlike if not inert effects. Investigation has not only shown all this, but it has also shown further, that while a crystallisable, and consequently pure and definite aconitine *can* be prepared, although at very great cost, it cannot be prepared, even where the same process is strictly adhered to, from every batch of roots. We conclude from this, that such influences as climate, soil, &c., affect both the amount and quality of the alkaloid derivable from the plant.

As regards the detection of aconitine by chemical means, it has several well marked reactions with various reagents; but these are not sufficiently delicate to detect the minute quantity which the poison-scientist has generally to work with. No test can be said to be of much avail in cases of poisoning from organic substances which will not detect from the one-hundredth to the one-thousandth part of a grain. Strychnine, for example, is only soluble to the extent of one part in two thousand parts of cold water; but even this dilute solution is distinctly bitter to the taste. This bitterness, however, is not sufficient to indicate strychnine, as quinine also would give a similar bitterness. It is here that the special knowledge of the expert comes into play. Quinine, if present even in very minute quantity, would impart, with excess of sulphuric acid, a distinct fluorescent appearance to the solution, which would not only distinguish it from strychnine, but would also be sufficiently distinctive of its own individuality. Strychnine, on the other hand, can be readily detected, if even a trace be present, from the brilliant violet-blue reaction it gives with strong sulphuric acid in the presence of an oxidising agent. With aconitine, however, no such delicate chemical test is known; but here the physiological tests come into operation, and the burning sensation produced by the minutest quantity when touched by the tongue, or the action produced when subcutaneously injected into some of the smaller animals, are tests as delicate and certain as any chemical tests employed to detect the more common poisons. This, we think, was plainly brought out in the recent trial; so that the very cause ought at the same time also to carry the cure to much of that uneasiness which has been created in the public mind.

The only remaining source of uneasiness which can possibly exist is in the supposed facility there is for obtaining these potent poisons for nefarious purposes. We would, however, point out that throughout the trial, there was not a shadow of proof that such poisons could be obtained by any one outside the medical faculty. It ought not to be overlooked that the party who bought the poison was a properly qualified practitioner, who, in purchasing the poison, gave his address as such, and as such was exempt from all the provisions of the

Poisons' Act. To move for stricter regulations under such circumstances would, we venture to think, be an insult to the medical profession, and might lead to mischievous results.

TRAVELLING NOTES.

SOUTH AFRICA.

RAILWAYS are now being rapidly extended over the Cape Colony; and travelling in South Africa, as now in vogue, will in a few years, like the stagecoach of England, be a matter of the past. Two main or trunk lines of railway have been constructed into the interior, one from Cape Town as far as Beaufort West; and another from Port Elizabeth as far as Graaffreinet, with the view of their further extension and junction in the Midland Provinces. Travelling is at present done by means of oxen, mules, or horses. Oxen are used chiefly for heavy transport, but also at times for passengers, or when a family moves from one part of the country to another; horses for passengers who require to move rapidly from one part of the country to another, such as those travelling between Cape Town and the Diamond Fields; and mules either for heavy transport or passengers; and where there are frequent relays of them and the animals in good condition, travelling from one part of the country to another is a matter of tolerable ease and quickness.

Travelling with oxen is not now so frequent as in former years, say in the time of Barrow or the poet Pringle, and is chiefly done by the Boers, and notably the Orange Free State and Transvaal Boer. The method of procedure is as follows. We will suppose the party outspanned or bivouacked, after a stretch of from two to three hours' travelling. As soon as the oxen are released from the yoke and turned adrift to graze, the drivers collect wood, of which there is generally plenty to be found, and make a huge bonfire. Next, the old Boer *tantia* or housewife makes her appearance with a *rooster* or gridiron, which she places on the fire until it is thoroughly heated; the boys hand down the *kostmaandje* or provision-hamper, which is well stored with *carbenaatjes*, *sussaaties*, *rusk*s, and *biltong*. The *carbenaatje* is a chop prepared on the gridiron until partly carbonised, whence its name. The *sussaatie*—most likely of Malay or Indian origin—consists of small bits of meat curried, spiced with onion, and run on to skewers; and, in the hot climate of South Africa, forms with lemon-juice a valuable article of diet. The *rusk*s used are biscuits leavened with a superior quality of yeast, made from raisins; and a bag of them, together with *biltong* or springbuck-flesh dried in the sun, is a necessary adjunct to every long journey. As soon as the mats—generally made of springbuck skin—are spread, and coffee set, the men partake of their meal by soaking *rusk*s in coffee, and helping themselves to *carbenaatje* hot from the gridiron, using such knives and forks as may fall in their way; for in South Africa, in travelling, you must do not as you wish, but as you can.

Meanwhile, one of the party is despatched to fetch the oxen, which he drills into order with the *sjambok*, a thong of rhinoceros' hide,

rather stiff at the handle, but soft and pliant at its extremity. One of the men, standing in front of the oxen, gets hold of the *riems*—thongs of bullock-hide, having an iron ring at one extremity—and with a loop, attaches a *riem* to each pair of horns. The oxen are then led back, and inspanned in pairs, generally keeping their places, but occasionally interchanged, as may suit convenience. They are generally driven by means of the *sjambok*, of which the two last oxen, being in close proximity to the driver, who sits on the *voorstel* or front extremity of the floor, get rather a merciless share; or by means of a whip, consisting of plaited *riempies* ending in a *voorslag*, and fastened on to a long bamboo stick. Some of the drivers, notably the Cape Malays, have great adroitness in using the whip, being able to hit any of the front oxen at any spot they may desire. When the wagon is inspanned, the master and driver take their seats on the front box, his wife and children on a suspended bed or mattress immediately behind him, and within easy reach of his gun, which is generally loaded, and which the wife is always ready, at a moment's notice, to hand to him, in the event of any game turning up. For the sportsman, no travelling can be better suited, as he can always beat the bush in the vicinity of the wagon; and as the wagon moves on slowly, he can always rejoin it at his convenience.

Of game to be met, there is a great variety; notably in the Cape Colony, the springbuck, rheebuck, steenbuck, wildebeest, the wild peacock, klnorhaan, plover, partridges, hares; and in the Free State, large herds of blesbucks. Lions are seldom to be met now, except in the higher latitudes; but elephants are still to be found at the Knysna and near Port Elizabeth, where they are protected by law.

At the evening bivouac, when the day's travelling is over, the natives generally cluster around the fireside, and begin to tell tales of their adventures, and also about animals, at which they are very clever. (A good collection of these tales was made by the late Dr Bleek, Professor of the Philology of South African Languages, and is, we believe, to be found in the Public Library at Cape Town.) Passenger-travelling between Cape Town and the Diamond Fields is generally effected by means of the passenger transport wagons. As these wagons have constant relays of fresh horses and mules, one may accomplish the distance—about seven hundred miles—making use of the railways also, in five days. Mules, of which a good strong animal has been imported from Monte Video, have to a great extent superseded horses, as they stand the vicissitudes of morning frost and noonday heat remarkably well, and can live upon almost anything.

CURIOUS CASE OF FOSTER-NURSING.

A CORRESPONDENT in the south of Scotland has favoured us with the following:

The story published in your *Journal* of January 28th, and which was designated 'My Highland Collie and her Adopted Kittens,' recalls to my mind another curious nursing anecdote, which

not very long ago came under my notice, and which I now send you.

A few years ago, when visiting at a neighbour's house, it was mentioned in the course of conversation that there was then on the premises a singular case of a cat having adopted children from a nest of one of her natural victims. On my expressing a wish to witness this phenomenon, I was at once taken to the stable-yard, and there shown a fine female cat nursing a family composed of two kittens and two handsome young rats, the whole four living in perfect harmony. On my inquiring the history of this remarkable group, I was informed by the coachman in charge, that shortly after the cat-mother had given birth to a litter of kittens, she had been deprived by him of all but three. The mother evidently did not approve of this reduction in her family, became restless for a time; and on her again settling down, it was discovered she had replaced one of her murdered children by a fine young rat. Seeing this, and knowing that cats were too numerous to please the gamekeeper, the coachman determined to destroy one of the three remaining kittens; which was done. On the following morning, the coachman, on visiting the cat's nursery, was not a little surprised to discover that the mother, in lieu of her murdered offspring, had introduced into her nursery a second young rat.

The two kittens, in company with the two rats, had been impartially nursed, and were, when I saw them, living in perfect harmony. They were at that time about two months old; and were residing together in an old wine-case, with a piece of wire-netting thrown over the top. The young rats were pretty-looking, sleek creatures, with bright brown eyes, and evidently well nourished. They were, however, of different dispositions; for whilst the one would with confidence return the visitor's gaze, the other disliked being looked at by strangers, and would, on the approach of the latter, make rather frantic endeavours to conceal itself amongst the fur of its ~~father~~ mother.

I afterwards learned, I regret to say, that the family party was broken up in an abrupt and unsatisfactory manner. The friendly coachman had left his situation. The cat-mother had given way to some poaching proclivities, and during a nocturnal ramble, had been caught and killed in one of the gamekeeper's traps. The kittens and young rats were thereafter thrown friendless on the world, and left no trace behind them.

WATER TELESCOPES.

Considering the cheap and easy construction of these useful instruments, it is wonderful they are not used more than they are, as, by employing them, extremely interesting observations can be made on the denizens of sea or river. To make a water telescope, procure a tube made of tin, and funnel-shaped, about three and a half feet long, and nine inches in diameter at the broadest end. It should be wide enough at the top to take in the observer's eyes, and the inside should be painted black. At the bottom or wide end, a clear thick piece of glass must be inserted, with a little lead, in the form of a ring, to weight the tube. When the instrument is immersed in clear water, it is

astonishing how many fathoms down the observer can see. One of these simple contrivances would greatly enhance the pleasure of water picnics, as much amusement would be afforded by watching the inhabitants below; and it would also prove very useful in surveying deep places, that have been ground-baited, for, if no fish were seen collected there, another spot would naturally be chosen. The Norwegians employ this instrument largely for ascertaining the position of herring-shoals, and in their cod-fisheries. Often by the use of the telescope they discover fish which otherwise they would not have known of.

THE MISSION OF THE FLOWERS.

HAIL! lovely visitants, that yearly bring
Edenic breathings of enchanted air;
That yearly strew the green paths of the spring,
And radiant summer wreaths with garlands rare.
Hillside and hollow, wayside, wood, and plain,
Blessing, they come and go, and come again.

Dear as the light, their flush of childhood-joys!
Companions of our youth's unclouded day,
What fragrances of love-sweet memories
Around them cling! And when they droop away,
What lingering scents their withered blooms retain
Of flowers that fade but *once*—nor come again!

Theirs, to the homes made dark by sorrow's blight,
A ministry of love and cheerfulness,
Speaking of peace and hope—sweet thoughts and
bright—
To silent suffering and lone distress;
Theirs to bedew the dust we cannot save,
And then—to hallow the beloved one's grave!

Ah! ye to whom—pent up in dreary town—
The fields and groves are but a fairy tale—
To whom comes not the balm of breezes blown
From heather hill, or blossom-breathing vale:
The gift of flowers, from loving, tender hands,
Charms, like a glimpse of green 'mid desert sands.

Come on your angel-mission, lovely flowers,
Athwart the world broadcast! The wilderness
Make glad! 'Neath happy suns and genial showers
Come with sweet power to beautify and bless
The paths of man; his spirit to illumine
With light of Grace—flower of celestial bloom!

DAVID HOWIE.

The Conductors of CHAMBERS'S JOURNAL beg to direct the attention of CONTRIBUTORS to the following notice:

- 1st. All communications should be addressed to the 'Editor, 330 High Street, Edinburgh.'
- 2d. To insure return in case of ineligibility, postage-stamps should accompany every manuscript.
- 3d. MANUSCRIPTS should bear the author's full *Christian* name, surname, and address, legibly written; and should be written on white (not blue) paper, and on one side of the leaf only.
- 4th. Poetical offerings should invariably be accompanied by a stamped and directed envelope.

Unless Contributors comply with the above rules, the Editor cannot undertake to return ineligible papers.

ASCENDING BEN NEVIS IN WINTER.

UPWARDS of twenty miles in circumference at the base, and rearing its head to an altitude of four thousand four hundred and six feet above the level of the sea, stands Ben Nevis, the loftiest mountain in Great Britain. To make the ascent has from time immemorial been the endeavour of those who care to behold Nature in her wilder aspects; nor is the journey one which the tourist is likely soon to forget. He marks it as a point in his life, and if he has been lucky in weather, he boasts with pardonable pride of having witnessed from his lofty stand-point the peaks of Ben Lomond, Ben More, Ben Lawers, Cairngorm, and other well-known heights.

Struck with the idea that the highest point in Great Britain might be utilised for the purposes of carrying out a series of meteorological observations, the main object of which should be to forecast the weather, Mr Clement L. Wragge, a Fellow of the Royal Geographical Society, succeeded last year in carrying this into practical effect. Making Fort-William, which town stands at the base of the mountain, his headquarters, he or his assistant made *daily* ascents to the top, where, with the aid of instruments, a series of observations was made in connection with the Scottish Meteorological Society. Debarred by winter from pursuing these observations, Mr Wragge again essayed the hazardous ascent in March, an account of which, with other interesting particulars, has been supplied to us by that gentleman. He writes as follows:

On the 31st of May, 1881, I had the honour of establishing the first Meteorological Observatory on the summit of Ben Nevis, a mountain in the county of Inverness, Scotland, and the highest point of land in Great Britain, being four thousand four hundred and six feet above the level of the sea. I had proposed to the Scottish Meteorological Society—who kindly provided the mercurial barometer—to place my own set of standard instruments on the top of the mountain; and to make daily ascents from Fort-William, for the purpose

of observing them, at the hours of 9, 9.30, and 10 A.M., if they would grant me certain facilities. I had devoted myself to a life of travel and research, and was convinced that in endeavouring to promote the establishment of meteorological stations at high levels, I was turning my energies in the right direction. With a view to securing simultaneous observations at high and low levels, my wife undertook to make observations at the same hours, near the sea-level—at Achintore, Fort-William. The Society—whose able chairman, Mr Milne-Home of Milne-Graden, was the first to suggest an Observatory on Ben Nevis, in view of the great benefits likely to accrue ultimately to science and the public from observations at such an altitude and position—accepted my offer, and cordially seconded my efforts. The result was, that last year regular daily observations were made on the Ben in all conditions of weather from the 1st of June to the 13th of October inclusive, without, I am proud to say, the break of a single day.

I ascended the mountain at the rate of about five days a week, arriving at the summit at 9 A.M.; and a trained assistant—Mr William Whyte, of Fort-William—relieved me in the ascent on the remaining days. Occasionally, as the posting-up of the observations for the Society was of itself heavy work, I was obliged to send my assistant to the Ben four days in one week; but I made a point of making up for it, and in consequence have sometimes climbed the Ben on eight or nine days in direct succession, returning to Fort-William each afternoon. Observations, besides being taken near the sea-level, were also made in connection with those on the summit of the mountain, at intermediate points during the ascent and descent, or upon any change which might suddenly take place in the weather. I usually took a pony by a circuitous path to a point within two thousand one hundred feet above the sea, and so I was fresh for the remaining and harder portion of the climb. Now and again, however, I trudged the entire distance, taking a more direct route.

With a view to making arrangements for the continuance of my meteorological work this coming season, I lately revisited Fort-William and Ben Nevis, leaving Edinburgh by the early morning train on the 27th of March, accompanied by an old Australian friend, Mr Philip Egerton Warburton. I also took my faithful Newfoundland dog 'Robin Renzo,' who in all conditions of weather accompanied me in my ascents of Ben Nevis last summer and autumn.

Arrived at Fort-William, we put up at the *West End*, a comfortable little hostelry held by MacIntosh; and, in order to discuss matters, I called on Mr Colin Livingston of the Public Schools, who takes a warm interest in the Ben Nevis observations. The result was that I decided to ascend next morning, Mr Livingston kindly undertaking to observe near the sea-level, in direct connection with my contemplated set of readings on the mountain.

In the morning we were up by five, and after a hearty breakfast, at once began to prepare for the ascent. The prospect was dreary enough. Incessant rain was falling in a soaking drizzle, and a dirty cloud-fog covered the mountains to a low altitude. To avail ourselves of his assistance in case of accident, we arranged to take with us Colin Cameron, a well-known guide.

By 5.40 we had greased our boots; and were soon threading our way through the streets of Fort-William, clad in our oldest suits, and with lashings round our trouser-legs for comfort's sake. Warburton carried a bundle of sticks; and Colin—besides a capacious bag containing oatmeal cakes, hard-boiled eggs, and sandwiches—a tin of sawdust steeped in paraffin, wherewith to light a fire, should we succeed in reaching the summit. My burden, though light, was an important one—namely, the travelling instruments—aneroid, thermometer, ozone tests; and a flask of the far-famed 'Long John,' necessary enough under the conditions of winter we soon had to face. Renzo, who made up the party, was in great spirits, occasionally loitering behind to salute an old friend, and again trotting ahead, familiar with every step of the way.

About 5.50 I paused to observe at the sea-level. Temperature was 46.7 F., aneroid 29.367; with a heavy pallium of rain-cloud covering the sky, and a moderate south-westerly breeze blowing. Our course lay along the Inverness road as far as the Bridge of Nevis; then we turned towards Claggan, following for some little distance the course of the deeply wooded and picturesque Glen. Here the birds were joyously singing their early lays of the coming spring; and beyond, the dark heights of Meall an t-Suidhe (Hill of Rest), capped with 'wisps' and 'tails' of gloomy cloud-fog, frowned over the Peat Moss below. At a shepherd's hut we paused, and took a few lumps of peat, in order the better to feed the fire we hoped to be able to make on the summit. The swampy Moss was soon crossed, and the ascent commenced up the slopes of Meall an t-Suidhe, the western spur of the great Ben Nevis system. At about three hundred feet we experienced strong south-westerly gales, sweeping

obliquely down the grassy slopes, so that, although the ascent at this point was comparatively easy, we had to struggle with the gusts, and kept slipping back, the ground being very soft.

At about one thousand feet a pause was made at 7.10 A.M., when the temperature was found to be 45.4, and the aneroid 28.215, with a moderate south-westerly breeze; clouds still covered the adjacent hills, and rain was falling. When about thirteen hundred feet up the mountain we reached the first plot of snow; and a hundred feet higher—where we encountered the first wisps of the cloud-fog—a frog was seen disporting itself in a swamp! The highest altitude, by the way, at which I have seen this reptile on Ben Nevis is two thousand three hundred and fifty feet, and this was in August last.

Now we had reached a level portion, and continued our course—leaping from stone to stone—over the black swamps, which were made the deeper by the melting snow. At about seventeen hundred and forty feet we saw a white mountain hare—an irritating chance for Renzo, who vainly chased it over the swamps and round the granite boulders, far and away. I have never before seen this creature at such a low elevation, though frequently at about two thousand four hundred feet; and its tracks have been noticed on the Plateau of Storms at four thousand feet.

We were now enveloped in the main cloud-fog, and pursued our way, making for the Lake (Lochan Meall an t-Suidhe). At eight o'clock this point was reached, and at the spot where I took intermediate observations last season, I took observations now, and found the temperature of the air was 43.0, of the water of the lake 40.0, aneroid 27.507. Heavy rain was still falling, a strong south-westerly gale was blowing, and cloud-fog enveloped all. The ground besides was rendered sloppy with melting snow. Pursuing our course, we now proceeded over the fairly level quagmire that lies between the Lake and the slopes of the Ben proper. Mosses and lichens thrive around here in abundance, and the spot is of much interest to the botanist. Foremost comes the reindeer moss (*Cladonia rangiferina*) in great profusion. I may just mention, too, for the sake of those who are specially interested in the subject, *Andreaea alpina*, *Lycopodium selago*, *Sphagnum cymbifolium*, *Sphagnum rubellum*; and *Scyphophorus pyxidatus*, *Cladonia uncialis*, and *Parmelia saxatilis*. Dwarf specimens of the heather (*Calluna vulgaris*) and bog grasses also abound; and the swamp is a favourite locality for the butterwort (*Pinguicula vulgaris*) and several kinds of orchis, which particularly arrested my attention early last summer.

At about two thousand feet we came to masses of snow lying in the trenches of the mountain side; and the next two hundred feet of the ascent were over slushy hags and melting snow, which rendered progress a hard task. Our course then lay over the rough felsites and porphyrites of the steep face of the mountain, and the most trying part of the climb commenced. We had now passed the practical limit of vegetation (about two thousand four hundred feet); but if I may slightly digress, I should like to mention here that many choice plants exist even above three thousand feet, and various kinds of mosses and lichens on the very summit of Ben Nevis.

Between the summit and the altitude of Buchan's Well,* which is three thousand five hundred and seventy-five feet above the sea, I have gathered *Saxifraga stellaris*; fine specimens of *Alchemilla alpina*, *Poa alpina*, and *Carex rigida*; the mosses *Oligotrichum hercynicum* and *Racomitrium lanuginosum*; and the lichens *Cetraria islandica*, *Lecidea geographica*, which adheres to the rocks, and *Stereocaulon paschale*, which grows in abundance on the top of the mountain. Between Buchan's Well and three thousand feet I have obtained specimens of the bilberry (*Vaccinium myrtillus*), *Viola palustris*, *Rhodiola rosea*, probably *Campanula rotundifolia*, *Potentilla tormentilla*, a dwarf eyebright in flower (*Euphrasia officinalis*), the turfy hair grass (*Aira caespitosa*), &c.

But there was not much botanising to be done at high altitudes on the present occasion, and on nearing the Red Burn, at two thousand six hundred feet, we saw that its rugged slopes were filled with vast shelving masses of snow many feet deep. It was evident that great difficulties were before us; and before pushing on, we determined to rest and refresh ourselves with a snack of luncheon; for the pure mountain air—though bitterly cold and raw—was yet most exhilarating, and our appetites had become keen. So, in the great ravine of the Red Burn, which drains a large portion of the western slopes, we paused, and enveloped in the cloud, and surrounded by tremendous fosses of snow, we eagerly discussed the contents of Colin's bag, Renzo sniffing around waiting for his share. My only fear was lest we might be overtaken by an avalanche. Colin declared that the snow-masses on the south side of the burn were some thirty feet deep; but, however this may have been, it was very evident that it would be highly dangerous to attempt to cross these deep accumulations from this side, so I decided to proceed by a different route, and to follow the ravine up its northern side. Slowly and carefully we plodded upwards, testing every step, yet nevertheless often stumbling into crevices, and sinking thigh deep in the soft treacherous snow. The ascent now became a matter of considerable venture and difficulty; nearly all the landmarks were buried, and the raw, chilling fog-sheet grew thicker. At last we reached a point near the source of the burn by Buchan's Well, and the view was desolate in the extreme. The well was completely buried; and one whole sheet of deep snow stretched through the fog beyond, dazzling the eyes by its excessive whiteness. After a brief pause to consider our position, we struck a course for the first precipices which lay directly ahead; and when we had waded along about another hundred yards, we got a glimpse of the edge—a formidable brink, smoothed over by great walls and heaps of snow, and looming through the fog like some great gulf of destruction. We now followed pretty much the outline of these fearful abysses, taking care to give them a good wide berth.

At length we reached the Plateau of Storms at four thousand feet—so named by me on account of the north-east and south-west gales that,

owing to the configuration of this portion of the mountain, sweep across it with great fury during deep cyclonic depressions. On one occasion last summer I had to fight every foot of my way across this plateau, crawling along, and pushing on from boulder to boulder, to obtain breathing-time, and some little shelter under their friendly lee—so great was the fury of the north-east gale. Its rugged blocks of agglomerate were now entirely covered by the uniform mantle of snow, and most of the cairns marking the track lay deeply buried. Now and again, however, just the top of some spectral-looking pile, lashed with snow, hove in sight through the cloud-fog to confirm us in our course.

At last at 10.40 A.M. I found myself once more on the top of Ben Nevis. But where were the instruments and observatory fixings which had been left there during the winter? Where was my hut, in a corner of which I had hoped again to kindle a fire? All literally snowed up. No trace of the notice-board, although about seven feet high, could be seen; the barometer cairn, also seven feet high, only showed two feet, and the great Ordnance cairn about the same. The north wall of the hut, about five feet high, was buried; and the south wall only just appeared. On searching the spot where the thermometer cage was fixed, we found the top of it, over five feet in height, nearly level with the main surface of snow. In fact, the entire cage was buried, only some four inches of it showing on the south side, where it is nearly seven feet from the ground. Hence it was impossible to get at the instruments inside. At the conclusion of my period of daily observations last season, I had left the maximum and minimum self-registering thermometers in the cage, having set them for the winter, and Mr Livingston observed them twice subsequently. The former, on Negretti and Zambra's principle, is an admirable instrument, especially adapted for high-level stations; for if properly managed, no reading can be lost by vibration during gales and storms. The same remark applies to Hicks' Solar Radiation Thermometer, which I also had in use last season.

Waiting patiently for eleven o'clock, when I had determined to take observations with my travelling instruments, we sat down on the snow by the barometer cairn. Colin meanwhile endeavoured to light a fire; but in the absence of shelter, the wind being very strong, all our efforts were in vain, and, moreover, the match-box had got damp. So we threw down the bundle of sticks and lumps of peat that we had carried with such fond hopes, and gave up the attempt in despair. Although drenched with the continuous moisture, and our hands swollen and numbed by the wet and raw cold, our appetites were keen enough; and we set to work—still enveloped by thick cloud—to demolish the remaining provisions, and poor old Robin Renzo again came in for his share. So lifeless were my fingers, that I could hardly shell an egg. At last the minute-hand drawing nigh to eleven, I 'swung' the thermometer, and found the temperature was 35.6; whilst the aneroid—which at the sea-level was 29.367—now read 24.945, with a strong north-westerly breeze sweeping across, accompanied by dense cloud-fog and incessant rain.

* Named by me after the able meteorologist and Secretary of the Scottish Meteorological Society.

Glad to quit the inhospitable region, we commenced the descent shortly after eleven, and retraced our tracks to the Plateau of Storms; then we followed the usual course, and paused at Buchan's Well at 11.50. Here the temperature was 37·6, aneroid 25·700, and a strong breeze from south-west-by-west blowing. In our descent we now traversed, though not without danger, the huge slopes of snow in the Red Burn which we had beheld with apprehension and avoided when ascending. Then for some three hundred feet we traversed the south side of the burn; and near the crossing where we had paused for our first luncheon, Colin the guide boldly committed himself to the steep bank of snow, and seating himself, slid over it into the deep ravine, a feat of considerable hazard. Warburton followed; and I brought up the rear, suffering no harm, barring slight damage to a finger by the friction. Renzo was far more cautious. No amount of coaxing would tempt him to follow us, and with great sagacity he made a deviation, following the outline of the rocks, and keeping a somewhat zigzag course. At about two thousand nine hundred feet, we saw the track of a hill-fox; and a few ptarmigan about two thousand four hundred feet. Last autumn, I saw reynard's track at an altitude of nearly four thousand feet, and ptarmigan at three thousand five hundred and seventy feet. I have never seen these birds higher than Buchan's Well, or lower than two thousand feet. At two thousand one hundred feet we paused at a well which was opened up by Mr Brown of the Inland Revenue, Fort-William, last season, and found the temperature of the water 35·4.

Pursuing our way cautiously downwards, we reached the Lake again (eighteen hundred and forty feet above the sea) shortly before one o'clock, amid a strong south-westerly breeze, rain and cloud-fog; and when at last reaching the Pent Moss at the foot of the mountains, we found a strong south-south-westerly wind sweeping towards the front side of the barometric depression. At 3.13, at sea-level, Fort-William, I found temperature was 48·1, of the water of the Loch 44·3, and the aneroid 29·285, having fallen 0·082 since the morning. Then to our hotel, which we reached in a pitiable plight, but nothing the worse for our adventures; and in a few minutes we were consoling ourselves with hot coffee and a pipe, preparatory to enjoying the excellent fare of our estimable host.

I can only here refer to the valuable results which I am very pleased to state have been worked out, under the auspices of the Scottish Meteorological Society, by Mr Buchan, from my daily observations of last season; but I am convinced that high-level stations in connection with observatories at lower levels adjacent, would prove of immense value to the country in the matter of weather forecasting. By such stations working together, we deal as it were with vertical sections of the atmosphere, and having regard to pressure, temperature, humidity, and wind, can investigate at different altitudes the nature and conditions attending the approach of the many 'disturbances'—some of which are warned from New York by the praiseworthy enterprise of Mr Gordon Bennett of the *New York Herald*, to whom the thanks of the British nation are due. What more suitable positions than Ben Nevis and Fort-

William could be chosen for such important investigations? Not only is the mountain the highest in the United Kingdom, but it rises almost directly from the sea-level, is on the Atlantic border, and in the very track of many of the most serious storms that travel from west-south-west to east-north-east, sweeping over the British Isles from the ocean, doing such immense damage to shipping and other property, and causing the loss of so many lives. Observations from Ben Nevis in permanent continuance, backed by Government, would enable us to give most effective aid in sending warning to our coasts, and to the continent, when such cyclonic storms are approaching. If a substantial observatory-house were erected there, to insure daily observations on the mountain during the storms of winter, with a subterranean telegraph-line for the purpose of conveying early intelligence of coming storms, the value of such an outpost station not only to Great Britain, but to the whole of Northern Europe, could scarcely be overestimated.

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

CHAPTER XV.—'SHE LOVES ME. I SHALL WIN HER YET!'

'PERHAPS,' thought Strange, as the train bore him swiftly towards the great metropolis, 'it is the best thing that could have happened that Gilbert should have carried his jest so far. I can't step in between Lumby and the woman he is going to marry. And yet—she does not love him. It's the merest marriage of convenience. She brightens when I go near her, and Lumby's coming makes her dull at once.' (And this was not his egotism, but the simple truth.) 'I can't leave her! Never see her again?' Oh, vacant world! Let any man who has loved, remember what such a prospect seemed to him in the hot-blooded days of youth. The conflicting purposes in his mind so tore him, that by the time at which the train reached the terminus, his nerves were trembling and twitching, and he was so irritable as to be downright hungry for a quarrel with anybody who might present himself. He had chambers in town, which he had for the past year used but rarely, and to them he despatched his man, whilst he himself took a cab and sought out Gilbert. That ardent chum lived in Dane's Inn; and Val, eagerly dashing from his cab, rushed up the courtyard, nearly overturning the old Crimean commissioner in his haste, and reaching Gilbert's door, rained such a shower of blows upon it, that the startled echoes rolled and tumbled over one another down the darkened staircase, in their haste to answer. Mr Gilbert in person responded to this urgent summons.

'Hillo, Val! That's you, old man? Delivered from the house of bondage, eh?'—Strange glared at him from the semi-darkness; but the expression of his face being unseen by Gilbert, that young gentleman flowed on: 'Come in. Had to take strenuous measures—hadn't I? Thought I'd make 'em strong enough to lift you. Come in.' 'You unmitigated ass!' said Val, fairly boiling over.

'Eh?' said Mr Gilbert. 'Oh!' A slow smile lit up his broad mid-England countenance. 'Overdid it a bit, eh?'

'What did you mean by piling message on message in that idiotic way?'

'Here's gratitude,' said Mr Gilbert, with appealing hands spread abroad. 'Here's a specimen of thankfulness for friendship's toils!—Come in,' he continued, clawing Val by the shoulder and dragging him into the little hall. 'Three shillings for expenses; and sixpence for a drink to the commissioner. You can't grumble at that—three journeys—twopence a journey. Hand over.' Val walked up and down in the sitting-room, heaping contumely on the over-zealous Gilbert. 'Three-and-six,' was that gentleman's sole response to all oburgations.

Strange, taking an inward survey of himself, became conscious of his own condition, and made an effort after calmness. 'I don't want to quarrel,' he said.

'No?' interjected the stolid Gilbert incredulously.

'Don't irritate me, there's a good fellow. I've had one or two things to disturb me, and the last straw may break the back of human patience.'

'You give me three shillings for the telegrams,' said Mr Gilbert humorously, 'and pay me back the sixpence I gave the commissioner, and I'll let the matter sleep.'

'There's your money,' cried Val, throwing it on the table. 'Don't speak to me again.'

Mr Gilbert gathered up the money and threw it out of the open window. 'Don't you go into any more dull houses,' he answered; 'or if you do, don't ask me to lug you out of 'em!' Val was striding from the room; but Gilbert laid a hand upon his shoulder. 'Look here, Val,' he said; 'a joke's a joke.'

'And an ass, an ass,' said Val in answer, and disappeared majestic.

'Mr Strange!' cried Gilbert, following to the head of the staircase—Val was half-way down, and made no response—'Mr Strange!'—Val paused; perhaps Gilbert was going to propose a meeting, to avenge his outraged feelings.—'You'll find your three-and-sixpence in the courtyard, Mr Strange,' said Gilbert, in a voice of smoothest courtesy; and thereafter he exploded in a peal of laughter, which echoed up and down the hollow staircase, and pursued the unhappy Val half-way to the entrance of the Inn.

Driving to his own rooms, the young man found their solitude unbearable, and wandered aimlessly into the streets. There any chance object caught his eye and claimed attention with a foolish exigence which irritated him, though he submitted to it. A porcelain vase in a shop window; a looking-glass surrounded by diminutive Cupids and Broddingnagian wreaths of flowers; a coal-scuttle; the presentment of an imbecile Madonna framed in smoke-dried oak, and otherwise striving to look old; the exposed steel of a case of surgical instruments—anything seemed to be good enough to stare at. He wasted a little vacant observation upon each of these things, and upon many more, until, pausing to examine, with needless curiosity, a thermometer which hung in an Oxford Street optician's window, and having slaked that futile interest, he was about to turn away, when suddenly,

beside the thermometer, he saw the face which all this time had dwelt within his thoughts. It was a cabinet photograph, and so lifelike in its expression that it almost startled him. For one minute he was amazed, but in the next he became angry. By what right did any rascally shopkeeper dare to exhibit this sacred face to the public gaze? He was ready to quarrel with anybody, and entered the shop. Luckily, there were one or two people there already, and he had time to cool. He had no right to ask an account of the shopman; but being there, he must do something, and so, in place of making a disturbance about the photograph, he bought it. With the lovely face lying against his heart, he walked homewards. Reaching his own rooms, he set the photograph before him, and looked at it long and eagerly. Beautiful, impassive, smiling, it looked back at him, and the fancy which passion has always at command gave it life and colour. Fate beckoned him as he looked, and her gesture was imperative, because he was willing to obey her. When men choose to yield, Fate is always imperative.

Seeking, amongst a lot of tumbled papers in a drawer, for an envelope large enough to hold the photograph, he found but one, on the back of which were scrawled a number of lines, which he remembered once to have chosen haphazard from Shakspeare for mottoes in some Christmas sport. They had been written in pencil, with one exception, and were now faded and half illegible. The one exception was a line of Longaville's in *Love's Labour's Lost*—'Thy grace being gained, cures all disgrace in me.'

'There is my motto,' said Val. 'Thy grace being gained, cures all disgrace in me.' He kissed the photograph, and put it in the envelope, and sealed it there. He had no more doubts about going back now. He had no plans, no resolves. What would come, might come; and he was content henceforth to drift with the tide, and to go whithersoever it might carry him. And being in haste to meet Fate half-way, he called suddenly to mind the fact that he had ample time to catch the midnight mail; and having instructed his servant to meet him at the station, he consigned the sealed envelope to his breast-pocket, and strolled slowly thither. He had no longer any will to fight against his love; and he put away all thoughts of Gerard from his mind, and was at peace in his Fool's Paradise.

He reached the Grange next morning, and spoke lightly of his call to town as a stupid jest, and stayed out the remainder of the time, meeting each day with Constance. Mr Jolly's time of festivity was coming to an end; his guests were preparing for flight; and at last the close came, and Val must go back into the world which had now no light for him.

On the last day, he was alone with Constance for a few minutes. She was at the piano, playing scraps of melody, and breaking abruptly away from them, as though her mind were somewhat restless. Val, standing near her, spoke, as lightly as he could.

'So we all fly away to-morrow,' he said, 'owl, jackdaw, and bird of paradise.'

'Yes,' she said, looking round at him with a languid smile. 'It is a pity. The pleasantest

times come to an end. The house will be dull for a little time to come.'

'Yes,' said Val, 'I suppose so.'—She went on playing softly.—'Those dancing chips,' he quoted, 'o'er whom thy fingers walk with gentle gait.'

'How quaintly pretty!' she said, looking round again. 'Whose is that?'

'It is from one of Shakspeare's sonnets,' he answered. He longed to speak the whole of it, but had not courage. The mere want of daring to do so little, spurred him, and stung him so that in a second he was ready to do all. 'Constance!' he murmured, and she turned again and looked at him. Her face was suddenly pale, and there was a visible fear in her beautiful eyes. 'I cannot go away without a word.' Her eyes drooped as his gazed passionately into them; the blood surged up to her face and left it pale again. 'If you loved the man you are pledged to marry'—the floodgates once open ever so little, farewell restraint—'I could not speak. How dare I? But you do not love him, and it is no dishonour in me that I plead my cause. I have loved you from the hour when I first saw you. I tried to go away. The telegrams that came a fortnight ago were sent at my request, to call me to London, away from you. I went; but I could not stay. My heart dragged me back again. I cannot live without you.'

She rose, pale and trembling, and stood before him. 'By what right,' she asked, still with lowered eyes, 'do you speak to me so? Might it not have been more honourable to have made your first appeal to Gerard—to your friend?'

He turned ghastly pale at that rebuke, and the room whirled round with him. He reached out a pair of trembling hands and seized on the piano.

'No, no!' she said. 'I did not mean to be so cruel. Go! Forgive me. Leave me. You must never speak such words to me again. Let us never meet again, for pity's sake.'

He looked at her doggedly, seeing her as if through a shining mist. 'You love me,' he said, 'and not Gerard.'

At that instant, Reginald's voice was heard below calling 'Constance!' With one sweeping gesture, she commanded him from the room. He passed out at one door; and she, with a motion that seemed the mere continuation of her gesture, left by another. But as they went, each gave a backward glance, and again their eyes met. 'Constance!' cried the voice below. She waved her hand once more against him, and was gone. He passed upward to his own chamber.

'She loves me,' he murmured. 'I shall win her yet!'

(To be continued.)

TWO STARTLING ADVENTURES.

NEARLY forty years ago, I was in the habit, during my school holidays, of spending a long time at certain intervals with my grandfather, who was an eminent surgeon living in a small town in Suffolk. I was a great favourite of his, and consequently began to look on his house as a sort of second home. One day, I regret to say the old gentleman whilst going his rounds caught a severe cold, which confined him to bed, but from which he anticipated nothing serious. Unfortunately, however, to our great

sorrow, his illness proved more serious than at first expected, and in a few days the poor old gentleman was no more. I went from home with my parents, a distance of thirty-two miles, to attend the funeral. The distance in those days being too great to admit of our returning the same day, we were compelled to stay the night after the funeral at the house. As the space in the house was rather limited, I was asked if I should be afraid to sleep in the bed in which my grandfather died; an idea which I indignantly repudiated. It was forthwith arranged that I should pass the night in that room. In justice to those who suggested the idea of my being afraid, I ought to say that that part of Suffolk was intensely superstitious, and that, considering I was only a boy of fourteen, my consenting to sleep in the room was, under the circumstances, somewhat courageous. I retired to rest at the usual time, no doubt with my thoughts full of stories I had heard or read about ghosts and ghostly visitants. I turned my attention to the bed on which I was to spend the ensuing hours, as I fondly hoped, in sweet oblivion. It was a huge old-fashioned four-poster, with heavy curtains hung on rings, which rattled with every movement of the bed, and was, at the time of which I am writing, a highly aristocratic bedstead; but considering all the attendant circumstances, its funereal appearance was not calculated to inspire my youthful breast with any but the most dismal sensations.

I undressed and got into bed, devoutly hoping that my slumbers might not be disturbed by the appearance of any spiritual visitor. The curtains near the head of the bedstead being partially drawn, by turning my head in either direction, my gaze rested on them. At that time, there was nothing equivalent to our modern night-lights, and save for the reflection of the fire in the grate, my room was in darkness. These curtains seemed, to my already half-terrified fancies, to be hiding-places for any number of ghosts, all ready to confront me, the moment I should be rash enough to throw off my earthly cares and commit myself to the arms of Morpheus. However, I at last fell asleep.

My repose was of a troubled nature. I fancied I heard strange noises in the room, but at anyrate I awoke after being asleep a short time—I suppose about two or three o'clock in the morning, fancying I heard the curtain rings rattling. I thought it must be my agitated state of mind which caused this idea. Imagine, then, my horror and fright when I saw, by the faint glimmer of the now expiring fire, that the curtain on one side of the bed was being forcibly jerked aside by some unseen hand. I trembled from head to foot, and cowered beneath the blankets, expecting I hardly knew what. Again and again did this unseen hand jerk the curtain. It could not have been a trick of the imagination. I was unable to cry out even if I had been inclined to do so. At last, after having given about half-a-dozen angry jerks, ineffectually as regards pulling the curtain aside, I was left to enjoy such rest as I could reasonably expect to get before morning.

Never was daylight more eagerly welcomed by anybody than it was by me that morning. With the earliest dawn I sprang out of bed—feeling braver than I had done a few hours

before—and proceeded first to dress, and then to examine my room, in order to ascertain if possible by what means my ghostly visitor had made his entrance and exit. The door, being hidden from my view when in bed by the curtain, presented itself as the most probable means. I examined it as well as my agitated state of mind would permit. Nothing, however, appeared to show any signs of my visitor's entrance. It was securely locked, as I left it the night before; and there was no sliding panel or anything of the sort which could have admitted anybody. I then turned towards the window; but that too was fastened; and I confess I gave the affair up as incomprehensible.

I went down-stairs more thoroughly impressed with regard to eerie visitants than I remember ever to have been before. My preoccupied air—for I was debating whether or not to mention my adventure—attracted attention, and drew forth many questions, to all which I replied with very guarded answers. At last I told the whole story, adding that I had never believed in ghosts before, and should like to find out the truth of this one. My story seemed to them incredible. But at last, in spite of the solemn proceedings we had witnessed the day before, a smile stole over the face of my grandmother. It was quickly suppressed, and she said: 'I think I can explain the mystery, young gentleman; let us come and try.'

We all followed the old lady up-stairs into the room where I had passed the night. She went to the side of the bed and pointed to the curtain rings. We then saw the explanation of the whole matter, which was as follows.

My grandfather was, as I have said, very celebrated in his day, and consequently had a large practice. His night-bell—in order not to disturb the other inmates of the house—was hung in his room close by his side. When the old gentleman was taken ill, absolute silence was enjoined. This bell, therefore, was taken down, and the wire fastened to the curtain rings. On the night in question, some young men, strangers in the place, and consequently ignorant of my grandfather's illness and death, were going home rather noisily at the somewhat early hour at which my adventure took place. Being bent on mischief, they commenced pulling the night-bell handle, in order, as they no doubt observed, 'to rouse the old gentleman.' Every pull, therefore, gave a corresponding tug at the curtains; hence my terror and fright in thinking that some unearthly visitor was in my room, trying to pull them aside. My mind was set completely at rest by this simple explanation; and I went home that day fully convinced that there is a reason to be found, if one will only try, for the specious ghost stories which foolish people constantly publish for the benefit of the ignorant and credulous.

My other adventure, which happened some years before the one I have just related, was not of so startling a nature. At the same time, it was calculated, young as I was, to cause me a considerable amount of uneasiness. I was staying at the same house during my grandfather's lifetime. Being a mere child, I was of course not permitted to stay up late by my worthy grandmother, who used to send me to bed about seven o'clock. One night I had gone to bed in the room

I usually occupied; and on awaking in the morning, I found that everything in the room had changed! I could not account for it. I was not a sleep-walker; but here I was ensconced in another bed, with my clothes neatly folded up at the foot. I tried to run over the events of the preceding day; but though I remembered everything that had occurred, I could think of nothing which might account for this extraordinary metamorphosis.

When the time came for getting up—which I knew by hearing the old clock on the stairs—I rose and dressed. On going out of my room, I perceived that I had been removed in some way during my sleep. I was quite at a loss to understand how. However, the mystery was soon explained. After I had gone to bed, an old friend of my grandfather's had arrived unexpectedly with his wife. They had calculated on stopping the night, and the only room available for the worthy couple was that in which I was asleep. After much deliberation, it was arranged that I should be turned out, to make room for them. On going to my room to awake me, I was found fast asleep. My grandmother, a kindly old dame, proposed removing me if possible without awaking me, which was, as she said, a pity. Forgetful, therefore, of the probable consequences, the old lady took me in her arms, and deposited me safely in the bed in which I found myself in the morning. Although this was done with the best intentions, yet it was, I think, a rash proceeding, as the results in the case of a sensitive child might have been serious.

I think that these two adventures serve to show that however improbable an event may be at the time, there is generally an explanation to be found for it, without ignorantly and foolishly attributing it to supernatural agency. I consider that the present mania for so doing is calculated to do an immense amount of harm, especially to the young and ignorant.

SETTING THE SNARES.

CHAPTER VII.

AFTER a brisk canter, and while the sun was still above the horizon, Arthur and Rachel were returning from the ride mentioned in our last chapter, when just as they reached a hollow or 'dip' in the ground at no great distance from the farm, Rachel exclaimed: 'There is a man on horseback making signals to us. See! there he is, by that patch of cotton-wood trees.'

Arthur looked in the direction indicated; and there, surely enough, was a man waving his hat, as he rode briskly towards them. They reined up; and in a couple of minutes the man, who was a stranger, came alongside. 'Say!' he cried; 'air you Squire Arthur from the Holt Ranche?'

Arthur replied in the affirmative.

'Then, boss, Squire Holt wants you to meet him at the Ogley Ranche, as soon as you can.'

'At the Ogley Ranche!' echoed Arthur, in surprise. 'Why does he wish me to join him there?'

'Guess that ain't none of my business,' said the man sulkily; 'and it ain't none of my business whether you go there, or whether you

don't. But I reckon I heard him talking about the reason; he has concluded to buy a piece of land away in the hills. The man that belongs to it has come down about it, and Squire Holt proposes to stay at Ogley's to-night, and go on fresh in the morning.'

'It is very curious'—began Arthur.

But the stranger interrupted him. 'Wal, boss,' said he, 'it ain't no affair of mine. When Squire Holt found I was going past the Gaisford Rancho, he asked me to call and tell you, but said I might cross the track of you and Miss there, and to do so, if I could, as he wanted you at once. I've done it; I've earned the two dollars he paid me, and I don't care a single cent what comes of it.' With this the man struck his heels into the pony's side; and ere Arthur could fairly make up his mind what to say, he was beyond hearing.

'I suppose I must go,' said Arthur ruefully; 'but it will be dark long before I get to the Ogley Rancho.'

'I did not like the look of that stranger,' said Rachel. 'I noticed that he would never meet your eye. I cannot think why he should deceive us; but you ought to ride over to Mr Holt and learn if the message was genuine.'

'It would take me as long to get to the rancho and back to this place, as it would to ride to Ogley's,' replied Arthur; 'so I should have all the bad part of my ride in the dark, and perhaps offend my uncle. No; there can be no great harm in obeying. So good-bye, Rachel,' he said, as they shook hands; 'and tell your father why I have not returned.'

Arthur, as he reached the crest of the swell on his side of the hollow, turned for a moment to wave his cap; then he vanished, and Rachel rode slowly home.

Mr Gaisford met Rachel as she rode up to the door of the farmhouse, and naturally asked what had become of Arthur. On learning what had occurred, he expressed considerable surprise, as he had heard nothing of Mr Holt's intention to buy land in the vicinity of Ogley Rancho. He smiled, however, at Rachel's strongly expressed dislike of the messenger, and said that out West it did not do to be too particular.

While they were speaking, their old Mexican woman-servant Carlota came out from her dairy.

'Señorita Rachel!' exclaimed Carlota, 'what is that you say? Señor Arturo gone up to Ogley's Rancho?—that very bad thing.'

Hereupon the farmer, as if suddenly recollecting himself, said to Rachel: 'Oh, I remember now that Carlota came to me to-day, asking very anxiously if I had seen Mr Arthur; and on hearing that he was out with you, she seemed more satisfied.'

'Yes,' continued Carlota, who had attentively listened to the farmer; 'I think Señor Arturo safe then. But now he is murdered.'

'What!' ejaculated the farmer.

'Merciful heaven! what do you mean?' cried Rachel, the colour deserting her face; yet, as she spoke, she felt that Carlota's words did but carry the realisation of a dreadful fear which had haunted her from the moment she parted with Arthur.

'Cipriano! Cipriano! come here!' screamed Carlota. In obedience to this summons, a young

Mexican, her nephew, presented himself. 'Now, Cipriano,' began Carlota, 'you tell to the Señorita what you have hear about Señor Arturo!'

The Mexican spoke very briefly and to the point. He said that Cuervo the Uté captain had met him, and warned him that men were lying in wait to shoot Señor Arturo, if they could get him near the hills that night; that these men, were a white, and two 'bad' Apachés; and that Arthur was on no account to ride out to the mountains alone. He was to say also that some attempt would be made to decoy him there by a feigned message from his uncle.

Gaisford paused for an instant; and then, with the air of a man accustomed to act promptly, exclaimed: 'I see it all!—Ride, Rachel, to the Holt Rancho; tell them to send every man they can muster, well armed, through the gulches to Ogley's Rancho.'

'No, father; send some one else,' cried Rachel, as she shook the reins of the pony and prepared to ride off. 'I shall follow Arthur. He cannot be above a few miles up the pass, and I may overtake him before any danger happens.' And before her father could reply, she was off on her swift little steed.

The sun was already out of sight, and twilight, beautiful but short-lived, was setting in.

'Bring up three horses!' shouted the farmer to one of his men who just then came in sight.—'Carlota! I will ride with this man and Cipriano to the ford, and meet Texas Dick. You can tell the others as they come in where we are gone to; and send them on, as soon as they can get mounted, to Ogley's Rancho. I will fetch the weapons.' Saying this, the farmer entered the house, leaving Carlota and the young Mexican intently watching the progress of Miss Rachel.

'Golly! how Señorita Rachel is riding!' exclaimed Cipriano presently. 'But the pony splash very little water at the creek. By thunder! she have swim through, to save time. She mucha brave girl. The creek twenty foot deep there.'

It was even so; and the farmer, who had just emerged, laden with firearms, knowing the deep, treacherous holes of all the streams in the vicinity, turned pale as he saw his daughter plunge through the 'creek' at a spot dreaded for its danger, evidently doing this to save the time which would be consumed in riding round by the ford. She emerged safely, however, on the other side, and rode swiftly away.

'Now mount, Cipriano!—And you, Ned,' continued Gaisford, as the horses were led up; 'here are rifles and cartridges.—Send on the other men, Carlota, as I told you.—Now, boys, are you ready?—Off with you!'

The party started at a sharp trot, taking a line somewhat different from that followed by Rachel, as their aim, in the first instance, was to meet Texas Dick and his men, who, they knew, would remain at work at the new corral until sundown.

Little was said; but many an anxious glance was cast towards the distant foot-hills, until a group of five or six men, easily to be recognised as Texas Dick and his assistants, came in view on the further side of the creek. A piercing 'halloo' from the farmer drew the attention of

this party; and some signals were made which convinced the Texan that he was wanted; and so, without losing time in debate, he and his comrades quickened their pace, crossed the ford, and were soon alongside the farmer. A very few sentences sufficed to convey the position of affairs to the frontiersman; then, with merely an ejaculation of 'Come on, boys!' he turned his horse's head, and followed by his men, rode off at once in the direction of the hills.

'I told you I saw a white man in company with some Apachés,' said Dick, as they pushed on. The farmer assented. 'Wal,' continued the Texan, 'that white man has been seen with them again; and one of our boys saw him with old Seth Birrable the post-master.'

'Me see strange white man slink into back of post-office this afternoon,' said the Mexican; 'then he run out of front, and hide and creep in bush till he get away.'

'That Birrable is a bad un,' said the farmer.

'That is so,' assented Dick; 'and if any harm comes of this business to Mr Arthur, we will lynch him. I had a good mind to take him out to a tree last winter, for I know he was in those horse-robberies. But this time we will string him up for sure.'

A low murmur of approval from his hearers followed this speech; and the party rode on in silence.

The twilight was now beginning to thicken in the distance, shortening the perspective; and as if spurred on by the nearness of night, both horses and men bent to their work with a vigour. They were going over the rough ground with wonderful speed. All at once the Texan, keenly scanning the country towards the hills, suddenly exclaimed, pointing to an open patch which lay between two jutting piles of rocks and mounds: 'By snakes! there's Señor Arthur! You see his gray horse?'

One or two others of the party declared they could just make out in the dim light the figure of a horseman; but from the distance, it was impossible to feel certain. Dick was positive, however, and rising in his stirrup, he gave a loud and peculiar halloo.

'He heard me!' cried the Texan. 'I saw him turn his horse round. Now he goes on again.' A second time the shrill halloo arose; but it was impossible to decide whether the sound reached the rider or not.

Suddenly Cipriano the Mexican cried: 'Señor Gaisford! there is firing in the foot-hills. I hear a shot just now.'

'The Mexican is right!' exclaimed Dick, after a brief, painful pause. 'I heard shots again.—Push on, boys! Don't spare your horses!'

Nor did they; and the ground being fortunately level in itself, although of course with an upward slope, they made rapid progress. They had approached nearly to the last spur forming the boundary of the broken country, and were about to enter the pass into which they had seen Arthur ride, when suddenly they heard several other shots fired, and were even near enough to see the flashes.

'Give a shout, boys!' said the Texan; 'it will cheer our friends and frighten our enemies. Now for it!'

The 'boys' complied, and two or three tremen-

dous yells rang through the night, which must have penetrated far beyond the cañon from which the firing proceeded.

CHAPTER VIII.—CONCLUSION.

It was indeed Arthur whom Texas Dick had seen a few minutes before entering the defile far ahead of them. Till then, the young Englishman's ride had been quite uneventful, and the only cause for anxiety which occurred to him was the rapid approach of nightfall while he had still the roughest and most uneven portion of his route before him. As he rode into the defile through which he was now passing, the twilight became deeper, from the narrowness of the pass and the height of the rocks on each side of him. He had therefore to concentrate his attention on the difficult path over which his horse was picking its way; and it was only after he had ridden right into the pass that something startled him, and he looked eagerly up and around. His quick eye made him fancy that he saw something move where the shadows were darkest, and he shouted to know if any human being were there. For a moment, as he listened, there was no response, no murmur, no flap of night-hawk's wing to break the gloomy silence; then, all at once, a flash lit up the rocks just in front of him, and a report followed. Instantly he drew his own revolver, but as he did so, two more bright flashes dazzled him; a stunning shock told him he was hit, while his horse fell dead under him, shot through the head.

When Arthur and his horse fell, three heads, cautiously lifted above a parapet of rock, witnessed the effect of the volley.

'Bueno! my boys!' exclaimed one, a white man—Señor Tony; 'he is down; but I doubt if he is dead. Hurry to him; finish your work, and the fifty dollars and the keg are yours to-night.'

The Indians gave a grunt of assent, and springing to their feet, were emerging from the rocks behind which they stood, when Pedro stopped as suddenly as though he had been petrified.

'What is the matter?' exclaimed the impatient white man. 'Lose no time, or he will recover, and give us trouble.'

'Oye! Listen!' said Pedro. 'Cavallos!—horses come!'

Tony listened. He heard, surely enough, the gallop of a horse, and at the rate it was travelling, it was plain it would be within the defile directly.

'There is only one,' whispered Tony. 'Fire as he comes out of the shade.' But the Indians either considered that this was not in the bond, or, as was more likely, were unwilling to run any fresh risks; so the party listened to the gallop of the rapidly approaching rider. As they did so, to Tony's alarm he heard Arthur groan and move; signs that he was regaining his consciousness.

'Another moment,' he muttered, 'and he will be on his feet, and ready to fight.'

The deadened clatter of the horse's hoofs as it came through the gorge was now changed to a clearer ring; the rider had gained the open space, and was free from the close reverberation of the rocky pass.

'What do I see?' exclaimed Tony. 'A woman! Rachel!' Next moment, turning to the Indians, he said: 'Don't hurt her; but take her horse, so that she can't hurry back. The fond fool! to come here.'

In the meantime, Rachel had come near enough to see the prostrate figures of Arthur and the horse. With a slight and instantly repressed scream, she reined up, and leaped from her pony. The Indians, who had now cleared the ridge, gave a hideous shout and rushed down the slope towards her; but the delay, brief as it had been, was fatal to their purpose. Their shout was answered with whoops from the opposite side of the gorge, and three flashes at once broke forth from the darkness behind the girl, and the bullets which followed them struck the rocks against which the Apachés could be seen descending. The Indians immediately turned and fled, disappearing in an instant among the rocks.

Before Rachel had time to realise the terrible situation in which she stood, she heard a deep guttural voice behind her exclaim: 'Señorita Rachel, yo Cuervo!' [I am Cuervo!]

'Thank heaven!' cried the girl, as she turned round and saw the friendly Uté. 'Oh, come to me, Cuervo; Señor Arthur is dying!'

The next instant, Cuervo and his two stalwart sons were by her side, assisting to disengage Arthur from his dead horse. The young man was able to speak as they did so, and to assure Rachel that he was not seriously hurt.

As he spoke, the sudden clatter of a body of horse was heard upon the stony ground close by; and then, with loud shouts, the party under the farmer and Texas Dick rode up. The men immediately dismounted; lights were struck, and Rachel was in the arms of her father. It seemed that the courage which had sustained her so long, deserted her all at once, for she clung to her father and sobbed hysterically.

There was little time, however, for the indulgence of sentiment, because, as Texas Dick said: 'There ain't no telling where the scallawags may be, or how many of 'em. First thing we know may be a shot, so we will make tracks.'

The dead horse having been quickly stripped of its saddle and headgear, and Arthur mounted behind one of the party, Cuervo and his sons being similarly accommodated, they at once rode off.

All this took place in a fraction of the time required for its narration; and it was not till the party had got out of reach of further attack, that Cuervo began to explain how he had arrived so opportunely. Reducing his narrative to the plainest and briefest form, it appeared that he had long been expecting some such attack upon Arthur, as he had seen Señor Tony in company with two Apachés when the rest of the tribe were on the hunt; and these Apachés being frequently intoxicated, had dropped words which fired the suspicions of Cuervo. He had learned enough to assure him that Arthur would be waylaid on a particular night, which, as the reader will guess, was the night when the Uté had presented himself with his sons so unexpectedly, and acted as body-guard to Arthur until the latter was in safety. On this present day, Cuervo

and his sons had been in the foot-hills, where they discovered Tony in consultation with the Apachés. Lurking behind a convenient tree, Cuervo overheard that a plot was on foot to decoy Arthur thither that night and kill him. He accordingly went down into the plains, and meeting Cipriano, who, he knew, was often at the Gaisford Rancho, gave him the message which the Mexican had faithfully tried to deliver; then returning, the Utés determined to watch Tony and his confederates.

Not daring to follow the latter too closely, Cuervo had slightly mistaken the direction in which they entered the broken country, so was for a time thrown out. He and his sons, however, had a pretty sure guess as to the spot where the ambuscade would be laid, and they had just worked their way to its vicinity when they heard the first shots. Directly afterwards, Miss Rachel passed them, galloping in the direction of the firing. They followed her, and would have been by her side in a couple of minutes; but the whoop of the Apachés, as they descended the rocks, told to Indian ears that no time was to be lost, and that even the two minutes could not be risked. So they fired as truly as they could in the direction of Tony's yelling accomplices.

Rachel's arrival had clearly saved Arthur's life, by alarming the suspicious Apachés. But for this, even Cuervo's intervention would have been too late. Arthur, in spite of his wound—for he had experienced a very narrow escape, a bullet having ploughed its track along his scalp—found an opportunity for saying as much to Rachel, as they rode through the darkness towards the Holt Rancho, where they arrived to find the farmer lost in wonder as to where Dick and his men could be gone.

On hearing details of the expedition, Mr Holt became excessively wroth, and vowed he would not rest until the mean trash of whites and the bad Indians were hunted out of the neighbourhood.

'They say this white man is known; in fact, it's certain,' interposed Texas Dick, on his employer pausing for an instant.

'Who is he?' demanded the farmer. 'If he's alive in the territory after to-morrow, he will have to hide pretty close, for I'll hunt him as if he was a wild-cat.'

'Wal, then, it's your other nephew, Tony,' said Dick bluntly. 'There's a good many of the boys who mean to draw a trigger on him at sight, so you can leave him to them.'

Holt was literally staggered at hearing this, for he reeled and caught at a chair. 'If he were ten times my nephew,' he exclaimed at last, after a pause which was very painful to every one present, 'he dies if I meet him.—But tell me now, some of you, what ground you have for saying this murderer was Anthony Derring.'

This testimony was soon forthcoming; and it appeared from the remarks made during the narration, that the young man in question had once been a resident at the Holt Rancho, where he was high in favour with the farmer, and looked upon himself, there was little doubt, as Mr Holt's destined heir. His conduct, however, had grown very bad, far exceeding, indeed, the tolerably wide latitude allowed 'out West'; and finally, being conclusively proved to have taken part in

a serious robbery, while he was suspected of an attempt to waylay Mr Holt himself, the farmer dismissed him, with a handsome present, however, to keep him from the necessity of resorting to evil courses. It was indeed to supply his place, that Mr Holt had written for Arthur.

Tony had probably thought that his banishment would not last long; but when he found a successor to himself installed at the ranche, he considered that the situation had grown more serious, and that his only chance of restoration to favour lay in his getting rid of the interloper, and keeping his own share in the blood-guiltiness a secret from his uncle. This achieved, it was highly probable that if Tony presented himself apologetic and penitent at the nick of time, the farmer would relent, and all would be well.

One sentiment seemed to pervade the whole of the men, and this was, that Birrable the postmaster was a dangerous character who must be cleared out. In this connection, it will be sufficient to observe that Birrable must either have received warning or taken fright; for on the very next morning his office was found to be closed when the mail-cart came in, and he himself was never seen or heard of again—unless indeed the report of a man from the Nevada mines could be relied on. This man came into the neighbourhood a year or so later, and declared that he had assisted at the 'lynching' of Birrable, who, under another name, had been a source of trouble at the narrator's mining-camp for many months.

Meanwhile, Squire Holt did not slacken in his anger or turn from his purpose; he lost no time in advising the 'boys' of the district, of Tony's plot to decoy and murder Arthur Richmond; and a hot pursuit was instituted in quest of the messenger who brought the false instructions to Arthur, Birrable the postmaster, and Tony himself. But vain was the search in each case. Birrable had fled, as already explained; the messenger was a stranger; while the closest inquiry for fifty miles round revealed no trace of Tony. But some months afterwards, when all interest in the pursuit had flagged, and Tony's doings and himself were in a fair way of being forgotten, a horrible story, told by some men who had been recently through the Indian territory, brought him vividly to every mind.

These men camped in the vicinity of the Gaisford Ranche, to rest their cattle for a day or two, and told how they had seen Miguel the Apache, whom they knew, in company with some other men of his tribe. These Indians had a good deal of money, and traded with the white men who now told the story. It possibly happened in the course of this trading that some whisky changed hands; at anyrate, Miguel got intoxicated, and in his drunken bravado exhibited a scalp, not long taken from its owner's head, which he boasted was the scalp of a white man, 'mucho big chief.' He also showed various trophies, amongst others a leathern purse, which, he boasted, had been full of dollars. And inside this was written, 'Anthony Derring.' Miguel, being in the loquacious mood of drunkenness, although usually the most silent of Indians, explained that this 'hombre Americano' [this Yankee man] had shot his brother Pedro; that he, Miguel, had dragged the body away, and

shown it to the captains of his tribe, and these had followed the murderer, and duly revenged the slaughter of their comrade.

Thus perished Señor Tony; at all events, if the report of the traders were untrue, he never appeared to contradict it; while one or two articles, known to have belonged to the young man, were at various times seen in the possession of some of the Apache squaws.

It was not long after the events related, that Mr Holt, being thoroughly satisfied with the fitness of Arthur to assist him, and, in short, having taken a very great liking to the young man, desired him to send for his mother and the remainder of her family; a summons which almost frightened Mrs Richmond to death, so terrible seemed the idea of crossing the Atlantic. But it was evident that she had virtually no choice; her son's letter was so earnest, the advice of her friends was so emphatic, the advantages of the removal so unmistakable, that she was compelled to go, although with much gloomy presentiment, and with many sighs and tears. She found, as others before her have found, that the making up her mind was the worst part of the business, and that it was possible even for her to survive a long sea-voyage.

'We shall see a great change in Arthur, I have no doubt,' she was fond of remarking to her eldest daughter as the ship shortened the distance between them and him. She was more correct in this than even she herself supposed. At anyrate, with all her presentiments, and with all her belief in the change that a foreign life must have worked in her son, she was not quite prepared for his meeting her at Kansas City in company with an exceedingly pretty young lady, or for the pretty speech: 'Mother dear, this is my wife, Rachel. I am sure you will love her.'

This she did very soon, and very dearly. But as poor Mrs Richmond, dowager, often said, when in time to come she had found sympathising neighbours to whom she could say it—'When he said this, you really might have knocked me down with a feather.'

BOOK GOSSIP.

THERE are some people who spend every available hour which they can spare from other duties, in what is to them the delightful luxury of reading. They read in the morning, and they read in the evening; they read in company, and they read in solitude; they read within doors, and they read without doors; they read at board, and they read in bed. Walking and reading, also, are two performances often carried on conjointly, though the practice is not to be commended as good in any sense; but less fault is to be found with that other practice of pulling out a book and perusing it while we rest during our walk. To those who indulge in this habit, neat small editions—literally 'pocket editions'—of good works are always acceptable; and to such we would commend what is called 'The Familiar Quotations Series of Books,' published by Whittaker & Co., London. This series, besides those volumes which give it

its title, such as *Familiar Latin and French Quotations*, &c., contains a number of well-known and interesting books. There are, for instance, Charles Lamb's *Tales from Shakespeare*; J. B. Selkirk's *Bible Truths with Shakespearian Parallels*; Dr Johnson's philosophical romance of the Abyssinian prince, *Rasselas*; De Quincey's wonderful *Confessions of an English Opium-eater*; and many others. The volumes are small and handy in form, printed in good type, and cheap—three qualities which should commend them to many readers, especially those of the pedestrian order.

**

Of all games in this country, Bowling, as practised out of doors, is among the most innocent and least harmful, in every sense. Yet this agreeable pastime as practised indoors had at one time a very bad name, so much so, that certain Acts of parliament had to be launched against it. Nor were even these discharges of legal artillery sufficient to check the evils of gambling with which the fair character of the game had become tainted. In the time of Henry VIII. the game was classed among unlawful amusements, and bowling-alleys were proscribed by statutes which were directed against all who either played in such places or kept them for profit. It was allowable, however, for artisans and servants to play at the game during Christmas-time in their masters' houses and presence; while persons who were worth more than one hundred pounds per annum might obtain a license for playing within their own domain. But notwithstanding these restrictions the game still retained its popularity, and worked as much evil as before. Writing some forty years after the above Acts were passed, an English author says that 'common bowling-alleys are privy moths that eat up the credit of many idle citizens, whose gains at home are not able to weigh down their losses abroad; whose shops are so far from maintaining their play, that their wives and children cry out for bread, and go to bed supperless often in the year.'

The game, however, as practised in the open air, has long since cleared itself of any such stigma as anciently attached to its indoor cousin, and is now, as already said, as much dissociated from any idea of vicious betting or gambling as any game of skill can possibly be. For those who are unable to engage in the more active athletic exercises, bowling is at once a safe and an agreeable recreation, as is testified by its numerous votaries, who derive pleasure and mild relaxation from the pastime. Like other games of skill, it has its code of laws, written and unwritten; and a knowledge of these laws by the frequenters of bowling-greens and by members of bowling-clubs, is the best preventive of misunderstandings, and saves the unnecessary cropping-up of 'disputed ends.' An excellent little book on the laws and rules of the game is the *Manual of Bowl-playing*, by W. W. Mitchell, Millport (London and Manchester: John Heywood). It contains the laws of the game, rules for bowling-clubs, suggestions for the making and keeping of greens, and an appendix giving the results of the chief tournaments and matches during the last few years. The little book pre-

tends to nothing beyond being a useful and handy guide to the game of bowling, and in so doing it pretends to nothing more than its contents will justify.

**

We have from time to time drawn the attention of our readers to the publication of books intended for the simplification and advancement of science-knowledge; and in this category of useful and compendious works must be classed that of Dr Andrew Wilson, F.R.S.E., entitled *Leaves from a Naturalist's Note-book* (London: Chatto and Windus). The book, as the author points out, is made up of a series of sketches, compiled chiefly because of the existence of a growing taste on the part of the cultured public for a knowledge of the objects in which the naturalist professes an interest. While such books are essentially imperfect in point of fullness and exhaustiveness, they at the same time serve a purpose which more full and exhaustive treatises would fail to accomplish, in so far as they engage the interest of the non-scientific reader, and may in many cases lead the way and prepare the mind for higher scientific studies. In consistence with the object which the author had in view, there is nothing in this little volume which any reader of average intelligence might not comprehend, while there is much which even readers of some degree of scientific culture will heartily appreciate and enjoy. In addition to chapters devoted to such subjects as jelly-fishes, the 'threads and thrums' of spider-existence, skates and rays, whales and their neighbours, kangaroos, barnacles, and flies, there are papers of a more general kind, treating of such subjects as the office of science in the elucidation of crime and the conviction of the criminals; the exposure of medical quackery; scientific ghosts; food and fasting, and the like. The diversity, within certain limits, of the subjects treated in the book is such as to render it scarcely possible for any one to take it up even for a few spare minutes without finding something to interest, instruct, or amuse.

**

John B. Gough is well remembered in this country as one of the most powerful lecturers that ever spoke on the subject of temperance. At the time of this American orator's first propaganda, the effect of his prelections here was marvellous; and if, on his second visit to this country a few years ago, he filled a less distinguished position in the public mind, this was due not so much to any falling-off of power in the orator, as to the fact that temperance agencies and temperance arguments are much more common and better understood now than they were twenty-five years ago. Since his return to America, two years since, Mr Gough has been engaged in writing an account of his life-work, embracing the experience of thirty-seven years on the platform and among the people at home and abroad. The book deals largely with his experiences in this country in 1878, and with the various prominent temperance advocates whom he met in London and elsewhere. Much of the book is taken up with sketches of London life, some of them exceedingly graphic, many of the anecdotes told being pointed and

amusing. There is a story referring to the tricks of professional beggars. A man was standing with a board in front of him, with the inscription, 'I am blind,' when a gentleman threw a shilling on the ground; the blind man instantly picked it up. The gentleman said: 'Why, I thought you were blind.' The fellow, after a moment's hesitation, looked at the board, and then said: 'I'm bless'd if they haven't made a mistake, and put a wrong board on me this morning! I'm deaf and dumb!'

THE MONTH.

SCIENCE AND ARTS.

THE Suez Canal, which represents the greatest engineering triumph of the present century, is found to be inadequate for its designed purposes. The traffic at present amounts to three million tons of shipping annually; and owing to the development of Chinese and Australian commerce and to other causes, it is constantly on the increase. As many as fifty ships are occasionally threading the passage of the Canal at one time; and when it is remembered that these vessels can only pass one another at certain points—like railway trains on a single line of metals—it can be imagined what tedious and costly delays are constantly the rule. These difficulties form the subject of a highly interesting contribution to the *Times* newspaper from a correspondent, who has gone over the ground with a view to noting them and suggesting possible remedies. He points out that the plan of widening the waterway throughout would be inadvisable, on account of the enormous expense which it would entail; and dwells rather on the recommendation that the *gares* or passing stations should be greatly increased in number. He also advises that the stone casing of the banks—at present in progress—to prevent the sandy sides shelving into the water, should be actively pushed on, so that ships, which are now limited to a certain speed, could travel through more quickly without any risk of injury to the banks from their wash. He finally suggests that the Canal should be bought up by the different nations using it, instead of being left in the hands of a private Company. England would have to pay the lion's share; for her ships are as four to one of those which pass under other flags.

Another international highway—the Tunnel beneath the English Channel—continues to excite lively interest both among engineers and politicians. There is one difficulty to be surmounted, peculiar to all similar works of excavation, and that is, the question of efficient ventilation. Some statistics were recently brought before the German Society of Engineers bearing upon the ventilation of the St Gothard Tunnel, from which it appears that in spite of its mountainous position, where the outside air must be of the purest description, the workmen suffered severely from the rapid deterioration of the air which they breathed. In the Mont Cenis Tunnel, things seem to be quite as bad; for the engine-men are furnished with mouth-tubes, through which they can breathe from a reservoir of fresh air which they carry with them. With these facts in view, it would seem that if the Channel Tunnel below the bottom of the sea is ever completed, the chief

problem in turning it to practical account will remain to be solved.

It would appear that London with all its smoke, and consequent fog, is a far more healthful city to dwell in than Paris with its noted clear atmosphere. The chief of the Prefecture of the Seine, Dr Bertillon, recently issued some statistics showing that the Paris death-rate—which ought, from the small proportion of young children and elderly persons, to be considerably lower than that of the British Metropolis—is in reality much higher. After making allowance for the difference of age-constitution in the population of the two places, we find that for every hundred deaths in London, the Parisians register one hundred and twenty-eight. From these figures we may judge that whatever things they may do in France better than we do, they must be behind us in sanitary matters.

M. Muntz assures us of the somewhat startling fact that all natural water contains alcohol, though in an infinitesimal proportion. In river-water the proportion is about one-thousandth; in sea-water about the same; but in cold rain-water the proportion of spirit is rather greater. Though we have on a former occasion hinted at the presence of alcohol in pure cold water, M. Muntz is said to have confirmed it by means of apparatus which he has specially devised for the purpose.

The impetus given to gas illumination by the serious competition of electricity has borne fruit in the substitution of brilliant lamps in many of the London thoroughfares for the inefficient glimmering burners previously in use. Indeed, it has often been remarked that we never knew what gas could do for us in this way until electricity threatened to beat it out of the field. A new form of gas-light, the 'regenerative' burner of Messrs Siemens, is now on its trial in Holborn; and judging from the effect obtained, its success is assured. In this lamp, the products of combustion, instead of passing away as waste vapour, are again passed through the flame. In this way the burner is not only constantly fed with a supply of warm air of its own creation, but every particle of the illuminating portion of the gas is consumed, and therefore turned to the best account. A very bright light is thus secured with a minimum consumption of gas.

Professor Ayrton's lecture on Electric Railways before the Royal Institution dealt with much that must have been new to the majority of his hearers. After stating that the whole question was one of cost, and depended upon whether electric transmission of power could be made cheaper than any other known system, he proceeded to point out various disadvantages attached to existing railways. The weight of a locomotive equals that of six carriages loaded with passengers, so that its mass adds fifty per cent. to the horsepower necessary to propel the carriages alone. This weight cannot be reduced, or the driving-wheels would fail to grip the rails. Another still more serious result of employing such a heavy motor as an ordinary engine is, that the line throughout—its bridges and all its parts—must be made of great strength, and consequently at much greater cost than if there were no locomotive to consider. The advantages of an electric motor are in comparison very great; for

experiment shows that for every fifty pound of dead-weight, one horse-power can be developed; a result to which neither steam, gas, nor compressed-air engines can attain. The few experimental electric railways already tried have been very limited in extent; the two rails acting as carriers of the current, and making connection with the motor through the wheels of the train. In such short lines, no great leakage occurred; but in long lines, the leakage from the rails to earth, and especially to moist earth, would prove most disastrous to success. Professor Ayrton proposes to obviate this difficulty of leakage by laying a well-insulated cable parallel with the rails to convey the main current. The rails would be divided into sections, and only that section upon which the train was actually running would be connected with the main cable, the connection being made by the moving train itself. By another device, it is proposed that the train should graphically record its exact position on a map at the terminus, or in a signal-box, as might be required. These various plans were demonstrated by a working model, which further showed that a complete block-system could be guaranteed. A moving train coming on to a blocked section of the line would not only stop, for want of propelling current, but would be automatically braked.

The celebrated photograph called the Trotting Horse, exhibiting an animal in different positions, some of which appear quite absurd, so contrary are they to all our preconceived ideas upon the subject, must be familiar to many of our readers. Mr Muybridge, the clever American photographer who produced it, has lately given an account of his manner of working both to the Royal Institution and the Royal Academy. His studio, he explained, was more like a racecourse than anything else, the grand stand being represented by a battery of twenty-four cameras. These cameras were connected by threads, breast high, and a foot apart, stretched across the course on which the horse had to gallop, or trot, as the case might be. As the horse broke each thread, the camera in connection did its instantaneous work; and a series of twenty-four pictures, giving the varied movements of the animal, was the result. By comparing these sun-pictures with the best-known productions of ancient and modern art, Mr Muybridge showed that many of our best artists have been in the habit of depicting animals in positions which they never assume in nature. But he did more than this. By a mechanical contrivance, the various photographs were projected by a lantern on a screen in such quick succession, that the trotting movement of the horse was brought before the astonished audiences in a life-like manner. Mr Muybridge proves that a horse galloping with all four feet off the ground at the same moment, is a simple impossibility. We need not point out that this is the way such an animal is invariably portrayed by even the best artists.

The use of the telephone seems to be steadily increasing, not only in this country, but in most of the European states. Its adoption at first by the public was very slow, for it represented a new-fangled contrivance, and this was quite enough to prevent a very large class from having anything to do with it. But its great value as a

means of communication soon became apparent to all, and the number of applicants for its aid is now very great. It is quite certain that the various British Telephone Companies do not offer the public all the advantages which they might easily do. In Germany, there are public telephone rooms where, on payment of a fee of five-pence, a passer-by can walk in and hold a conversation with any friend who may be a subscriber to the system. But in Switzerland, telephones are made far more generally useful than anywhere else. In Zurich, there are eleven public offices open to the use of all; attached to them is a Commission service, by which all kinds of messages and orders are executed for a very small fee. The central office is in direct communication with the telegraph system, so that a subscriber can dictate his message without the intervention of a third party; and in 1881 nearly nine thousand telegrams were transmitted in this manner. The Telephone Company also undertakes to wake its more sleepy subscribers at any hour which they like to appoint—an excellent idea.

Various endeavours have from time to time been made to get motive-power from the action of the waves; but such attempts have met with very small success. Mr Bigler, an American inventor, has contrived a buoy for use over sunken rocks or other dangerous spots, which carries a small dynamo-electric machine, set in motion by the rise and fall of the waves. The current of electricity so generated furnishes an Edison incandescent lamp with light. The action is of course intermittent; and the weak part of the contrivance seems to be the stoppage of the light on a dark but calm night. Without waves, the machine would not act, and the hidden danger would not be pointed out.

The destruction of the American pine forests is going on at such a rate, that it is calculated in some States they will be stripped of wood in as short a period as twelve years. The killing of the goose with the golden eggs was never better illustrated than in the short-sighted policy which allows this forest-land to be denuded of its trees without leaving any provision for the future. A few young trees planted here and there, and a very old one left to provide seed for successors, would have made a vast difference to the future prosperity of the districts indicated. But men have made too much haste to grow rich, and a timber famine at no very distant date must be the result. Another danger which has been forgotten is the risk of drought which the extensive removal of trees is known to induce.

A new musical instrument, the invention of Mr Baillie Hamilton, was recently experimented upon in the speech-room at Harrow School. It is of the harmonium type, in so far that its sounds are produced by vibrating metallic reeds; but the arrangement of these slips of metal comprises a very important modification. In the first place, the reeds are what are technically known as 'free'—that is to say, they can vibrate in and out of the frame in which they are set. These reeds are divided into groups of three, and each triplet is connected by a bridge. The effect of the arrangement is that a quality of tone approaching to that of the human voice is attained, and the rasping effect common to inferior harmoniums is altogether got rid of. The experiment was

certainly satisfactory; and when some little defects in the instrument have been corrected, it will form a dangerous rival to instruments of its class.

We fear that the adventurous gentlemen who have recently risked their lives in balloon journeys across the waters of the Channel, have not added very much to our scientific knowledge respecting *aéronautics* or atmospheric phenomena. They have merely proved that a north wind will carry them south, and that if they meet with a current in another direction, they must fain go with it. We can ill afford to risk the life of such a man as Colonel Burnaby, the Khiva hero; and we trust that he will not again attempt to travel to Paris *vid claudland* unless he has some very potent reason for doing so. The balloon as simply an aerial machine has now been brought to great perfection; indeed, it is difficult to see how it can be further improved; but the wind is still its master.

The popular outcry against the removal of the elephant Jumbo is very creditable to our human nature; but now that the excitement has ceased, and the animal is far away from its old home, we may well ask whether this outcry was justified by facts. It has long been known that if a male elephant is kept in confinement, it becomes, after a certain number of years, extremely difficult of control, by reason of recurring fits of irritability, if not madness. Chuny, an elephant which was kept about fifty years ago at Exeter Change, London, in one of these fits of temper killed his keeper, and was afterwards despatched, after some scores of bullets had been fired into his huge frame. Another elephant at Liverpool had to be destroyed after killing two of his keepers. At Amsterdam, a third elephant met with a like fate after killing his attendant. At Cologne, the same story was repeated with another elephant; and at Versailles, a man had a very narrow escape from a similar death. These occurrences, and doubtless many others, were of course known to our Zoological authorities; and there had been for some time signs that Jumbo might not always remain the docile creature which the public imagined him to be. Huge oak beams eight inches square, and cased with sheet-iron, had been placed to strengthen his house. These he had in an irritable moment snapped as if they had been sticks of firewood. Anxiety as to what Jumbo might do in the future, led his masters to accept Mr Barnum's offer to buy him, and for this act the Council of the Society have been assailed in a way not pleasant to reflect upon.

The street tramway system, which has been so rapidly adopted in our large cities, is in London about to receive an extension of a very important character. Hitherto, in the Metropolis the tram lines have been laid in streets which are almost level, for the labour of drawing the huge cars up-hill is more than the most willing horses can bear. Highgate Hill and Pentonville Hill are now to be furnished with tramways worked on a plan which has been adopted for some years past with great success at San Francisco, known as the steep grade system. The cars are pulled up-hill by an endless wire-rope attached to a drum and stationary engine. This moving rope is sunk in an underground channel,

and can be gripped by the car at any point, so that the motion of the vehicle is under the absolute control of the driver. It would be well, however, in laying any further tram-rails, to make sure that they shall do no damage to the wheels of private conveyances. The system of horse-tramways on steep gradients in certain towns should never have been sanctioned. The cruelty that is daily practised upon horses is a disgrace to our boasted civilisation.

The Archæological Society of Greece, to which the government have given the control of all matters relating to excavation and discovery of antiquities, seems to have issued a code of laws which will greatly hamper those who are endeavouring to trace the history of the past by the relics left by the former inhabitants of the country. No man is allowed to commence an excavation, even on his own ground, unless he agrees to give the proceeds to the Greek museums. In consequence of this prohibition, a great deal of secret digging goes on, and the treasures found are smuggled out of the country. In this way, their value as antiquities is much reduced; for the position where they were found, and the circumstances which led to their discovery, are lost sight of altogether.

A single and useful slip-link has been brought out and patented by Messrs Alexander & Co., of 190 Westminster Bridge Road, London, intended to be attached to the kidney-link of each horse's collar, so that when an animal falls it may be instantly released from the pole-chain. This is effected by simply touching the lever of the slip-link, enabling the horse, by being freed from the pole, at once to make endeavours to regain its feet by its own exertions. The invention has been found in practice to work well, and to be a great saving of time, as well as risk of danger to valuable horses.

A new and apparently useful invention has just been made by Mr Robert Pickwell, civil engineer, Hull, and consists of a Self-registering Ship's Compass, by means of which a diagram is produced showing: 1st, the exact steered course of the ship; 2d, the length of time the ship has been kept on any course; 3d, all the changes of the courses, and the exact time when such changes took place; 4th, in the event of a collision at sea, the bearing of the ship's head at the time is clearly shown. The diagram is applicable to long as well as to short voyages, and can be taken off and consulted daily, or be allowed to run the whole voyage not exceeding one hundred and fifty days. The compass itself is perfectly independent of the registering apparatus, which can be easily applied to any ordinary compass in general use.

The Fleuss diving apparatus has been already fully explained by us (Nos. 848 and 857). It may, however, be again mentioned that the object of the inventor was to enable the diver to carry on submarine operations without the necessity of having air pumped down through flexible tubes. A supply of pure air is secured by Mr Fleuss in a different way, namely, by an apparatus which the diver carries with him under water, for filtering the breath and admixing oxygen therewith, thus rendering it capable of being re-breathed. Part of this apparatus consisted of a heavy helmet and collar; but these Mr Fleuss

has now superseded by a lighter headgear for shallow-water diving, reserving the more cumbersome helmet for deep-sea diving.

OCCASIONAL NOTES.

LADIES' FASHIONS AND BIRD-LIFE.

THE fashion, which has perhaps always prevailed, of ladies adorning themselves more or less with the plumage of birds, has recently assumed a very objectionable phase. It is not now sufficient to make use of particular feathers of particular birds; it is necessary to have the bird-skin perfect and entire, and that not of common or merely beautiful birds, but of rare birds as well. A correspondent of a scientific contemporary the other day stated that he saw in a milliner's shop in Regent Street, London, four birds of paradise, two trogons—small birds of brilliant plumage—scarlet ibises by the dozen, a rare goat-sucker, kingfishers, orioles, and bee-eaters, not to mention other birds whose greater abundance might seem to excuse their wholesale sacrifice. 'The human race,' he adds, 'has already had to mourn the destruction of the dodo, the solitaire, the great auk, and the moa; let us not add to this list the *paradisides*, the trogons, and the humming-birds.' In this desire we most cordially acquiesce. The lower animals in general are no doubt rightly enough made serviceable to man; and the sheep and the silkworm are equally laid under contribution as providers of materials for human comfort and adornment. Even the feathers of the larger birds, the ostrich, for instance, have long formed an important article of commerce; and the bird is cultivated for the sake of the plummy harvest which it yields. But when we come to appropriating, not alone the feathers of birds, but the skins of birds with all the plumage intact, an element of waste and destruction is introduced which cannot be too strongly deprecated. It is an unhappy and mischievous fashion, and we would earnestly appeal to our lady readers to do all in their power to lessen and discourage it.

THE COST OF A LONDON FOG.

In the number of this *Journal* for December 4, 1880, there was an article on London Fogs, in which attention was specifically drawn to the great increase of this nuisance within the last fifty years, this increase being largely traceable to the enormously greater consumption of coal consequent upon the enlarged population and trade of the Metropolis, along with the fact that no definite attempt had been made on the part of manufacturers and householders to consume their smoke. It was also shown that there was no serious difficulty other than the inexcusable inaction of authorities and manufacturers, in the way of having this improvement carried out, apparatus insuring the consumption of every particle of smoke having been known and used elsewhere for years. As an evidence of the evil of delay on the part of the Metropolitan authorities in formulating some general plan for securing that each chimney consumes its own smoke, a striking item of information comes to hand, namely, that a *single day's fog* in London brought into the pockets of one gas Company no less a sum than *twelve thousand pounds*. This represented the price of seventy-five million feet

of gas, which had to be consumed in lieu of that daylight which the unwholesome sanitary conditions of the great city had shut out by a curtain of its own raising. Take the London fogs as covering ten days in the year—and this is below the real mark—and we have a sum of one hundred and twenty thousand pounds actually thrown away. Such a sum of money capitalised would surely be sufficient to enable those responsible for the public health to set in operation some organisation by means of which complete smoke-consumption would be rendered imperative on the part of every manufacturer, and in course of time every householder as well, within the bounds of the Metropolis. The enormous cost entailed upon the city by the present system, while, in addition, propagating the existence of a very serious nuisance, ought to bring home to the various governing bodies in London a strong sense of the necessity for instant and thorough reform.

'HOUSE OF REST.'

In our notice last month of the Babbacombe House of Rest, we named Miss Skinner as the 'Lady Superintendent.' This we learn is a misapprehension, she being a member only of the Committee of Management.

MAY BLOSSOMS.

SWEET hawthorn blossoms, with the kiss of May
So coyly nestling 'mid your fragrant tips!
You slyly wooed her on her joyous way,
To steal the honey from her rosy lips.
Her lovely fleeting smile your faces wear;
Fading while we exclaim: 'How frail, how fair!'

While your dear beauties feast my gladdened eyes,
Far from this busy mart my fancy treads;
Twine I your fairy buds 'neath laughing skies,
In crowns of pearly bloom for weary heads!
And with what tender joy I lay you now
On bosom racked with pain, and throbbing brow!

Down many a pleasant country lane I see
Fair childhood laden with your dainty bloom;
Dreams, idle dreams—a child-voice calls to me,
While timid hands reach shyly through the gloom—
Such eager trembling hands, that yearn to touch
The darling flowers the child-heart loves so much.

A childish voice, a little wistful face,
Pleads through the gloom—ah! surely not in vain;
While your faint perfume fills the mournful place,
Waking a world of mingled joy and pain;
Bearing through narrow court, and alley gray,
God's blessed sunshine, and the breath of May.

Oh, nestle fondly to that wan young cheek,
Where tears of rapture lie like April dew!
In loving whispers to that child-heart speak
Of warbling birds, green lanes, and skies so blue,
Of nodding violets that in dreams of love
Breathe odorous incense through the shady grove.

Before that little fluttering pulse shall cease
Its feeble throbbing—e'er you fall away
From the fast chilling hand—oh, whisper 'Peace,'
Then breathe the soft perfume round that form of clay,
While the blest spirit answers: 'All is well!
May is eternal May where angels dwell!'

ANGLO-AMERICANS.

BY AN ENGLISHMAN.

THERE is no subject more interesting to an English traveller in the United States than the career of his fellow-countrymen who have settled in that country. Many causes, often complex in their nature, have induced the immigrants to leave Britain. The great majority, however, have sought the New World hoping to find there a brighter lot than the home-land offered. Some for the sake of their children, some for political preferences, some from simple restlessness, have adopted the Great Republic as their future abiding-place. During the eclipse of British agriculture, large numbers of farmers, labourers, graziers, and the artisans connected with tillage, have joined the mighty hosts carving a shapely civilisation in the primeval Western wilds. But whatever they be, and wherever they be, the Anglo-Americans give a good account of themselves, and are contributing certain features to the society amid which they live. Faculties and tendencies that are merely asleep or suppressed in Britain, become prominent and energetic under the compulsions of the new life which the Anglo-American enters upon.

Owing to their superabundance at home, vast numbers of shopmen, clerks, small-traders, and those connected with commerce, have gone to the United States, whither thousands are continually following them; and owing to the enormous growth of business, which immigration itself adds to, large proportions of these persons have found employment in New York, Boston, Chicago, and other centres of trade. The majority have done fairly well; some far better than if they had remained in England. But those who went out speculatively had much to endure before they became assimilated to the new conditions of men and things. The 'riddling process' is more terrific in the United States than in England. Before a man gets sifted through the mesh that fits him, he has much to experience of a pain-

fully novel kind. Once through his 'prentice difficulties, however, the Anglo-American takes a place from which few competitors can dislodge him.

Business is pursued differently than amongst us, though international comminglings and competitions are hourly bringing commerce and trade to similar methods. Yet our drapers' assistants, for example, would find themselves out of their element in the dry-goods' stores of America. Here, our shopmen spend much time in panegyrics upon the fabrics they vend; and he who is most mellifluous in praise of his master's goods gets promotion. In the United States this specious volubility would cause the shopman's speedy dismissal. Customers judge for themselves, and any attempt to gild the pill excites contemptuous suspicion of the vendor. I was much amused with a little episode, which explains this better than any abstract remarks. A young haberdasher, newly from London, got a situation in New York. His first client was a gentleman in search of stockings. He piled all sorts of hose before the individual, who had a rural appearance, with a gushing eulogium upon each. The customer stared, but said nothing for some time. At length he quietly drawled: 'I say, mister, air you a darned ass?' 'No, sir!' replied the astonished youth. 'Wall, am I?' 'No, sir.' 'Then what air you telling me about them things? I guess this is a store, not a lecture-hall. If I buy, it'll be upon my opinion, not yours.' This led to a subsequent painful interview between the young haberdasher and his employer.

But though eager volubility is a positive disqualification for business, a slow unimaginative plodder is dropped after a short trial, no matter how painstaking in his department. In the United States, 'pace' is a first requisite. It is vain to complain of it, absurd to decry it, suicidal to combat it; for it does not depend upon individuals. The human brain vibrates quicker in the Western Continent than in Europe. Climate is more ardent. The mixed blood of Americans is derived from the most speculative, most

adventurous, most practical of European peoples, and is making a new type of mankind, very different from the average Englishman. This is no novel statement, but one that has been uttered a thousand times. Yet it will bear repetition; for the new type is by no means crystallised into permanent form. Each decade something is added to the Americans, their plastic nationality taking on a new trait without effort. The hordes of Germans, Swedes, and Irish have considerably modified the people and its march during the past twenty years. Now, the immigration of myriads of English is having its effect. And great among the factors, producing further modification, is the freed negro. That result is an intensity of life such as obtains nowhere else in the world.

To the prevailing type the Anglo-American must approximate wholly, or in degree. From what I saw, it was evident, after his novitiate, the Englishman generally equalled the American as a business-man. Our youngsters required no very long period of drill to fit them for positions of responsibility. In a year or two, without aping the national manners, pronunciation, and habits of thought, the all-constraining media shaped the English boy into a resemblance of the native. But middle-aged Britishers adapted themselves with difficulty to the rapid, irreflective life around them.

Shrewdness and speed are combined by the best sort of Americans; but speed takes preference. While an Englishman is weighing the probabilities of business, his Cousin has effected his purpose, or smashed in the attempt. Business needs to be done smartly, and a man must have a reputation for so acting, if he seeks to advance. No matter what the field of enterprise, a paper-collar store or a bank, a man must 'run it' in a go-ahead fashion, or the business will languish. Anglo-Americans fully understanding this, often prove more than a match for the native. Many instances came under my observation, where my capable compatriots had dominated a particular business by their superior perception of the conditions of success. Americans have considerable imagination, and can project cyclopean enterprises, and often carry them to a brilliant consummation. Still, when an English immigrant gets hold of a 'big thing,' he can keep it against most competitors. Indeed, nothing is more common than to find English brain directing or assisting transatlantic mercantile and manufacturing establishments to developments beyond the daring of Europe. As anonymous partners, as managers, as chiefs of departments, or other spheres of control, capable and docile Englishmen exercise a great portion of that influence in the present progress of the United States which is attributed to the fear-nothing Yankee. In short, Englishmen and English capital are gigantic factors in the phenomenal success to which the United States have attained. Broad as the native mind is, the English is broader; great as native skill is in money-making, English skill is at least as great. The addition of a more circumspect morality gives Anglo-Americans frequent advantage over the sons of the soil.

Commercial conflicts are often waged more pitilessly than those of internecine war. This is the case in America. 'Smartness' too often

means unscrupulousness. What are reckoned crimes in London are regarded as peccadillos in New York. If one of our commercial men leads a client into a financial ambushade, or commits highway robbery on the Exchange, he is shunned, and his career damaged, if not destroyed. Not always so in America. Successful fraud goes frequently unchallenged, is sometimes openly applauded in certain circles. For the victim, there is little sympathy. He was too confiding—so much the worse for him. He will not make the same mistake when he gets up from his fall. For he is expected to get up. To lie still under a swindle is more reprehensible than to get up and swindle others. This sort of morality is fatal to trade, and the best sort of Anglo-Americans know it. Instead of playing scoundrel in turn, they become wary of scoundrels, and keep them at a safe distance. The bitter agony-period from 1873 to 1879 has created a number of business safeguards that did not exist before, and they are due in some measure to English example and English astuteness. Anglo-Americans want to keep their money safe; a traditional veneration for capital runs in their veins. Hence the tightening of the systems of credit. While eager for gain as any Yankee, they are still more eager for the solidity of their customers. Clever Anglo-Americans would not waste time on perfecting wooden nutmegs; they know the end of such things. This trait counts enormously in their favour, in the conflict for business with natives, and with immigrants from Germany, France, and Italy.

The conflict is likely to be more severe in the future, owing to changes coming over the rising generation in the United States. For more than a century, Americans have tended in the second and third generations to urban rather than rural pursuits. This tendency is now becoming a passion. Farmers' sons are lured to city life like moths to a candle. Agriculture, which has made the country what it is, and which must continue to be the basis of its growth and the motive of its real prosperity, is being abandoned by those reared to follow it. Farmers send their boys to the best schools. The taste of the Pierian spring gives them a thirst for book-knowledge, and induces a dislike of manual labour. From school they go to college, at their parents' expense, or by their own efforts; for American boys, determining to be learned, will find ways and means that never enter the minds of their British Cousins. By some avenue, ambitious rurals climb the steep of Parnassus and never return to the plough. As school-masters, clergymen, professors, and the light-cavalry of civilisation, they seek careers in the cities. Some have no reason to repent the calls of ambition; but many have a weary struggle to middle age, when success, or the grave, relegates them to a state of quietude. But theology, teaching, law, medicine, and the rest of the learned professions cannot absorb the teeming multitudes now crowding them. Mediocrity gets a decreasing chance of a bare subsistence. The overflow goes perforce into some department of trade or commerce. It is the only path open to those who will neither be artisans nor tillers of the soil. At the present moment, there are multitudes of University graduates touting for

Insurance and other Companies in New York, Philadelphia, Chicago, and elsewhere, glad to earn a few dollars by the most repellent, disheartening, and ill-paid toil. For the sake of city life, the attire of a gentleman, and the hope of making a quick fortune, these jostling young gentlemen endure privations, degradations, and shabby discouragements, that react seriously upon morality. Culture has given a keener edge to intellect, and a false idea of gentility demands pecuniary success at any hazard.

There is in the business atmosphere of the United States an electric intensity not found in the most frenzied centres of Europe. The flood of highly educated youngsters, now being thrust into it, must add to the desperate conflict, and young immigrating Britishers must be prepared for difficulties that their elders have not known; there is a combat waiting them far sterner than any waged in tumultuous, competitive Europe.

Besides, the major operations of business are no longer in the hands of individuals. Visible or occult gangs control the harvests, the mines, the railways, the manufactures, the politics, and to a certain extent, the journalism of the United States. Against the operations of the confederated lions of trade, the ablest man, single-handed, is as powerless as before a tidal wave. Honesty counts for nothing; prevision is worse than blindness, for combinations of speculators defy all calculations. The 'corner' is now the mode of making great wealth. And wealth is the object of an infinite majority of Americans; the spending of it lavishly the *beau idéal* of enjoyment.

This makes excitement a necessity of existence. From childhood to age, incessant mental activity must be had; and it is curious to observe that speed of mind is accompanied by great bodily quietude. The lolling, lounging, arm-chair-loving Yankee has long furnished amusement to British athletes and pedestrians. But this corporal laziness is the necessary result of restless mental exertion. Brains have so much to do, that limbs are compelled to be quiescent. 'To get on' in the United States, mind, not muscle, is the prerequisite. Intending emigrants should ponder this.

For artisans there are just now excellent prospects. A great impulse of activity prevails; everything is 'booming' in the most encouraging manner. But British tradesmen must be ready to exchange old methods for new ones, to forget much, and to learn much. I have heard bitter repinings from men who were too rigid to yield to American ideas. Such should remain at home. Anglo-Americans have to work harder than any other people in the world. When I was in Cincinnati, bricklayers were earning a pound a day, and the same rate prevails in many other cities. But the work was far more exhausting than in England. Here a bricklayer is reckoned a good hand if he sets nine hundred bricks per day; a thousand is high water-mark. In the United States, fifteen hundred is the average, and some smart fellows have set two thousand per day. Now, at the outset, most Englishmen find this rapid style simply destructive. And there is no doubt that it taxes the energy of the strong and clever. Yet such is the custom of the trade. For the weak and incompetent, it means exclusion from first-class employment, and banishment to places remote from

thriving cities, where speed is slower, competition feebler, and wages low. Although the standard is so much higher than in England, our immigrants after a period of probation and 'hardening,' are found equal to all comers. An instance of this will be appropos.

A German master-builder was erecting a block of houses, and his employes were exclusively Germans. Four young English bricklayers applied for work. They were newly arrived, and met with several refusals. At length, two were taken on trial. By the end of the week, the four were engaged; by the end of a fortnight, all the Germans were dismissed, and the Englishmen carried the building to its completion. Their power of work, quickness, and steadiness gave them a marked advantage over the Germans. But their determination 'not to be licked' was the real cause of their triumph. That British characteristic tells prodigiously in favour of the Anglo-American, and makes him *facile princeps* amid natives and strangers. These young bricklayers told me they never worked so hard in their lives before, and were glad that a crucial test had revealed to them 'what they could do.' After this breaking-in, they were equal to the highest standard of American labour. One of them soon became an employer, and was making sure tracks for fortune when I last saw him.

What I have said of the building trades applies to all others. Indeed, the higher dexterity, taste, and skill a business requires, the more does the American workman respond to the demand. The plasticity of type to which I have referred is nowhere seen so plainly as in the domain of the useful arts. Germans and Frenchmen have given a finish to American manufactures, that is wanting in our own. Besides, there is a native neatness, the result of a high ideal of excellence. This matter deserves the serious attention of British manufacturers who are losing many markets simply from the clumsiness of their goods. There is rising in the United States a race of artists, designers, and artificers who promise to surpass those of all other nations. The fervour of the climate develops the æsthetic side of man; the clash of millions of eager, inventive minds is producing a standard of excellence that is both novel and exalted; the possibilities of wealth are vastly beyond those of any European state, and the love of the elegant and the beautiful pervades all classes. The inevitable sequence of these conditions must be widespread, all-dominating art. It is seen in the gorgeous public buildings, in the exquisite villas, in the light yet strong furniture, in the beautiful appointments of drawing-rooms and table equipages; while every American lady, yea, though black, is living evidence of an innate taste in dress, that makes the English suffer by contrast. Into every avenue of life this characteristic of taste goes, modifying manners and behaviour, as much as architecture, furniture, dress, ornaments, and tools.

The Anglo-American is, however poor, compelled to be a gentleman. I was gratified to note how quickly insular *gaucheries* and John Bullisms melted away in the solvent atmosphere. Workmen in England are not always careful of personal appearance, though

our young men are becoming so. But in America, after business hours it is impossible to distinguish a man by any external marks of his occupation. Artisans are dressed neatly, stylishly, splendidly, according to individual ideas and income. I have lived in hotels and boarding-houses with working-men whose clothes, deportment, and conversation gave not the least clue to their employments. Good manners are not only expected from all, but are insisted upon. Except in mining regions, where a conglomeration of international rowdies sets up a local code of behaviour, all Americans are urbane. And, by the way, in these mining districts the Anglo-American is equal to the best or the worst. Some of the greatest reprobates and desperadoes claim Old England as their motherland. Indeed, I could mention instances in point that prove our countrymen to be second to none as wielders of the bowie-knife and revolver. Yet, even in these lawless spots, woman is treated with considerate courtesy. The poorest of the sex claim a chivalrous attention. Rarely are brutalities and outrages inflicted upon women; and when they are, a recent immigrant or a drunken madman is the perpetrator.

Refinement of manners is nowhere more conspicuous than in the treatment of children. Anglo-American boys and girls have indulgences, pleasures, and intimacies with their elders quite unknown to their cousins in the East. I was struck with the extraordinary good conduct of children in school. There is a code of high behaviour ruling teachers and scholars that compares favourably with that of England. It was curious to remark, as I had occasion to do, how soon an immigrant's turbulent, irascible, opinionated boys were subdued to the prevailing behaviour.

In all sections of society, in all employments, in all latitudes, Anglo-Americans show 'a grit' that wins them position, wealth, and the good opinion of their neighbours. That intractable conservatism which marks them at home, evaporates in the brilliant air of the New World. They become Americanised. But they do not cease to love the old land; and no people are kinder to their visitors. They receive a Britisher with a warmth of hospitality and a depth of courtesy which prove that the old virtues develop with mind and fortune.

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

BY DAVID CHRISTIE MURRAY.

CHAPTER XVI.—'THIS IS MY FUTURE PARTNER, LADIES.'

THE dining-room at Lumby Hall was a place furnished for solid comfort's sake and with no regard to show. The walls, the ceiling, and the floor were all of oak. Dark maroon hangings kept a certain air about the chamber, as though to say that eating was not a busy matter here, but a thing to be done in shaded peace, and at what leisure the diner would. The oak floor, save for an edging some foot and a half in width, was deeply carpeted. The pictures on the walls were dull with time. The dim gold of their heavy frames relieved the sombre shades of the

oak panelling, but had no gewgaw quarrel with their age, as any modern gilding would have had. There was no new electro'd look on the silver stands and candelabra. The eyes of ornamental Cupids had grown dark; there were streaks of darkness in the Cupids' silver hair; their noses had grown blunt with the chamois leather of generations of butlers. All things wore a look of comfortable age. Sitting here, you were out of all disturbing influence, unless you were outside it in the literal sense of carrying it within you. There is no great comfort in new things. A new chair, stiff and shiny, sets one's teeth on edge with the creak of its leather, yet untrained to yield. Your old chair has found out all your angles, and is ready to adapt itself to a stranger's. Old shoes, old coats, old wines, old friends, what comfort there is in them! In the society of an old friend, you can lounge as you do in an old jacket; you have no fear of taking the gloss off him, or it. There is a sense of comfort, of long human proprietorship, which has left even it not unmarked with human interest, in old furniture. Not as it stares forlornly at you from the dim dustiness of half-fictitious years in Wardour Street shop windows; but as it stands where it has been wont to stand, in any old chamber familiar to a family. The chairs in which generations of the same house have sat, the table at which generations have dined, the solid square decanters out of which great-grandfathers and great-great-grandfathers poured mirth and jollity—what are new things beside them?

Gerard and his father sat here, well content in the after-dinner hour, the old man sipping his glass of port, the younger his glass of claret.

'And so,' said the senior, balancing the nut-crackers, and looking across the table with a humorous air, 'you won't come up to London?'

'If you wish it, I will come,' answered Gerard. 'Otherwise, I don't care for it.'

'Oh,' hummed the old boy, not unmelodiously, "'There's nothing half so sweet in life as Love's young dream.'" In his youth he had had a famous tenor voice, which, though now a trifle husky, had still something of its old mellow flavour left in it.

Gerard looked up at him, and laughed affectionately. 'Well, dad,' he said, 'why not? You had your day.' There was a little blush upon his face, which was not unbecoming, going as it did with such a friendly candour in his eyes.

'Yes,' the old boy answered, for good port disposes the heart to sentiment; 'I have had my day. I thank God for a tranquil afternoon, and the promise of a quiet evening.' They were both silent for a minute or two, and then he said in his usual tone: 'I'm afraid I must drag you away, my lad, but only for a day. I've been talking things over with your mother; and since you are going to get married, and can't very well do that on your allowance, I have thought of taking you over into the House, and transferring to you, say, half my share in it. Your need never meddle with the business. I would rather you didn't meddle with it. So long as Garling lasts at least, it couldn't be in better hands. When I am gone, except for Milly's share, you will have everything; but I shan't follow King Lear's pattern even with so good a lad as you are. So I shall run up to town to-morrow, have a talk with

Garling—see exactly how I stand—and then go to Bryan, and get him to draw up the necessary papers; and then you must beg away for a day, and come up for the completion of the business.' Gerard would have thanked him; but he went on: 'And now, I've had wine enough, and I'm going up-stairs. Are you coming?' They rose together and left the room arm-in-arm. 'This is my future partner, ladies,' said Lumby senior, entering the drawing-room. 'We must have new blood in the business.'

Mrs Lumby rose and kissed her son, a little tremulously. They were a most united household, and had great love for each other. The coming change had cast a sort of tender shadow on them all. Gerard's marriage would bring about their first real parting.

In the morning, Lumby père, in highest spirits, started for London. It is fine to see a mellow-hearted man living over the morning of his days again in the knowledge of his son's felicities; and old Lumby was a pleasant sight. Snowy whiskers; beaming British countenance, handsomer by far in its well-preserved beginning of age than it had ever been in youth; ancient satin stock, voluminous, with shining buckle behind; white high collar, meeting the silver of his whiskers; hat broad-brimmed, and not too glossy; figure, clad in dull broadcloth, not too portly, but square and solid—the beau idéal of a country gentleman. Arrived in London, he drove to one of those city hostels, once numerous, but disappearing now, if the last of them has not already gone, where the solid mahogany tables and sideboards looked liquid with the polish of a century; where the Butler had known the fathers of all but the most ancient guests, and remembered the room you slept in when you first came up to London; where the table linen was all of the finest, the whitest, and the costliest, and in whose cellars, port 'elbow deep in sawdust slept, as old as Waterloo.' Most people like to be considered somebody, and the very Boots in this ancient hostel knew the House of Lumby and Lumby, and revered its head. He would have been a mere unit in a crowd at the *Langham*, and even there the port could have been no better. When, after luncheon, he walked down to the offices of the firm, the old servitor at the door capped him with a smile; the elder clerks bowed gravely; the younger, with a sense of awe, bent lower at their figures, and sent their quills across the paper with increased assiduity of aspect; and the old gentleman came, in short, like a little monarch of feudal times to his own. His heart was glad in his only son, and he was humbly grateful that it was in his power to lift him above all little worldly anxieties, and set him in the way to happiness. In the fullness of his heart, he stopped to speak to the oldest of the clerks, who had known him when he was a lad, and had gray whiskers when his father had first inducted him into the honour of a share in the firm.

'It is like old times to see you here, sir,' said the honoured clerk.

'Ah!' said Mr Lumby, 'it is like old times to be here.—Where is Mr Garling?'

'He is out at present, sir,' said the clerk; 'we expect him to return at once.'

'Mr Gerard is coming into the firm,' said Mr

Lumby with genial pride. 'These landmarks in life show us how old we are growing—eh, Johnson?'

'They do indeed, sir,' said the ancient clerk, flattered to be the first to hear the news. 'I remember your coming, very well, sir. You were Mr Gerard then.'

'You have spent a pretty good slice of your life here, Johnson, eh?'

'You may say that, sir,' said the old clerk, with a tremulous quaver in his old voice. 'Fifty years to-day, sir!'

'Nonsense!' cried Mr Lumby.

'Fifty years to-day!' the old clerk repeated. 'Half a century, sir. I came here on my fifteenth birthday, and I am sixty-five to-day.'

'Happy returns!' said the head of the firm, offering his hand, which the old man took gratefully. 'Happy returns! Will you come and dine with me to-night, if you have no other engagement?'

'I shall be honoured, sir,' the old clerk answered.

We have new-fangled ways now. Perhaps they are better than the old; but the affectionate veneration of the ancient servitor is rarely now to be seen in these fast-rolling days.

'Shall we say six o'clock?—Very well. We'll have a talk over old times, eh? You won't forget?' The idea of his forgetting!

Mr Lumby went up-stairs, and walked into his own room, where he rang for the *Times*, and sat down to wait for Garling. It was a square little room, hung on three sides with maps, and crowded with one big table and two heavy chairs. One side of it was of corrugated glass and wooden framework, and in this was a sliding door. Beyond this thin partition was Garling's room. Mr Lumby read his *Times*, and waited, with a comfortable heart.

CHAPTER XVII.—'YOU'VE GOT TWO NAMES, HAVE YOU?' THOUGHT HIRAM.

Hiram Search had had some reason to think the world a hardish patch to hoe, to copy the figurative locution of his native land. It had never been easy since he could remember, and of late years it had been full of struggles, which were mostly failures, to make both ends meet. But it is not until a man has tasted happiness that he can appreciate the full flavour of misery. Happily, the reverse also holds good, and a man can find the finer flavours of happiness when misery has cleansed his palate. For a little space, Hiram, like his betters, had been happy, and now came trouble, all the more troublous, as it always has been, for coming on smooth times. The daily crust must somehow be earned, and Hiram was away early and home late, though Mary sat crying at home, awaiting the funeral of her mother. Her father redeemed his promise, and took the funeral charges on himself. It was a poor and simple show, and no mourner followed the plain coffin. Garling paid for it, such as it was, and gave Mary a five-pound note.

'You will hold yourself in readiness for me,' he said; 'and I shall come for you in a day or two. I must make arrangements to receive you.' He gave her an arctic kiss, and went his way; and she, feeling quite desolate, strayed about the

empty house, and longed for Hiram's protecting presence. It was midnight when he came.

'We can't go on in this way, my darlin',' he told her. 'You must give me the right to protect you. 'Taint provident, I know; but there air some situations, where it's wise to be improvident, an' this is one of 'em. We shall have to be careful an' savin'; but we have both had practice at that; an' I fancy I can allays find us in a roof an' vittles.'

'Not yet,' she pleaded tearfully; 'I couldn't marry so soon after mother's death.'

'We must find you cheerful lodgin's,' said Hiram; 'an' I must begin to turn round pretty sharp, an' look for some other kind o' labour, an' when I've got it, we must be married as soon as possible. 'Taint to be thought on, as I should leave you alone in the world a minute longer 'n I can help.'

'But Hiram,' she said timidly, clinging to him—'my father?'

'Wall,' said Hiram, looking on a sudden as hard and as keen as a razor, 'what about him?'

'He is coming to take me away,' she answered.

'Is he?' said Hiram. 'Air you goin' with him?—No, my blossom. I don't want to speak any harm of him; but he's got no claim over you or your doin's—none. His noo-born yearnin's 'll ha' to wait, I fancy. He choked 'em down, it seems, for nigh on a score o' years, an' now he can jest keep on chokin' 'em for my convenience.'

'He is coming to take me away with him,' she said.

Hiram treated this lightly. 'Don't go with him,' he answered, and thought that question settled. Then he kissed her tenderly, and went up to bed, but not to sleep. How to make a living? Such a living as would leave some margin over bare necessity, something, not luxury, but comfort, for his little girl? He could make nothing of the problem yet, and the schemes he devised had all some flaw in them.

The afternoon of next day, being Saturday, brought Garling back again. 'I am here,' he said, 'to take you home.'—She shrank from him.—'Are you ready?'

'No,' she answered, in fear of him.

He sat down, saying coldly, with an air of reproof, that he would wait until she had finished her preparations.

'But,' she said, scarcely knowing how she found courage enough to say it, 'I am not going.'

'You are in error,' he answered drily. 'Get ready at once, if you please.'

With a sort of desperation, such as a mouse might feel if in extremity it found the heart to face a terrier, she said again: 'I am not going. I have promised not to go.'

'You have promised? Whom have you promised?' he asked, looking darkly at her from beneath his brows.

'I have promised not to go,' she repeated with hysteric courage.

'You are of course aware,' he said coldly, 'that I, as your father, have complete control over you until you come of age. You are not yet twenty, and my control will continue for at least fifteen months. I promised your mother that I would exercise it, and I will.'

'Why did you leave us?' she panted. 'Why should I trust you to be good to me? I will not go.'

'Your mother,' he responded, coldly as ever, 'could have told you why I left you. I am a man, and cannot speak scandal of the dead.'

'You speak scandal,' she panted back again, 'in saying that you cannot speak it. I won't believe it—I don't believe it. My mother was a good woman, and you left her—you left her cruelly. I will not go with you.'

He had cared little enough to take her; but scoundrel as he was, he had not had the heart to refuse her mother's prayer; and though he had striven to beat the feeling down, he had it in his mind that there was some terror in wait for him if he should break his promise. But though he came reluctantly enough, the girl's opposition decided him as firmly as though her society were a necessity of life to him. Her reiterated refusal spurred his halting purpose. It was years since anybody had disputed an order of his, and the denial stirred his blood pleasantly.

'It is not a matter,' he said calmly, 'in which you can exercise a choice. I order, and you must obey.' He kept his eyes upon her until hers sank before them. He knew the virtue of that stony glance of old. It had helped to break her mother's spirit, and to make her the mere creature of his will. 'I wish to treat you kindly,' he went on; 'but I shall insist upon obedience, instant and complete. My method is decisive in all matters. I give you ten minutes in which to make ready. If you are not ready in that time, you will go as you are.'

'I will not go,' she protested wildly.

'You do not understand. Permit me to explain. I have a legal right over you. The first policeman in the street will see you into my cab at my order.'

What was she to do? She knew no better. 'What have I ever done to you?' she cried. 'I have lived by my own earnings, and I can do so still. You were cruel to my mother, and you broke her heart, and now—'

'And now,' he said, 'time flies. Obey me. Not a word, at your peril.'

Cowed by the brutal and contemptuous tone, and not able to guess how far his rights might stretch, or how far he would carry them, she left the room, and blinded with tears, mounted the staircase. Suddenly, as she stood disconsolate in her chamber, shaken with her own weeping, she clasped her hands at a thought, and falling on her knees, drew, from a shabby papered box which held all her belongings, a sheet of paper and a pencil: 'DEAR HIRAM,' she wrote—'My father is here. I am obliged to go. Pray, oh, pray find me. Live here, and I will send you my address; but he will watch me.—MARY.'

She crept on tiptoe to Hiram's room, and pinned the paper to his pillow, and then crept back again. Ah, there was hope! Hiram was clever, and brave, and strong. He would find her, and deliver her. She could surely manage to convey to him the news of her whereabouts; and he would find her, though the cruel father buried her underground. She knew nothing of the world; but why was she a woman, but to know that it would be wisest now to play at

resignation? She packed with trembling fingers, in haste, as though every hurried motion brought Hiram and her rescue nearer. When she descended, her father sat with his watch in his hand.

'You are ready? Where is your luggage?' She told him; and he called in the driver of the cab which stood before the door, and ordered him to bring it down. 'Come,' he said to his daughter, with cold discourtesy; 'get in first.' She passed the threshold; and he, having dropped the hasp which held back the main lock, followed, and they were driven away.

When Hiram returned that night at his usual hour, the door was locked against him. But he, being a man of expedients, and unwilling to disturb Mary, dropped over into the area, and entered by the kitchen door, supposing that the hasp had fallen by accident. There was nothing to warn him of his sweetheart's disappearance, except that his candle was not in its usual place upon its ledge in the narrow hall; but he disregarded that, and crept silently up-stairs. He struck a light in his own room, and glancing round it, saw the paper on his pillow. By the flame of the match, he read 'Dear Hiram,' and the name by which the note was signed. Before he could master a word beyond this, his frail light went out. He had no other; and in his anxiety to read the missive, he crept quietly down-stairs, not guessing even yet that he was alone in the house, and that the jewel which made it like a casket to his mind, had been stolen away. The night was gusty, and the wind in sudden bursts moaned up and down the streets like a houseless wanderer, uncertain where to go. He could find no light in the kitchen; but remembering how he had entered, and hearing how the wind shook the thin latch, he shot the bolt; and mounting the stairs as noiselessly as a ghost, he opened the front door, and leaving it ajar, went on tiptoe to the nearest street lamp, and there read the letter. Standing amazed and uncertain, with a chill sense of dismay upon him, he heard a sudden clap, which sounded like the explosion of a small cannon, and the wind came hurrying by with a hoarse rejoicing murmur. He darted back to the door, and found it closed. The house was locked against him.

This small disaster affected him curiously. It was like a bad omen; and he stood before the closed and deserted house like one whom the whole world had cast out. Shaking off his dejection, he walked, slowly at first, but more and more briskly as his thoughts shaped themselves, and the mental way grew clear before him, to a coffee-house he knew; and paying his sixpence for a bed, retired, and in spite of trouble and anxiety, slept fairly. He was astir betimes in the morning; and having secured a half-sheet of note-paper and a few wafers, he wrote, 'Letters next door at No. 97,' and walking to the house, fastened that legend over the letter-slip. Then came the routine of the day. Every time the omnibus passed the house in Fleet Street in which were situated the chambers of that Mr Martial to whom Hiram had once carried a message, the conductor mounted to the roof of his vehicle and stood there, scanning the windows eagerly. That afternoon—so simple seemed the knot which

Hiram had to untie—he saw Mary, caught her glance, and exchanged a signal with her. But he could not leave his post; and though he passed the house again twice before the daylight faded, he saw her no more. On the morrow, he secured a substitute to perform his duties, but was informed by a superior official that if this kind of thing went on, he would be dismissed.

'If that's so,' said Hiram, 'I shall be sorry; but it is as maybe.' It was but a poor way of earning a living, after all, and he was every day more anxious to break from it. Perhaps, if he could once be bold enough to leave it, he would pitch upon something better. He rode up to the house, dropped from the omnibus, and rang the bell. After some delay, Garling himself responded to the summons. He was dressed for the streets; and after one keen glance at Hiram, he came out, closed the door behind him, and walked eastward, as calmly as though his visitor had been invisible. Hiram followed; and at the touch of a finger on his shoulder, Garling stopped and faced about.

'What do you want?' he demanded.

'A word with you,' said Hiram in reply.

'It was you,' thought Garling in his secret mind, 'to whom she gave the promise not to go.' But he only said aloud: 'Speak your word;' and turned upon his heel again, leaving Hiram to follow. If he hoped to shake off the intruder, he was mistaken; the unwelcome hand was again upon his shoulder, so firmly this time as to bring him to a stand-still.

'I want to see Miss Martial,' said Hiram.

'Remove your hand, sir,' returned Garling coldly.—Hiram for sole answer moved him a little to and fro, as though to hint his own preparedness to shake a favourable answer out of him.—'Officer!' said Garling. A policeman paused in passing. 'This person annoys me.' It was so icily done, with a self-possession so perfect, that for a second Hiram was confounded, and he permitted Garling to withdraw himself and walk on. His perplexity lasted for a second only, and he followed at an easy pace, satisfied for the present to allow the cashier a start of ten or a dozen yards. Garling, looking not to right or left, went calmly on, with his hands clasped behind him, as his habit was, and Hiram followed him. Garling, with his wry forbidding smile bent downwards, surrendered his visitor as vanquished, and betook himself to thoughts of other things.

'Where you go, I go,' said Hiram quietly within himself. 'I'll have somethin' out of you afore I've done, as sure as water's wet.' Threading in and out among the passengers, he pursued the figure in front, and never took his eyes from it. Garling moved aside for nobody, but walked slowly, as though in green meadows, with not a soul in view, and everybody made way for him—which is the triumph of your impassive and unyielding men. Along Fleet Street, up Ludgate Hill, through St Paul's Churchyard, Hiram followed, and by this time treading pretty close on Garling's heels, pursued him into quiet Gresham Street.

'Mr Garling,' said a man in passing.

'Yes,' said Garling, walking on.

The man turned and walked with him. 'The Emerald Isle sails this evening; but the whole

consignment cannot be completed until to-morrow. Shall we send part by the *Emerald Isle*, or keep it all for the *Ohio*, which sails on Wednesday?

'Keep it for Wednesday,' answered Garling, without looking round or pausing in his walk. It was wonderful how for twenty years this chill abstracted manner had kept everybody about the House of Lumby and Lumby in awe of him.

'You've got two names, have you?' thought Hiram. 'That's a pull, to begin with.' The clerk who had addressed Garling had the air and manner of a gentleman, and the profound respect of his approach implied a high authority in the man he spoke to. At the wide door of the offices, the porter saluted Garling and received no response. On each side of the entrance was a small brass plate bearing the simple inscription, 'Lumby and Lumby.' The name struck a clear note in Hiram's memory. It was a man bearing that name who had lifted him out of the Slough of Despond less than half a year ago. He followed Garling, and no man spoke to him. The cashier had ceased to think of him; and if he noted the footsteps behind him at all, he took them for those of an employé of the House. And Hiram followed Garling so calmly, the clerks supposed that Garling knew of him, and had brought him to the office. Up-stairs and along a corridor, and then through a little door went the cashier; and Hiram pursued leisurely. At the sound of Hiram's entering footsteps, Garling turned. A flash of surprise passed over his face and left it calm again. He rang the bell; and a clerk came in response to it.

'Bring a policeman,' said the cashier calmly.

The clerk, with a glance at Hiram, retired.

'I am not alarmed,' said Hiram quietly; 'an' now we air here alone, we can have it out together quiet and comfortable; can't we, mister? Very well then. Here's the case as it stands. Your cards air these: You've got the little gell in your own hands, an' you're her father. My cards air: That you married in a false name; that you let the wife of your bosom starve to death if it hadn't been for the cherity o' strangers; an' that you air open to a charge of abduction. Honest folks don't kerry aliases, Mr Garling-Martial or Martial-Garling, or what your name is. While you're calling for a policeman, you'd best give a wholesale order, an' have enough to take the pair of us. I charge you with abduction. If you have a right to the little gell, you have to prove it. You can establish your claim, mister, by admitting an illegal marriage.'

This was a bold shot; but it hit the very white of Hiram's expectations. A gray hue crept cloudily over the natural colours of Garling's face, and he fixed a deadly glance on Hiram.

'Look as ugly as you can, mister,' said the unwelcome visitor calmly. 'Nature's hand has been bountiful in that direction.—Walk in, officer.'

'Wait down-stairs,' said Garling to the policeman, standing in the doorway.—'What do you want of me, when all is said?' he asked of Hiram.

'I want my plighted wife, Miss Mary Martial, out of your wicked clutches,' he responded.

'If I refuse to surrender her?' asked Garling.

'Then I go to the first police court,' returned Hiram, 'an' charge you with abduction by force.'

'What proof have you that she came unwillingly?'

'A letter in her own handwritin'.'

'Will you show me that letter?'

'Yes,' said Hiram; 'I will hold it up afore you. But if you offer to lay a hand on it, I shall prob'ly twist your wicked head off.' He held up the note, and Garling read it.

'What position have you to maintain a wife?' he asked.

'That is not the point,' said Hiram, folding up the letter. 'I've got the whip-hand, Mr Martial, an' I'm goin' to exercise my power, Mr Garling. Get up. You don't want Lumby an' Lumby to know your villainies, you hoary-headed reprobate.' Another shaft discharged at half hap-hazard; but it entered Garling's heart, and Hiram saw it, impassive as he was to look at. 'High in the confidence of a respectable British house, 'taint wholesome to be foolin' round, marryin' onder false names, an' starvin' wives, an' abductin' gells!'

How much, thought Garling, did the man know? How much was guess-work? He was too dangerous to be trifled with. 'Come to the point,' said Garling. 'What do you want me to do?'

'I want you to come now, without a minute's loss, an' surrender Miss Mary Martial to my care. An' if you delay one minute by the clock, I bring my charge.'

'Come with me,' said Garling, rising; and they left the room together.

'What horrible mystery is here?' said the head of the great firm, sitting white and wonder-stricken in the next apartment. Every word had reached him. '*Garling* under an alias. *GARLING!*' Incredible! 'Married? Left his wife to starve?' Incredible again. And true, for he himself admitted it.

LITERARY LARCENY.

Not long ago, an expeditious rascal stole a transcript of the *De Consolatione* of Boethius, 'the last of the classics,' from the Vatican, and within a few hours sold it to another library in Rome. This rapid act of theft and barter was not the work of an ordinary thief, we may be sure. No one ever heard of a burglar ransacking a library; its treasures are not fish for his accommodating net. There are indeed petty rogues who lighten the railway book-stalls, and for whom the dealer in second-hand books lies in wait behind the open shelves within reach of every street-lounger's fingers; but, as a rule, books are caviare alike to the professional thief and the 'fence,' but for whom his occupation would be gone.

Nothing comes amiss to the soldier when looting is the order of the day. In the general scramble for plunder, he takes anything ready to his hand, as heedless of its worth or worthlessness as Bardolph, when he stole a lute-case, bore it twelve leagues and sold it for three-halfpence. One of the few surviving relics of the ancient library of Peterborough Cathedral is the *Chronicle* of Hugo Candidus, rescued from the clutches of a marauding soldier of the Commonwealth, who, giving up his prize on the payment of ten

shillings for its ransom, wrote on the fly-leaf: 'I pray you let this Scripture Book alone, for he hath paid me for it; therefore, I would desire you to let it alone. By me, Henry Topclyffe, souldier under Captain Cromwell; therefore, I pray let it alone, HENRY TOPCLYFFE.'

Better aware of the value of such things was Captain Silas Taylor, who 'garbled' the library of Worcester Cathedral; that is, culled from it whatever he had a mind to appropriate. Among the treasures he carried away was the original grant of King Edgar; which he afterwards offered to sell to King Charles II. for a hundred and twenty pounds; but His Majesty not being inclined to pay the price, the precious document remained in the Captain's possession until, evil days coming upon him, his belongings were seized by his creditors. Then Aubrey tried hard to persuade the prebends of the cathedral to purchase it back; but, says he, 'they cared not for such things; and I believe it hath wrapt herrings by this time.'

During the first hubbub of the Restoration, certain persons made a turbulent entry into the office of the Commissioners of Lands, in Lambeth Palace, and ransacked the records kept there, not a little to their diminution. Half a century later, Archbishop Parker's *De Antiquitate Britannicæ Ecclesiæ* disappeared from the shelves of the Palace Library, finding its way home again in 1757, as a gift from the Bishop of Durham; an honest acquisition to the archiepiscopal collection than certain manuscripts brought from the collegiate house of the Greek Patriarch of Jerusalem, under the pretence of examining and collating them, but never returned to their proper abiding-place.

If the cathedral libraries have suffered much from depredators, it is principally by reason of the carelessness or dishonesty of their official custodians. Concerning that of Lincoln, bibliographically famous for the books it does not possess, Edwards writes: 'The chief spoliator was so proud of his booty, that he took pains to commemorate the transaction as well as to turn it to profit. Among the choice volumes enumerated in "The Lincoln Nosegay, beyng a brefe table of certain bokes in the possession of Maister Thomas Frognell Dibdin, Clerke, which bokes be to be sold to him who shal give the moste for the same," are Caxton's *Dictes and Saynges of Philosophres*, his *Chronicles of England*, his *Cathon*, Pynson's *New Cronycles of England and of France*, the Edinburgh Bible of 1579, and a curious series of Tracts in early-English printing—all part of the collection of Michael Honeywood, Dean of Lincoln in the middle of the seventeenth century, the great restorer of the cathedral library.' The depletion of the library was commenced before Master Dibdin's day, the Dean and Chapter having disposed of numbers of old books to raise the wherewithal to purchase more modern works; while the vergers had long been in the

habit of cutting illuminations out of manuscripts, to sell to visitors. This practice was also in vogue at the Leicester Free Library, where a valuable Arabic manuscript, a manuscript Latin Bible, and a copy of Purchas's *Voyages* were bartered away piecemeal.

'What matter a few dirty black-letter leaves picked out of a volume of miscellaneous trash—leaves which the owner never knew he had, and cannot miss—which he would not know the value of, had you told him of them?' is the conscience-salving question the author of *The Book-hunter* ascribes to mutilating biblioklepts; as though they confined their operations to robbing ignorant and non-appreciative book-owners, which is by no means the case. Aynon cut fifteen leaves out of Charles the Bold's famous Bible of St Denis, two of which were afterwards recovered, the other thirteen figuring among the Harleian Manuscripts in the British Museum. Vespasiano, librarian to Duke Frederick of Urbino, was not providing against imaginary dangers in laying it down that a librarian 'must preserve the books from damp and vermin, as well as from the hands of trifling, ignorant, dirty, and tasteless persons. To those of authority and learning, he ought himself to exhibit the books with all facility; courteously explaining their beauty and remarkable characteristics, the handwriting and miniatures, but observant that such abstract no leaves.'

Men of learning might well come under the Italian librarian's suspicion, or bibliomania have been terribly belied. Aubrey accuses Dr Thorndyke of filching Camden's Autobiography from him as he lay dying. Pinelli was credited with obtaining many of his most valued literary curiosities by the skilful use of his fingers. Monsignor Pamphilio was detected by Du Montier slipping that collector's cherished copy of the London edition of *L'Histoire du Concile de Trente* under his robe; whereupon the angry painter seizing hold of the thief, shook him until the stolen book fell at his feet, to be picked up by its owner, ere he showed the future pope his way out in a very summary and ignoble fashion. More, Bishop of Ely, was charged with enriching his collection of books by plundering the libraries of the clergy of his diocese, paying some with more modern works, some with sermons, and some in no way at all. It was a friend of the prelate who, being caught by a visitor in the act of putting a rare volume under lock and key, explained that the Bishop of Ely was coming to dine with him that day. When Sir Robert South wrote to Sir Robert Cotton to appoint a meeting between him and the founder of Oxford's famous library, he thought it necessary to caution his friend not to leave any valuable books of portable dimensions lying about within Sir Thomas Bodley's reach. Under the pretext of verifying certain statements of Camden, Cotton got possession of sundry public papers, and then successfully resisted all the efforts of their proper custodians to obtain their return. Remembering this, when Agarde, the keeper of the Exchequer Records, died somewhat suddenly,

the keeper of His Majesty's Papers and Records wrote Sir Ralph Winwood that Cotton would be sure to seize upon all the dead official's papers, if not anticipated by a prohibitory warrant.

Cotton's aptitude for appropriating state documents was shared by many a man of note and name. In James I.'s reign, Lord Carew borrowed four books of Irish records from the State Paper Office, and returned but three; and Lord Suffolk held fast to two boxes full of important documents. Milton not only helped himself to the records at Whitehall, but allowed Bradshaw, Thurloe, and others to do the same so freely, that upon Raymond entering upon his duties at the Restoration, he reported that many books, papers, treatises, and records were missing, while none of the state papers of the Commonwealth were to be found. Sir Samuel Morland informed a certain great minister that John Thurloe had four great chests full of papers in his possession; but the minister delayed issuing an order for their seizure, 'for reasons to be judged; and then Thurloe had time to burn them that would have hanged a great many, it is thought, if they had been suffered to speak; and he did certainly burn them all except some principal ones culled out by himself.' A warrant was issued when too late, giving Raymond authority to seize any state papers wherever he could find them. Lord Gerard's Life-guards brought some to light when they attached Bradshaw's goods; but the greater portion of the lost property was beyond recovery. In later days, Lord Shelburne, Lord Egremont, and General Conway, plundered the State Paper Office of various volumes, foreign papers, and the records of Frobenius's Voyages; and Henry VIII.'s papers were appropriated by Lords Cherbury and St Albans.

An essayist of the last century did not scruple to aver that if the libraries and cabinets of collectors were stripped of their borrowed ornaments, many of them would have nothing to show but empty drawers and bare shelves. He professed to know a literary virtuoso who piqued himself upon his collection of scarce editions and original manuscripts, most of which he had purloined from the libraries of others. He was always borrowing books of acquaintances with a resolution never to return them; sending in a great hurry for a particular edition, which he wanted to consult for a moment; but when its return was solicited, he was not at home; or he had lent the book to somebody else; or he could not lay his hand upon it just then; or he had lost it; or he had himself already delivered it to the owner. Sometimes he contented himself with stealing one volume of a set, knowing where to procure the rest for a trifle. After his death, his library was sold by auction, and many of his defrauded friends had the pleasure of buying their own property back again at an exorbitant price.

A little later on, a writer in the *Gentleman's Magazine* commenting on Gough's insinuations against the honesty of Rawlinson and Umfreville, says: 'One might point out enough light-fingered antiquarians of the present age to render such a charge extremely probable against earlier ones.' We would hope that the bibliophiles of our own time are not equally oblivious of the distinction between mine and thine; but one who should

know them well deposes: 'Some collectors have a propensity to obtain articles without value given for them—a culmination of a sort of lax morality apt to grow out of the habits and traditions of the class. Your true collector considers himself a finder, a discoverer, rather than a purchaser; and it is the essence of his skill to find value in those things which in the eye of the ordinary possessor are really worthless. From estimating them at little value, paying little for them, the steps are rather too short to estimating them at nothing, and paying nothing for them.'

Possibly, it is only scandal after all. If it be a true bill, the over-fond lovers of rarities of the press have been lucky in not being brought to book for their knaveries. Don Vincente, the Barcelonese priest, did indeed pay the penalty; but he was a man of many murders, as well as a man of many books; it being his way to sell a rare volume, and regain it again by putting a dagger in the purchaser's heart. Outbidden in a competition for a copy of *Ordinacions per los Gloriosos Reys de Aragon*, he strangled the buyer in his own shop three days afterwards, and by adding arson to murder, prevented his crime being even suspected. It had been plain to the authorities for some time that the dagger-slain men whose bodies were found in river, street, and ditch, had not come to their deaths accidentally; hence, after this additional case of strangling, the police set about searching every house in the city, and when they lighted upon the *Ordinacions* in Don Vincente's possession, their quest was ended. He at once confessed everything, and was duly arrested and arraigned. At the trial, his counsel argued that the confession was false, and that his client had got his books honestly; meeting the objection that one of them, printed in 1482 by Lambert Palmart, being unique, must have been stolen from a certain library, by proving that there was a copy in the Louvre; whereupon the accused exclaimed that he was a miserable man. 'It is never too late to repent,' said the Alcalde, thinking the priest had come to a proper sense of his crime; a belief quickly dispelled by the incorrigible bibliomaniac's reply: 'Ah, Signor Alcalde, my error was great indeed; my copy was not unique!'

The powers that be are privileged to despoil private individuals in the public interest; so we must not say the Ptolemies practised book-stealing by wholesale, when they compelled passengers on board vessels touching at Alexandria, to surrender their literary belongings for the enrichment of that city's library. At anyrate, their intentions were more honourable than those of the Spanish and Italian monks who overran Bohemia after the Thirty Years' War, and who were commissioned to enter the houses of heretics and carry away every Hussite book they could find; a commission so thoroughly executed, that one of them was able to boast that he had seized and destroyed sixty thousand volumes. How many priceless examples of Bohemia's ancient literature thus perished, none can tell. The destruction then wrought made any relic of it so precious, that the directors of the National Museum at Prague were much elated by the receipt, in 1813, of a manuscript of four pages, with a note from the anonymous

donor, stating that it had been discovered by him in the archives of the house he served; and knowing it would be destroyed if its owner became aware of its existence, he had sent it to the Museum, to secure its preservation. It proved to be *The Judgment of Libussa*, a poem of the eighth century, and the most ancient relic of Slavonic literature extant. It was afterwards ascertained that the patriotic sender was Hovar, steward to Count Colloredo Mansfeld, at Zelena Hora, who deserves to be remembered as the perpetrator of a most praiseworthy theft.

PAVEMENT PORTRAITS.

A HOUSEKEEPER.

ALONG the Strand, a living stream of human beings is for ever pouring. Of all the many streets with which I am acquainted, I know none which is so full of never-ceasing vitality as that leading from Charing Cross to Fleet Street. The tide of human life in this thoroughfare ebbs and flows, but it never runs out altogether. In most streets there is a period during every four-and-twenty hours when 'nature seems dead,' and not a soul is to be seen; but not so in the Strand. There are always people moving along sufficient to show that it is an active human watercourse, as little likely as its neighbour the Thames to be drained of its stream.

North and south of the Strand run, at right angles to the parent river, so to speak, numerous small rivulets, which in their sluggish quiet, their dull demureness, their contrast in these respects to the main thoroughfare, may be likened to the sleepy back-waters or the tame little tributaries of a great tidal way on which sea-going ships are borne. And as men tired of a long day's rowing, turn their boats up back-waters and tributaries, and pitch their tents on the shore, 'far from the madding crowd,' so on each side of these drowsy streets are encampments of men who are daily factors in the turbulent tide of London life. Here, in short, are to be found in abundance chambers and the class of men who live therein; and in this region flourishes also that unique specimen of womankind the Housekeeper, the Platonic squaw in the social Indian's wigwam. What my housekeeper—that is to say, the good woman whose grandson I rescued one bitter morning in January from being run over by a Pickford's van in Bedford Street, Strand—would say to being called a 'squaw,' I hardly dare to conceive; so I will not attempt to imagine her feelings under such circumstances, but will describe her person as she appeared when first I saw her.

The little boy—the one who nearly fell a victim to the van—was standing on the great square doorstep of a house consisting entirely of chambers. He was going off to school, as the slate under his arm bore evidence; and an elderly female was on her knees adjusting his comforter round his neck, and rubbing his face with a whity-brown handkerchief. The operation over, the elderly female gave the boy a good loud smacking kiss on the cheek and a pat on the back, and so started him off; and a moment after, I had seized him, and, as I have intimated above, prevented what perhaps may prove

to be a remarkable career from being cut short on the threshold by an unexpected and carelessly-driven van. The incident was over in a few seconds, and the boy was restored to the arms of the housekeeper, who promptly spanked him, and drove him sobbing up-stairs, and then turned to thank me. That was how I came to know my housekeeper.

About five feet six in height, this woman, clothed in black bombazine, resembled an exaggerated extinguisher in shape and colour. She had a fair circumference at the hem of her dress, a smaller one at the waist, a still more restricted circle at the shoulders, and a regular little knob of faded black ribbon and lace at the top of her head. The face under the cap was corrugated with conflicting emotions: joy at the escape of the child, anger at his having run into danger, and gratitude to me for saving him. It was difficult to say which feeling was uppermost, until the housekeeper spoke.

'Indeed, sir,' she said, with a strong, very strong, Cockney accent, 'if it 'adn't been for you, 'e'd 'ave been run over; an' run over 'e will be, as sure as ever I'm a-standin' 'ere, one o' these days. Them boys, they never looks which way they're a-going; an' it's a marvel to me as many more on 'em than is isn't run over wi' them vans a-careerin' about the place in that shameful way. I've no patience wi' them.' Then the bombazine extinguisher turned and disappeared at the far end of a dusty passage, where was a staircase leading to the chambers, and dissolved in the murky gloom of the corridor, as if she were but a 'pilgrim shadow,' instead of a very solid housekeeper.

Shortly after this—my first—interview with the housekeeper, I became acquainted with the interior of the house wherein she lived, through a friend of mine taking chambers there; and in time I grew quite intimate with her. In the course of many talks I had with her, I discovered that the housekeeper was, in her way, a curiosity; a sort of crystallised Cockney, whose mind, instead of being 'widened' by the surrounding influence of the 'thoughts which shake mankind,' affecting all great cities—London particularly—had become 'fossilised' by the conditions under which she lived; stifled by dusters, bounded by brooms, and circumscribed by the very narrow circle within which the home wants of half-a-dozen Bohemian bachelors are contained. Her ideas were limited to bed-making, breakfast-preparing, and tea-finding for 'her gentlemen,' as she called the lodgers. Her sympathies were confined to the welfare or otherwise of these unconscious objects of her solicitude; her affections were concentrated on her only unmarried daughter, a young woman of somewhat flighty disposition; on her little grandson Tommy, who seemed to prefer living with grandma to living with his parents; and, in a mild way, on her husband, a gentleman whose region seemed to be the coal-cellar.

The last-named object of the housekeeper's interest was frequently alluded to by her in a half-contemptuous way as 'that man.' He was described as being 'no good' whatever, and certainly no ornament. He was said to be 'past work,' and a great sufferer from 'wind round the 'art;' but whenever Mr Wentletrap's physical

infirmities were mentioned, his wife would inform me, with proud satisfaction in her tone, that there was one thing about Wentletrap with which she had reason to be gratified, and that was, that she had made him keep up his 'club,' although he had long since given up regular work, so that, 'come what might, she would 'ave twenty pound to bury 'im with.' This interesting fact was told me several times, on occasions when the wind round the heart was unusually bad.

The housekeeper is entirely of the town, and knows nothing of country. She has never seen the sea, though she once thought of going to Margate by boat. Her ideas of rural scenery are gathered from Kennington and Peckham Rye, to both of which places she has, to my personal knowledge, made journeys at very long intervals, arrayed in a violet merino dress trimmed with blue bows, a black velvet jacket, a pair of one of the gentlemen's cast-off dogskin gloves, and a chip-straw bonnet adorned with a bunch of cherries. These trips have been planned with infinite pains, and carried out with indomitable perseverance; and they have resulted on each occasion in a bunch of hot-stalked drooping flowers—in which 'old-man' and sweet-william have predominated—and a violent headache.

The duties of the housekeeper are performed with rigorous punctuality and praiseworthy completeness. The nature of those six gentlemen whom she serves demands these characteristics in their somewhat aged landlady, and I can testify to the faithful way in which she serves them.

Her pleasures are few. The annual 'show' of the Lord Mayor, as it moves along the Strand to Westminster, is the principal excitement of the year; and this, with an occasional visit to the pit of a theatre—the Adelphi, which once boasted of Toole and Paul Bedford, for choice—constitutes pretty nearly all that the housekeeper enjoys of amusement. But even theatres are among those things which, owing to her somewhat weak constitution, she is not able often to indulge in. She one day told me that she was not like other people; she wished she was; but she had much to contend with in being burdened with an imperfect digestion, which interfered greatly with her pleasures in life. For instance, she could not go *properly* to theatres; and upon my asking why she was not able to go to such places with as great propriety as the rest of the world, the housekeeper caught up her apron by the hem, along which she drew the thumb and forefinger of her right hand as she answered, slowly and emphatically: 'Because I can't eat oranges like other people. I'm very fond o' them; but they lay so cold inside!'

If the housekeeper's pleasures are few, her pains are many. What with a 'crick' in the back, a 'stitch' in the side, 'spasms' in the chest, 'shooting-pains' in the head, she is hardly ever free from one or more of the ills that flesh is heir to. But with all these afflictions, the victim is, as she has told me herself, the soberest of women that ever stepped. She does not permit her ailments to drive her to alcohol. She is not like that dreadful woman who looks after the chambers over the way, where the gentlemen cannot call their liquor their own, and where they are fortunate if they find any in their sideboards. She don't do such things.

She don't boast of her abstinence. O dear, no! It is inclination, as much as anything else, which makes her abstain. She 'ardly knows one 'sperrit' from another, and she 'ates 'em all.'

Mrs Wentletrap dearly loves a gossip. If my friend is not at home when I call, down the stairs at the sound of my knock, from her own suite of apartments under the slates, comes the housekeeper, ostensibly to receive any message, but really to tell me how Carry, her daughter, is going to be married; how Tommy, her grandson, will go and play with a 'rabble o' boys' on Charing Cross Bridge; how Mr Wentletrap could not get the scuttle higher than the second floor this afternoon 'because o' the wind;' or, far above all these minor matters, how her own 'cricks,' 'stitches,' and 'spasms' have 'worrited' her of late.

She honours me with her confidence; and I am sure I ought to have felt very proud when one day I was actually invited to the housekeeper's attic, there to have a cup of tea. While I was resting myself, Mrs Wentletrap began to talk of her early life. I confess I did not pay much attention to the incidents which she was relating, until, whisking a cloth from off an immense glass shade under which any number of dingy stuffed humming-birds dolefully spread their dusty wings, she suddenly said: 'An' that I 'ave seen better days, I know you will believe when you look at *them*!' Willing to accept the testimony of the birds—or rather, unwilling to doubt the word of the housekeeper—I assented to the probable former existence of the 'better days;' and then the housekeeper sat down on a chair and, looking me earnestly in the face, said: 'I fear, sir, I'm not long for this world. Do you know, I've actually got a new pain! Can you tell me what it means? It's a guzzling!'

'A what?' said I, almost unmed. hbra.
'A guzzling, sir; the about I doubt in that; an' I think it means mis. med that
'Where is it?' I asked. too late
'Ah! there's where it's at, sir; I c^d/the pre say where it is; but all I know is, that it's laid 'old o' the in'ards, an' there it'll stop.'

And so ended my last confidential conversation with the worthy housekeeper.

SECRETS OF SUCCESS.

DEMOSTHENES, when trying to encourage the Athenians in the defence of their country, speaking of Philip, said: 'And again, should anything happen to him; should Fortune, which still takes better care of us than we of ourselves, be good enough to accomplish this; observe, that being on the spot, you would step in while things were in confusion, and manage them as you pleased; but as you now are, though occasion offered Amphipolis, you would not be in a position to accept it, with neither forces nor counsels at hand.' His translator adds: 'Important advice this to men in all relations of life; good luck is for those who are in a position to avail themselves of it.'

If we accept this advice, we find the theory of waiting our turn, or sitting still till Fortune shall throw the prize into our lap, a mistake. We hear men exclaim: 'Well, I can't help it.

What is to be, will be.' Or again: 'It must take its chance.' In these cases, we are afraid the chances are very much against success.

To be successful, nothing should daunt us. If we persevere, determined to succeed, we shall be continually finding help and assistance where we least expect it. When all our efforts fail, and we are sunk to the very brink of despair, Providence steps in, and bids us hope again. Perhaps we can make our meaning more apparent by an illustration. A young man who had adopted literature as a profession, was walking sadly along the streets of Paris, determined to rid himself of his life. Through great privations and hardships had he struggled and persevered, but without avail; success would not attend him, and he had determined to die. As he slowly and sadly pursued his way to the riverside, rain began to fall, and unconsciously he paused beneath a portico until it should cease. Standing by his side, was another, who likewise sought shelter from the storm. As they waited silently together, a portion of the brickwork above them gave way, and the companion of the would-be suicide was struck dead. The magnitude of his contemplated crime came forcibly before the young man's mind, as he saw how wonderfully the hand of Providence had preserved him. Accepting it both as a warning and an encouragement, he started home with renewed vigour and a fresh determination to succeed. He is now one of the greatest of French dramatists.

We will give another illustration, to show how important it is that we should watch for and seize upon small opportunities, without waiting for the time that shall require a mighty effort—a time that may never come. A young man had travelled on foot many weary miles to reach a free college. Arriving at his destination, he told his story, and asked for admittance. But the place was already full. Not liking to tell him plainly in words, the superior filled a glass so full of water that not another drop could be added, and silently held it towards the young man. He understood the sign too well, and turned sadly away. But a moment afterwards his face cleared, and stooping, he picked up a withered leaf; this he carried back, and placed on the surface of the water. The incident was his salvation; for he was at once admitted into the institution. We are here taught that nothing, however formidable it may appear, should daunt us in our way through life; for of a surety, man's extremity is God's opportunity.

Another secret of success is a proper appreciation of the value of time. Samuel Johnson tells us: 'He that hopes to look back hereafter with satisfaction upon past years, must learn to know the present value of single moments, and endeavour to let no particle of time fall useless to the ground.' A learned gentleman who had to wait at a railway station for a train was heard to exclaim: 'Ten minutes lost for ever!' Here is one of the greatest secrets, we had almost said the secret of success. Time waits for no man; therefore should we seize upon every moment for profit. Often, whilst contemplating an action, men will say: 'I must do this, or that, when I have time;' but the time never comes, unless they are determined to find it; for there is nothing in life that men could not find an excuse

for neglecting, were they not compelled by interest or necessity to find the time to do it.

Again, there are men who start in life with every chance of success; surrounded by able and willing friends, with all possible advantages to insure their success, who yet remain in the position they were first placed in; or more frequently, letting slip all the precious advantages they have possessed, eventually become objects of charity—pursued to this end, as they would say, by their evil destiny. And all this without any outward or perceptible fault. There are no signs of substance wasted in riotous living, nor any apparent neglect of business. This, when first looked at, appears very mysterious; but when considered for a moment, it becomes apparent that here there has been no aptitude for seizing the favours of Fortune, no valuation of precious moments, but an easy and fatal faith that all must be well with them.

Another great secret of success is confidence in our own powers; for if we do not believe in ourselves, how can we possibly expect that others will believe in us! A man may have every attribute for success, and yet remain 'a nobody' for life, for want of confidence in his own powers—an over-diffidence, standing silently in the background, when he should come forward to be seen and heard. Such a one will find his want of confidence increased as time passes, until at length there will be such a wide chasm between him and his fellows, that he will find it impossible to cross.

'Waste not, want not,' is an old maxim we will touch lightly upon; not that we think it of least importance. On the contrary, we believe it is one of the most important things of life that we should use carefully the gifts Providence has so bountifully bestowed. There is no greater sin than for a man willfully to waste his substance, as what is unnecessary for his own existence might prove life to others. Bishop Beveridge made such a good rule for his own guidance in these matters, that we may safely term it one of the secrets we are seeking. He determined 'never to spend a penny where it could be better spared, nor to spare it where it could be better spent.' There is no parsimonious spirit shown here; it is simply a practical spending or saving as is really required, and should be well borne in mind by all.

Another great secret of success is the choice of a good wife. Lord Burleigh, in his advice to his son, amongst other things said: 'Use great circumspection in choosing thy wife, for from thence will spring all good or evil; and it is an action of life like unto a stratagem of war, wherein a man can err but once. Inquire diligently of her disposition, and how her parents have been inclined in their youth—neither make choice of a fool; for she will be thy continual disgrace; for then shalt thou find it to thy great grief that nothing is more fulsome than a she-fool.'

There is much truth in the observation that men are what women make them. Although a man need not be subject in any slavish sense to his wife, still he is not unlikely to be influenced by her in some way or other; and fortunate indeed is he who obtains the help meet for him—a loving, careful partner, full of sympathy

and encouragement, smoothing cares and chasing clouds away. How great is the work of our wives!

After all these elements of success, we are still doubtful if the real secret has yet been mentioned. Izaak Walton says: 'Let me tell you, there be many that have forty times our estate, that would give the greatest part of it to be healthful and cheerful like us. I have a rich neighbour who is always so busy that he has no leisure to laugh. The whole business of his life is to get money and more money, that he may still get more and more money. He is still drudging on, and says that Solomon says, "The diligent hand maketh rich;" and it is true indeed; but he considers not that it is not necessarily in the power of riches to make a man happy; for it was wisely said by a man of great observation, that there be as many miseries beyond riches as on this side them.' And in another place he tells us: 'My advice is, that you be honestly rich, or contentedly poor; but be sure your riches be justly got, or you spoil all; for it is well said: He that loses his conscience has nothing left that is worth keeping.'

These beautifully expressed sentiments of the learned philosopher lead us to ask: Is the true success of life to be gained or looked for in position? Can the man who has successfully traversed the distance between poverty and riches, who has risen from obscurity to fame, be counted successful? We think not, if he lack that greatest of all earthly blessings, Contentment. While it is the duty of every one to endeavour to earn an honest independence, those who fail to achieve riches may still apply to themselves the saying of Richard Lucas, that 'a man may be virtuous though not wealthy; and that that fortune which prevents him from being rich cannot prevent him from being happy.'

SOME CURIOUS SUPERSCRPTIONS.

Nor the least interesting of the many postal curiosities to which the newspapers from time to time give publicity, are those relating to addresses on letters; and it occurred to the present writer, after reading the pleasantly written article on Curious Epistles in a recent number of this *Journal*, that possibly a few selections from his collection of curious superscriptions might interest the reader.

While performing at Bolton in September 1802, Hay, the comedian, received a letter from Charles Dibdin, which bore the following address:

Postman, take this sheet away,
And carry it to Mr Hay;
And whether you ride mare or colt on,
Stop at the Theatre, Bolton;
If in what county you inquire,
Merely mention Lancashire.

A letter bearing the following address was received at the office of the *Newcastle Weekly Chronicle*, in February 1880:

To Uncle Toby this missive is sent,
And I'm sure the penny is very well spent.
The weekly newspaper, the *Chronicle* named,
Is in Newcastle and through England famed.
Mr Editor this to mine uncle will give,
And I heartily hope that both may long live.

'Uncle Toby,' it may be well to explain, is the

assumed name of the conductor of the 'Children's Corner' in the paper mentioned.

Shortly previous to the arrival of the above, a communication addressed as under reached the same office:

To Newcastle I want to go;
And, now Post-office dearies,
You'll hand me gently, I trow,
To Editor of 'Notes and Queries.'

Some curious examples were published in the *Chromolithograph* in 1868; these among others:

'Mr —, Travelling Band, one of the Four playing in the street, Persha [Pershore], Worcestershire. Please to find him if possible.'

'E. R —, a cook as lived temperry with a Mrs L —, or some such name, a shoemaker in Castle Street, about No. — Hobern, in 1851. Try to make this out. She is a Welsh person about 5 feet 1 stoutish. Lives in service some ware in London or nabourede London.'

'This is for her that maks dresses for ladies, that livs at tother side of rode to James Brocklip, Edensover, Chesterfield.'

'This is for the young girl that wears spectacles, who minds two babies. 30 Sherif Street, off Prince Edward Street, Liverpool.'

The wag who sent an epistle to 'The biggest fool in the world, Tunbridge,' had little thought, we may be sure, that it would thus be endorsed: 'The Postmaster of Tunbridge cannot decide to whom he should deliver this, as he does not know the writer.'

It is related in an old almanac that at the end of last century a gentleman wrote a letter to a lady of rank in London, addressed thus: 'To the 25th of March, Foley Place, London.' It was delivered in due course at the residence of Lady Day. A glance at the calendar will show that Lady-Day is celebrated on the 25th March.

Two or three years ago, a gentleman at Ayr received a letter the envelope of which had these lines:

Awa tae auld Scotland, and speer for John Graeme,
It's a wide direction, but a weel kent name,
In the New Town o' Ayr, at the auld Brig-en';
He sells a drap whisky—but the postman will ken—
And if ye should fin' him, as I've nae doot you will,
I'm certain he'll no grudge the postman a gill.

An old 'postie,' of Chepstow, Monmouthshire, informs us that he once delivered a letter with this address:

Postman, my hearty,
Use the uttermost dispatch
In taking this letter
To the Inn Bonny Thatch.

John Kitchen the Landlord
A fine old English Host,
Good Cheer was his motto,
Good Ale was his boast.

On Tutshill, near Chepstow,
On the banks of the Wye,
You will find it with ease,
So, old fellow, good-bye.

We are further informed that an epistle having the following duly reached its destination:

Postman, this missive which I send,
Is for a tried and valued friend;

- From England's shores to Ireland's nation—
Mark well the place of destination.
The name is Bird, you'll find the pair,
And young ones, too, in Mountjoy Square,
The number, seven, all snug and neat.
You'll find the nest in Emmett's Street.
- So now to Dublin haste away,
And find the Birds without delay;
They'll clap their wings, and sweetly smile
A welcome to the Emerald Isle.

About the year 1850, a Mr Carver was the recipient of a communication from Nottinghamshire bearing these lines. They were published in the *Leeds Mercury* at the time :

I request, Mr Postman, this letter you'll send
To George Carver, my brother, a trusty old friend;
He makes bricks and tiles without straw or stubble,
Free from Egyptian bondage, tho' not without trouble.
At Denton, near Otley, in Yorkshire, you'll find him;
The postage is paid, you have no cause to mind him.

One other example, and that the latest that has come under our notice. In June last, the following amusing address on an envelope passed through the Lochee post-office :

Wake up! my bauld Postie o' Bonnie Dundee,
Gather up your auld traps an' mak' aff for Lochee,
By Camperdown Wood an' by Gourdle's stey brae;
Nor linger at Mackie's druin-shop by the way.
Like a flash o' greased lightnin' leave Fowls far behind,
But at Bell's o' Muirloch you may stop to tak' wind;
Gif the maister's at hame, gie him this like a brick,
And, till I come doon, I'll be awn ye a 'sic'.

A MODEL ESTABLISHMENT.

IN Seymour Street, adjoining Euston Station, London, there are two large buildings where about fifteen hundred pens are kept busily employed from nine to five o'clock—with but an interval of half an hour for dinner—every working day except Saturday, when they cease at one. This is the Railway Clearing House. Few outsiders are aware of the importance of this office to the railway service. It is really an association instituted to enable railway Companies in England and Scotland to carry on without interruption the through-traffic in passengers, animals, minerals, and goods passing over different lines of railways, and to afford to the traffic the same facilities as if the different lines had belonged to one Company. It constitutes an impartial syndicate that decides all ordinary disputes between contending Companies. It is regulated by Act of Parliament, and is conducted by a Committee appointed by the directors of the Companies who are parties to it—each Company being represented by a delegate, and ten delegates forming a quorum. They hold at least four stated meetings in the year, when the accounts of the clearing system and the balances due to and from the several Companies are settled and adjusted, the decision of the Committee on any disputed question being final.

Nor is this all. When traffic of any kind passes over two or more different lines, the receipts are divided and allocated by the Clearing House according to the number of miles belonging to each Company over which it has passed. There are fixed charges called Terminals allowed to the receiving and delivering Companies. To the novice, this may seem exceedingly simple; however, it is far from being so. Perhaps railway A

is allowed a toll of so much per ton; B gets a fraction as per agreement; C's tunnel of half a mile is entitled to a share of three miles of ordinary line; D receives a special rate in virtue of his viaduct; E is the joint property of A, B, C, and D; F has so much extra distance by virtue of what is termed running powers—that is, he has the right of running over a portion of another's line; while G perhaps claims something special, but has not yet had his claim conceded, the amount of which must be deducted, and kept in suspense till the claim is settled by the Committee appointed to dispose of such matters.

The work of the Clearing House is so complex that it could only be accomplished by a division of labour. For this reason, it is divided into 'departments,' such as Goods, Live Stock, Passengers, Parcels, Mileage, and Time. Except the last two, the names of these explain themselves. The Mileage deals with carriages and trucks, each of which is traced by its own number. At every junction where one line joins another Company's, the Clearing House has a 'number-taker' stationed, whose business is to take the numbers of each carriage and truck and forward them to London. Here they are duly posted up, and a careful account kept of the number of days they have been absent, so that the Company which has caused the detention may pay accordingly. But for this system, carriages would often go amissing. As matters are conducted by the Clearing House, there can be no dispute between parties. The Time department keeps an account of the time expended upon work. The office expenses are divided; and Companies pay for clearing according to their receipts and the number of items comprising them. It should be mentioned that in the Goods department, sums under five shillings are not divided in the usual way. The clearing of such small sums in the ordinary way would be too expensive. After the Terminals are deducted, the remainder is thrown into what is called the Light Traffic Fund, and divided at the half-year's end in proportion to the heavy traffic of the Companies interested. The other accounts are almost all monthly, and must be correct to a penny. Even a small discrepancy at the last moment would be sufficient to detain every clerk in the department till found.

It must be evident that only under the strictest discipline could such an establishment be carried on. On entering in the morning, the first thing each clerk does is to sign his name in a book. This book is removed at two minutes past nine, and every name not found there declared late. Of course there is a book for every room. Anybody absenting himself from the office without leave, whether from illness or any other cause, may expect a visit from a doctor during the day. His business is not to give professional advice, but merely to report in the interest of the office. To such as choose to avail themselves of it, there is a Medical Club, with a doctor to attend subscribers. The 'lates' tell when holidays come round. A few lates mean a few holidays lost; whereas if there are none, and no errors registered against him, the clerk is entitled to a day or two more than the usual fortnight. Dinner and tea can be had on the premises. The dining-room is capable of seating

some hundred diners; while the culinary department is capable of providing for a like number. As the premises and coals are provided free, a dinner can be had much cheaper than outside.

In connection with the establishment there is a co-operative society, known as the Clearing House Supply Association, which by judicious management has proved to be a success. Grocery, provision, and a large assortment of other kinds of goods can be bought at a trifle over cost price. To prevent peculation, neither storekeepers nor Dining Club servants are allowed to receive money. There are agents appointed throughout the office, who, for a trifling commission, examine the bills, receipt them and take cash. Tradesmen advertise in the price list, offering furniture and other articles which it would be inexpedient to keep in stock, at a reduction of so much per cent., ranging from five to twenty-five. Almost anything of domestic utility can be had in this way; and so can clothes, books, and jewellery.

Promotion usually goes by seniority, if the clerk, tested by examination, proves himself competent to hold a more responsible position. These examinations vary according to the different grades. The clerk must be over a stated age, or longer than two years in the service, before he can apply to be examined, or at least expect the benefits due to a successful examination. Before entering the service, candidates are put to a pretty severe test as to general abilities, though figures are the speciality. The ulterior examinations are confined to a knowledge of the different lines, and the ten thousand and one regulations and agreements that keep all the Companies of England and Scotland working harmoniously together.

There is an Athletic Club, a Chess Club, and a Dramatic Society. Singing is encouraged by occasional concerts, that supply an evening's healthy recreation, especially in winter, when outdoor exercise is attended with many inconveniences. The most flourishing institution of this kind, however, is the Literary Society, connected with which there is a valuable Library of several thousand approved volumes. The principal daily and weekly newspapers are taken, as well as the higher-class monthly magazines. At one time a clerk held the post of librarian, and gave the books out after office hours; but of late years the Library employs a man wholly. From time to time the Office Committee votes handsome sums for new books; and this, with the readers' subscriptions, keeps the Library stocked with the best and latest productions of the printing-press. The Reading-room is kept open till ten at night.

A few years ago, in conjunction with some of the Companies, a Superannuation Fund was started, on very liberal terms to the employes, who only pay one half of the subscription, the employers paying the other half. This arrangement, as may be supposed, was heartily received by those whom it was intended to benefit. There is also a Contingent Fund, supported by a small subscription, which in case of illness gives assistance for a period of three years.

In such a vast establishment, to apportion the work so that every part of the machine may

have enough to do, while no part is strained to the point of collapse, is a task requiring a considerable amount of discrimination. This falls to an official who is termed the head of a division, and who has from thirty to twice that number of men under him. In most departments, the clerks work in couples, one being an 'account-man,' who has charge of the work. It is his duty to attend to all matters of a pelexing nature, while the assistant is kept at what is straightforward. The duties of each are so clearly defined, that shirking is all but impossible. The lazy man, who cannot manage to do his work during office hours, must come back at night to make up lost time. Every month's work must be completed at the appointed day. Strange as this may seem, the process of dividing various sums is mostly done by mechanical means. A circular piece of cardboard moves within a rim of the same material, on a pivot. On both sides of the circle thus formed, there are figures, arranged to a mathematical scale. The movable circle has a cross-bar, which serves the purpose of a handle. Now, say we wish to divide L.1000 by 100 in the proportions of 60, 30, and 10. It can be done in a moment by turning the handle till 100 on the inside scale is opposite 1000 on the outside. Opposite 60, 30, and 10, the answers are found in decimals. Some of the clerks are ingenious and dexterous enough to make these 'wheels,' as they are called, for themselves.

The management of the whole establishment devolves upon the Secretary, a gentleman of such wide sympathies and kindly manner, that the Committee were fortunate in having obtained the services of one who has now served their interests long and faithfully. Possessed of rare administrative abilities, he is also gifted with the peculiar power of impressing his own individuality upon subordinates; and this contributes in no small degree to the good feeling and concord which reign throughout the office.

SERENADE.

Down is the summer's day,
Faded the sun's last ray,
Silent each singing bird;
Vespers are sung and said,
And, as my path I tread,
Never a sound is heard.

Under the moon's full light—
Holy, and calm, and bright—
Gaze I with loving eyes,
Up to the castle tower;
Where, like a sleeping flower,
Sweetly my lady lies.

Moon, with thy virgin beams,
Silver my lady's dreams,
Silver her dreams to-night;
Thou art the lovers' friend,
Watch over and defend
My love till morning light.

FASHION.

At last there appears to be some reasonable hope that the teachings and warnings of physiologists and physicians to the female sex are beginning to bear fruit. There exist signs and symptoms that internal reform in the matter of fashionable follies is at length being inaugurated. The interest taken in the lectures that have been given by Mr Treves, F.R.C.S., at South Kensington, and that evinced in the exhibition of 'hygienic' clothing, would seem to forebode a hopeful era of reform. The very nature of the subject in question indicates that until the ladies themselves are led to adopt the initiative in inducing hygienic changes in raiment, the efforts of the entire medical faculty will be simply unavailing to correct the grievous errors of dress so prevalent in our day and generation. M. Worth, for instance, is far more powerful, as things are, than the College of Physicians; and the flats of a fashionable bootmaker or corset manufacturer are supreme, when compared with the expostulations of the physiologist. The hopelessness of the fight against fashion has of course long been recognised. If, therefore, the health-reformers succeed in enlisting the votaries of fashion on their side, we may not require to look in vain for very sweeping dress-reforms, and for a return, if not to a simpler, at least to a healthier style of clothing.

The truths, palatable or the reverse, that have been expounded by Mr Treves, are anything but new. For years past, every school manual of physiology has taught, directly or indirectly, that to compress and to contract the chest is a process productive of worse evils than can be mentioned either in such a text-book or in a public lecture. The senseless practices still in vogue in the construction of our boots and shoes, and the exceeding injury wrought to the instep-arch by high heels, have formed prominent topics in every health-lecture wherein social customs and ordinary habits have been treated. Follies of eating and drinking; the lassitude and ailments

that follow late, or rather early hours spent in heated ballrooms; the necessity for pure air, and like topics, have been over and over again expounded by the ablest of our physiological teachers. And yet, the results of the spread of health-knowledge have been anything but encouraging. For the tight waists and the high heels are still extant; and life is not regulated, either in the upper classes or amongst the middle and lower classes, with greater skill, or with a larger modicum of common-sense than before. Hence, we repeat, it is with peculiar satisfaction that we find that ladies themselves are entering the lists as champions of an improved hygiene. The main hope of reform lies in the idea that the wives and daughters of this and other generations will educate themselves in the knowledge of the laws of health, and that they will thus become enabled, practically and sensibly, to know these laws, and to abide by them.

The exhibition of hygienic clothing was interesting from more than one point of view. It served to show, for instance, that in the higher education of women the more mundane concerns of dress and attire had not been neglected; since the undergraduates of Newnham and Girton contributed to the exhibition, corsets designed to afford support to the body and at the same time to avoid all undue compression. The exhibition in question also contained exhibits designed to show what could be done to render the ordinary corset a hygienic article of attire; and there was to be seen even a 'hygienic doll,' intended, presumably, for the instruction and edification of the young idea in the art of dressing sensibly. Boots constructed on 'anatomical' principles were likewise on view, and even stockings of improved make were included in the list of exhibits. It would therefore appear that tradesmen and others are at least as willing and able to enlist themselves on the side of physiology, as they are at present compelled to serve the follies of fashion.

But it is evident that beneath the whole question of reform in dress lie the almost

universal conditions of supply and demand. The health-reformers will require to create a demand for the articles they allege to be useful; the supply in such a case being certain to follow. Lectures upon health-topics may aid the creation of demand, by inspiring the public with a distrust of injurious foods and fashions of all kinds, and by aiding the endeavour to attain a higher standard of physical culture. But that human nature is ultra-human where Fashion and use-and-wont are concerned, is of course the most commonplace of truisms. Innovations which offend the canons of so-called fashionable taste, have but an ephemeral existence, as all experience proves. Hence, until hygienic reforms are nurtured and developed under the protecting wing of 'society' itself; and until matrons and maidens of their own free-will, based on physiological teaching, resolve to eschew fashions which are notably injurious to health, reformers can only wait in the hope that the extended knowledge of physiological truths will by-and-by bring about some reformation. It is on these grounds that the present movement amongst women in favour of health-measures is to be commended and fostered. If the endeavours of the sex to aid the work of the physiologist are to be productive of ultimate good, they must, however, be continuous; and it is to be earnestly desired that the movement will speedily assume such a character and force, that no doubt may be entertained concerning the lasting nature of the reform thus inaugurated.

But there exists a wider and yet more practical view of this all-important question of health, in relation to fashion and to the ways of ordinary life. It will not be denied that among the aims of education, that of teaching the boy or girl how to live wisely and well, is one of the most important the teacher can set before his or her mental view. Those who contend most strenuously for fashion-reform, and for the inauguration of a new era in the physical regulation of life, would do well to turn their attention to the education of the young, and to endeavour to promote the teaching of Physiology in every school worthy the name of an educational institution. At the present time there exists plenty of proof that the laws of health and the science of life together form topics concerning which even mere children may amass a very considerable amount of information, when properly taught. Physiology forms one of the topics included under the head of 'specific subjects' in the Educational Code. Teachers even in ordinary day schools, are now provided, by publishing enterprise, with handy manuals on the subject; and succeed in training their pupils to satisfy government inspectors, and to attain a respectable standard of elementary knowledge regarding the human body and its functions. The Science and Art Department examines its thousands of students annually in this branch of study; and it may therefore be maintained that there are agencies of high educational power and value at work, which tend to 'counteract fashionable follies and to lay the foundations of a sound knowledge of sensible living. Probably, no more powerful or more convincing work on 'Education' has been produced within late years than the well-known manual of Mr Herbert Spencer. Much of Mr Spencer's space is devoted

to a defence and advocacy of the teaching of physiology in schools, and there are not a few of his sentences which will bear quoting, when the relations of education to healthy life are discussed. 'If any one,' says Spencer, 'doubts the importance of an acquaintance with the principles of physiology, as a means to complete living, let him look around and see how many men and women he can find in middle or later life who are thoroughly well. Only occasionally do we meet with an example of vigorous health continued to old age; hourly do we meet with examples of acute disorder, chronic ailment, general debility, premature decrepitude. . . . Not to dwell on the pain, the weariness, the gloom, the waste of time and money thus entailed, only consider how greatly ill-health hinders the discharge of all duties—makes business often impossible, and always more difficult; produces an irritability fatal to the right management of children; puts the functions of citizenship out of the question; and makes amusement a bore. Is it not clear that the physical sins—partly our forefathers' and partly our own—which produce this ill-health, deduct more from complete living than anything else? and to a great extent make life a failure and a burden instead of a benefaction and a pleasure?'

These are not merely eloquent words. They possess also the quiet, impressive seriousness of truth; and, moreover, they apply with extreme force to the fruits of the errors which ignorance of health-laws and violation of the commonest principles of physiology assuredly entail. Mr Spencer has another passage which is terribly realistic in its grim force and sarcasm, and thoroughly applicable to the lack of health-training under which the wives and mothers of past generations and of to-day suffer. 'When a mother,' says Mr Spencer, 'is mourning over a first-born that has sunk under the effects of scarlet fever—when, perhaps, a candid medical man has confirmed her suspicion that her child would have recovered had not its system been enfeebled by over-study—when she is prostrate under the pangs of combined grief and remorse, it is but small consolation that she can read Dante in the original.' These words apply with increased force to the higher ranks of life, in which the follies of fashion are most rampant; but there is hardly any sphere of human existence to which they will not apply when the questions of preventable disease and of wrecked lives are brought forward for discussion.

It seems to be the plainest of truths, then, that the radical cure for the follies of life, and for monstrosities of living, is to be found in an improved system of education. If we make a place for physiology in schools, not as an 'extra,' but as a veritable and stable part of the curriculum, we shall be attacking the root of the prevailing evil, whilst health-lectures to adults and 'hygienic exhibitions' are only lopping at the branches of this modern upas-tree of disease. If we send our boys and girls out into the world knowing something of their own bodily structure, we shall at least have armed them against many an error of physical life; and if we have taught them the most elementary aspects of the laws of health, we shall have thrice armed them against their becoming the insensate

blocks whose chests the costumier compresses, and whose feet the bootmaker endeavours to twist and contort with more than a *souppon* of Celestial ingenuity. That which is learned at school too often fades away from the routine of adult life; but that it will be otherwise with the lessons of physiology and health, when these are properly taught, no one may doubt. Few sane persons who grow up in the knowledge of why a free and elastic chest is a necessity for healthy lungs and for a lengthy life, will consent to be twisted and contorted at the will of the fashionable *modiste*; just as a knowledge of the facts concerning the injurious effects of carbonic acid gas, or regarding the abuses of foods and drinks, will afford the surest protection against bad ventilation and intemperance. Health-lectures and expositions illustrated by the *torso* of the Venus de Milo, are well enough in their way; but those alone see where certain and lasting reform is likely to begin, who advocate the bending of the twig when it is supple and pliant, and who demand that the laws of health shall be taught in every school.

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

CHAPTER XVIII.—'UNDERHAND?'

THE ancient Johnson, servitor of the great House for half a century, presented himself in due time at the old-fashioned city hostel and asked for Mr Lumby. Mr Lumby had not yet arrived, and the old clerk sat down in his private room to wait. There was a mingling of early twilight with gaslight in the streets, and the room itself was sombre with much old mahogany. As he waited, the gaslights in the street grew brighter, and the shadows in the room grew deeper. The silence and the shadows and the waiting became in course of time quite unendurable, and the clerk rang for lights.

'Did Mr Lumby name any time for returning?' he asked.

'No, sir; not particular,' said the waiter. 'Least-ways, I think not. I'll inquire.' The waiter drew the blinds, stirred the fire, and having lingered a little, left the room with that air of foiled expectation peculiar to his tribe. Coming again in the course of a few minutes, he said that Mr Lumby had left no word behind him as to the hour at which he would return.

'That is curious,' said the old clerk, with a sort of tremulous disappointed dignity. 'He asked me to dine with him at six o'clock this evening.'

'Sing'lar,' said the waiter, with raised eyebrows—very sing'lar.—'Shall I bring you anythin' while you wait, sir? A glass of sherry and a biscuit, now?' suggested the waiter with an almost filial interest.

'Yes,' said Johnson; and sat there for another hour, crumbling his biscuit, and sipping, very very slowly, at his sherry. Steps came and went upon the stair, bells rang, voices ordered and

voices answered, while Johnson sat wondering and waiting. A step came up the stair, and the clerk, with a sort of weary anger, inwardly declared that he knew it would go by. But this time it came straight to the room, and Mr Lumby entered. The old clerk rose to greet him; but the head of the great House, who was a much bigger man than ancient Johnson, laid both hands upon his shoulders and half forced him into his seat again.

'I am sorry to have kept you waiting, Johnson,' he said. 'I am afraid I have spoiled your dinner. But no man is altogether master of his time, and I have been detained.—Let us see what they can do for us. Better late than never, eh, Johnson?'

'Better late than never, sir,' returned the old clerk. 'Better very late indeed, sir, than not at all.'

'Ay,' said the head of the firm; 'better very late indeed, than not at all.' There was something in his tone which seemed to give the remark a greater significance than the occasion called for; and when the old clerk looked at his employer, he saw a shadow resting on his face, which he had never seen before. 'Better very late indeed, than not at all.' Lumby's voice trailed off, and the shadow deepened on his face. For a minute he stood absorbed in his own thoughts; and then, with a little shaking of the head, he roused himself, rang the bell, and entered into consultation with the waiter and the guest. Soup, sherry, fish, a bird, a cutlet, champagne, port.—'Yessir,' 'yessir,' as the items were told off; and the waiter was gone to put the orders into execution. Lean Johnson, ancient servitor, so felt his visage glow with satisfaction at the arrangements, that he blew his nose in a very big bandana to hide himself, and emerging from his silken refuge, betrayed no more than a twinkling eye might tell.

'And Mr Gerard is coming into the House, sir?' said the clerk.

His employer's eyes were fixed upon the fire with a far-away look.

'Yes,' he said, recalling himself, and shifting in his chair, like one who lets fall an invisible burden; 'Mr Gerard is coming into the House. He is going to be married, Johnson. I suppose that you are a grandfather, long ago?'

'No, sir,' said the ancient servitor gravely; 'I am a single man.'

'You should be quite an irreclaimable bachelor by now,' said Mr Lumby with a laugh. 'Eh, Johnson. Quite the bachelor!'

'Why, yes, sir,' returned Johnson. 'There are two or three of us, sir, in the House. Neale is almost on the shelf by now.'

'Ah,' said Lumby gaily, 'Neale is sixty, I should say.'

'Fifty-eight, sir,' answered the old clerk.—'Then there's Barnes. Barnes is over fifty, young as he looks. And Mr Garling, he's another of the hopeless cases. Eh, sir?'

There was a change in the countenance of the great man; and the shadow the clerk had noted there, came back again. 'You would scarcely fancy Garling a marrying man,' he answered.

'Why, no, sir,' said Johnson. 'Scarcely. Mr Garling is all for business. A long head, sir. I hope you'll forgive the liberty I take, but I've always thought the House was fortunate in Mr Garling, sir.'

'Ye-es,' said the head of the firm, lingering on the word, not doubtfully, but as if his thoughts dwelt on something else.—'Is Garling popular?' he asked suddenly.

'Well, in a way, sir,' said the old clerk. 'He is looked up to. I should say he is as much looked up to as the Bank. People identify him with the House, sir. In another sense, we should hardly call him popular perhaps. A very reserved man, sir, is Mr Garling; not exactly haughty, but reserved.'

'And quite a bachelor, eh, Johnson?'

'O yes, sir, quite a bachelor,' answered Johnson. 'Almost as inveterate a bachelor as I am. He and Neale and Barnes and I are all in the same bag, I fancy, sir. We might make up a quartette party to sing, "To keep single, I contrive"—we four, sir.' The old clerk laughed and rubbed his hands, half at his jest and half at the appearance of the waiter, who came in to lay the cloth; which being done, another waiter came in with a tureen, and another with a decanter of sherry, and a fourth with nothing but a napkin and an air of authoritative supervision.

'You need not wait,' said Mr Lumby; and the quartette withdrew itself—with lingering touches of decanter and table-cloth and salt spoons—as though only half resigned to leave a picture unfinished.—'There are not many business men like Garling, eh, Johnson?'

'Well, sir,' said Johnson, as if he tasted Garling with his soup, and after critical observation, approved of him, 'we think him quite unequalled. Business seems to be his very life, sir. Mr Garling is not a man of whom I should be inclined to speak as a reveller, in any direction, but that's the only word that I can find. He seems to revel in business.' It was evident that Johnson regarded the cashier with an unstinted veneration. With the first glass of champagne, the old clerk drank long life and happiness to Mr Gerard; but he went back to Garling, and as the good viands and the cheerful wine warmed his elderly heart, he chanted his praises higher. 'He doesn't work like a servant, sir, but like a master. You might think, to see how he works, that every business combination was intended to swell his own account at the Bank. But then, it's a delight to him, and that's one proof of his financial genius.'

If the ancient clerk had looked at his employer then, he might have seen the shadow deepen on his face; deepen, deepen, a shadow of mistrust and fear. The shadow of the cashier's ugly secret was on his heart, and fell outwards on his face. Garling under an alias? Garling married? Garling starving his wife? Incredible. And true.

'Yes,' he made answer after a while, 'he has always seemed absorbed in business—too much absorbed, perhaps, to be quite wholesome.'

'Not a holiday for nine years, sir,' said the old

clerk. 'It's wonderful, wonderful.'—The head of the firm sat silent, sipping at his wine.—'And the business seems to absorb him altogether. Quite a lonely man.'

Lumby stirred at that. 'No friends?'

'Since young Martial died, more than twenty years ago, not one intimate friend, I believe, sir. Martial was managing clerk to Messrs Begg, Batter, and Bagg, in Chancery Lane, sir, an eminent legal firm. A most able and promising young man. His death was a great blow to Mr Garling, and I believe he has never formed a friendship since.'

'Perhaps that speaks well for him, Johnson?' said Mr Lumby in a questioning voice.

'I should say so, sir,' the clerk responded—'decidedly, I should say so. Those stern and silent natures, sir, feel deeply.' Elderly Johnson, with his own ancient heart softened and warmed within him, was prepared to take almost a sentimental view of Garling's loneliness. The port was old, like Johnson's self, and all the mellow shine of the suns that glowed upon its parent grape lay snugly beaming in his bosom. Kindly Johnson, thus happy and thus honoured, in private talk with the head of the great House, and sitting with his venerable legs beneath the same mahogany with him—why, at such an hour should he not think well of all men, and best of all of the captain of his troop—the troop he had served in now for half a century?

The cloud of distrust lifted and lightened ever so little in Lumby's mind—and fell again. The wife might have brought desertion on herself, might have deserved it all, and more. But then—the alias, the alias! The cloud thickened and fell lower yet. The talk strayed to other themes, and Lumby strove to take his part in it, and bore himself well enough to make Johnson believe him the most affable of men. And when at last the elderly clerk had gone with an envelope in his breast-pocket, sealed as yet and of unknown contents, the head of the House walked the apartment with troubled steps and bent head. The dialogue he had overheard between Garling and his unknown visitor troubled him terribly. He had trusted Garling so completely, that no doubt of his probity had ever lifted its head. He had respected him so profoundly, that the revelation of that afternoon had come upon him as a thing unbelievable. And being once shaken in his belief in the man, the business idol he had set up all these years in his own mind began to totter. Garling might still be honest in money matters, but there was more than room for doubt. Perhaps—so Mr Lumby thought—his own laxness might have tempted the man, and being such a man as he now knew him to be, the chances of his fall from honesty seemed great. It still lacked an hour of midnight when Mr Lumby rang the bell.

'I shall be out late,' he said to the waiter. 'Let a fire be laid in my bedroom, so that I can light it on my return, and leave a small decanter of brandy there for me.'

The waiter bowed; and Mr Lumby, assuming his hat and greatcoat, left the hotel and walked resolutely towards his offices. Once he stopped dead short in the street, and stood for half a minute. 'Underhand?' he murmured, as if questioning himself. 'I cannot help it. I must know.' He

walked on again sturdily, and reached his goal. He tried his key upon the door. The latch turned easily; but the door was bolted and barred within. He rang the bell; and after a long pause, he heard the sound of footsteps.

'Who's there?' asked the voice of the watchman who slept upon the premises. A little trap-door was pushed open, and the voice added: 'Let me have a look at you.' The light of a bull's-eye lantern fell through the space left by the trap-door full upon Mr Lumby's face; and in a changed tone the watchman cried: 'Wait one minute, sir.—I beg your pardon.' Lock and bolt went creaking back, and the door opened. 'I never dreamt as it was you, sir,' said the man.

'Lock the door again, and light me up-stairs,' returned the head of the firm.

The man obeyed, and in the little blot of light which dwelt about his feet, Mr Lumby marched stolidly on through darkness. 'Light the gas.'—The man obeyed again.—'I shall be here for some hours, perhaps all night. I have important business to do. I may be here to-morrow night, and perhaps again on Wednesday; but my being here is not to be spoken of. You understand?'

'Perfectly, sir,' the man responded.

'Very good. Good-night.'

'Good-night, sir;' and the man was gone, his footsteps sounding lonely on corridor and staircase.

'Now, Garling,' muttered Mr Lumby as he closed and locked the door, 'let us see if you play fair.' He pushed aside the sliding panel of corrugated glass between the cashier's room and his own, and entered. On one side of this apartment, raised but one inch from the floor, stood a row of enormous ledgers, dating back many years. A broad-shouldered solid phalanx, they stood so tightly wedged together that it seemed if they had been each a leaf thicker, it would have been impossible to squeeze them into the place they occupied. Each bore upon its back in gilt figures the date of the year whose entries it held, the gilding being very dull and faded in the earliest volume, and mounting by slow stages through succeeding volumes to the fresh glitter of last year. Mr Lumby seized that which dealt with the first year of Garling's stewardship and dragged it from its place. It cost some effort to do this, and before he had laid the ponderous volume on the table in his own room, his brow was moist. He took off his hat and overcoat, wiped his forehead, and sat down with the book before him. Then casting the great boards open, he sat awhile with knitted brows thinking. Looking through the space where the sliding panel had been, his eyes lighted upon a slender volume standing upon a shelf above the others, and rising, he crossed the room and returned with it. From the pages of the great ledger distilled a musty fungous odour like the smell of a long-closed vault, or the earthy scent of damp rot in a deserted chamber. There was something depressing in this odour; but he shook the feeling away, and set resolutely to work. He had wielded in his own hand the destinies of the great House, and in his day he had been a giant among accountants. The faculty was somewhat rusty with long disuse, as even the finest faculties are apt, to grow, and he found

himself at first less swift and certain than of old. But, as he laboured, he felt the power growing anew within him; and in an hour's time he was sweeping over the serried columns at a pace which to most men would have made accuracy impossible. The night sped by; and he still sat there with knitted brows, poring over the leaves. The dawn was gray, and the gaslight had grown sickly, when he laid a finger with a sudden gesture as of detection, upon one set of figures at the bottom of a page. His face had been growing more and more anxious for an hour, and now it was keen and hard on a sudden, as though triumph for the moment outweighed the sense of fear.

'Clumsy, after all,' he muttered—'clumsy after all. The old plan. Juggling cross-entries to and fro, as though that could fog anybody but a fool.' Looking up, he saw how light the air had grown; and consulting his watch, he found that it had run down at a few minutes after six o'clock. 'It may be half-past seven by now,' he said, under his breath. 'I must be away at once.' By instinct, he moved silently in the silent house; and having thrust the great ledger back again into its place, and laid down the slender volume exactly as he found it, he closed the panel, and looked about him to see if there were anything which bore an altered aspect. The gas brackets had not been so drawn out when he came, and he replaced them. He unlocked the door, withdrew the key, locked it on the outer side, and in the dim light felt his way along the corridor and down the stairs. The watchman had opened the large doors, and was smoking a morning pipe outside. The streets were almost in clear daylight, dimly as the dawn had seemed to peep through the office windows.

'Good-morning, sir,' said the watchman, touching his hat.

'Good-morning,' returned Mr Lumby; and pausing, laid a warning finger on the watchman's breast: 'Not a word of my having been here—to anybody. I shall be down again to-night at nine.'

'Very good, sir,' answered the man respectfully; and his employer, walking sturdily, returned the corner and was gone from sight.

'There's somebody up to something,' thought the watchman as he resumed his pipe; 'and the governor's a-finding of 'em out. That's evident.—You've got a pretty tidy berth here, Joseph,' apostrophising himself, 'and you know when you're well off, don't you? Very well, then, don't let us hear none o' your chin-music. Of all the disarsterous things as is, onregulated chin-music is the wust. "Not a word," says the governor, "not to nobody." Very well then, Joseph, "not a word" it is!'

Mr Lumby walked onwards sturdily, bound for his hotel. There was a somewhat dazed and unreal sense upon him, in the first place, born probably of his having been up all night; and he was not yet nearly so much moved by his discovery, as it had seemed probable to himself that he would be if he made it. He had his doubts at first as to the meaning of the discovery. At the beginning of his day of trust, Garling had been deliberately false; but had the falsehood gone on? or was restitution made, and had he walked honestly since? That question remained still

to be decided, but with so large a presumption on the wrong side of it as amounted almost to a moral certainty. What motive could the man have had? What reason in such a case to search for motives? Yet Garling had always, so far as his chief employer knew, lived plainly—more plainly than necessity demanded, and had indeed passed as a saving man, with a tolerable balance at the Bank. So much had been said of him currently many years ago. Surely he was too long-headed and keen to gamble. Where could the temptation come from with such a man? In what quarter was he likely to be assailable? It was against Mr Lumby's experience that a man at once saving by nature and prosperous by circumstance should become a swindler. It was not only against experience, but in the very teeth of reason. And now—how much was likely to be gone? and how much was likely to be recoverable? All this was futile guesswork for the present; but the business man's heart quaked at the bare thought that enough might be gone to shake the credit of the House. If that were so, he could never forgive himself. For it was he to whom the concerns of the House had been left by his father, and if they had been fatally betrayed, it was he who was to blame. Generation after generation of Lumbies, father and son for a hundred and thirty years, had carried on the House with ever-growing wealth and credit; and if in his day it should sink dishonourably, it would be more than he could bear. Now he began to wake to the possible dread of the discovery he had made. But he put it from him. No man could have conceived and carried on without detection a fraud so vast; and yet he had trusted Garling so implicitly, that he had left him the power to gather everything into his own hands, if he had the will to do it; and disappearing suddenly, to leave the concerns of the firm a shapeless wreck and ruin. Was Garling bold and vile enough for such a deed? Who knew? Was he able enough to do it, if he chose to be a villain? Of that Lumby had no doubt. And there grew up before him the vision of a systematic fraud so carefully planned and so thoroughly executed, that he quailed to think of it. But as this dread seemed to grow more and more possible to his mind, the old man's stout heart rose to meet it. Perhaps it was a petty matter after all—a question of a few hundreds, or at the utmost a few thousands; but if it were the deep-laid scheme he feared, he would hoist the wicked engineer with his own petard. He hungered for the night to come, that he might be back unknown at the books again, to trace the swindle upwards from its birth; and then, fully armed with knowledge, turn upon the man who had planned against his honour and betrayed his trust, and crush him with a word.

The entrance of Mr Lumby to the hotel was noticed with befitting wonder by the boots at the amazing hour of eight A.M. He had walked the streets for more than half an hour, to clear his brain, which was still in turmoil as he entered, and mounted to his bedroom. 'It may take a week—a month—to go through the books and learn everything.' So he mused. 'Can I afford to wait so long? Will it not be safest to have him watched? or will he be so keen that a watch may set him off? Shall I take anybody into

confidence, or track him by myself? Why, if I can do it alone, should I publish my own laxity? I don't want to be laughed at or pitied by business men in London. "Poor old Lumby, smart man once, gone past his time." No, no. None of that for me. The scoundrel, trusted as he has been! The fool I was to trust him! Trust no man, no man! The villain! I made him, made him! took him from the gutter almost, and made him a figure in the City—a man of mark. Black ingratitude. The heartless scoundrel! Come—what have I proved against him yet, to be in such a fever? More than enough, more than enough. Oh, the scoundrel—to take him by the elbow when I know all; to take him lightly in a friendly way—"Garling, the favour of a word with you." I think I see him. "Oblige me by looking at this paper—a calculation for the past nine years, showing the sums of which you have swindled the firm of Lumby and Lumby." Is that worth doing? Is that worth waiting for and creeping to through nights of watching? Come, come! I may find that he has been honest since that first year; some pressure may have been upon him.—Pressure! He knew well enough that in any extremity he might come to me.'

He maddened himself thus, walking up and down his room for a long time, but by-and-by settled into a slow rage of hate and anger infinitely more deadly, and more terrible to endure. In this mood he sat down to think, and found thought beyond him. There was no room in his mind for anything but that slow rage, unless it were an undefined fear of what the rage might lead to; for he felt almost murderous, and some dread of his own passion began to take hold upon him. He had always thought himself a kindly and a merciful man, and in truth he had been so; but he had never had cause to hate or to be greatly angry until now. The two things that hurt him most were his own imbecility of confidence in the man—for so he called it—and the fact that he himself had bred the creature who so stung him. He had bragged of Garling's finance, of Garling's keenness, of Garling's trustworthiness—he had promoted him from post to post; he—known as a sound man of business—had so belauded and so trusted Garling, that all men had accepted him. How could he blame himself bitterly enough? He raged up and down the room again. So, now in a whirlwind, and now in a sudden calm, and now back again into the whirlwind, his thoughts fought and wrestled. But one thing became abundantly clear to him. If he desired to survive this blow at all, and still more if he meant to repay it—and he did—he must be calm. And the first way to that was to make up a definite mind as to the course he should take. There was no fear—except a certain phantom fear that would intrude itself however often banished—that Garling could as yet have taken fright. There was little likelihood of his learning of his employer's nightly visits to the office, and no reason, therefore, for him to think himself suspected. It would be best on all grounds—if it could be safely done—to learn everything before bringing his charge; and after much doubtful examination, he decided to wait, and by nightly studies of the books, to learn all that could be learned. But an impulse which

seemed merely accidental, threw this resolve to pieces.

He took a bath, and tried to breakfast; and after a time, returning to his bedroom, carefully darkened the room and lay down to sleep. For some hours sleep seemed unlikely enough, and he did nothing but fight over all the old ground again, passing through new rages and new revengeful pauses of rage; but at length quite suddenly, as he lay with closed eyes, he fell into a doze, and thence, after some uneasy tossings, into a deep if troubled slumber. When he awoke, the brief spring day was already fading into dusk. He arose refreshed; and his thoughts instantly recurring to the business before him, he felt a sort of hunger and hurry to begin it, and waited with much impatience for the hour of nine. It was half because he had named that time to the watchman, that he chose it now; for he was in a mood to be guided by hints of superstition and beginnings of foreboding; but there was solid reason for not going earlier, since on uncertain and irregular occasions, the whole staff of clerks stayed late, and it was essential to his purpose to be secret.

The night was raw, and as desolate as only night in a great city can be. There was a filthy mist abroad, bedraggling the lamps and the illuminated windows; and the pavement was slimy to the feet, as though the mist had been beaten and trodden down by the traffic into that consistency. At fretful unavailing war with the mist, there was a miserable wind, maudlin, and moaning its own discomfort, shivering and whimpering in such a fashion as to become trying to the human temper and provoke impatience at its feebleness. Even the most inveterate loungers were within doors to-night, and only misery and business were abroad. Mr Lumby walked on stoutly, until, without apparent reason, he came to a sudden halt, and stood staring thoughtfully at the greasy pavement. So far as he could have told, then, or afterwards, there was absolutely nothing in his mind to determine him. He had thought the whole matter over, and had decided on his course. And yet in the pause he made he changed his resolution, and turning to the right, swung straight towards Garling's chambers. Reaching Fleet Street, he began to examine the numbers of the houses, and went peering through mist and night from door to door. He knew Garling's number, but had forgotten the look of the house, if ever he had known it. As he went on peering from door to door, a cabman, a dozen yards in front of him, came stumbling across the pavement with a canvas-covered box. He placed this on the top of his cab and stood by the door. A girl, closely wrapped against the mist and cold, tripped over the pavement and entered the vehicle. Following her came a man, muffled to the chin, and carrying a satchel of black leather. Crawling slowly along the same side of the street came a hansom cab, and Mr Lumby, with bent head and a feigned lameness in his gait, stumped swiftly to it and stayed the driver with a motion of his hand. The hansom pulled up three yards behind the four-wheeler.

'Where to, sir?' asked the foremost driver.

'Waterloo station, main line,' said Garling's voice in answer.

Lumby standing, and facing the driver of the

other cab, waved to him to be still. 'Follow,' whispered the merchant across the top of the cab. The cabman nodded, and drove slowly in Garling's rear. 'Is this the flight?' asked Lumby of himself—'Is this the flight?'

ECCLESIASTICAL RELICS.

THE collecting of relics forms one of the most interesting features in connection with the early history of the Church, not only as showing the esteem and veneration in which these were formerly held, but also as exhibiting the superstitious feelings prevalent among the early Christians. In whatever light these practices may now be regarded, it may fairly be assumed that in most instances the zeal which originally prompted the enthusiast to collect and treasure such relics was both innocent and natural; but as time went on, the number of these relics increased, and, in course of degeneracy, articles venerated as such, multiplied beyond measure, so that not only those whose supply must necessarily be limited became accessible to an extraordinary degree, but the most puerile objects were seized upon as fitting symbols for veneration and worship. To the roll of martyrs were added myriads of imaginary saints; and when the relics of the real saints had become exhausted, recourse was had to those of the imaginary saints, who existed only in legendary history. The search for these was further promoted by the fact, that the most exorbitant prices were paid for relics of but minor importance; while almost all those of greater worth had richly endowed convents or churches raised for their safe keeping.

Naturally enough, this demand for relics led to forgeries and impositions, and many such have been recorded. Ford relates, in his *Hand-book of Spain*, that the Archbishop of Castro actually raised a college in 1588 on the site where two notorious impostors had hid bones and forged writings in a leaden vessel. On the discovery of these, the prelate, imagining them to be the remains of San Cecilio, a deaf and dumb boy said to have been cured by a miracle, had thus intended to render a tribute to his memory and secure a fitting resting-place for his bones. The brain of St Peter, preserved at Rome, and inclosed in a box for better safety, was on examination found to be a marble stone. A somewhat similar discovery was made concerning the supposed arm of St Anthony, which was afterwards discovered to be the mutilated limb of a hart. A Bishop of Tours in the eleventh century being induced to visit a much-venerated chapel in which a saint was buried, found that its patron was no other than a robber who had been executed for his crimes. That people thus regarded the remains of a robber as a fitting emblem of divinity, is undoubtedly strange; but it may have been that the so-called robber was simply an expatriated political leader, who, as in the popular conceptions of Robin Hood and Rob Roy, was regarded as more sinned against than sinning.

Many relics are constantly shown, whose claims to veneration are only traditional. These lead us

back to the remotest times. Among the more prominent pointed out are the red earth of which Adam was made; the tomb of Seth on the slopes of Antilibanus; and that of Joshua, which is represented as being near Constantinople. The bones of Abraham, Isaac, and Jacob rest at the church of St Maria Sopra Minerva at Rome. At the Cathedral of Prague is preserved the stone on which Abraham gave the angels to eat; and Adam's guardian angel changed to a stone, for not being more watchful, is said to repose in a corner of the exterior wall of the Kaaba.

It is in connection with the events occurring in the New Testament, however, that most of these impressions are linked. Jerusalem and Jaffa are places still to be seen by the traveller in Palestine; but as regards their specific localities, there is the most conflicting evidence. But be this as it may regarding the explanations of travellers, tradition at least has found no difficulty in assigning each event its proper place; for there is scarcely an incident recorded in the holy narrative, the exact scene of which is not still recognised and pointed out. In connection with the history of our Lord, the marks of his fingers at Nazareth, when the people of that place attempted to cast him down a precipice, are still pointed out. There is also shown the spot where the angel Gabriel appeared to Mary. It is represented as having been in a cave shaped in the form of a cross; and, as if to commemorate the event, two pillars are standing, the one being where the Virgin stood, and the other where the angel appeared to her. Maundrell relates of these pillars that part of one was broken away by the Turks, who were expectant of finding treasures under it; and that the upper portion of the column, which now depends from the roof of the cave, is supposed by the credulous to remain hanging there by a miracle.

Raised over the supposed spot of the Nativity, there stands a church, built by the Empress Helena in the year 327; and among the relics preserved of that period of our Lord's history are the swaddling-clothes in which He was wrapped. There is shown at Aix-la-Chapelle the cotton robe worn by Mary about the time of the birth. These two relics are exhibited once in seven years; and it is asserted that as many as one hundred and fifty thousand pilgrims have been present on one of these occasions. A duplicate set of the swaddling-clothes are mentioned as having been seen at St Paul's in Rome; while yet a third church (in Spain) has claimed possession of them. Five boards of the manger in which Christ was born are kept at Rome, inclosed in an urn of crystal and silver; and the cradle is to be found in the Mosque of Omar.

Several tables, each represented as the true one at which the Last Supper was partaken, are to be found. One of these, made of cedar, is in the Lateran at Rome. A towel is at Rome, and another in Holland. A part of the table-cloth is at Vienna; the knife with which the Paschal lamb was cut is at Trier; and Bishop Arculf speaks of the cup being, at the beginning of the eighth century, at Jerusalem.

But it is not only to the Bible that zealots confined themselves for these trophies; for where fact failed to supply material, tradition has been

resorted to. A towel is preserved with which, it is said, a compassionate woman, beholding the drop of agony on our Lord's brow, wiped his face. So great was the demand for this cloth, that several are now to be seen; and the only argument which has been brought forward to justify this is that originally it consisted of many folds. One is at St Peter's in Rome; another, formerly belonging to St Ferdinand, is now in the sacristy at Jaen; a third is at Montreuil-les-Dames at Laon; a fourth at Cologne; while yet another is to be seen at Milan.

To such minute objects has the searcher for sacred spots turned, that the hole where the tree grew of which the Cross was made is guarded; and fortunately, having been found to be on the site where the Convent of the Cross stands, the monks there have bordered it with silver. Tradition points to this tree as the growth of a bough cut off that from which Adam ate the forbidden fruit. Adam's skull was said to be originally buried under it; while the tree itself was afterwards, along with the skull, preserved in the Ark. The tree was subsequently planted on a mountain in Judea, and the skull buried there. It is from this, it is said, that Calvary or Golgotha, which means the place of skulls, derived its name.

Regarding the wood of the true Cross itself, there is perhaps no relic which has been so much sought after. The first intimation of a search being instituted was in the year 326, when the Empress Helena, moved by a vision, as it is said, proceeded to Jerusalem to obtain possession of it. After much labour, the three crosses were discovered; but as nothing could be found to identify them, recourse was had to a miracle. Two, on being applied to the body of a dead person, failed to restore life; but the attempt with the third was successful. Thus all further doubts were removed. A magnificent church was afterwards built over the spot, by Constantine the Great, Helena's son. It received the name of the Church of Martyrdom; and pilgrims can still stand at the spot where the three crosses were found. The Cross itself was divided into several portions. One was sent to Constantinople; and another, inclosed in a silver case, retained at Jerusalem. Here it was seen by St Paula in 390. Chosroes, king of Persia, after subduing Palestine, carried it off with him. It was afterwards recovered by the Emperor Maxentius, brought back to Jerusalem, and is still to be seen there. Arculf has said that the whole Cross was at Constantinople, in three separate pieces, and inclosed in a wooden case during his lifetime; and some have affirmed that it was in Cyprus. The opponents of the latter theory, however, state that that is the one on which the penitent thief was crucified. Besides these, there are shown portions of the Cross at Rome, Venice, Genoa, Vienna, and Prague. A piece is at the church of St Croce-in-Gerusalemme, Rome, which is reported to have been presented to it by the Empress Helena. There is a piece at Heiligen-Kreutz, in Austria, brought from Palestine by Leopold V. Even in England, until lately, there was a small bit preserved among the jewels of James I.

The nails have been almost as popular as the Cross itself. Originally, there were not supposed

to have been more than four; but in Calvin's time they had increased to fourteen. The sponge with which the soldiers gave our Lord vinegar to drink, is another relic for whose possession there has been much disputing. It is said to have been saved from Chosroes by Nicetas, and sent to Jerusalem; and, according to Arculf, it was there he saw it. Betrandon de la Brocquiere mentions having seen it in the Church of St Sophia. Since then, it has evidently been divided, for now it is in no less than four different churches, in one of which it is represented tinged with blood. Among the other relics of which there are duplicates are the spear, the coat without seam, the winding-sheet, and the stone laid to secure the sepulchre.

Equally numerous have been the relics of the disciples. At Samaria, the dungeon is still pointed out where John the Baptist was beheaded. The cloth on which his head was laid is preserved at Aix-la-Chapelle; and all his bones, except those of his fingers, are at Alexandria. These are distributed over five different churches, while his right hand is at Munich. No relic of John the Baptist, however, has been so eagerly contested for as his head. According to one account, the Emperor Theodosius found it wrapped in a cloth saturated with blood. He carried it to Constantinople, and there the hinder portion of the head still is. The fore-part is at Rome. Another portion, comprising from the under lip to the chin, is at Genoa; while the whole head is represented as being preserved at Amiens in Picardy. The relics of St Peter are also considerable, and these include the most varied assortment, from a fishing-net, once kept in the cloisters of Westminster Abbey, to one half of his body still preserved.

Innumerable other relics might be mentioned; but the examples we have noted will serve to show to what an incredible extent their collection has been carried.

THE MORTLAKE PEERAGE.

CHAPTER I.

WHEN I was a very young man, I was curate of Knutsfield. In the spring of 18— my rector was taken ill, and had to go abroad; and I was left in charge. Shortly after his departure, I received a visit from an old college companion named Stanhope. He was a young man of good family and high connections, and one whom I very much respected. He told me that he was in love with, and engaged to be married to, a young lady, whose friends were abroad; and asked me if I would unite them in holy matrimony. At first, I objected; but he pleaded so hard, and produced a letter from my pretty cousin Emily, urging me to comply with his request, that in the end I consented. Mr Stanhope wanted to get a special license; but I stipulated that if I was to perform the ceremony, the marriage should be by banns. To this he agreed; and the banns were duly published, he having in the meantime taken up his abode in the parish.

On the day appointed for the marriage, there was a considerable congregation assembled in

the church; for the villagers had somehow got wind of the affair, and their curiosity was excited.

The bride was a most beautiful girl. Her glance was like a sunbeam; no one could look at her without an emotion of pleasure. Immediately after the ceremony, the young couple started, as I then supposed, on their wedding tour, and I saw nothing more of them. About twelve months after the wedding, I heard that Mr Stanhope had obtained a good appointment, and had gone out to India.

More than two years elapsed without anything occurring to recall these incidents to my mind. My rector's health had in some measure been restored, and he was back at the rectory. I had been very hard worked during his absence, and needed rest; so I started on a two months' tour in Switzerland. The incidents of my holiday have nothing to do with this narrative, so I shall at once proceed to state what happened on my return. Of course, the first thing I did was to go up to the rectory to pay my respects to my superior. As soon as the ordinary courtesies had been complied with, the rector said: 'I am in a state of great perplexity. I had an application the other day for a certificate of the marriage of George Spencer Stanhope and Caroline Amelia Craven, said to have been solemnised by you in July 18—; but I cannot find it.'

'Not find it!' I exclaimed, in deep surprise. 'It was duly performed, and duly registered.'

'It is not there now,' replied the rector. 'I have searched carefully; and so did the lawyer's clerk who applied for it.'

'I must see into this,' I replied. 'If the entry is not there, the register must have been tampered with.'

I started off at once, and examined it carefully; and I found, without doubt, that a leaf had been extracted. I taxed my memory as to the marriages which had been solemnised about the same time, and found that at least two others were missing. By whom this fraud had been committed, I could not divine. I questioned the clerk and sexton; but though they distinctly remembered the marriage taking place, they averred that no one had been allowed access to the register without my permission or that of the rector.

I consulted a member of a legal firm with whom I had done business, and in whom I had the greatest confidence; and he caused affidavits to be prepared, setting forth that a fraud had been committed, and attesting that a marriage had been duly solemnised between George Spencer Stanhope and Caroline Amelia Craven, and entered in the register on the 28th of July 18—. These were duly sworn to by myself, the clerk, and the sexton; and were deposited by me in the hands of the legal firm I have previously mentioned.

Shortly after this, I obtained a living in London, and the whole of the incidents connected with this matter had again passed from my mind; when a rumour reached me that Mr Stanhope had, in consequence of the death, by accident,

back to the remotest times. Among the more prominent pointed out are the red earth of which Adam was made; the tomb of Seth on the slopes of Antilibanus; and that of Joshua, which is represented as being near Constantinople. The bones of Abraham, Isaac, and Jacob rest at the church of St Maria Sopra Minerva at Rome. At the Cathedral of Prague is preserved the stone on which Abraham gave the angels to eat; and Adam's guardian angel changed to a stone, for not being more watchful, is said to repose in a corner of the exterior wall of the Kaaba.

It is in connection with the events occurring in the New Testament, however, that most of these impressions are linked. Jerusalem and Jaffa are places still to be seen by the traveller in Palestine; but as regards their specific localities, there is the most conflicting evidence. But be this as it may regarding the explanations of travellers, tradition at least has found no difficulty in assigning each event its proper place; for there is scarcely an incident recorded in the holy narrative, the exact scene of which is not still recognised and pointed out. THE MORTLAKE PEERAGE.

CHAPTER I.

WHEN I was a very young man, I was curate of Knutsfield. In the spring of 18— my rector was taken ill, and had to go abroad ; and I was left in charge. Shortly after his departure, I received a visit from an old college companion named Stanhope. He was a young man of good family and high connections, and one whom I very much respected. He told me that he was in love with, and engaged to be married to, a young lady, whose friends were abroad ; and asked me if I would unite them in holy matrimony. At first, I objected ; but he pleaded so hard, and produced a letter from my pretty cousin Emily, urging me to comply with his request, that in the end I consented. Mr Stanhope wanted to get a special license ; but I stipulated that if I was to perform the ceremony, the marriage should be by banns. To this he agreed ; and the banns were duly published, he having in the meantime taken up his abode in the parish.

On the day appointed for the marriage, there was a considerable congregation assembled in

the church ; for the villagers had somehow got wind of the affair, and their curiosity was excited.

The bride was a most beautiful girl. Her glance was like a sunbeam ; no one could look at her without an emotion of pleasure. Immediately after the ceremony, the young couple started, as I then supposed, on their wedding tour, and I saw nothing more of them. About twelve months after the wedding, I heard that Mr Stanhope had obtained a good appointment, and had gone out to India.

More than two years elapsed without anything occurring to recall these incidents to my mind. My rector's health had in some measure been restored, and he was back at the rectory. I had been very hard worked during his absence, and needed rest ; so I started on a two months' tour in Switzerland. The incidents of my holiday have nothing to do with this narrative, so I shall at once proceed to state what happened on my return. Of course, the first thing I did was to go up to the rectory to pay my respects to my superior. As soon as the ordinary courtesies had been complied with, the rector said : ' I am in a state of great perplexity. I had an application the other day for a certificate of the marriage of George Spencer Stanhope and Caroline Amelia Craven, said to have been solemnised by you in July 18— ; but I cannot find it.'

'Not find it !' I exclaimed, in deep surprise. 'It was duly performed, and duly registered.'

'It is not there now,' replied the rector. 'I have searched carefully ; and so did the lawyer's clerk who applied for it.'

'I must see into this,' I replied. 'If the entry is not there, the register must have been tampered with.'

I started off at once, and examined it carefully ; and I found, without doubt, that a leaf had been extracted. I taxed my memory as to the marriages which had been solemnised about the same time, and found that at least two others were missing. By whom this fraud had been committed, I could not divine. I questioned the clerk and sexton ; but though they distinctly remembered the marriage taking place, they averred that no one had been allowed access to the register without my permission or that of the rector.

I consulted a member of a legal firm with whom I had done business, and in whom I had the greatest confidence ; and he caused affidavits to be prepared, setting forth that a fraud had been committed, and attesting that a marriage had been duly solemnised between George Spencer Stanhope and Caroline Amelia Craven, and entered in the register on the 28th of July 18—. These were duly sworn to by myself, the clerk, and the sexton ; and were deposited by me in the hands of the legal firm I have previously mentioned.

Shortly after this, I obtained a living in London, and the whole of the incidents connected with this matter had again passed from my mind ; when a rumour reached me that Mr Stanhope had, in consequence of the death, by accident,

of his uncle the Earl of Mortlake, very unexpectedly succeeded to the title, and was coming home from India. I called on him shortly after his return, and was received with the greatest cordiality. Of course, the first thing I did was to ask after his wife. For a second or two, he did not answer me; but I noticed that he turned very pale. At last, mastering his emotion, he said: 'She is dead.' I was about to condole with him, when he checked me: 'Do not say any more about it; the subject is too painful for me to discuss at the present moment.'

Not long after this, I met my cousin—who, by the way, had jilted me and married Sir A. Colville, a baronet with large landed estates—and I asked her about her young friend, expressing my regret at her early death.

'Who told you she was dead?' she asked.

'George Stanhope, himself,' I replied.

'Very strange!' she said, musingly.

'What is strange?' I asked.

'That I should not have heard of it.'

'Then, were you not aware of the circumstance till I informed you of it?'

'No; I know nothing but what you have told me.'

'I do not want to be inquisitive,' I pursued, 'but I must ask you one more question: When Mr Stanhope went to India, did his wife accompany him?'

'No; she remained in England.'

I could not quite understand Lady Colville's manner. She seemed shocked and pained; the subject appeared to be as distressing to her as it had been to Stanhope. She was silent for a time, and then she went on: 'I wish, Lionel, you and I had not been mixed up with that affair. I hope no evil will come of it.'

'What should, my dear cousin?'

'I cannot exactly tell. The awkward part of the business is that I feel certain there was a child born of the marriage.'

'Why is that awkward?'

'Don't you see that if the child is living, and is a boy, the boy would be Lord Mortlake's heir?'

'Of course he would.'

'But,' she replied with emphasis, 'I do not believe that he knows of the child's existence.'

'Then the sooner he is informed of it, the better,' I replied.

'But I do not know if the child is alive or dead.'

'I shall, with your permission, make it my business to ascertain,' I replied.

'I would rather you did nothing of the kind,' she said quickly. 'If Lord Mortlake applied to me, I should give him all the information I could. He is one of the most amiable and honorable men I know; we may therefore rest assured that if he desires secrecy on any point, he has good and valid reasons for it.'

'That may be perfectly true,' I replied. 'I have the fullest trust in Lord Mortlake's honour. But there is one thing more I have to say—the register at Knutsford has been tampered with; the leaf containing the entry of the marriage has been abstracted. What does that mean?'

'I cannot even conjecture; but rest assured that Lord Mortlake has had nothing to do with it.'

'Well, at least you can tell me how they

became acquainted, and why you took such an interest in Miss Craven's affairs. I should not have solemnised the marriage, had it not been for your solicitation.'

'I know very little; but what I do know I will tell you.—When I was a child, Caroline Craven and I were schoolfellows, and I was her bosom-friend. Her mother and mine had also been schoolfellows, and their friendship had continued after marriage. Mrs Craven was a sickly, rather weak-minded woman, but at the same time well educated and well bred. It was considered that when she married the rich Mr Craven, she had made a good match; but I doubt very much if she was happy. He was a pompous, purse-proud man, and not very popular among his friends. As I have said, Caroline Craven and I went to the same school at Barminster. It was kept by the Misses Onslow. They were well connected and highly cultivated women; but they were also narrow-minded, and prim and punctilious. Caroline was a wild, giddy girl, full of spirit, and full of talent, and, as you know, very beautiful. It was towards the end of our residence at this establishment, just when we were thinking of being released from our studies and coming out, that Mrs Craven fell ill, and was ordered to the south of France for change of air. My father and mother accompanied her and her husband; and we were sent back to school for another year. Caroline remonstrated when she heard of this decision, and vowed she would not go back to school; but it was only an evanescent feeling; she knew her father's stern character too well to think of disobeying him.

'When the midsummer holidays came, which it had been arranged we should spend with Lady Mansfield at Hampton Court, we were packed off on a visit to some friends at Tregothnan in Cornwall, as Lady Mansfield was too ill to receive us. I suppose it was thought we could not get at any mischief in such an out-of-the-way district as Tregothnan. But when two girls of eighteen and nineteen are left to their own devices, mischief is sure to follow, especially when one of them is of so impetuous and impulsive a nature as Caroline Craven. In our walks and wanderings in the neighbourhood of Tregothnan Park, we made the acquaintance of your friend Mr Stanhope. He was our constant companion for many weeks; and it soon became evident that he and Caroline were deeply attached to each other. Mr Stanhope was in those days poor; and Caroline knew that her father would never consent to her union with a poor man, however good his family might be. Still, as Mr Stanhope was as impulsive as she was, they agreed to get married first, and obtain his consent afterwards; and I weakly consented to aid them. The marriage took place, as you know, and we all returned to Tregothnan. I never saw two people so devotedly attached; they seemed to live only in each other's presence.

'At last the vacation came to an end, and we had to return to Miss Onslow's. The parting between the lovers was a very painful one; but it had to be endured; and as Caroline could not make up her mind to face her father's anger, all sorts of vows were meanwhile exchanged. Caroline was always inclined to

put off the evil day; and so it was arranged that as soon as Mrs Craven was convalescent, she should be informed of the marriage; and through her influence, Caroline hoped to obtain her father's forgiveness. Instead, however, of recovering, as it was expected, Mrs Craven took the fever, and died at Rome. This was a death-blow to poor Caroline's hopes; and shortly after that, my father and mother returned to England, and I was taken from school; since which, I have never seen my friend or heard from her. I heard that Mr Craven did not intend to return to England, and eventually that he had settled at Florence; but the friendship between the families ceased at the death of Mrs Craven; and since then I have lost sight of my friend altogether.

My cousin's narrative threw very little light on the points I wished to have elucidated—namely, Was the girl I had married to Lord Mortlake really dead? If she was not, what had become of her? At one time, I felt a strong inclination to proceed at once to Lord Mortlake, and open all my mind to him, and seek in that direction a solution of the mystery; but on consideration, I came to the conclusion that such a course was not advisable—that it was no concern of mine, and that I had better let the matter rest.

More than thirteen years had elapsed since the ceremony which forms the ground-work of this narrative took place at St John's, Knutsfield, and in the interval I had been preferred to a charge in the district of Canterbury. It was while in residence here that I was induced to proceed further with the investigations I have already described. In the ancient city of Canterbury there resided a maiden lady by the name of Onslow. She was moving in good society, and was considered a very kind, benevolent lady. After a time, it came to my knowledge that she had formerly kept a ladies' school. On hearing this, my old curiosity returned, and I determined to call on Miss Onslow, and ascertain if she was the same person who had been preceptress to my cousin and Miss Craven.

Miss Onslow proved to be a very stately old lady, very tall and very angular, with strongly marked features and dark piercing eyes. I took a dislike to her the first instant I set my eyes upon her; but that does not matter. I apologised for my intrusion, and was received most graciously.

'I understand,' I said, 'that you formerly kept an establishment for the education of young ladies?'

'Yes,' she replied; 'at York House, Barmister.'

'Just so. And among your pupils, some thirteen years since, you had a Miss Emily Skeffington, now Lady Colville?'

She answered in the affirmative.

'You also had at the same time a pupil named Caroline Amelia Craven?'

'A bad girl, sir—a very troublesome girl,' she said with much vehemence.

'Possibly. But we will not discuss Miss Craven's qualities. How long did she remain after Miss Skeffington left?'

Miss Onslow's brow darkened; she hesitated for a few seconds, and then replied: 'Some length of time—nearly a year, I should think. Her mother died abroad; and when her father sent for her, she was too ill to travel.'

'Did she remain in your establishment the whole of that time?'

'No; she was so ill, that at last we had to take her to the seaside.'

'What was the nature of her malady?'

'We did not quite know.'

'Did not the medical man give you some clue to her ailment?'

Miss Onslow gazed at me haughtily and defiantly, but she made no answer. 'Never mind,' I went on as blandly as I could. 'I will ask you another question, which I am sure you will at once answer. Did you know that Caroline Craven was married?'

She stared, and grew very pale, but replied at once and most emphatically: 'No.'

'But Miss Craven must have told you she was.'

'Girls who are in that situation,' she answered quickly, 'always say that; but there were no valid proofs'—

'In that situation? What am I to understand?'

'I really do not see, sir, what right you have to cross-question me in this manner,' she said haughtily.

'Very true, madam; I certainly have no right to question you; but it will be wise on your part to answer, because I have good reasons for probing this matter to the bottom, and I would rather do it quietly than otherwise.—Now tell me,' I went on, 'what am I to understand by the phrase "in that situation"?'

'She was about to become a mother,' she answered doggedly.

'The girl being in that situation, and asserting that she was married, what steps did you take to ascertain if there was any truth in her statement?'

'None. She had no certificate; and we did not want to create a scandal by publishing the facts to the world.'

'Did you make this known to her father?'

'No. If the truth had got wind, even supposing the girl to have really been married, it would have ruined us.'

'True. You thought nothing about the girl or her future prospects; all that you did was to hush the matter up and pack her off to the seaside. What was the name of the place you took her to?'

'Sandgate, a small watering-place in Kent.'

'And the child—what has become of it?'

'I died a few months after its birth.'

'Or that you are certain?'

'Yes, of that I am certain.'

'And the mother, what became of her?'

'She went to Florence to her father.'

'Is she alive or dead?'

'I cannot say. I have heard nothing of her since she left us.'

I cannot say that I was quite satisfied with the lady's mode of answering my questions; but at the same time I felt that I had no reasonable grounds for questioning the truth of her statements; so I merely thanked her, saying that

she would oblige me if she would give me the address of the person with whom Mrs Stanhope lodged, and also that of the medical practitioner who attended. She complied at once; and folding up the paper, I was about to leave the room, when she interposed, and earnestly entreated me not to publish to the world her share in the matter.

'At present,' I said, 'I have no intention of so doing; but I can make no promise. If the child is really dead, as you state, no good purpose could be served by such a course. Before, however, I am satisfied upon that point, I must have better evidence than that which I now possess;' and with that I bowed and left the room.

THE ADVENTURES OF AN AMERICAN SPECIAL.

THIRD PAPER.

'CONDENSE, young man, condense. If you want to get on in life, condense.' These words were addressed to a young reporter by the venerable Horace Greeley, in the writer's hearing; and indeed the journal he established and conducted with honour and profit for so many years, was a happy illustration of his maxim. Nothing high or low was considered too unimportant to find admission; but the severe pencils of the night-editors assigned the item its proper space. Sometimes it happens that the ubiquitous special may ferret out something on his own account, by a strict promise of giving incident, but suppressing names or addresses. This is called 'sensation local' work, and is received with great caution by the editors. It is generally done by reporters who are on the extra staff of a journal, or who sell their locals wherever they can find a purchaser. Often as not, they are the result of a full brain and a needy pocket. Of this class was the vivid description of a Fenian plot to burn Mr Ashbury's yacht the *Cambria* as she lay off Gowanus Bay; or the still more startling one entitled 'Barnacle Bill,' which appeared simultaneously in the *New York Sun* and the *Boston Post*, if the writer's memory serves him. In this thrilling and minutely circumstantial narrative, it was roundly asserted that the loss of so many steamships near Cape Race was due to the presence of wreckers, who decoyed vessels with false lights.

So great a furor did this create at the time, that telegraphic communications were exchanged between the governments of Washington and Newfoundland, with the result that a British man-of-war was despatched to the bleak promontory of Cape Race on a fool's errand.

But far more serious for the people of New York was the one which the *Herald* defiantly inflicted on a credulous public. A special edition of the *Herald* one summer morning informed its readers that all the wild animals in Central Park had broken loose, and were tearing about the streets. This was followed by a graphic description of a fight between Commodore Vanderbilt, armed with a revolver, and a rhinoceros; while other local celebrities had desperate encounters with lions, tigers, and infuri-

ated elephants. At the end of four columns of minutely described horrors, it was announced that of course the article was a hoax, but that in consequence of the carelessness of the Park officials, such a thing might happen at any time!

The American's restless, impetuous disposition is proverbial. Scarcely any of the *Herald's* readers took the trouble to wade through those four columns, but rushing into street and café, informed their neighbours of the terrible tidings. Women who had husbands in the city were in agony for hours, and in many cases the most appalling and disastrous results came from this cruel hoax. Some idea of the widespread dismay and panic occasioned may be gathered from the fact that the writer's mother, living in Bergen Point, twenty miles from the scene of the alleged outbreak, with the majestic Hudson between, had occasion to visit a neighbour. A large greyhound came bounding along the street as she reached her friend's house. One glance was enough. With a shriek of terror, she fled, tripped, and fainted.

Occasionally, 'sensation locals' are true in substance and fact, though names and dates may not be given. A case of the kind came under the writer's notice. 'Mr Blank,' said a well-known Bohemian one evening, 'would you like to know a burglar?'

'Rather an odd addition to one's stock of acquaintances, isn't it?' returned the writer. 'However, one may get something out of it.'

'More, perhaps, than you think,' returned his friend, as they walked towards 'Harry Hill's,' a sort of concert hall, within a stone's-throw of police headquarters, and the well-known resort of sporting-men, thieves, and abandoned characters. The place, however, was well conducted; and indeed, the secret of its success lay in the fact that its proprietor pandered to that morbid craving which some respectable people have of seeing vice without becoming a victim.

'If half what this man says be true, it will create a breeze,' said the writer's friend as they entered the hall. 'There he is at yonder table;' pointing to a short, squarely-built man of about forty, with a clean shaven face, good clothes, and a profusion of jewellery. A quiet, respectable-looking man in the main, and not at all a person that one would associate with midnight crime.

'How are you, Mr Kelly?' cried the writer's companion, addressing him carelessly. 'This is my friend, Mr Blank of the —.'

Mr Kelly expressed his gratification at meeting the writer, and invited him to drink at his expense.

The reader may wonder at this frankness of manner towards one who was avowedly an exposé of crime. But the fact of the matter is that your criminal is as greedy of appearing in the public print as any third or fourth rate exponent of the dramatic art. Their appetite for notoriety is insatiable. They long to pose as heroes, even though it may get their necks into a noose. It is this bombast and garrulous vanity which enable the police to pounce upon them so readily, and then surprise the public with accounts of their own sagacity in following up a clue. Every trade has its tricks, and the police force

is no exception to the rule. At that time, Mr Kelly was not wanted for any particular 'job,' and he was consequently free and affable with everybody.

'Police!' said Mr Kelly—'police! what are they good for?' and he emptied his glass with an air of profound contempt. It need scarcely be said that some very carefully prepared remarks had been spoken in order to induce Mr Kelly to launch forth.

'Why, gentlemen,' he continued, 'what's the police good for? Some poor "gonoff," as hasn't enough money to square 'em, gets "lagged" for maybe five or six "stretches;" and the big uns don't get touched. Police!' he repeated again. 'There's that job at ——'—mentioning the name of a jeweller on Broadway—'why don't they find out who done that? They say he must have stole the things himself. Rubbish! There's that job on Long Island last week, and Staten Island the week before.'

'In fact,' said the writer, 'there are so many burglaries committed now, that one would think it was done by a regularly organised gang, as I believe has been hinted at in some of the papers.'

'What would you think of the Burglars' Company, Limited?' he said with a merry twinkle in his eye—'comic idear, ain't it?—with a paid-up capital of ten thousand dollars, and burglars' tools that would open any safe in the United States!'

'Splendid idea!' said the writer, laughing. 'I've a notion I'd write it up.'

'Do!' said Mr Kelly; 'and send it to old Kelso [the chief of police]; you could make good reading out of it. You might say there was one man as planned the whole thing, and that the gang was so well organised, they set the police force at defiance. Pitch into old Kelso, and tell him he ain't worth his salary. That'll make him as mad as a hatter, I reckon.—I could put you up to a wrinkle or two, if I had a mind to; for I've known a heap of queer characters, and they've given me away points that would make your hair stand on end.'

The writer expressed himself deeply obliged to Mr Kelly; and a conversation ensued, which resulted in his inviting us to his house to see his 'old woman.'

His old woman turned out to be a very handsome blonde of some eight-and-twenty, who immediately sent out for fried oysters and laid the table for supper. The house was well, if not elaborately furnished. Mr Kelly announced that he would move the first of May, as he intended to take a 'public' in the Ninth Ward.

After a very pleasant evening, during which our host related a great many thrilling adventures, as done by some acquaintances of his in the cracksmen line, we took our departure.

A month passed away. Burglaries and house-breaking still continued in Long Island and Brooklyn to an alarming extent, baffling all attempts of the police at detection.

One Sunday afternoon, a policeman walking past either the Third or the Sixth Avenue Savings-bank—the writer has forgotten which—heard a peculiar throbbing. He summoned assistance; and found, on investigation, that the sounds came, not from the bank itself, but from

the cellar of a house next door. Breaking in, they descended to the back basement, which they found completely undermined and tunnelled towards the bank vaults. The cause of the strange noise was a small steam-engine working at a pressure which threatened every moment to burst the boiler. By the side of the engine lay one of the gang of burglars, intoxicated. The engine worked a drill which would in four hours more have penetrated to the vaults; and the robbers might have carried off with ease nearly a million of dollars. Had the man who was left in charge attended to his duty, and not allowed the boiler to get superheated, the success of the burglarious operations was assured.

Mere chance—that fatal *bête noire* of the criminal—led to the detection and exposure of Mr Kelly's Burglars' Company, Limited. They had hired the house next the bank for a year, paying the rent in advance, and announced that it would soon be opened as a first-class bakery and confection shop!

The result of the trial proved that there actually did exist an elaborate association of criminals, with a capital of six thousand dollars, represented by costly burglars' tools of every description. Mr Kelly had told very nearly the truth, having two objects in view—the airing of his own vanity, and the indulgence of what is known in America as the game of Bluff at the expense of the police force. It is more than probable that Mr Kelly found himself watched by the police more than was agreeable, as, knowing his antecedents and associates, they would not give him credit for remaining idle. It is a notorious fact that by *telling the truth*, he hoodwinked them completely, and had chance not thwarted his plans, they must have been completely successful.

Mr Kelly is now, to the best of the writer's knowledge and belief, concentrating his genius on the severance of oakum strands or stone-breaking at Sing-Sing.

SOME SINGULAR DELUSIONS.

In Heywood's *History of Angels* we find the following strange story: 'A young hypochondriac had a strong imagination that he was dead, and did not only abstain from meat and drink, but importuned his parents that he might be carried to his grave, and buried before his flesh was quite putrefied. By the counsel of physicians, he was wrapped in a winding-sheet, laid upon a bier, and so carried on men's shoulders towards the church. On the way, two or three pleasant fellows, hired for the purpose, meeting the procession, demanded whose body it was. Being told his name—"Surely," replied one, "the world is well rid of him; he was a man of a very bad and vicious life; and his friends have cause to rejoice that he hath ended his days thus, rather than at the gallows!" Thereupon, the dead man rose on his bier, and told them they were wicked men to do him that wrong; and if he were alive again, he would teach them to speak better of the dead. But they proceeding to defame him, and

to give him much more disgraceful, contemptuous language, he, not able to suffer it, leaped from the bier, and fell about their ears with such rage and fury, that he ceased not buffeting them until quite wearied; and by the violent agitation of the humours, his body being altered, he returned to his right mind; and being brought home and refreshed with wholesome diet, within a few days recovered both his health and his understanding.'

In Hone's *Year Book* we read of a farmer at Stevenage, in Hertfordshire, who died in 1721, but was not buried till 1751, thirty years afterwards. This delay in the interment arose from a singular delusion under which the farmer in the latter years of his life had laboured. In making his will he bequeathed his estate, worth four hundred pounds a year, to his two brothers, and, if they should die, to his nephew, to be enjoyed by them for thirty years, at the expiration of which time he expected to return to life, when the estate was to revert to him. He ordered, therefore, that, after his death, and with a view to his reappearance at the end of the thirty years, his coffin should not be put in the earth, but affixed on a beam in his barn, locked, and the key dropped through a hole into the coffin, that he might unlock it from the inside and let himself out! He was allowed four days' grace beyond the time limited, and still refusing to present himself, his remains were committed to mother earth.

Overwhelmed by the horrors he witnessed in the unhappy time when

King Liberty, drunken and frantic,
Let Anarchy loose on his slaves,
And plundered and murdered his people,
Dancing on graves,

a famous Paris watchmaker became persuaded that he had lost his head on the scaffold, and that it had been put on a heap with those of many other victims of revolutionary 'justice'; but that the judges, growing merciful somewhat late, had ordered the severed heads to be reunited to their respective bodies, and by a mistake on the part of the officer concerned in executing the novel decree, another man's head had been placed upon his shoulders, whereby he had exchanged an excellent set of teeth for a very indifferent one. He was thought mad enough to be confined in the Bicêtre, and there he might have remained to the end of his days, but for a lucky repartee made to him when he defended the possibility of St Denis walking with his head between his hands and continually kissing it. 'What a fool you must be to believe such a story,' exclaimed a sceptical listener. 'How could St Denis kiss his own head; was it with his heels?' The riddle was so unanswerable, that the man gave it up, and henceforth troubled himself about nobody's head, not even his own, and before long was sane enough to resume his old place in the world.

Not very long since, there died a Paris a man named Viory, notable for stopping and talking to every dog he met in the streets; not out of an irrepressible affection for the friend of man, but as an act of condescension towards a subject. Sane enough to all appearance, Viory claimed to be the monarch of the canine race,

by reason of having been a dog himself in a former state of existence.—Reversing the process of transformation, a patient in an American lunatic asylum insisted upon it that he had been changed into a horse, made himself a tail out of the frayed ends of a rope, donned harness, and attached himself to a wagon made out of an old soap-box, and busied himself in dragging it about all day. He then carefully locked it up with the carts of the establishment at night, and galloped off to a field, like a horse released from his labours. Like a steed of high-mettle, he never passed a wheelbarrow without shying at it.—A still more extraordinary freak of the imagination was displayed by a Frenchman, mad for the loss of his beloved wife. He was found standing in a large flower-pot, intent upon refreshing himself with the contents of a watering-pot, and informed his astonished friends that his wife had carried away a portion of his soul, leaving him only sufficient for a plant; he had consequently been transformed into a cypress, as they saw; and all he had to ask them was to lose no time in transplanting him in the cemetery grounds.

Not a few would-be sons-in-law of the Queen of England have had to be contented with appearing in court instead of at court; a fate that befell an aspirant for Her Majesty's own hand. In a case tried at Chicago, it was shown that James Love of that city was under the belief that Queen Victoria, with the Emperor Napoleon and his consort Eugenie, visited Chicago after the great fire there, and took up their quarters at the boarding-house in which Love was living. Seeing the Queen of England daily, he grew to adore her; and she in return worshipped him. Mr Disraeli favoured the match, and the English people approved it.—But J. C. Knickerbocker also fell in love with the august lady, and so managed matters that Mr Love was debarred her presence. Nay, more. When Mr Love went for a marriage license, the clerk, on seeing the lady concerned was 'Victoria Guelph, Queen of England,' refused to grant him the license; and before long, Mr Love had to appear in court to vindicate his competency to manage his affairs. The ill-used man drew a touching picture of his devotion to the Queen, and of her unalterable affection for him. He averred that his diabolical foes had drugged his lady-love; and that a third candidate for her hand, named Cassel, had even threatened her life with a hatchet, but failed to shake her resolution. He had appealed to the British people to rescue their sovereign; but they had unaccountably made no sign; and he implored the court to subpoena the object of his affections, who had, singularly enough, neglected to appear and corroborate his story.

For a man to be bewitched by a woman, is common; that he should like it, is common too; such being the case, one can hardly comprehend a man complaining of being bewitched by his wife, but that was the grievance with an Iowa farmer. Not that his trouble ended there; for his neighbours bewitched his pigs, or so he said; while the princess of witches, in the guise of the hired girl, set her uncanny subjects to call him foul names, gibe at him, and prick him with pins. In vain would he cover himself with blankets; his howling tormentors quickly pulled them off

again; they hunted him out of every cunningly devised hiding-place; and he dared never say 'Yes' or 'No,' in answer to a question, knowing they would not rest, or let him rest until he had eaten his own words.

Many a delusion has been aired in the Agony columns of the London newspapers, but never a more pitiable one than the following:

'MURDER!—Whereas, in consequence of evidence in my possession concerning divers murders, or suspected murders, committed in times past, I am under the painful apprehension that the strongest possible motives exist in certain quarters for destroying my life; and whereas I have good reason to suspect that drugs have been given to me at different times since July last, and in previous years, and that I am now in danger of being stricken down by poison, violence, or disease artificially created; and whereas I have recently suffered from sleeplessness and nervous irritability, with muscular twitchings, rippings of the blood, stiffening of the fingers, &c., and am now suffering from incipient weakness of the chest:—I hereby offer an annuity of Fifty Pounds during my life—with full pardon, so far as I may be able to secure it—to any person, who, recognising me from having been concerned in administering to me any noxious drug or poison, shall furnish such evidence as will prove a murderous intention on the instigators of this crime.'

It is a shade pleasanter, perhaps, to fancy somebody has designs upon your life, than to imagine that you have yourself killed somebody; as was the case with an American engine-driver who applied for a three months 'lay-off,' on the plea that he was 'killing too many men on his run,' accusing himself of a wholesale manslaughter, of which he was quite guiltless. For some occult reason, American engine-drivers would seem to be subject to dangerous hallucinations. One had to be relegated to other duties because he was constantly stopping his train for non-existent obstructions on the track, or pulling up in the belief that very palpable bridges had gone altogether. Another was always on the look-out for a black horse, which he averred was in the nightly habit of jumping on the line just ahead of him, and leading him in a race of several miles; and when, in his anxiety to overtake the phantom steed, he ran through a stopping station at the rate of fifty miles an hour, it was thought desirable to give him a rest.—No masterless horse troubled the eye and mind of an old driver on the Central Illinois Railway; his phantom took the shape of an Indian warrior mounted on a white horse, careering along the prairie beside the track, and racing with the train, unheeding of the fireman's lumps of coal, and the shots from the revolver of the imaginative driver.

That the fireman should be infected with his mate's delusion was nothing wonderful. Madness of this sort is very catching, or where would the reputation of Lourdes be? Some imaginative individual saw, or fancied he saw, the window-panes of the houses in Rustadt suddenly emblazoned with crosses, swords, and other significant emblems; and soon the natives of Baden, Rhenish Bavaria, Alsace, and Lorraine thought of little else but the strange signs and tokens, and left their work undone, to gaze for hours

at the nearest window-panes; until their faith and patience were rewarded by seeing therein, not only swords and crosses, but deaths-heads, soldiers, nuns, cannon, and war-ships. A sceptical Genevan journalist set the appearances down to a kind of hypnotism, caused by long gazing on smoky window-panes burned by the sunshine; but believing Badenians looked upon them as omens of trouble to Fatherland; and sanguine Alsations held them to be happy prognostics of the swift-coming *revanche*. Of course, nothing came of it all; the hallucination passed away; teaching its victims that seeing is not always believing, for when the mind goes wrong, the eye is not to be trusted.

THE FUTURE OF ROAD-TRAVELLING.

WILL the time ever come when the main roads of the country will be once more used as they were in what we already call the 'old coaching-days,' for general traffic? A year or two ago, the question would have been answered immediately, positively, and perhaps impatiently, in the negative. To-day, as we shall endeavour to show, there is considerable probability of those roads being again put, if not exclusively, at least to a very large extent, to the use for which they were originally intended. Of course, the railways are supposed to have completely monopolised the long-distance travelling. No one who wanted to go, say, into Yorkshire or Scotland, from London, would have thought, half-a-dozen years ago, of adopting any other means of locomotion than that supplied at Euston and King's Cross. Coaches and stage-wagons are practically extinct; for the expensive amusement which is now known as 'coaching' is useless to the *bond fide* traveller; and they are few indeed who can derive much real pleasure from a steady hundred-mile walk along one of our trunk-roads, though a saunter through the bylanes is no doubt a different thing.

But matters have changed very greatly during the past half-dozen years, and are destined, we firmly believe, to change still more remarkably during the years immediately before us. There are now numbers of men in London who, if they wanted to visit Yorkshire, or even Scotland, would eschew the iron-road, and take to the Macadam, mounted, not on horse-flesh, but on steel, and deriving from their own muscular legs the force required for travelling at the rate of eighty or a hundred or even more miles *per diem*. But although the once rare bicycle has now penetrated to every hamlet, and has conquered the once powerful prejudice against it, we are well aware that it can never effect the revolution in travelling of which we spoke in our first sentence. 'Cyclists' are increasing at a wonderfully rapid rate; and we are persuaded that the takings of the railway Companies must be considerably less than they would be if bicycles were unknown. But it is of course only the young and vigorous male portion of the community, who can utilise it for long-distance travelling.

It is to the tricycle, in some of the many forms it is now assuming, that we look as the

travelling-carriage of the future. Within a very short time it has come extensively into use; and as it is available for ladies as well as gentlemen, and is safe and steady for old as well as young, while the clergyman and doctor can use it without that sacrifice of dignity which is supposed to be involved in the use of the bicycle, it will be seen that the tricycle appeals to a very wide constituency indeed. It is impossible to say how many of these useful machines are already in use, and it is equally impossible for the candid critic to affirm which of the countless patterns in vogue is the best. It is enough to say that a person of average strength can with practice propel himself (or herself) over ordinary roads at the rate of six, eight, or even ten miles per hour, without any extraordinary exertion or fatigue; while if two club together and sit side by side on a 'sociable,' the labour is considerably diminished. What pleasanter mode of spending a holiday can there be than for a man to take his wife through the country in this fashion? The luggage is strapped behind; you start at what hour you please, taking whatever route you prefer; you halt when and where it suits you, and have no trouble with your horse when the day's journey is done. The travelling costs you nothing, unless it be a few pence for turnpikes. You save your railway fare; and you see more of the country than you could possibly do in any other way; while the moderate exercise—which you need never permit to become irksome—will do you a thousand times more good than lounging on the sands or rushing over the continent.

Still, we admit, we have not proved our point. The question is, whether these modes of locomotion will ever supplant in any large degree our present method. We acknowledge that so long as any physical labour whatever has to be performed in the propulsion of tricycles, they will not come into universal use. Let us not forget, however, that in many districts where railway accommodation is *nil* or defective, they are used very extensively for business as well as pleasure. Postmen and doctors especially, have taken readily to this method of locomotion. But inventions are in progress, and have indeed been already perfected, which promise to take the tricycle out of the category of velocipedes or foot-worked machines, and give it a far greater value and importance.

It is well known that one of the first uses that M. Faure made of his new discoveries relating to the storage of electricity was to propel a tricycle, and the speed he then obtained was ten miles per hour; and in this connection it appears as though the French, who were the first to introduce the modern bicycle about fourteen years ago, will be the first to manufacture its direct descendant through a nearly traceable evolution, the Electric Tricycle. With such a machine, supposing that the cost of producing the power be not prohibitive, we can foresee the day when the family party will journey down to Brighton on a fine afternoon by road instead of rail; when the splendid main roads of our country will again be thronged with travellers moving along easily, safely, and inexpensively, not in swaying coaches, but in smoothly rolling tricycles; when the old *Red Lion* and *Blue Boar*, deserted these last forty years, will

again become gay and busy; and when the long neglected villages and bylanes will be explored by tourists who will never want to catch a train.

INSECTS ON THE SURFACE OF ORANGES.

When a dish of oranges is seen on the table for dessert, the fact is hardly realised that in all probability their surface is the habitat of an insect of the *Coccus* family. This tiny creature is found on the orange skin in every stage of transformation, from the egg to the perfect insect, during the winter months, instead of remaining dormant in the cold weather, as is the case with most of the insect tribe. It would hardly be possible to find a St Michael's or Tangerine orange that had not hundreds of these little creatures in various stages of development on their surface. Lemons, too, are frequently covered. Upon inspection, the skin of an orange will be found to be dotted over with brownish scarlet spots of various sizes. These specks can be easily removed by a needle; and when placed under a microscope, an interesting scene is presented, consisting of a large number of eggs, which are oval white bodies, standing on end, like little bags of flour, some of the inhabitants of which may very probably be seen in process of emerging from the opened end of the egg. The female insect upon leaving the egg has six legs, two long hair-like appendages, and no wings; it thrusts a sucker into the orange in order to obtain nourishment, and never moves again, passing through the various stages of development until it lays its eggs and dies. In the case of the male insect, the chrysalis after a short period opens and the insect flies off. The male is supplied with wings twice the length of its body, and each of the legs has a hook-like projection. It has four eyes and two antennæ, and is so tiny that it cannot be seen when flying.

From some parts of Spain, oranges come to us having their rind covered with a *coccus* of quite a different type. The surface of oranges, indeed, affords the possessor of a microscope an infinite amount of interest and amusement.

THE MIRK.

WHEN snaw lay deep upon the brae,
Or drifted owre the lonesome moor,
A waste around the cottage door
Where ance the bloom o' heather lay,
The bairnies, tired o' laugh an' play,
Would singin' gang to sleep at night;
While in the pane I'd place a light
To guide the wanderer aright,
That in the mirk might lose his way.

Now thirty years ha'e fled this day,
Since last I heard the bairnies' sang,
Yet every bush where birds are thrang
Brings back again the simple lay,
That never mair will cheer the brae;
For on my hame there fell a blight—
My bonnie singers a' took flight:
O shine on me, Thou Beacon-light,
Lest in the mirk I lose my way!

GOING FORTH TO LABOUR.

A FEELING of pity, mixed with contempt, is provoked on seeing a family moving in a respectable position in which, through some species of pride or indifference, sons are brought up to do nothing. The father, a good enough man in his way, has not the vigour of character to see the folly of which he is guilty. He has perhaps an idea of the youngsters getting some sort of position in the Civil Service; but for want of ability, and assiduity in learning, that proves hopeless, and comes to nothing. Then he has a notion of the Army, which used to be the general refuge for the genteel destitute; but matters in that respect are also now so hemmed in with regulations and restrictions, that it, too, proves abortive. It is altogether an awkward case. There are the young fellows growing up. They are beginning to show symptoms of a moustache. Costly fancies are demonstrated in the way of dress. Tailors', bootmakers', and jewellers' bills are becoming unpleasantly numerous and oppressive. Papa is perplexed, and at his wits' end. It is a bad look-out.

The man has obviously behaved foolishly. If he has got into a mess, it is his own blame, and he must take the consequences. Why did he not bring up his family with the belief that in the ordinary course of things, according to the destiny of nature, they must Go Forth to Labour—not sham labour, like that pictured by fashionable frivolity, but downright work—something which will help on the general business of the world, and produce a reasonably fair livelihood? This is a question which the man cannot or will not answer. It was a hateful false pride that was at the bottom of his stupidity. He belonged to a condition of society in which an industrial career in commerce or the useful arts is looked down upon; and to avoid that, all risks are to be run, even to the extent of pinching poverty, and a resort to shabby contrivances for a livelihood.

Suppose the man had succeeded in his primary

idea of getting his sons appointed to some department of the Civil Service, it would have been a paltry affair after all. The Civil Service means continuous daily toil through life, with a moderate subsistence, and a round of duties which almost amounts to a crushing out of all mental saliency. Hope is left behind. With good health, and good behaviour, there is no doubt a prospect of employment until old age, with a small retiring pension, but all chance of improvement of circumstances on a scale worth speaking of has to be laid aside. The father who gets his son established in the Civil Service, has condemned him to life-long drudgery and obscurity, and that is hardly to be deemed a matter of kindly gratulation. A youth should, if possible, be floated off on a career in which his capacities will have scope for development in enterprise. Without progressive incitements corresponding to faculties and opportunities, life is apt to be but a cheerless monotony. Perhaps, from the eagerness with which the Civil Service is sought after, this dull routine of existence commends itself to vast masses of young men who are disinclined to self-reliant exertion. If so, we leave them to enjoy what they appreciate, and turn our attention to those phases of society more likely to be roused to an independent exercise of brains and sinews.

It is an instructive fact, that those who affect to consider themselves as belonging to the higher classes of society, are by bad up-bringing excluded from the pursuits which have made England the most wealthy and powerful nation in the world. Riches are not obtainable by putting on a fine appearance, or by talk, or by the pretensions of dreamers, but by Going Forth to Labour, and pursuing that Labour with all reasonable diligence. The costly education given to youth, often in itself is a bar to advancement in life. As a consequence, the wealthier classes are in the main recruited from the ranks. For the most part, they began as poor boys who, fearing no imaginary humiliation, and embracing every opportunity of advancement, 'justified by honour,' at length

attained to the distinction and ease of circumstances which they are now seen to enjoy. We may be quite certain that the wealthy men we see and hear of have not made their way by street-lounging, by attending steeplechases, or by squandering their time in Club rooms under the inspiration of nips of brandy and cigars.

Of late, we are happy to say, the so-called higher classes have shown symptoms of turning over a new leaf. Feeling as if they were about to be left in the lurch, a number of them have resolved to send their sons Forth to Labour in fields which lie invitingly open for their mental and bodily capacities. As better than any moralising, we propose, in illustration, to tell a story of real life, which we condense from a narrative recently published.* An English gentleman, whom, for brevity's sake, we may call the Captain, living in good circumstances, with a wife, three sons, and a daughter, was suddenly brought into difficulties by certain pecuniary losses. He resolved to make a personal sacrifice for the sake of his boys; and in this, his wife and daughter cheerfully concurred. The Colonies offered an opening for enterprise, and the part he selected was the neighbourhood of Winnipeg, in Manitoba. This newly opened-up district has been much spoken about recently. It is situated near the south end of Lake Winnipeg, and west of Lake Superior, in Canada, and noted for its general fertility. Had we been to make a choice, we would, for the sake of a generally agreeable climate, have selected New Zealand, or some part of Australia; but to many persons, such would be objectionable, owing to the long voyage and distance from England. Canada is comparatively near home, and can be so easily reached by steamboat, as to be deemed preferable by a large number of emigrants. It was so, on the present occasion.

Some time before setting out, the Captain submitted his sons to an agricultural training, so that, on arrival in the colony, they took kindly to a routine of rough work in the fields. Going by way of the St Lawrence and Toronto, the family reached Winnipeg in twenty-two days, including stoppages. They found Winnipeg a busy and thriving town, rapidly rising into importance, with establishments for the sale of every kind of farming implement; also for the sale of horses, draught oxen, milk cows, and other animals. Likewise shops of different kinds, for articles native and imported. Hotels large and numerous.

The Captain had bargained for a lease of a settlement including a dwelling-house, a garden, and some land in crop. The whole was a downright imposition. The dwelling-house was little better than a dilapidated shed, with the rain pouring through the roof. There was no garden;

and ten acres alleged to be in tillage, were upwards of a mile off, through swamps waist deep. Certain so-called stables and cattle-sheds, were simply roofless piles of manure and rubbish. So much for entering into a contract for houses and lands without seeing them. It was too late to repine, or to think of going back. The Captain, with his sons, set a stout heart to the business, and did their best to get things into order.

It was rather late in the season—the beginning of June, 1880; but this family of Crusoes managed, by dint of hard work, to cultivate some land near their dwelling, sufficient to insure the prospect of a tolerable harvest. A good deal of carpentry in a rough way was also effected; wooden fences were set up, and the dwelling-house underwent a thorough repair. There was now an air of comfort, where there had been formerly nothing but misery. The writer of the narrative says: 'For forty dollars (eight pounds) I purchased a cow and calf of a neighbour; and within seven weeks of leaving England, we had as good cream and butter on our table as in Devonshire itself. Poultry, pigs, &c. soon followed.' Not caring for delicacies, which could be procured only from Winnipeg, ten miles off, the family had for diet, bacon, salted pork, eggs, salads, vegetables, pastry, and home-made bread, all which were sufficiently nutritive. Domestic work, we presume, was done by the ladies, for we hear nothing of hired assistants.

The struggle was hard, but contained the elements of success. Horses, a serviceable wagon, a mowing-machine, and other implements of husbandry, were purchased, and put to a good use. The worst thing to contend against were the roads, which in wet weather were in a frightful condition. Every hardship, bad roads and all, was philosophically surmounted. Fortunately, there was near at hand a vast stretch of prairie, yielding wonderfully high and thick grass of excellent quality; of this, a large quantity was cut and winnowed, forming a useful stock for sale, and also for winter use. The boys took to the work of hay-making, as well as everything else, with much alacrity. The Captain tells us, for the encouragement of others, 'that *wholly unaided*, his three boys—the eldest under twenty—managed to plough and crop sixty acres in the short period of six weeks—the work, too, being *well done*!'

There seem to be two heavy drawbacks against Manitoba, which are touched upon lightly. The first is the comparatively short summer, with its great heat, and swarms of black flies and mosquitoes, which there seems no way of extirpating. The second drawback is the long winter, with its intense frost, sometimes sinking to fifty degrees below zero, and which would be wholly unendurable but for the dryness of the atmosphere. When the wind blows during this frosty season, no one dares to encounter it unless wrapped up in skins and furs. Driving home from Winnipeg the day before Christmas, it

* *A Year in Manitoba, 1880-1881, being the Experience of a Retired Officer in settling his Sons.* W. & R. Chambers, 1882.

seemed almost too cold for any one to survive it. 'My nose and cheeks,' says the Captain, 'were frozen on two different occasions during the day, leaving very sore evidences thereof for some while afterwards; and it was imperative every now and then to get down and run alongside for a considerable distance, to maintain circulation at all. . . . Of course, it becomes, under any circumstances, a question of more or less clothing; coats of skins—the dress of primitive man—best meeting the necessities of the case. For these, bears, beavers, wolves, racoons, skunks, and every variety of furred animal, are freely drawn upon; but especially and chiefly the buffalo supplies his hide for the comfort of those who have now nearly exterminated him from those prairie-wilds where but lately he was wont to reign supreme in herds of countless thousands.'

With all its drawbacks, the Captain was favourably impressed with Manitoba for the special object he had in view, namely, that of settling his sons. He does not think it is a country suited for tenant-farmers of the ordinary class, or for persons coming out to take things easily. 'One sees numbers of young, smartly dressed fellows, ornate with gold chains, rings, and solitaires, with finely starched linen—fresh arrivals from England—lounging about the streets of Winnipeg; and we wonder whether they have at all realised what farming in Manitoba means! It certainly means the greatest exertion to maintain even personal cleanliness and common decency of attire; for the destruction of clothes is truly alarming, and nothing but the adoption of the "overall" duck suits of the country and high boots, can preserve a man who has to work from soon becoming, as to his clothing, a veritable scarecrow.' Considering how successfully his sons had taken to the rough mode of life pursued in the colony, the Captain thinks that Manitoba is well adapted for a class of young men with good education and fond of a country life and pursuits, provided they are industrious and not likely to be daunted by trifles. This is exactly the class who are so numerous as to be a positive embarrassment to the country at home, and whom many parents would be thankful to see comfortably and decently settled.

The writer candidly tells us that Manitoba is not the place for persons of settled habits in middle life. For himself and his wife, he says: 'We should indeed be very sorry were we compelled to live here always.' This is an important admission. Intending emigrants would need to consider the nature of the country they select. As a rule, capitalist emigrants in middle life, and who design to rely upon agriculture, cannot be advised to go to Manitoba, or indeed any raw district in the north-west of America. We should also doubt whether it is suited for the reception of the large number of artisans who have been flocking thither; though it appears there is a good opening for blacksmiths and such

handicrafts. It should be added, however, that the improvement by means of railways will speedily change the aspect of affairs, and afford openings for settlement hitherto unheard of. We need not pursue the subject. Our object was to point out how a gentleman with his wife quitted home and country, making for the time many sacrifices, for the purpose of establishing their sons in a career adapted to their faculties, and which proved eminently successful. It was a noble effort, and can only be spoken of with the heartiest approval. Instead of seeing their boys merged in the crowd of genteel idlers who have become a pest to society, they had the satisfaction of observing them Going Forth to Labour in a field every way worthy of their exertions. W. C.

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

CHAPTER XIX.—REGINALD, IN HIS FRIENDSHIP FOR VAL STRANGE, BEGAN TO GROW DESPERATELY FEARFUL FOR HIM.

MR REGINALD JOLLY and his father walked together in Piccadilly. Even Captain Morris, the sometime laureate of the West End, would have found but little in his favourite haunt to praise on such a morning. Mud and mist were its prevailing characteristics; the mud oceanic, the mist Scottish, and the general outlook profoundly melancholy. London is the home of wonders, and amongst its store of marvels it is open to question whether there be one greater than the placid endurance of its people. In Stamboul—which is the incapable official's earthly paradise—men bear anything. But in London, capital city of the land of the free, it is singular that we make no rebellion against misrule. There was an Irishman once, who, being informed that for a score of years the bailiff or land-steward in a certain district had not been shot at, excused his countrymen on the ground that what was everybody's business was nobody's business. Perhaps the same proverb applies in other cases; and anyhow, Piccadilly lay in its usual spring-tide condition.

In all minds, good temper is not merely synchronous with boot-polish; but there are circumstances and conditions in which the one may disappear with the loss of the other. Mr Jolly, in spite of the weather, had turned out of his chambers in the Albany in a beaming condition. A passing hansom rolled up a sudden wave of mud; the wave overflowed Mr Jolly's varnished shoes and spotless gaiters; the cabman turned and grinned derisively; a small boy, with that inhuman delight in misery which only small boys feel, danced with joy on the muddy pavement at the sight; and the injured gentleman forgetting dignity in anger, made at the juvenile satirist with his cane. But the small boy, surrounding himself with a very halo of mud-splashes, dived behind a lamp-post, and from that place of vantage hurled forth satires too ponderous—so it seemed—for infant tongue to wield; and Mr Jolly could but shake his stick at him in impotent exasperation. Turning, in anger curious, disproportionate to the event,

such as elderly gentlemen are subject to on like occasions, the injured man faced his only son, and read on his undutiful countenance a smile of mirth. At that, with such reproach in his glance as may have stricken Brutus when dying Cæsar breathed '*et tu,*' he walked in silence to a near cab-stand, and entering the first vehicle he came to, gave the word for home. When Reginald would have entered with him, the aggrieved father voicelessly waved him back and drove away alone. The aged-seeming youth stood upon the kerbstone and watched the retreating cab. His smile was half-glad, half-pensive, and he gave the small boy a penny. Then obscuring the remnant of his emotion with an eyeglass, behind which all passions faded to a stony glare, he turned away, and felt a hand upon his shoulder.

'Hillo! How de do?' from Reginald.

'How de do?' from Mr Gilbert, late yachting comrade of Val Strange's. 'Nice day.—Your governor, wasn't it, who drove away just now?—Thought so.—Which way are you going?'

'I am a waif upon the human sea,' responded Reginald, winking behind his eyeglass with much dexterity. 'I was going somewhere; but my guile has left me, and I am alone in London, and I don't know where to go.'

'Come and lunch with a fellow at the Club—just across the road.'

'What fellow am I to lunch with?' inquired Reginald.

'Come on,' returned Gilbert; and led the way to a ford, or crossing, by means of which they passed over the river of mud and came to the Club portals.

'Thus,' said Reginald later on, waving his hands vaguely at the well-furnished table, the cheerful apartment, and the fire.—'Thus we pluck sweetness from misfortune, and the grief of the father becomes gladness to the son.'—Gilbert, who had seen the disaster to the elder Jolly, smiled, and pushed the claret across the table.—'Strange is in town, I believe,' said Reginald, a moment later. 'Have you seen him?'

'No,' said Gilbert, a slow smile again wreathing itself about his broad features. 'Strange and I are at loggerheads.' When Gilbert smiled, there was this peculiarity about it, that the smile worked underground, so to speak, travelling unseen about his countenance, breaking out at salient points, to disappear again and break out again, now in a wreathing of the lips, now in a twinkle of the eye, until, having permeated the whole mass of his mid-England features, it burst forth all over in a kind of triumph.

'At loggerheads?' said Reginald, fixing his eyeglass in order to reproach him. 'Why, I thought you two were the Damon and Pythias of the modern world. And who ever heard of anybody quarrelling with Val Strange?'

'I never quarrelled with him,' said Gilbert, with his smile in ambush in his eyes. 'I never row with anybody. Not on principle, because I think a fellow ought to assert himself at times; but because I haven't energy. The fact is, he quarrelled with me.'

'What about?' inquired the other.

'I think I have the letter about the somewhere,' said Gilbert, pulling out some loose papers. 'Yes; here it is.'

Reginald took the letter from his outstretched hand. 'Am I to read this?'

Gilbert nodded; and his companion taking down his eyeglass, opened the letter, and read a line or two: 'I am in the dullest hole I ever got into in my life;' and so forth. At this he turned his eyes to the address from which the writer dated, and saw that this epistle had been forwarded from his father's house. He gave a little gasp at that discovery, and partly to cover a momentary confusion, read on. When he had read it through, he handed it back to Gilbert. 'Did you send the telegram?' he inquired innocently.

Gilbert's slow smile declared itself on his lips, disappeared, shone out in his eyes, disappeared, and beamed suddenly on every feature. He nodded twice or thrice, and responded, in the phrase of the once-famous Muster Gerridge: 'I believe you, my boy. I sent it. I did more. I went out of my way to oblige him. You see, he asked me not to fail in making the telegram urgent enough to fetch him out of the place he'd got into; and so, thinking the first mightn't seem sufficiently particular, I sent a second; and then—so that there shouldn't be any mistake about it—I sent another. Then he comes up to town, slangs me horribly for overdoing it, and tells me he's done with me for ever. It's Talleyrand over again. *Trop de zèle.* You catch me ever helping anybody again, and tell me of it.'

'You don't happen to know whom Strange was staying with, do you?' asked Reginald.

'No,' said Gilbert. 'He omitted to name his host, and I don't know anybody but Val himself in that part of the country.' And Mr Gilbert, had he known the truth, would rather have been shot than have betrayed Strange in this manner.—'Why do you ask? Do you know 'em?'

'Ye-es!' said Reginald, again assuming his eyeglass, and speaking in a tone of anything but certainty. 'I think I do.'

'They must be a wooden lot,' said Gilbert, 'to frighten Strange in that way. In the matter of patient endurance of boredom, I'm a perfect camel, and Val is the next man to me. I never knew anybody who could endure being bored better than Val, except myself of course. But then, you know,' said Gilbert, as if deprecating his own virtues, 'I'm so used to it. I can't remember not being bored; everything's a bore to me, and always was, and so, you see, I've had lots of practice.'

'Ye-es,' said Reginald again. 'Must have had.' He was both humiliated and indignant; but by dint of much self-control, he disguised his feelings, and turning the conversation to other matters, sat on for an hour, and then took leave. He was eager to be alone, that he might puzzle out this curious affair of Strange's. If it were true that Val had found things dull at the Grange, it was certain that he had borne the infliction in a marvellously cheerful manner on the whole. Dull? He had been the life of the house—the very centre of all people's enjoyment. Once or twice there might have been a preoccupied and even a dreary look upon his face—Reginald remembered that—but he had always emerged from his momentary quiet into a very fever of good spirits. There was some small mystery at

the bottom of the matter, and the younger Jolly was one of those people to whom mystery is a thing unendurable. There was a fair share of mother-wit hidden in that prematurely bald head of his, and as he sat in deep bewilderment over the whole matter, some uncertain gleams of light began to dawn. It was evident that Strange must have been intensely eager to get away, before he would have written such a letter to Gilbert. It was equally evident that the reason he gave was not the true one. It was plain, also, that when the telegram arrived which should have been his excuse for leaving, he had changed his mind, and did not want to go. The complete pretence of the excuse was proved by his immediate return when at last the third telegram had forced him away. This, then, was clear—that, at the Grange, at the time of Val's stay, there was some unusual attraction and some equally unusual repulsion. Reginald cudgelled his brains to remember whether anybody who might have been disagreeable to Strange had left the house between the writing of the letter and the receipt of the telegram. No. There was nobody leaving at that time. Had anybody arrived who brought a new attraction to the place, and made him eager to return? No. Then the attraction and the repulsion existed there together. How?

When the present writer was very young indeed, he was in love, in a quite hopeless manner, with a lady whose years probably doubled his own. The lady was perhaps two-and-twenty, and is at this time elderly, and indeed a grandmother. The present writer was permitted to make one of a water-party, and to his own ecstatic delight, was relegated to the boat in which the object of his unspoken adoration sat with a younger sister. It was a large boat; and there were several young men, who wore high collars, and otherwise made open proclamation of achieved manhood, told off to it; but there were no other ladies. One of the young men had the celestial happiness to be the brother of my adored. Unmindful of that splendid privilege, he called to the occupants of another boat, complaining of the inequality of distribution. My hated rival, who was two-and-thirty, turned upon him: 'It's all right, Tom. We have your sisters. Don't ask any more ladies here!'—'Don't ask any more?' queried the other. 'Sisters?' It was spoken with extreme disdain. 'What do you think a fellow wants with his sisters at a picnic?' This was my first lesson in a phase of nature which I have since studied with some care. It impressed me all the more because it was uttered in respect to *such* a sister; and the moral I deduce from it, and from my after-studies is this: that, as a rule, a brother is ignorant—is even ridiculously ignorant—of his sister's fascinations for other people. He is prepared to admit the attractions of other men's sisters—they appeal to him: he is not altogether amazed—though perhaps amused—that a man should marry or desire to marry *his* sister; but if the future brother-in-law, in a flush of that foolish fever under which he labours, should chance to pour out his thoughts of his divinity, it seems—confess it—a little ridiculous to the divinity's brother. Those lambent orbs in which the soul is made visible for the first and last time in this world for you or me—'item,' saith the brother, 'a gray eye or so.' Her sigh melts

not him, her glance commands him not, he will grin superior at your raptures; had it been Susan now—*your* sister, he could have understood it.

Any other man knowing all that Reginald knew, and having but half his readiness of observation, would have jumped to the truth at once. It may be accepted as proof of considerable keenness that he reached the truth at all. It was a slow and doubtful process; but he mastered the problem at length, and was satisfied that his solution was the true one. It troubled him on many grounds. He had grown into a great liking for Gerard, and had long had the sincerest friendship for Strange. And he himself was proud, and in respect to some matters, loftily honourable. The British undergraduate has, if you take him in the lump, fewer of the Christian virtues than you might wish to find in him; but some of the mere heathen virtues are an absolute part of him, and men who have them not, he despises, and from his soul abhors. Reginald, in his friendship for Val Strange, began to grow desperately fearful for him. It was remarkable, having once made up his mind to the reason of Val's astonishing behaviour in the matter of the telegrams, how true an allowance of the impulses which guided all three of the people involved, he was able to make. He adjudged to Gerard, at once, the unsuspecting single-heartedness which belonged to him; to Constance, the honour which baffled inclination; and to Strange, the weakness which made his passion so dangerously strong. He resolved to watch, even to make opportunities for watching; and if the result should confirm his thoughts, to speak.

THE PEPYSIAN LIBRARY.

THE *Diary* of Samuel Pepys, written between the years 1660 and 1669, is more or less familiar to every reader; but comparatively few are aware of the treasures contained in that unique collection, the Pepysian Library at Cambridge. A curious document is still extant, namely, that part of the will of Pepys which refers to the disposal of his literary treasures. In accordance with the provisions of that will, the 'new building' in the second court of Magdalene College bears upon its outer wall the motto and armorial bearings of Samuel Pepys, with the legend, *Bibliotheca Pepysiana*.

Let us cross the threshold, reader, and ascend the staircase—always supposing we are accompanied by the Master, or one of the Fellows of Magdalene; for not otherwise could Hercules himself obtain admittance into this literary garden of the Hesperides. We have not far to go, only a few stone steps; and our conductor pauses before a quite ordinary-looking door, unlocks it, and behold we are in the *Bibliotheca Pepysiana*! It is quite a little room, as libraries go—fireproof, by the way—with three or four windows, whence we get a charming glimpse of sunny meadow-land and silvery stream. The exquisitely polished floor reflects the ruddy glow of the firelight; the glass fronts of the eleven mahogany book-

cases—Pepys's own—shine again; and if a speck of dust is anywhere to be found in the whole room, it pertains to our own shoes, and in nowise to the Pepysian Library. Verily, I believe that if the shade of old Pepys could come sauntering in some sunny afternoon, marshalled, of course, by the indispensable—and most courteous—Fellow, it would do his heart good to see the care that is taken of his collection. But, in a sort of sense, Pepys is always present there, for over the mantel-piece he beams forth from the canvas of Sir Godfrey Kneller, in a voluminous periwig, 'very noble,' to use his own most favourite term of eulogy. (A far finer portrait of Pepys, however, by Sir Peter Lely, hangs in the Hall at Magdalene.)

As I have already had occasion to mention, the bookcases are Pepys's own. They are of mahogany, handsomely carved, with handles attached at the sides. The doors are formed of small panes of glass, those in the lower divisions being made to lift up. The books are almost all arranged in double rows, the smaller in front of the larger, so that the lettering upon each book in both rows is clearly visible. The advent of these bookcases from the cabinet-maker, Mr Sympson, is mentioned in the *Diary* under date August 24, 1666.

But perhaps the most interesting thing about this library is the fact that its three thousand volumes are all arranged upon the shelves exactly as Pepys left them. They were classified by him according to size, No. 1 being the smallest, and No. 3000 the largest. This arrangement is apt to be amusing, as, glancing round the shelves, we perceive, say, a volume of the fiercest polemical theology flanked on one side by a collection of 'Loose Plays,' and on the other, maybe, by a book of 'pithie and profitable riddles, right pleasaunt and delectable to the reader.' All the books—with a few exceptions in morocco and vellum—are bound in Pepys's regular livery of black and gold; and wherever a volume happens to be in the least degree shorter than its neighbours, it is elevated upon a small block of wood, painted exactly to resemble the binding. Suppose we unlock one of the cases, and take out a folio volume bearing the simple lettering 'Chesse Play.' Upon the first board is inscribed, as on all the books, a device in gold—the two anchors of the Admiralty, of which Mr Pepys was at one time Secretary, crossed behind a shield, bearing a legend. This shield is surmounted by his crest. On the last board are his arms and motto. And so, having examined the outside, we turn to the inside also, and find that this simple-looking volume is none other than 'The Game and Playe of the Chesse, translated out of French and imprinted by W. Caxton; fynysshed the last day of March, the yer of our Lord God a thousand four hundred and lxxiiij.' This is said to be the first book printed in England. The Pepysian Library is peculiarly rich in Caxtons, Wynkyn de Worces, Pynsons,

and other early-English printed books. Among the most interesting are the 'Polychronycon,' 1482, folio; 'The Chronicles of England, emprinted by me W. Caxton in thabbey of Westmynstre by London the V day of Juyn the yere of thincarnation of our Lord God m.cccc.lxxx,' folio; 'Thymage or Mirroure of the Worlde,' 1481, folio; 'The Book of the Ordre of Chyvalry or Knyghthode [one of the very rarest volumes from Caxton's press]; translated out of Frensshe into Englishe at a Request of a Gentyll and Noble Esquier by me W. Caxton.' It is supposed to have been printed in 1484. The first and second editions of the 'Tales of Cauntyrburye,' and 'The Proffyttable Boke for Mañes Sovle, and right comfortable to the Body, and speccially in Adversite and Tribulacyon; whiche Boke is called The Chastysing of Goddes Chyldren,' are also printed by Caxton.

Walking slowly round the shelves, our eye is very probably arrested by a small duodecimo volume bearing the interesting lettering 'Old Novels.' We take it down; and find that it contains various curious pieces purchased separately, and afterwards bound up together, as, 'The Worthie Historie of the most Noble and Valyaunt Knight Placidus, otherwise called Eustas, who was martyred for the Profession of Jesus Christ. Gathered in English verse by John Partridge in the yere of our Lord 1566,' black-letter, and supposed to be unique. Evidently a novel for Sunday afternoons! The following piece of prose, also in black-letter, and also supposed to be unique, entitled 'The Goodli History of the most Noble and Beautiful Ladye Lucrece of Siene in Tuscan, and of her Lover Eurialus, very pleasant and delectable to the Reader,' MDLXVII., was possibly for week-day perusal, and approximates more closely to the novel of modern times. Another of these 'Old Novels' is entitled, 'The Mirror of Martyrs, or the Life and Death of that thrice valiant Capitaine and most Godly Martyre Sir John Oldecastle, Knight. Printed by V. S. for William Wood, 1601.' I wish that some of our 'new novels' were anything like such improving reading. Passing on, most of us will experience something of the delight of meeting an old friend when we come upon a quarto entitled, 'A Parable of the Spider and the Flie: made by John Heywood: imprinted at London in Flete Strete, by Thomas Powell, 1556.' There is another copy of this work in University Library.

Four curious little duodecimo volumes—printed for the most part in black-letter—containing from one thousand to fifteen hundred pages respectively, are entitled (1) Penny Merri-ments; (2) Penny Witticisms; (3) Penny Compliments; (4) Penny Goodlinesses. Here are a few of the titles from one of the volumes: 'The History of Friar Bacon,' poetry; 'The History of the Valyaunt London Apprentice Aurelius, written for the encouragement of Youth,' prose; 'A Brief Sum of Certain Wormwood Lectures:

Which women used to sing and say
Unto their husbands every day,

translated out of all languages into Billingsgate Dialogue, by Matthew Parker, 1682, prose (Confuse not, O reader, this Matthew Parker with the venerable Archbishop of that name); 'The Delightful History of Dorastus and Fawnia,' in

black-letter, is familiar to all students of Shakspeare as the groundwork of the *Winter's Tale*; 'The True Tryal of Understanding or Wit newly revived, being a Booke of Excellent New Riddles,' by S. M., 1687, poetry; 'Variety of Merry Riddles,' by Laurence Price, 1684; 'The Book of Merry Riddles,' 1685, black-letter, prose. In one of which books, by the way—I fancy in Price's book, but cannot be certain—I stumbled upon my old nursery friend, 'Two legs sat upon three legs, with one leg in his lap; in came four legs, caught up one leg,' &c. I had never imagined it so venerable, and shall look upon it in future with the greater reverence.

And now let us turn to the five folio volumes of Old Ballads, for which this library is chiefly famous. The first volume contains the following note in Pepys's handwriting: 'My collection of ballads, begun by Mr Selden, improv'd by the addition of many pieces elder thereto in time; the whole continued to the year 1700.' The earlier ones are in black-letter with pictures, and the later ones in white-letter without pictures. They were classified and indexed by their purchaser under the following heads: (1) Devotion and morality; (2) History true and fabulous (would that I had Pepys's eye for discovering the boundary-line between these two extremes); (3) Tragedy, namely, murders, executions, judgments of God; (4) State and Times; (5) Love pleasant; (6) Love unfortunate; (7) Marriage, &c.; (8) Sea: love, gallantry, and actions; (9) Drinking and good-fellowship; (10) Humour, frolics and mirth. The greater number of these ballads are familiar to most readers, for the Bibliotheca Pepysiana was one of the chief sources from which Bishop Percy obtained his *Reliques of Old English Romance Poetry*, while very many of those omitted by Percy have been printed by Evans in his collection of Old Ballads. At the end of the fifth volume is a copy of the 'adjustment and settlement of the ancient ballad warehouse, with the propriety and right of printing the same, between William Thackeray, John Millet, and Alexander Millbourne in 1689.'

Foremost amid the manuscript treasures, the six volumes of Pepys's own shorthand *Diary* are probably to most people of the greatest interest. The shorthand employed is that known by the name of Shelton's System, a copy of whose *Tachygraphy*, with other works on shorthand, is to be found in the library. The *Diary* was first deciphered by the Rev. John Smith, of St John's College, and a manuscript copy made in plain English, which is still preserved in the Bibliotheca Pepysiana. The various editions of the published *Diary* consist only of extracts from this work, many portions of which are wholly unfit for publication. Second only in interest to the above is the original narrative of the escape of Charles II. after the battle of Worcester, taken down by Pepys in shorthand, from the king's own mouth. This manuscript having been likewise deciphered and published, is well known to most readers. The Maitland Manuscripts, two precious volumes of ancient Scottish poetry, have furnished the principal portion of the published collections of Pinkerton and others. But perhaps the most delightful volume among the manuscripts

is a folio containing nothing but letters—Henry VIII.'s love-letters to Anne Boleyn, very neatly copied, by an English traveller, in 1682, from their originals in the Vatican; a number of letters to and from the Earl of Leicester, the Regent Murray, and other great men of the sixteenth century, many of them in Spanish; more than one letter from Oliver Cromwell; a letter of Charles II., dated from the Hague, shortly after the execution of his father; and very many others, the exact particulars of which have passed out of my memory.

Two thick folios contain 'The Original Libro de Cargos as to the Provision, Ammunition, &c. of the Provedor of the Spanish Armada.' They are written in Spanish, and have a hole pierced through, for the purpose of hanging them up in the ship.

Pepys appears to have been the first to collect pictures, prints, &c. illustrative of the city of London; two deeply interesting folio volumes in the Pepysian Library are entirely filled with them. Mr Jackson, by the way, is known to have added to this branch of the collection. I remember also with great pleasure a French fashion-book of the seventeenth century, infinitely more interesting than the fashion-books of modern days (*biblia à biblia* with a vengeance, these), inasmuch as each plate was the portrait of some celebrated man or woman. The costumes, very interesting from the historical point of view, nevertheless struck me as peculiarly frightful and unmeaning, especially the ladies in riding-habits—long skirts, men's doublets and *periwigs*—'an odde sight, and a sight that did not please me,' as Pepys himself remarked in the *Diary*, upon meeting certain of the 'Ladies of Honour' so attired in the galleries at Whitehall. But it was not sufficient for the maids of honour to array themselves in periwigs, the gentlemen must needs betake themselves to *muffs*.

And last, not least, we have to look through those four priceless folios of prints, sketches, and engravings, portraits for the most part of celebrities famous and forgotten. I remember being struck with a deeply thoughtful head of Spinoza, also a picture of Michel de Montaigne—which, by the way, I have seen elsewhere—a dashing young cavalier, not as yet done sowing the wild-oats which bore fruit in those wonderful Essays. Sir Thomas Challoner, by Hollar—suspected by Dr Dibdin to be a proof—is an exceedingly fine head. Over it is written in pencil, probably either by Pepys or Jackson: 'Bravo, sixty-one guineas for my Lord Buckingham.' Rather a large print represents Sir Thomas Overbury in a sitting posture; over it is the following inscription in pencil, apparently by the same hand: 'Bravo, fifty guineas for Lord Buckingham.' A print of Devereux, Earl of Essex, on horseback has a pencilling of 'fifty guineas' over it. Lady Castlemaine, with wavy hair, occurs more than once; also 'pretty, witty Nell Gwynn,' usually represented amid lambs garlanded with daisies, in her favourite rôle of innocence. Then come a series of 'forgotten worthies'—Drake and Gilbert and Frobisher, and Fenton and Raleigh and Grenville, with others whose names are less familiar. 'Charles Kingsley's page,' it has come to be called in the College, from his continual and loving study of it. (It is almost

unnecessary to say that Kingsley was a Magdalene man.)

A large oval print of Sir Edward Spragge is stated by Dr Dibdin to be very rare. There are also some spirited sketches of heads in Indian ink, one especially I remember of Newton before he was Sir Isaac; also a sketch of Sir John Hotham; and another of Tarlton the jester.

Such is the Pepysian Library. A little chamber where Time stands still as in the palace of the Sleeping Beauty, where we have only to cross the threshold to enter the seventeenth century. Only, be sure, reader, I have not described one quarter of the rarities which, if you make a pilgrimage to Magdalene, you will without doubt discover for yourself.

THE MORTLAKE PEERAGE.

CHAPTER II.

My next step, after seeing Miss Onslow, was to proceed to Sandgate, and call at the addresses given me of the doctor and the lodging-house keeper. The latter I could not find; she had left the town, and no one knew where she was now living. The doctor, I discovered, had given up practising, and had taken up his residence at Folkestone; so I had to hark back to that town, where eventually I found him. Dr Scudamore proved to be a very gentlemanly old man, in no way disposed to be reticent. He remembered the whole affair. He thought the young lady was very good-looking, but not very strong-minded. And somehow he imagined she was not happy, and tried to gain her confidence, but could not. Both mother and child were strong and healthy; in the whole of his practice he never saw a finer infant. He knew nothing of what became of them after they left Sandgate, and could give me no information about Mrs Pocock, the lodging-house keeper. He, however, voluntarily stated that he did not believe that the lady he attended was dead. He gave as his reason that, as he was crossing from Calais to Dover not many months since, he saw a lady, whom he believed to be his former patient. She was attended by a gentleman, who seemed to be her husband, and had a large retinue of servants. He bowed to her, and she returned his salutation. I did not attach much importance to this, because a bow from so courtly an old gentleman as Mr Scudamore, I argued, even if given in mistake, would be almost sure to elicit a response. But Mr Scudamore would not listen to such an idea; he was confident that the lady was the same person he had attended at Sandgate—only that she had grown more womanly and even more beautiful.

All this was very tantalising. I could not entirely credit Mr Scudamore's story; nor did I feel perfectly satisfied with Lord Mortlake's assertion that his wife was dead. I did not for one moment imagine that he had treated his wife unhandsomely, or that she had been subjected to any foul-play on his part. On the contrary, I had a strong conviction that he had been deceived, and that he was in reality as much in the dark with regard to her existence and whereabouts, as I was; nevertheless, the conviction that Lady Mortlake was still alive had become so

rooted in my mind that I was not inclined to give credence to anything to the contrary. It may be asked, why did I not go to Lord Mortlake and seek a solution of the mystery from him? At least he could give me his grounds for asserting that his wife was dead. That is all perfectly true; but it was not practicable. I did not know where he was to be found. Lord Mortlake had not been in England for years. He had been travelling in all parts of the world; and according to common report, had become a misanthrope, or been seized with a mania for trapping and hunting. At anyrate, so far as his friends knew, he was living somewhere in the backwoods of America; and no one had any idea when he was likely to return.

One morning some time after this, I received a message from Miss Onslow, who was seriously ill, requesting that I would call upon her. Accordingly, I went, and found the lady in her sick-room. I was shocked and surprised to see how much she was altered since I had last seen her. Always thin, she had now shrunk into a mere skeleton. She beckoned me to approach her, and whispered: 'I want to speak to you alone—before my sister comes; there is no time to be lost. I am dying!'

'You can leave the room,' I said to the woman in attendance. 'I want to have some conversation with Miss Onslow of a private nature.'

'The doctor said she was not to be left,' answered the attendant sullenly.

'I will ring if there is any necessity,' I replied.

The woman glared at me; she did not answer, but left the room without a word.

As soon as the door was closed, Miss Onslow put her long thin hand out of the bed, and thrust into my hands a packet of old letters. 'Put them into your pocket,' she whispered. 'Don't let her see them; she is a spy.'

'What are they?' I asked.

'Letters—their letters—the ones we suppressed.'

'Mr and Mrs Stanhope's?' I asked.

'Yes,' was the reply.

'Then you were the cause of their separation?'

She gazed at me piteously, and then answered, 'Yes.'

'God will judge you for that wicked act!' I exclaimed. 'Those who separate husband and wife will have much to answer for.'

The wild yearning look in her eyes came back, and she said: 'The thought of how we treated that poor girl has been like a canker in my heart. I wish I had my time over again.'

'A vain wish, my poor woman,' I said, softened by her anguish, 'and one that will not serve you.'

At this moment the door opened, and another tall woman, the very counterpart of Miss Onslow, only stouter and better looking, entered the room, and stalked across towards the sick woman, who faintly ejaculated: 'My sister.'

'What is all this, Ann—and who is this gentleman?' asked the new-comer sternly.

The sick woman essayed to answer—raised her head a little from the pillow, and then suddenly fell back. She was dead. She had been suffering, as I afterwards learned, from heart-

disease, and the shock of her sister's sudden entrance had killed her.

I went home in a very sad mood. The scene I had just witnessed was so deeply impressed on my mind, that I could not get rid of it—it haunted me; while I was almost unmanned by the thought that a soul had passed into eternity in such a state. In the hope that the perusal of the letters given me by the dead woman might distract my attention from these morbid ideas, I sat down and read them. There were more than twenty, some of so touching and pathetic a character, that I was moved to tears as I read them. Mr Stanhope's were full of love and tenderness, urging his wife to disclose their marriage to her father, or to let him do so; vowing eternal fidelity, and complaining that she did not answer his letters. His wife's at first expressed the most unbounded love; but they gradually changed. It was evident to me that the Misses Onslow were trying to poison her mind, and persuade her that she was deserted. When the idea first dawned upon the young wife, her agony of mind as expressed in her letters was intense; but she evidently would not believe it, and urged him to come and take her away. Poverty, she said, she could bear; but the thought that he had ceased to love her, was maddening. Some of her letters were very incoherent, full of passionate love, alternating with vows of hatred and revenge; and I came to the conclusion that the writer at these times was hardly accountable for what she wrote. The mystery to me was, how human beings could have read these letters and acted such an inhuman part.

From one of Mr Stanhope's later letters, it was evident that he had procured an interview with one of the Misses Onslow, and had tried to discover the whereabouts of his wife. The letter was obviously written while he was in a state of great mental excitement. He said that though he still loved her, he was stung to the quick by her silence and neglect; stated his intention to accept an appointment in India, and gave an address in Calcutta where she could write to him.

The first thing I did after I had read these was to apply to Lord Mortlake's bankers for his address. They stated that they had not heard from him for some time; but they gave the address of a bank in New York through which he received his remittances. I wrote to the manager, inclosing a letter to my friend. Time went on, and I got no answer; but the letter was not returned.

Shortly after the death of Miss Onslow, I received a note from Dr Scudamore. He said that, understanding that I was anxious to discover the whereabouts of Mrs Pocock—the person with whom Mrs Stanhope lodged while she was at Sandgate—he had made inquiries, and had discovered that, having lost her first husband, she had been married again to a man of the name of Minter, at Ramsgate, a small shipowner. At the same time he inclosed her address. This was another link in the chain; and I started off to pick it up.

I found the woman very uncommunicative. All I could get out of her was, that the child of the lady I spoke of died a few months after it was born, and was buried at Ashford. She

admitted that she had the charge of the child till its death; and she produced a certificate of its burial. I was about taking a copy of this, when I discovered that it was a certificate of the baptism of the child, and not its burial. I took no notice till I had copied it, then I said: 'Thank you. Now I'll see the certificate of the burial.'

She looked at me blankly; then she snatched up the paper and examined it. With a muttered execration, either on me or herself, I could not make out which, she produced the other paper, and gave it me. Just as I had finished making a copy of this, a handsome boy of about fourteen or fifteen entered the room. He was about to withdraw, when I stopped him and asked his name. 'George Pocock,' he answered.

'This is your son, then, I suppose?'

'Of course he is!' she replied. 'What makes you ask?'

'Because he is the very picture of what Mr Stanhope was when he was young. The likeness is perfectly astounding.'

'I can't help nothing about who he's like,' she said sullenly. 'He's my boy.—Ain't ye, George?'

'Yes, mother,' he replied meekly.

I folded up the copies of the certificates carefully and put them into my pocket-book. The woman all this while was motioning to her boy and looking daggers at him. I was watching her all the time. At this moment, a voice in the passage called out: 'Dinner ready, Polly?' and a bluff, hearty-looking man entered the room.—'Sarvant, sir,' he said on seeing me, and he doffed his hat.

'This is your wife's son?' I said interrogatively.

There was a broad grin on his face as he answered: 'So she says; but blaame me if I know whose he is! He ain't a bit like the missus, is he? And he ain't no more like old Pocock than she's like the Queen. 'Tain't hern, sir; doan't you believe it!'

'What rubbish you do talk, Robert!' his wife cried; and then turning to me, she said: 'You mustn't mind what he says. He's jealous of the boy.'

'Ho, ho, ho!' laughed Mr Minter. 'Jealous! 'Tain't no business of mine, sir, whose child he is, but I likes to have my say, and what I says, I sticks to. 'Tain't hern; doan't you believe it.'

'I am quite of your opinion, Mr Minter,' I said. 'I was just remarking how unlike his mother he was, when you entered the room.'

'Was ye now, sir? Well, I call that pekewlar—werry pekewlar. It's what I call a coincidence!'—Then there was an aside, as the dramatists call it: 'How about the dinner, Polly? Hadn't you better see about the taters?'

Mrs Minter took the hint, and vanished. As soon as she and the boy were gone, he recommenced: 'Lord bless you, sir, she's as good a little woman as ever stepped in shoe-leather, but she's got her pekewliarities.—He's not her boy, sir. Her boy, which was about the same age, died, and she tried to make people believe it was this one. My sister knows all about it.'

'What was her reason for acting thus?'

'The Lord above knows! I like to act fair

and straight; and I always told her if I come across anybody as knowed the boy's friends, I'd tell 'em.'

'Have you any proof of this?' I asked.

'My sister knows all about it, and she'll swear to it.—Do you know the boy's friends, sir?'

'Yes; if he is the one I think he is, I know both his father and mother.'

'Surely now, that is werry pekwlar! Just fancy my coming in opportune-like! I suppose if I'd been five or ten minutes later, I shouldn't have seen you, sir!'

'No; I was just going when you came home.'

'Well, I do say this is a coincidence; and if I might be so bold, will ye stop and take a bit o' dinner with us? We've got a beautiful bit o' pork, and apple-sass, and taters and greens. The taters I growed myself, and they're fust-rate!'

'No, thank you,' I said; 'I could not think of intruding on you in that way.'

'No offence, sir; I'm only a rough sailor; but if you'll stop, you're welcome. I can't say more, can I?'

'No; certainly you cannot; and I'm obliged for your hospitality.—But what about your sister? What is her address?'

'That's just it. What I says to myself was, If the gentleman would only stop and have a snack with us, I could put the old mare in the trap and drive him over.'

'There is no occasion for you to disturb the old mare. I have got my carriage at the hotel.—Where does your sister live?'

'Why, at Chislet.'

'Then allow me to suggest that you get your dinner—there is no hurry—and then come down to the *Albion*.'

'I am your man, sir,' said Minter. 'State your time, and I'll be punctual.'

'In an hour—say half-past two,' I replied.

At half-past two to the minute, Mr. or rather as I found he was called, Captain Minter made his appearance at the hotel. He was quite a dandy, being attired in a blue coat with brass buttons, white duck trousers, and a tall hat.

The carriage-door was opened, and I motioned him to get in.

'What! get inside along of your worship? I never rid in a coach like this afore. Can't I get up aloft along with the coachman?'

'O no! That would never do. My coachman would not like it.'

'Well,' he said, 'if I must, I must;' and he plunged in and took his seat.

It will not be necessary to describe our journey to Chislet; all I need say is that we found Mrs. Moody, the Captain's sister, at home. Her story was a very straightforward one. She stated that Mrs. Pocock had a son about three months older than Mrs. Stanhope's child; that when the Pococks lived at Sandgate she lived with them as servant; that at Mr. Pocock's death, the house at Sandgate was given up, and the widow with the two children removed to Ashford. A few weeks after their removal, the elder child sickened and died. After this, she left Mrs. Pocock, and did not see anything of her for years. Meantime, Mrs. Pocock married Captain Minter, her brother; and after a time, when she came back to Kent, she was surprised to find that Mrs. Minter claimed the live child as her own. She would undertake to

swear that the child that died was Mrs. Pocock's, and the one that was alive was the lady's that lodged with them at Sandgate.

Apart from the fact that there was no motive to induce this woman to fabricate such a story, there was something so simple and honest in her manner, so entirely different from the shifty ways and looks of Mrs. Minter, that I was deeply impressed with its truthfulness. Having obtained all the information I could from honest Captain Minter and his sister, and having examined the registers at Folkestone and Ashford, and found the copies of the entries I possessed perfectly correct, I went up to town to consult my legal friend as to what course I should take in consequence of the discoveries I had made.

His advice was that Mrs. Moody's deposition should be taken at once, and that Mrs. Minter should be threatened with legal proceedings if she did not sign a confession and give up possession of the boy forthwith. This brought the lady to book; and a legal document acknowledging the fraud was drawn up and duly signed and attested.
